3:4. portico. The portico was the outermost section of the three parts of the Jerusalem temple. This would be consistent with the pattern found in the temple at Tainat and elsewhere in Syria and Phoenicia. It seems to be an "attachment" rather than an integral part of the temple complex and, unlike the two inner chambers, has no doorway. In construction it most resembles the great court of the palace (see 1 Kings 7:12). While the main inner chamber and the holy of holies effectively comprise the "house of Yahweh," the portico matches traditional Near Eastern architecture as the courtyard attached to major dwelling places.

3:5. palm tree and chain designs. The use of a palm tree motif in monumental construction in the ancient Near East also appears most graphically in the wall paintings of the palace of Mari during the reign of Zimri-Lim (eighteenth century). The palm symbolizes fecundity and is the source of the date, a major asset to the economy and food supply of the entire area. The chain design is expanded in the Chronicles version, while it only adorns the capitals of the bronze pillars in 1 Kings 7:17. In Egyptian temples, the palm and lotus pillars represent the conceptualization of the temple as a microcosm of the earth that is the domain of the deity.

3:6. gold of Parvaim. While Parvaim is most likely a place name, its location is unknown. Suggestions have identified it with Yemen and northeast Arabia, but there is no site associated with the term. Its relation to gold may be based on a standard of purity, either associated with etymological links to *parim,* "young bulls," or *para,* a fruit-bearing tree. In both cases the color of the blood or fruit may have given rise to styling this gold as particularly high grade.

3:7. carved cherubim. The description of the wall carvings parallels 1 Kings 6:29. These winged beings, symbolic of God's presence, were also embroidered into the curtains as well as the veil covering the Holy of Holies in the tabernacle (Ex 26:1). An inscription of Agum-kakrime in the second half of the second millennium refers to his contributions and building of a shrine for the gods Marduk and Sarpanitum. The doors to this shrine are decorated with pictures of a horned serpent, a bison, a dog, a scorpion man and several demons, including the protective laḫmu-demons. The contemporary temple at 'Ain Dara in Syria also featured many carvings of sphinxes and lions.

3:8. six hundred talents of gold. For the relatively small chamber of the Holy of Holies alone to be inlaid with six hundred talents (39,600 pounds) of gold would have been quite extravagant. It seems more likely that this amount would have been applied as thinly beaten sheets to the decoration of the entire inner walls of the temple. For comparisons concerning amounts of gold see comments on 1 Chronicles 22:14.

3:9. gold nails, fifty shekels. Contrary to the NIV rendering, this difficult text probably conveys that fifty shekels worth of gold was used to plate iron nails used to attach the gold inlay to the walls. Nails weighing fifty shekels (14.75 ounces) would be too heavy, while fifty shekels weight of gold nails would not be enough to do the job.

3:10-13. sculptured cherubim. These free-standing figures made of olive wood served as guardians or wardens of the Holy of Holies (compare 1 Kings 6:23-28), much as they do the Garden of Eden (Gen 3:24). The architecture of ancient Near Eastern temples evoked images of the Garden (as a residence or audience hall of deity) in several particulars. Composite winged creatures positioned by pillars

stylized to look like trees (usually date palms) were common especially in Syria-Palestine and the upper Euphrates region. Like those whose wings cover the ark of the covenant within the Holy of Holies, these gold inlaid cherubim also function as the symbol of God's presence and a sort of throne. Ancient Near Eastern iconography frequently pictures the thrones of kings and deities flanked by composite winged creatures. The Canaanite equivalent for the storm god Baal was the figure of a bull upon which he is often depicted as standing (compare Ps 18:10 for Yahweh "riding" the cherubim). For more information see comment on Exodus 25:18-20.

3:14. curtain. According to the account in 1 Kings 6:31-32, the two sections of Solomon's temple were divided by a wooden door, which was inlaid with gold and decorated with carvings of cherubim, palm trees and flowers. The Chronicler describes also how the curtain served as a second barrier. In New Testament times the temple also had both doors and a curtain. Separating the holy precincts from the secular world and its impurity was required in the architectural design of ancient temples.

3:15-17. free-standing pillars. For more information see comments on 1 Kings 7:15-22. Their placement may be compared to the sacred architecture of the shrines at Shechem, Hazor and Tyre.

3:16. chains with pomegranates. Pomegranates are a symbol of fertility both in the ancient Near East and in the promises of the covenant (Deut 8:8). Ancient reliefs show a pomegranate-topped scepter used by kings and priests bringing sacrifices. A recently recovered ivory pomegranate (probably the top of just such a scepter) contains the Hebrew inscription "belonging to the temple of the Lord," suggesting its use by priests.

4:1. bronze altar. The use of bronze for sculptured items appears to have begun during the monarchy period. This sacrificial platform was a square, thirty feet to a side, with smaller levels forming steps to its altar. Like other altars, this one functioned symbolically as "God's table," upon which sacrifices were placed in acknowledgment of Yahweh's gifts of fertility (see 1 Kings 8:64 and 2 Kings 16:14). The huge size of this platform and altar most likely precludes it being cast as a single object. Instead it was probably constructed of wood and overlaid with bronze (compare the smaller altar described in 2 Chron 6:13).

4:6. basins. Archaeologists have found a bronze stand that would have held just such a basin dating from the twelfth century B.C. The stand had wheels and was decorated with winged composite creatures (see 1 Kings 7:29).

4:2-5. the "Sea." The "molten sea" (see 1 Kings 7:23-26) has parallels in Assyrian reliefs from the time of Sargon II (eighth century B.C.). There two massive cauldrons are portrayed, resting on the forelegs of bulls at the entrance to the Musasir temple. Its practical function was, like the laver in the tabernacle (Ex 30:18-21) and the ten basins (v. 6), for ablutions by the priests. Additionally, some have attributed to it a symbolic value. With its twelve bulls representing the twelve tribes and its monumental size (forty-five feet in circumference), it may have evoked images of Yahweh's role as Creator God and Lord over the chaotic waters of the earth. In this way, Yahweh eclipses the Canaanite deities Yamm and Baal and the Babylonian god Marduk, who represent sea and storm (see Ps 29:10; 104:1-9; Is 51:9-10).

4:7. lampstands. The ten golden lampstands (see 1 Kings 7:49) are a significant difference from the single lampstand in the tabernacle (Ex 25:31-38). They were probably cylindrical in shape, made of wood and covered with gold leaf. Placed on either side of the temple's interior, their light and golden reflection magnified the sense of splendor and glory inherent in Solomon's temple and God's presence (see Jer 52:19; 2 Chron 13:11; 29:7 for additional references to these "specified" objects). Along with the tables and incense altars or braziers, these furnishings provided the sense of this place being the "house of Yahweh."

4:8. tables. For information on the function of the tables and the use of the bread see comment on Leviticus 24:5-9.

4:8. sprinkling bowls. The golden bowls are also mentioned in 1 Kings 7:50, but the Chronicler supplies the figure of one hundred for them. Their exact function is unclear, but they may have been used to dip water from the basins (v. 6) or to collect blood from sacrifices (see Ex 24:6, 8; 27:3).

4:9-10. layout of the courts. This Phoenician-style, tripartite plan is also found in the temple at 'Ain Dara in northwest Syria. In this way the sacred precincts will be noted as restricted to priestly function and clearly divided from that portion of the temple complex that may have adjoined more secular buildings.

4:11. pots, shovels, sprinkling bowls. Completing the list of cultic objects fabricated by Hiram are those associated with sacrificial offering and incense. Incense shovels have been discovered in excavations at Tel Dan (see Lev

16:12-13). The pots were used to store ashes from the incense altar, and the bowls held blood from the sacrifices (Ex 38:3; Num 4:14). All of these dedicatory objects are designed to properly deal with the remains of sacrificial offerings. The disposal of ashes and the proper collection and use of blood were necessary to insure the purity of the altar and the temple.

4:16. meat forks. Archaeologists have discovered a number of large forks and these may be the items described by the Chronicler (see their inclusion in the lists in Ex 27:3 and Num 4:14). The priestly portion of the sacrifice was prescribed in Leviticus 7:28-36 to be the right thigh and the breast. However, in the story of the premonarchic shrine at Shiloh an instance is found of priests drawing sacrificial meat out of a common, boiling pot (see the comment on 1 Sam 2:13).

4:17. geography. Zarethan is located "in the plain of the Jordan," east of the river and halfway between the Dead Sea and the Sea of Galilee in Joshua 3:16 and 1 Kings 4:12. The exact site is not yet determined, although Tell es-Sa'idiyeh and Tell el-Meqberah are among the suggested locations. Succoth is located at Tell Deir Allah about a mile north of the Jabbok River and about three miles east of the Jordan River. Remains from this period have been found on the site. The area on the top of the tell is comparable to one football field, about one and a quarter acres. It was a small settlement that was involved in a bronze smelting industry.

4:21. floral work. A much more graphic description of the floral design on the lampstands (almond blossoms) can be found in Exodus 25:31-40 and 37:17-24. A similar example of a blossom motif has been found on a lampstand from Megiddo and on miniature pillars found at Arslan Tash. The lotus pattern is also common in Canaanite and Egyptian decor. The sense of constant fertility, here a reminder of the covenant, might be the purpose for this design.

4:21. lamps and tongs. The list provided by the Chronicler of golden sacred utensils includes the lamps attached to the multi-stemmed lampstands and the tongs used to carry coals to and from these lamps and the incense altars (see 1 Kings 7:49; Is 6:6). These tongs may have also been used to remove extinguished wicks, which would be relit and replaced within the lamp. The quality of the "fine" or "pure" gold used to plate even utilitarian objects like tongs or "snuffers" is a testament to their importance in cultic ritual.

4:22. wick trimmers. Wick trimmers would have been employed to prevent the wicks, floating in the cups containing oil on the lampstands (Ex 27:20), from sputtering or refusing to ignite (see Is 42:3). It would have been a regular task of the priests to tend the lamps (Ex 30:7), and they may have employed a trimmer to insure that there was no interruption of ritual or an extinguishing of the light (Is 42:3; 43:17). Since this is an unusual Hebrew term, some scholars translate the word as "musical instruments," based on Mesopotamian texts and Assyrian reliefs depicting the use of music accompanying temple ritual and the "divine meal."

4:22. ladles and censers. The word used here and in 1 Kings 7:50 for censers is one of two types of fire pans—in this case one with a long handle (see Lev 10:1; Num 16:6). Incense and a hot coal would be placed on the implement and carried about to cense a room or altar. The Qumran texts mention such a firepan used to carry fire into the temple. New Kingdom Egyptian drawings depict the use of handled censers as part of a ritual to ward off evil or being carried in procession. Ladles were used to dispense oil into the lamps or carry incense to the altars or censers (1 Kings 7:50).

5:1—7:22
Solomon's Dedication of the Temple

5:3. festival of the seventh month. The Chronicler mentions only the number of the month, not its name, Ethanim. See the comment on this autumn month in 1 Kings 8:2. One of the common systems of calendars simply used numbers rather than names to designate the months. The festival referred to is the harvest festival of Booths (Succoth).

5:12. linen clothing. Although linen garments were generally reserved for the use of priests (Lev 6:10; 16:4), on this special occasion, the Levites and musicians are also clothed in linen. The linen for the clothing worn by the priests was imported from Egypt where it was also distinctively used for priests' garments. Angels, too, are said to be dressed in linen.

5:12. musical instruments. Cymbals, harps, lyres and trumpets are all typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which one as "lyre." The one the NIV translates "lyre" is a

ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. Cymbals are made of bronze and are in the percussion group, so the only remaining question concerns their size. The trumpets are not the ram's-horn trumpets that are referred to in other contexts. Tubular flared trumpets were used in this period in military as well as ritual contexts. This is depicted on Egyptian reliefs as well as evidenced by actual instruments found, for example, in the tomb of King Tut (a silver trumpet nearly two feet long).

6:12-13. prayer posture. Solomon's posture in verse 12 and in 1 Kings 8:22 is initially standing with his arms upraised and palms opened upward as he addresses the assembly and prays a dedicatory prayer for the temple. It is implied from 1 Kings 8:54 that Solomon at some point had knelt down, and that detail is supplied in 2 Chronicles 6:13. The incantation prayers of Mesopotamian sources, such as that to Ishtar, imply prostration of the supplicant as well as a ritual of raising the hands. Hittite sources suggest similar postures and gestures. Royal prayers are not uncommon, though it is difficult to discern whether they are precomposed or spontaneous.

6:22. role of oaths in judicial process. See the comments on Deuteronomy 1:9-18 for background on the use of oaths. They are quite common in ancient Near Eastern law codes, where they appear in cases of theft and instances of damage to property. They also appear in treaty-making contexts, where the god(s) are called as witnesses to the agreement.

7:5-7. number and types of sacrifices. Burnt offerings, grain offerings and fellowship offerings are all mentioned here. See the comment on Leviticus 3:1-5 on the fellowship offerings and the burning of the fat prior to consumption of the sacrificial meat, and the comment on Leviticus 2:1-3 and 6:14-23 for the regulations regarding the grain offering. We are not told how many of the sacrifices were burnt offerings (which were totally consumed on the altar) and how many were fellowship offerings (which were used for festival meals). It appears that the king is providing much of the meat for a religious communal feast for those in attendance. These numbers are large but are not out of proportion with some of the other figures found in ancient Near Eastern literature. When in 879 B.C. King Ashurnasirpal II threw a dedication party for his palace in the Assyrian capital city of Calah, he provided five thousand sheep, one thousand lambs and cattle, five hundred deer, five hundred gazelles, thirty-four thousand fowl and ten thousand fish.

7:8. Lebo Hamath to Wadi of Egypt. See the comment on 1 Kings 4:21 on the boundaries of Solomon's kingdom. The "entrance" to Hamath (Ematu in the Ebla texts), Lebo Hamath, is most likely modern Lebweh on one of the sources of the Orontes. This was the southern border of the land of Hamath and therefore the northern border of Canaan, and designates the northern corner of the empire, about forty-five miles north of Damascus. The Wadi of Egypt would be the Wadi al-Arish.

7:12-22. God's response. There are a number of interesting features to this divine speech. First, rather than the typical ancient Near Eastern practice of choosing the site prior to the construction (see comment on 3:1), God's choosing is indicated at the dedication. Second, even though the temple was seen as the place of God's presence, in verse 14 he still makes it clear that he will hear their prayers *from heaven*. Nonetheless, third, his name, eyes and heart will be in the temple. "Name" represents an extension of self. Eyes were understood as representing gathering of information and, therefore, "knowing." In English, "heart" is used metaphorically for the seat of emotions in contrast to logic and reason. Hebrew uses it as the center of both emotions and reason/intellect. This usage is also true of the related Semitic languages such as Ugaritic, Aramaic and Akkadian. For more information on temple ideology see next comment. The prayers that God will hear at the temple would not come from organized prayer meetings once a week but from the petitions (national, royal, priestly or individual) that would be associated with the burnt offerings. Finally, the threat against the temple and the people who would neglect it is paralleled in the ancient Near East in the gods who abandon their temples and their cities because of offenses, typically in the category of ritual neglect. Here Israel is warned against neglect of the law, which included rituals, but was much more extensive.

7:16. temple ideology in the ancient Near East. The temple here is seen as the receptacle of God's power on earth. It is from there that he will see what is happening and from where he will act (emotions and decisions). In the ancient Near East the temple was considered to be a microcosm of the land. It represented either the cosmic mountain (Mesopotamia) or the primeval hillock (Egypt) out of which all else emerged. It was a palace that paralleled the palace where the deity dwelt either in heavenly

places or on the heavenly mountain. The deity was believed to be "in" the statue that was his representation in the temple; but the idol was not the deity (for more information on idols, see comments on Deut 4).

8:1-18
Solomon's Accomplishments

8:2. villages given by Hiram. See the comment on 1 Kings 9:11, which describes how Solomon transferred twenty cities in the Galilee region to Hiram of Tyre. If these are the same cities referred to there, it is possible that Hiram is returning them for any of several reasons. If this is referring to a different incident, the text offers no information concerning the location of the cities or the arrangements that led to their transfer.

8:3. Hamath Zobah. In earlier passages these are two separate areas (see comments on 2 Sam 8), but by the time of Solomon they appear to have been joined under one ruler. Zobah and Hamath were at the extreme northern border claimed for Solomon's kingdom. Any expedition there would be more likely in the form of a pacification campaign or show of force, such as the Mesopotamian kings' claims of expeditions "to the sea." Hamath was known for its pasturage and was later used by Assyrian kings as a way station for grazing horses. It is not unlikely that Solomon could also have made this use of it, as he imported horses from Kue (see comment on 1:16).

8:4-6. building projects. See the comment on 1 Kings 9:15-19 on Solomon's building projects. Tadmor is the oasis of Palmyra (about 125 miles northeast of Damascus) on the caravan route linking Palestine to northern Arabia. The twin cities of Upper Beth Horon, Beit Ur el-Foqa (about two miles northwest of Gibeon), and Lower Beth Horon, Beit Ur et-Tahta (about a mile and a half further to the northwest, and about one thousand feet lower in elevation), guard the Beth Horon pass. The pass leads into the Aijalon Valley (referred to in the Amarna texts as Ayyaluna), the major route from the hill country to the coastal plains. It has been suggested that Beth Horon is the city referred to as Bit Ninurta in the Amarna letters. Baalath is generally identified with Kiriath Jearim or a site in its vicinity east of Jerusalem (Josh 15:9; 18:14). Listed as a city within Judah (Josh 15:60), the site is commonly identified with Tell el-Azhar, nine miles west-northwest of Jerusalem, but this is unsubstantiated by archaeological finds or extrabiblical references. The effect of all this effort is to fortify strong points, establish trading stations along major commercial routes and make it clear that Solomon's jurisdiction is recognized along his borders.

8:7-10. forced labor. See the comments on 2 Chronicles 2:2, 7 regarding the use of resident alien populations on forced labor projects.

8:13. Sabbaths, New Moons and three annual feasts. See 2 Chronicles 2:4 for a similar list of major religious obligations—from weekly to yearly. For the three annual feasts see the comments on Deuteronomy 16:1-17.

8:17. Ezion Geber and Elath. Ezion Geber was a port city located at the head of the Gulf of Aqaba and may be either Tell el-Kheleifeh (which some identify as Elath) or on the island of Jezirat Far'on (Coral Island), the only site in the region with evidence of an ancient harbor area. The latter has been substantiated by underwater archaeological work that showed massive walls and jetties (though not Iron Age) and a small amount of Iron Age pottery. Study has shown its use by Egyptian mariners and the technology used for the artificial harbor is similar to that found at Phoenician Tyre. Elath is a settlement on the north coast of the Gulf of Aqaba that served as a trading port for the Red Sea and Arabian shipping.

8:18. Ophir. This nation supplied large quantities of exotic wood and precious stones (1 Kings 10:11), as well as serving as either a source or market for gold (1 Kings 9:28). Outside the Bible the only mention of Ophir is in an inscription from Tell Qasile (eighth century B.C.), and it does not aid in establishing its location. Suggestions for Ophir's location include Arabia, India and the Somali region of Africa.

9:1-12
The Queen of Sheba

9:1. Sheba. Suggestions on locating Sheba most often place it in the southwestern corner of the Arabian peninsula (possibly Yemen). This would place it in close proximity to the trade routes from Mesopotamia, as well as the links, through shipping on the Red Sea, with Africa and India. Sheba had contact with Syria-Palestine as early as the mid-second millennium. Solomon's new trading center and harbor at Ezion Geber in the Gulf of Aqaba may have threatened Sheba's camel caravans with competition. It would be only natural that the ruler of this area would want to establish friendly relations with a growing commercial power. The queen here is not mentioned by name, though Assyrian contacts with Arabia in the

first half of the first millennium often dealt with powerful queens. She may have been either the ruler or the consort of the ruler, dispatched by her husband on this important diplomatic mission. The journey was about fourteen hundred miles long and would have taken many weeks.

9:1-4. test of wisdom. The wisdom contest is a familiar theme in ancient Near Eastern literature. Babylonian literature represents it in the context of fables that use animals or plants as the combatants. Even from Sumerian times the literature reflects the staging of debates that will determine which party is the wisest. Kings were supposed to be characterized by wisdom—it came with the territory, though typically the gods were credited with having bestowed it. Ashurbanipal boasts not only of his great learning and wisdom, but of his technical knowledge and his ability to debate the learned. He credits Shamash and Adad for granting him his wealth of wisdom. Proofs of wisdom included rebuilding cities and temples, developing previously unused land, constructing irrigation works and conducting ritual observances. Most of these were construed as acts of piety.

9:4. food on his table. One expression of extreme wealth would be the display of quantities and varieties of food on the royal table. It was a singular honor to eat at the king's table and the number of persons who could be accommodated there was a sign of the power of the ruler. It also functioned as a human parallel to the divine banquet table so often portrayed in Mesopotamian epic texts (such as in the Tale of Adapa). Royal banquets in the ancient Near East featured an extensive and sophisticated *haute cuisine*, as has been demonstrated by the tablets preserving many ancient recipes.

9:4. seating of his officials. The size of Solomon's bureaucracy and power as a monarch might be estimated by the number who would regularly be seated at his table. It was also a further expression of the wealth of his kingdom that he could continuously provide for these men (note Jezebel's accommodation of 450 prophets of Baal and 400 prophets of Asherah in 1 Kings 18:19).

9:4. attendants and cupbearers. The multitude of Solomon's retainers and the sumptuousness of their official liveries provided the queen of Sheba and others with graphic proof of his wealth and power. It also established Solomon's court as being on a par with those of Egypt, Mesopotamia and Persia, who also judged power by the number of servants in evidence.

9:9. 120 talents of gold. Among the gifts brought by the queen of Sheba is a quantity of gold amounting to nearly eight thousand pounds (four tons). Such an amount would perhaps better be termed a tribute payment or a share contributed in the establishment of a business partnership. In 1 Kings 9:14 this is the same amount received from Hiram of Tyre. For information concerning amounts of gold see comment on 1 Chronicles 22:14.

9:9. spices. Sheba would have been set right on the principal trade routes for frankincense and myrrh, both of which were on a par with gold in terms of value. Evidence of the incense trade can be found in the reliefs at Deir el-Bahari depicting the pharaoh-queen Hatshepsut's expedition to Punt in southern Egypt. Similarly, the aromatic oils, perfumes, medicinal and embalming substances followed these same trade routes. They would be a fitting gift to add to the king's treasury. For more information on frankincense see comment on Leviticus 2:1. For more information concerning the use of spices see comment on Exodus 30:23-24.

9:9. precious stones. Hoards of precious stones have been found in excavations at Megiddo, Gezer and Ezion Geber, including carnelian, agate and alabaster. Engraved gems, used as signets or jewelry, have appeared at Phoenician sites as well as at Ugarit and Byblos, and Egyptian scarabs made of steatite or faience are found at many sites. In the ancient Near East stones (including gemstones of various sorts) were believed to have apotropaic value (offering protection from spirit forces). A seventh-century B.C. Assyrian handbook preserves a list of various stones and what they "do"—possibilities range from appeasing divine anger to preventing migraine headaches. One ritual text lists twelve precious and semiprecious stones that are to be used to make a phylactery to be worn as a necklace. Additionally, unusual nonprecious stone was treasured for use in mosaics (see comment on 1 Chron 29:2).

9:10-11. algumwood. See the comment on 2 Chronicles 2:8 on this species of juniper and its relation to almug wood, sandalwood, in 1 Kings 10:11-12.

9:11. harps and lyres. Musical instruments can be constructed of a variety of different woods, and this could effect their sound quality (see sandalwood and juniper in the comment on 2 Chron 2:8). Images of the lyre have been found on a Megiddo ivory plaque (twelfth century B.C.) and coins. Harps appear in many contexts, including the Egyptian relief from the time of Rameses II (thirteenth century B.C.)

of a blind harpist. For more information on harps and lyres see comment on 5:12.

9:13-31

Solomon's Wealth

9:13. 666 talents of gold. This is an incredible amount equal to about twenty-five tons of gold. Perhaps one way to make comparison would be the tribute lists of the Assyrian annals (Sennacherib is said to have demanded thirty talents [nearly a ton] of gold from Hezekiah). This amount represents a vast trading network generating revenues far beyond those of most other nations (note the amounts recorded in 1 Kings 9:14, 28 and 10:10). For information concerning amounts of gold see comment on 1 Chronicles 22:14.

9:15-16. gold shields. The five hundred shields of "hammered gold" (a term peculiar to this context) were designed for ceremonial purposes and as a demonstration of Solomon's wealth. The larger shields weighed 7 1/2 pounds, while the smaller shields contained 3 3/4 pounds of gold. They are mentioned in the story of Shishak's looting of Jerusalem in 1 Kings 14:25-28 along with their replacement by bronze shields (clearly a sign of changed economic posture and a step away from Israel's "golden age"). Ceremonial showpieces (such as the gold swords and axes at Ur) have been found at excavations. Ceremonial bronze shields have been found by archaeologists in the ancient Near East, but no gold ones as yet. Nevertheless, Sargon II lists six gold shields in his booty list from Urartu, each said to weigh over fifty pounds.

9:17-19. throne. The magnificent throne of Solomon's palace can be compared, at least in materials and construction, with Phoenician furniture, such as the eighth-century ivory throne recovered from tomb 79 in Salamis, Cyprus. On the sarcophagus of the Phoenician king, Ahiram, he is portrayed on a throne flanked by winged lions. Sennacherib's reliefs depicting the plunder taken from Lachish (701 B.C.) include images of decorated thrones. Like the throne of the Ugaritic Epic of Baal, Solomon's was elevated above all others, demonstrating his position of power. The golden footstool also has a Ugaritic counterpart, indicating that only the king could sit in a relaxed position, totally secure in his authority and possession of the land (for the ark as Yahweh's footstool see comment on 1 Chron 28:2).

9:20. Palace of the Forest of Lebanon. See the comment on 1 Kings 7:1-12 for the description of this palace. The likelihood that it functioned as both a royal residence as well as an arsenal is indicated by the golden shields displayed there (vv. 15-16) and the storage of more practical weapons in Isaiah 22:8.

9:21. trading ships. The mention of large cargo vessels known as Tarshish ships seems to indicate a type of ship employed in the Red Sea and Arabian coastal trade (see Is 2:16). Here the Chronicler refers to ships dispatched to Tarshish (a source of precious metals in Jer 10:9 and precious stones in Ezek 28:13, probably located in the western Mediterranean—possibly Carthage or southwestern Spain). This would greatly expand Solomon's trading links and suggests an even broader commercial partnership with the Phoenicians. For more information about ships see comment on 1 Kings 22:48.

9:21. ivory, apes and baboons. In addition to the large quantities of gold generated by Solomon's commercial enterprises, luxury items were also transported from exotic places to Israel. The Hebrew terms of the "ivory, apes and baboons" only appear in this passage and are probably loan words or Hebrew approximations of the native words. For example, there is some uncertainty whether to translate the third term as "baboons" or "peacocks." Eleventh- and tenth-century Assyrian kings also boasted of collections of exotic animals, specifically including the mention of apes.

9:25. chariot cities. Typically a chariot team included three horses with only two being used at any one time and the third kept as a reserve. The three would be stabled together, so twelve thousand horses for four thousand pens is the correct proportion, indicating four thousand chariot teams. Nevertheless, 1 Kings 10:26 reports that Solomon had fourteen hundred chariots. This is a large contingent of chariots but not as large as the two thousand contributed by Ahab to the western alliance that met the Assyrians at the Battle of Qarqar in 853 (see comment on 1 Kings 22:1). In the thirteenth century the Hittites and their allies had amassed twenty-five hundred chariots to confront Rameses II at the Battle of Qadesh. The implication is clear that Solomon had stationed sufficient forces on his borders to insure adequate protection and a strike force capable of quick retaliation or punitive campaigns.

9:29. sources. The parallel text to this summary statement on Solomon's reign is found in 1 Kings 11:41-43 (see comment there for information about royal annals). However, the Chronicler's list of additional sources of information includes the writings of two of Solomon's contemporaries, the prophets Nathan

and Ahijah. The third source, the visions of Iddo the seer, may refer to the figure in 2 Chronicles 12:15. Their citation is both an indication that the Chronicler drew his account from a variety of written and oral sources and may also suggest a direction or perspective he would encourage the reader to pursue further.

10:1—12:16
The Reign of Rehoboam

10:1-2. chronology. The year of these events is pretty firmly established at 931 B.C. (see comment on 12:2).

10:1. Shechem. The choice of Shechem for this political summit meeting suggests two things: (1) Rehoboam is in a weak political situation in comparison to David, since in 2 Samuel 5:1 the tribal leaders came to David's capital at Hebron to acknowledge him as king, and (2) having the meeting in the heart of territory associated with the premonarchic leadership of Joshua (Josh 24) and cultically a rival to Jerusalem (see the comment on 1 Kings 12:25) put Rehoboam at a further disadvantage. In fact Rehoboam was taking a chance in coming here away from his own power center. His lack of insight and administrative finesse in the negotiations are thus presaged by the meeting site.

10:4. Solomon's harsh labor. Just as the Persian king Cyrus charges his Babylonian rival Nabonidus with inflicting "forced labor service" on his people, the elders of Israel ask for a reduction in this practice by Rehoboam's administration. There is precedent in Mesopotamian documents for a new king to issue a *mesharum* decree manumitting a class of slaves or reducing the tax burden for a city or a district. Clearly there were grounds for discontent among the tribes, and a compromise was needed to hold the kingdom together.

10:6-8. elders. There seems to have been a division within the royal household/bureaucracy between "new" and "old" men (i.e., those who had been elevated to the status of adviser to the king recently and those with long service). The "elders" would represent those who had been in office during the time of Solomon. They may have come either from the royal family (half brothers, cousins like Jonadab in 2 Sam 13:3) or the civil service. The newcomers would most likely be made up of Rehoboam's own cousins and half brothers that were his contemporaries. The Sumerian Epic of Gilgamesh and Aka also features a situation in which Gilgamesh seeks advice first from the elders (who advise against rebellion), and then the young men of the city (who make up the armed forces, and advise rebellion). There also the advice of the young men is followed.

10:11. whips/scorpions. The practice of using whips to drive slaves or animals, or as an instrument of torture has a long history. Some have identified the scorpions here as the type of whip that has fragments of metal or glass attached to the tip (which the Romans called "scorpions"). So far this type of whip is not attested either in excavated finds, reliefs or literature prior to Roman times. In one Akkadian word list, however, a copper scorpion is listed along with copper fetters for slaves. Akkadian scholars have tentatively identified this as a barbed metal tip of a scourge.

10:16. tenuous union of Israel and Judah. The rallying cry of the northern tribes had been raised once before during Sheba's revolt (see the comment on 2 Sam 20:1). It is easy to think that the unity of the twelve tribes of Israel as a single people was natural and intrinsic. But that is not the case. In fact they were twelve independent tribal units with much to drive them apart. The unity that had been achieved during the time of David and Solomon was achieved only with great skill and effort, and in a time of prosperity. However, the elements that hold such political entities together were only a generation old and, like chiefdoms (such as that organized by Saul among the Israelite tribes), it is still too dependent on the personality of the ruler. The tendency of chiefdoms and empires is to fragment at the least provocation. Now the cost of unity and the differing perspectives of north and south easily drove a wedge between them when it became clear to the northern tribes that Judah and the Davidic house had no intention of compromising with their requests for more local autonomy and lower taxes.

10:18. death by stoning. See the comment on Deuteronomy 13:10 for stoning as a method of capital punishment. Adoniram's death is like the first shot of a rebellion or a riot. It is almost poetic justice that the man in charge of public works (including the movement of rocks) should die in a hail of stones.

11:1. 180,000 fighting men. This is an extremely large number for just the tribes of Judah and Benjamin. It is about the same number of soldiers that served in the combined armed forces of America during the entire course of the Revolutionary War. Modern estimates of the actual total population size during this period suggest that there were no more than three hundred thousand inhabitants in the southern kingdom. In Neo-Assyrian records from the ninth and eighth century the size of the Assyrian army increases from

about forty-five thousand (Shalmaneser III) to over two hundred thousand (Sennacherib). The twelve-nation western coalition confronted Shalmaneser at the Battle of Qarqar with as many as sixty thousand. The largest Hittite force reported was nearly fifty thousand (for the Battle of Qadesh, thirteenth century). All of this suggests that the word translated "thousand" in these passages should be rendered by its alternate meaning, "companies" or "divisions." Rather than a specified number, it has been suggested that each clan supplied a division with the number varying dependent on the size of the clan. Later in history these companies were standardized as having a thousand, but here there may be far fewer in a division.

11:2-4. prophetic oracle related to battle. In this period of preclassical prophecy the prophets of Israel served in very much the same role as did their ancient Near Eastern counterparts (see comments on Deut 18:14-22). One of the most frequent areas addressed concerned, as here, the advisability of military activity. Since it was believed that God's involvement was essential for the success of the military, the entire sequence begins with the divine command to go into battle. This divine command can be seen as typical in the royal inscriptions of the Assyrians. It was also important to consult the deity about timing and strategies. Sometimes, however, oracles were received unsolicited or unexpectedly. One example of this is found in a Mari text that describes a dream warning King Zimri-Lim not to go on campaign.

11:5-12. fortified cities of Judah. All of the cities listed, except Adoraim (modern Dura, three miles west of Hebron), are known from other sources (for instance, in the invasion of Shishak, see 12:2) and are located in Judah. They form an inner line of defense of the Jerusalem hills. There are four groups, ranging north to south, at strategic points guarding major approaches and highways: (1) Bethlehem, Etam, Tekoa and Beth Zur guard the eastern boundary; (2) Soco, Adullam, Gath and Maresha guard the west; (3) a southern line of defense includes Lachish, Ziph and Adoraim; (4) Zorah and Aijalon seem to function as northwestern fortresses, while Hebron (David's old capital in 2 Sam 2:1) may function as a staging point or regional center for both the south and the west. Archaeological research has not provided much help in identifying the building that Rehoboam did, though a few of the sites (particularly Lachish) show some evidence of this fortification work.

11:11-12. provisions for fortified cities. The garrisons within Rehoboam's fortress cities had to maintain a good stock of provisions and weapons in order to be effective guardians of the border. Like the Mari administrative lists detailing the amount of food, oil and beer necessary to sustain troops for various periods of time (ten or fifteen days or a month), the Chronicler has provided an abbreviated summary (lacking quantities and the times for regular delivery) of rations.

11:15. goat and calf idols. For information concerning the calves see comment on 1 Kings 12:28. Goat idols most likely refers to satyrlike demons who were believed to haunt the open fields and uninhabitable places. They are referred to only a few times in the Old Testament and have no known parallels in the ancient Near East.

11:22-23. princes as administrators. One of the principal methods of training the crown prince as well as other members of the royal family was to appoint them to administrative positions. Abijah's position might even be considered a coregency with his father Rehoboam (see 21:2-4). The Egyptian records and Mesopotamian annals regularly describe the appointment of royal sons as governors or district administrators (for example, see the Assyrian king Shamshi-Adad's appointment of his sons Yasmah-Addu and Ishme-Dagan to rule portions of his kingdom).

12:2-4. Shishak's invasion. Shishak's own account, recorded on the walls of the temple complex dedicated to Amon at Karnak (Thebes), contains a list of over 150 cities that he claims to have conquered, along with vague references to tribute garnered from the land of Syria. Jerusalem is not mentioned in the list, and the sites that are chronicled are in both southern and northern Israel. Using Gaza as a base, several divisions proceeded through the Negev, while the main force went through the Shephelah toward Jerusalem. It then turned north through the central hill country, went westward through the Jezreel Valley to Megiddo, and then followed the Trunk Road south along the coast. His itinerary also included a foray into Transjordan, crossing east at Adam and then back west heading to Beth Shan. Archaeologists have identified destruction levels at many of the named towns coinciding with this time period.

12:2. chronology. Egyptian sources place Shishak's reign and the founding of the Twenty-Second Dynasty between 945 and 924 B.C. Rehoboam's accession to the throne came in 931, so his fifth year would be 927, a plausible time

after the death of Solomon and the division of the kingdoms.

12:3. Libyans, Sukkites, Cushites. Among the Egyptian troops are levies from southern and western areas bordering on Egypt (Libya, Nubia). Since Shishak is a Libyan, it seems reasonable to expect he would include regiments of his own tribal peoples in his campaign. It is also known that he conducted campaigns in Nubia and probably had coerced their cooperation in this joint venture. The Sukkites do not appear elsewhere in the Bible but are known from thirteen and twelfth-century Egyptian sources (there called *Tjukten)* as a people related to the Libyans. Their twelve hundred chariots are comparable to what Solomon's force had been (see comment on 1 Kings 4:26).

12:9. Shishak's booty. Many of the gold and silver objects that had been manufactured for the temple, including the famous golden shields (see comment on 9:15-16), were carried away as tribute paid to avoid the destruction of Jerusalem. This may have made up the lion's share of the two hundred tons of gold and silver that Shishak reports having contributed to the temples of his gods.

12:13. Rehoboam's mother. Since Solomon is known to have married women from many countries, including Ammon (see 1 Kings 11:1), it is not unusual that Rehoboam's mother, Naamah, should be an Ammonite. Her marriage would most likely represent a political alliance between the two countries. The practice of regularly naming the mother of the kings of Judah may indicate that the office of queen mother was significant (see comment on 1 Kings 2:19).

12:15. sources. The genealogical lists of Iddo the seer may be compared to other works associated with this prophetic figure (2 Chron 9:29 and 13:22), but he is not named in any of the narratives of this period. The "records of Shemaiah" are probably a separate, extrabiblical history that the Chronicler drew on in creating his summary of events. Shemaiah is the prophet who warns Rehoboam against civil war and who exhorts him to repentance in the context of Shishak's invasion (see 2 Chron 11:2; 12:5).

12:15. wars between north and south. There were no full-scale wars between the two states, but the continual border skirmishes, lasting until the reign of Jehoshaphat (1 Kings 22:44), would have been troublesome and bloody enough to cause a continual drain on their resources. They might be compared, on a smaller scale, to the conflict between David and Ishbaal in 2 Samuel 2:12-32.

13:1-22

The Reign of Abijah

13:1-2. chronology. This is the first appearance of the synchronistic recording of Israel's and Judah's kings (see 1 Kings 15:1). However, unlike the writer(s) of Kings, the Chronicler only uses this dating formula in this single instance. Based on Jeroboam's accession in 930 B.C., Abijah's rule began in 913.

13:2-20. battle between Abijah and Jeroboam. The location of the battle, Mount Zemaraim, has not yet been positively identified but is usually placed in the vicinity of Bethel. The most familiar identification is with Ras et-Tahuneh. The rhetoric in Abijah's speech suggests that his intention is to reunite the north and south, by conquest if necessary. This is open pitched battle rather than the siege of a city. As is common in Chronicles, the size of the armies (1.2 million) is much larger than expected but is not the largest in ancient reports. Herodotus has usually been considered guilty of gross exaggeration when he reports that the army Xerxes fielded against the Greeks was comprised of five million people. For comparison, consider the Battle of Gettysburg with combined forces of 165,000. Additionally, the half-million casualties for the northern kingdom in this one battle would rival the bloodiest battles in history. In ancient records the Assyrian king Arik-den-ili claims to have killed 254,000. His nearest rival is Sennacherib, who claimed he inflicted 150,000 casualties at the Battle of Halule. Allied casualties in the First Battle of the Somme (France, 1916) were about 623,000. This battle lasted six months and is listed in the Guinness Book of World Records as the bloodiest ever. At the Battle of Gettysburg combined losses were reported at 50,000, only one-tenth of what is reported here. One of the bloodiest battles of ancient history was between the Romans and the Huns at Châlons-sur-Marne (France, 451) where there were 200,000 casualties. For more information see comment on 11:1.

13:5. covenant of salt. In the hot climate of the ancient Near East, salt was necessary for the health of humans and animals, and was the principal food preservative (texts from ancient Mari describe its trade value). When treaties or alliances were made, salt was employed to symbolize that the terms would be preserved for a long time. Babylonian, Persian, Arabic and Greek contexts all testify to this symbolic usage. In the Bible, likewise, the covenant between the Lord and Israel is iden-

tified as a covenant of salt—a long-preserved covenant. Allies entering into such an agreement would generally share a communal meal in which salted meat was featured. Thus the use of salt in the sacrifices was an appropriate reminder of the covenant relationship. Additionally, salt impedes the action of yeast (leaven), and since leaven was a symbol of rebellion, salt could easily represent that which inhibited rebellion.

13:8. golden calves in battle. There is ample precedent for an army to bring their divine images with them into battle. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. Standards or statues of the deity were usually carried to symbolize their presence. Assyrian kings of the ninth and eighth centuries regularly refer to the divine standard that goes before them. The ark, as Yahweh's standard, represents the Lord as clearing the way before the Israelites and leading the armies into Canaan. This concept is not very different from the Assyrian belief that the gods empowered the weapons of the king and fought before him or at his side. Nearly every army in the ancient Near East included priests and diviners (as seen in the Mari texts), prophets (2 Kings 3) and portable sacred objects (Assyrian Annals of Shalmaneser III [858-824 B.C.]). In this way, the god(s) could be consulted on the battlefield or invoked to lead the soldiers to victory.

13:11. priestly rituals. For further information on these ritual activities see comments on Leviticus 6:8-13 and Exodus 25:23-30.

13:19. towns taken by Judah. Bethel, as the site of Jeroboam's southern cult center, was a significant conquest. Later biblical texts make it clear that it was firmly back in Israel's control by the time of Jeroboam II and Amos (Amos 7:10). Jeshanah, near Bethel and seventeen miles north of Jerusalem, has been identified with Burj el-Isaneh, and Ephron (Ophrah in Josh 18:23) is generally identified with et-Taiyibeh, four miles northeast of Bethel. Rehoboam's victory gains him control of the two major routes crossing from the territory of Judah into Israel. These routes run north on either side of Bethel and converge just south of Shiloh. The territory involved comprises about twenty square miles.

13:22. source. The "annotations of the prophet Iddo" is probably by the same prophet mentioned earlier in 2 Chronicles 9:29 and 12:15. Curiously, the only appearance of this prophet's name is in connection with these source materials. He does not appear in any of the narratives.

14:1—16:14

The Reign of Asa

14:3. foreign altars. The amenities that Solomon had provided for his foreign wives included the construction of altars and shrines for their worship of their own gods (see the comments on 1 Kings 11:5-7). These may have been some of the altars destroyed by Asa.

14:3. high places. For more information on high places, see the comments on 1 Kings 3:2-3 and Deuteronomy 12:2-3.

14:3. sacred stones. Standing stones or *maṣṣebot* were apparently a common feature of Canaanite religion and also appear as memorials in a number of Israelite covenantal contexts (see Ex 24:3-8; Josh 24:25-27). Their association with Asherah, Baal and other Canaanite deities are the basis for their being condemned as a rival and threat to Yahweh worship. Archaeologists have discovered sacred stones at Gezer, Dan, Hazor and Arad. In the latter two cases they are clearly within a sacred precinct and part of the cultic practices at these sites. The Hazor stones include incised representations of upraised arms and a sun disk. The stones at Dan are in the gateway, and the clear remains of the presentation of votive offerings are evident.

14:3. Asherah poles. One common feature of Canaanite worship and of syncretized Israelite worship on "high places" and in city shrines is the erection of Asherah poles. There is some uncertainty about whether these were simply wooden poles, erected to symbolize trees or perhaps containing a carved image of the fertility goddess, or whether they were a part of a sacred grove. The reference in 2 Kings 17:10, which refers to Asherah poles beside "every spreading tree," seems to indicate that these were poles erected for cultic purposes rather than planted trees. As the consort of El, Asherah was a popular goddess whose worship is mentioned in Ugaritic texts (1600-1200). Her prominent appearance in the biblical narrative indicates that her cult was a major rival to Yahweh worship. For more information see the comments on Exodus 34:13 and Judges 6:25.

14:7. fortification. Although the Chronicler does not list any of the cities fortified by Asa, it is clear that he had a solid reputation as a builder. Mesopotamian annals and regnal-year titles regularly comment on the king's building activities as evidence of his success. The Chronicler also wishes to include "building" as the hallmark of a "good king," the result being a time of peace and prosperity.

14:8. army equipment. The division of task

within the military is illustrated by Asa's infantry used as shock troops (carrying large shields and spears) and his Benjaminite archers (compare the equipment issued to Uzziah's troops in 2 Chron 26:14). The palace reliefs of the Assyrian king Sennacherib include depictions of soldiers armed with lances and a circular shield used for defense and as a weapon in close fighting. The reliefs of Shalmaneser III portray his archers in long coats of mail and accompanied by a shield-bearer to keep the bowman's hands free and to protect him from missiles. Perhaps the Benjaminite forces did not utilize these auxiliaries, or they attached their smaller shield to their arm so that they maintained some protection while they shot their volleys.

14:9. Zerah the Cushite. Since the Cushites are often identified with the Nubian Egyptian pharaohs (see comment on 2 Chron 12:3), some scholars have identified Zerah with Osorkon I, the Egyptian pharaoh at this time (about 897). Osorkon, the son of Shishak, however, is Libyan, not Nubian. Therefore, if Zerah came with Egyptian forces, he must be a Nubian general working in cooperation with the Twenty-Second Dynasty (who had exerted some control over Nubia during the days of Shishak). Others think it more likely that Zerah was a chief of a Bedouin tribe (see comment on Num 12:1 for this variation of "Cush"). For discussion of the size of the armies see comment on 13:3-20. Hebrew has no word for "million"—the text here refers to "a thousand thousands" (or, a thousand divisions) and would be expressive of an innumerable force. Compare to how we might use "a month of Sundays" to talk about a long, long time.

14:9. chariotry. Considering the number of troops marshaled by Zerah, there is a surprisingly small number of chariots. Even so, each army had its own strengths, and three hundred is still a strong force of chariots. As we know from Mesopotamian and Egyptian records and palace reliefs, two- or three-man chariot crews worked from these mobile platforms to fire volleys of arrows, to carry commanders or messengers about the battlefield and for frontal attacks. Armies often were organized around chariot groups, with contingents of infantry attached to each chariot commander. For comparative sizes of chariot forces see comment on 1:14.

14:10. geography. The battle between Asa and Zerah takes place near Mareshah, a city fortified by Rehoboam and identified with Tell Sandakhanna on the southwestern border of Judah. It is located about four miles northeast of Lachish and nearly thirty miles southwest of Jerusalem. Zephathah (perhaps to be identified with the Zephath of Judg 1:17) only appears in this text. Since it is said to be a valley north of Mareshah, it is probably to be identified as Wadi Guvrin, just north of Mareshah and Beit Guvrin.

14:12-14. Gerar. See the comment on Genesis 20:1 for this site in the western Negev region, whose exact location is still undetermined (Tel Haror, about twenty-five miles southwest of Beersheba, is the most likely choice). Gerar may be the name of a region rather than a city-state, thus explaining the devastation of its cities by Asa.

15:8. detestable idols. Idols are not referred to specifically. The word refers to anything that is utterly revolting or disgusting from a ritual or religious standpoint, particularly prohibited food and objects used in unapproved foreign worship practices.

15:10. chronology. If Asa is attempting to tie his assembly and sacrifice to a major religious festival or event, then the third month contains the theophany at Mount Sinai (Ex 19:1) and the Feast of Weeks (Lev 23:15-16). Since a renewal of the covenant is also part of this event, Asa may be commemorating the covenant renewal at Mount Sinai (Ex 24). The year date places this celebration in 892.

15:16. Asherah pole. See the comment on 14:3 for discussion of the Asherah pole. The influence and political status of the queen mother (see comment on 1 Kings 2:19) could have undermined Asa's reform measures, and this may explain why he so utterly rejected her action and totally destroyed the object.

15:16. Kidron Valley. Located just east of the walls of the city of Jerusalem and containing one of the principal water sources for the city, the Gihon Spring, this would be an excellent staging area for King Asa's destruction of idols. Solomon had erected cult places for Ashtoreh, Chemosh and Molech here (1 Kings 11:7), but later reforming kings like Asa, Hezekiah (2 Chron 29:16) and Josiah (2 Kings 23:13) used the valley to make a show of ridding the nation of corruption.

15:19—16:1. chronology. There are some problems in reconciling the date provided here for the conflict between Asa and Baasha and the information in the parallel text in 1 Kings. For more information see comment on 1 Kings 15:33.

16:1. Ramah. Located just five miles north of Jerusalem, Baasha's incorporation of Ramah (er-Ram) into his territory would have been a cause of great concern for Judah. Just as Rehoboam had extended his control of the main

north-south arteries between Israel and Judah five extra miles (see comment on 13:19), so now Baasha pushes his control of the same arteries five miles south of the traditional line between the nations. There have been no excavations on the site.

16:2-3. treaty with Ben-Hadad. Based on the manner in which this treaty is described here and in the parallel text in 1 Kings 15:18-19, it would appear that Aram had been maintaining a policy of nonintervention, perhaps awaiting the best offer from the warring parties. Ben-Hadad I ruled during the first part of the ninth century, though no precise dating is possible. For information concerning the difficulties of Aramean history of the ninth century see comment on 1 Kings 20:1.

16:4. conquests of Aram. Ben-Hadad's attack on northern Israel, at the instigation of Asa, cost Baasha an important trade corridor. The cities captured in this campaign (see 1 Kings 15:20) include Dan (the northern cult shrine), Ijon ('Ayyun) at the northern end of the Huleh Basin (about ten miles north of Dan), Abel Maim (Abel Beth-Maacah in 1 Kings), all of which are on the road between Syria and the Phoenician coastal cities of Tyre, Sidon and Acco. The fact that Ijon is mentioned first suggests an attack from the west and ranging south. It is unknown how long Aram was able to hold these towns, but they are clearly back in Jehu's hands a few decades later, according to 2 Kings 10:29. The inscription from Dan mentioning another Syrian campaign against northern Israel suggests that this was a continual threat that had to be faced by Israel's rulers.

16:6. Geba and Mizpah. These two cities, now refortified by Asa with materials taken from the defenses at Ramah, guard the northern border of Judah. Geba (modern Jaba', four miles northeast of Jerusalem) appears elsewhere as the northern limit of Judah (2 Kings 23:8) and functions as the guardian of the Micmash Pass. Mizpah (Tell en-Nasbeh, eight miles north of Jerusalem) stood as the fortress dominating the watershed highway on the frontier between Israel and Judah. By fortifying these cities Asa cut off further action against Ramah. Mizpah is about three miles north of Ramah guarding the road from Bethel to Ramah. The excavations at the site have uncovered a wall with eleven towers dating to this period. The wall was twelve to fifteen feet thick and thirty-five to forty feet high. Geba is about two miles east of Ramah blocking access from that direction.

16:7. seer. Although Hanani the seer only appears in this passage, he is mentioned as the father of Jehu the prophet in 1 Kings 16:1; 2 Chronicles 19:2; 20:34. The title seer, *ro'eh*, apparently was an alternative term for prophet (*nabi'*; see the comment on 1 Sam 9:9).

16:9. eyes of the Lord. This imagery provides a sense of the universality of Yahweh's vision (equivalent to omnipresence) and involvement (reflecting his sovereign control). A Babylonian boundary stone from the end of the second millennium speaks of the moon god Sin as "the eye of heaven and earth."

16:12. foot disease. Some attempts have been made to diagnose Asa's foot disease as gout (uncommon in biblical times) or gangrene brought on by the obstruction of blood flow. The fact that Asa chose to consult only physicians, who were at times associated with magical rituals or, at best, herbal remedies, further demonstrates his failure to seek God's aid and thereby contributed to his own death.

16:14. fire in his honor. Royal tombs were hewn into the sides of cliffs. The funeral rites for Asa are quite elaborate and include the burning of spices in his honor as well as a general lamentation and internment in his family tomb. The fire does not imply cremation of the body or an attempt to mask the odors associated with a diseased body, but was rather an expensive display of the king's wealth. The practice is well known among Assyrian kings, where it was used as an apotropaic ritual.

17:1—21:3
The Reign of Jehoshaphat

17:2. fortified towns in Ephraim. As noted in 2 Chronicles 15:8 Asa had extended his control northward into the Ephraimite hill country. It seems a natural continuation of this policy for Jehoshaphat to fortify these unspecified cities. There is also no specific mention of the number of troops stationed here. We know from the Lachish letters of a later period that regular correspondence was maintained with these types of outposts and that fire signals were used as an early warning system.

17:3. consulting Baal. "Consulting" refers to asking the deity for oracles. This would usually occur at a shrine dedicated to the deity, and the oracle would be mediated by the priests of that deity. In the ancient world oracular answers were often given by diviners, who would read favorable or unfavorable answers in the entrails of a sacrificed animal. Even while the Israelites fully acknowledged Yahweh as their national patron deity, some were

inclined to continue to associate Baal with fertility and to consult him regarding agricultural issues. Also on daily issues such as sickness and health, they sometimes chose to look for information from Baal rather than from Yahweh (see 2 Kings 1:2).

17:6. removed high places and Asherah poles. See comment on 14:3.

17:11. Arabs. The Arabs referred to in the Old Testament inhabited the fringes of the Syrian desert, extending also into the Negev and the Arabian peninsula. Arabs begin to be mentioned in Assyrian royal inscriptions at about this time (for instance, they were one of the allies in the Battle of Qarqar).

17:12. building projects. Most of this building was military in nature providing garrisons, supply centers and border outposts to guard the entries into the land. Archaeological evidence of a line of fortresses in the Jordan Valley and adjacent to the Dead Sea may be associated with his reign. Supply centers were meant to stockpile food and other necessities in case of siege or famine.

17:14-19. Jehoshaphat's army. The conscript army of Jehoshaphat is exactly twice as large as that of his father Asa, well over one million men (see 2 Chron 14:7). For discussion of army sizes see comment on 13:2-20. Its divisions into clans follows the pattern found in other levies (1 Chron 27:1). Looking beyond the large numbers, the style of listing the contingents suggests a form of regimentation and a careful report reflecting proper protocol with regard to rank and organization.

18:1. marriage alliances. The wives of an ancient ruler or his children usually represented political alliances. Marriage was a tool of diplomacy throughout the ancient Near East. Towns, city-states, tribes or nations who wished to ally themselves with a ruler or come under his protection sealed the treaty with the marriage of a daughter of their chief family to the suzerain or his son. For instance, Zimri-Lim, the king of Mari (eighteenth century B.C.) used his daughters to cement alliances and establish treaties with his neighboring kingdoms. Similarly, Pharaoh Thutmose IV (1425-1412 B.C.) arranged a marriage with a daughter of the Mitannian king to demonstrate good relations and end a series of wars with that middle Euphrates kingdom. Solomon's seven hundred wives and three hundred concubines were a measure of his power and wealth, especially his marriage to the daughter of the pharaoh. The marriage alliance between Jehoshaphat and Ahab matched Ahab's daughter, Athaliah, with Jehoshaphat's son, Jehoram.

18:2. down to Samaria. Jerusalem is quite a bit higher in elevation than Samaria, but even if they had been equal, one would still have gone down to Samaria because of the descent out of the Jerusalem hills to go in most any direction. The distance between these two capital cities was about forty miles.

18:2. slaughtering sheep and cattle. Treaties were typically concluded amidst a great feast that would feature a ceremonial meal. These animals would have been sacrificed as an offering bringing divine sanction to the agreement.

18:2. Ramoth Gilead. The site of Ramoth Gilead has not been identified with certainty, but most accept Tell Ramith for its size, location and Iron Age pottery found in surveys. It has yet to be excavated. If this is the correct identification, it is in Transjordan about forty-five miles east of Jezreel. It is strategically located on the King's Highway at the juncture where the road south from Damascus would turn west to cross the Jordan near Beth Shan and enter the Jezreel Valley to connect with the main route of the Trunk Road (see sidebar on Trade Routes in Genesis 38). In 1 Kings 20:34 the Aramean king had promised to return the cities taken from Israel. It is possible that this has not been done, and Ramoth Gilead has remained under Aramean control. This battle brings the death of Ahab and therefore must be in 853 after the Battle of Qarqar against the Assyrians (see comment on 1 Kings 22:1) in which Israel and Aram were allies.

18:4. role of the prophet. In this period of preclassical prophecy the prophets of Israel served in very much the same role as their ancient Near Eastern counterparts (see comments on Deut 18:14-22). One of the most frequent areas addressed concerned, as here, the advisability of military activity. Since it was believed that God's involvement was essential for the success of the military, the entire sequence begins with the divine command to go into battle. This divine command can be seen as typical in the royal inscriptions of the Assyrians. It was also important to consult the deity about timing and strategies. During the time of Saul and David this type of information was usually gained through the priest's manipulation of oracular devices (see comments on 1 Sam 14:10; 22:10; and 23:9-12). Now, instead of asking questions of a priest to receive oracular responses, the questions are being posed to the prophet who, as representative of God, offers the prophetic oracles as messages from God in response.

18:7. prophesying ill. Throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. It is no wonder, then, that a prophet negatively disposed toward a king must somehow be controlled lest he bring about all sorts of havoc. In Assyrian king Esarhaddon's instructions to his vassals he requires that they report any improper or negative statements that may be made by anyone, but he specifically names prophets, ecstatics and dream interpreters. One can perhaps understand why a king would be inclined to imprison a prophet whose very words might incite insurrection or impose doom.

18:9. thrones at the threshing floor. Because of the importance of agriculture and fertility the threshing floor was often a place of ritual importance. Threshing floors were large, flat, open areas and certainly could have been useful for other purposes besides threshing. It is no surprise, therefore, that they should double as an open-air facility when space constraints or the desire for public visibility rendered the palace facilities inadequate. In the Ugaritic Epic of Aqhat, Danil, the king, publicly judges cases at the threshing floor outside the gate of his city.

18:16. scattered like sheep without a shepherd. An inscription of Sargon II of Assyria reports that the commander of the enemy troops fled like a shepherd whose flock had been stolen but later was captured and carried away in fetters.

18:18. vision of the throne room of Yahweh and his council. The familiar picture of a heavenly throne surrounded by the heavenly council is well known from the Ugaritic texts (most notably the Epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth-century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly, with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host. Usually one would expect this council to be plotting strategies to go to war on behalf of Israel, but instead the discussion is directed against Ahab.

18:19. council seeking volunteers. In the Ugaritic Epic of Keret the head of the assembly, El, asks for volunteers from the assembly to drive out the illness of Keret. In the end, however, El ends up taking the task on himself and creates a being to effect the healing.

18:19-22. luring spirit. This is a "mole" operation. When David wanted to undermine the success of his rebellious son, Absalom, he plants one of his advisors, Hushai, in Absalom's inner circle. His assignment is to suggest a strategy that will suit Absalom's natural inclinations but will actually work to David's advantage and accomplish David's plan (2 Sam 15:32-37; 16:15—17:14). Here the same process is at work. God has planned to act against Ahab who is seen as being led to his intended doom through the strategies suggested by trusted advisors (the prophets) that will coincide with his natural inclinations.

18:24. hiding in an inner room. The term used here refers to the place of utmost privacy. One usually retreats there to be alone or to find shelter.

18:26. Micaiah's imprisonment. Prisons were not used in the ancient world for reforming criminals. A hardened criminal might more likely find himself on permanent assignment on a labor crew. Prisons not connected with a labor crew were often located in the palace or temple, though they were sometimes simply pits. Some prisoners were in custody pending a trial, but most prisoners were either working off a debt or were political prisoners. This latter group was considered dangerous to the stability of the state rather to the health of the society. Punitive measures for this group often involved humiliating public display rather than isolated incarceration. Micaiah is being imprisoned to await the outcome of his prophecy and the battle—that will constitute his hearing and trial.

18:29. Ahab in disguise. In Assyria, when there was a bad omen (usually an eclipse) warning of evil tidings for the king, the ritual of the substitute king was sometimes performed. This is attested as early as 800 B.C., but is best known from the seventh century. In this ritual another individual was dressed in the robes of the king, and various rites and incantations were performed to identify this individual with the king. This person then took the brunt of the ill-fate that was to befall the king (usually death). It was believed that in this way the evil tidings could be redirected and the king could avoid his fate. While there is little here that would suggest a substitute king ritual, a similar mentality is minimally reflected in Ahab insofar as he expects to avoid the proclaimed doom on the king by not dressing as the king. It must be noted, however, that the avoidance of evil is more prominent here than the transfer of evil represented in the substitute king ritual (for more informa-

tion on the ritual transfer of evil see comment on 2 Kings 5:27). Most significantly, there is no designated substitute unless Jehoshaphat, by retaining his royal regalia, is intended to function in that role. He became, at the very least, a lightning rod for the doom, just as it was planned for the substitute to be. While Ahab's disguise may in fact fool the enemy soldiers, the greater intention may be to deceive the supernatural forces that would fulfill the destiny which had been prescribed against him.

18:30. Aram's strategy. While the infantry was absorbed in hand-to-hand combat, the Aramean chariotry was specifically targeting the king of Israel. Chariotry typically had very particular objectives in the course of the battle, rather than becoming entangled in the general melee. They might make the initial charge into the infantry, but then would be used to contain the parameters or to pursue certain targets, as here. The strategy of targeting the king was to be able to inflict punishment on him that would prevent future incidents.

18:33. sections of the armor. Armor is described here as made up of two parts: a solid breastplate and a scale-armor kilt. The arrow struck either between the two or between the joints of the scale armor. One of the best descriptions of scale armor comes from the Nuzi texts, where a coat of mail was made up of anywhere from seven hundred to over a thousand bronze scales of varying sizes. These scales were sewn onto a jerkin of leather or cloth. The front and back were sewn together at the shoulders (with a space for the head) and probably reached to the knees. By the ninth century some iron scales were being used.

19:5. appointment of judges. In the Mari documents from the Old Babylonian Period in Syria (c. 2000-1600 B.C.), judges were appointed by the king to perform special tasks, such as assisting in the administration of a territory, acting as a territorial governor, conducting military campaigns and intervening in domestic legal affairs. One can assume that the judicial appointments of Jehoshaphat had more narrowly focused tasks, primarily in the arena of legal affairs. As evidenced by the preface to the Code of Hammurabi (c. 1750 B.C.) and the statements made by the "Eloquent Peasant" in Egyptian wisdom literature (c. 2100 B.C.), the standard for behavior for those in authority is to protect the rights of the poor and weak in society. "True justice" (see Lev 19:15) is expected of kings, officials and local magistrates. In fact, the "world turned upside down" theme found in the book of Judges and in prophetic literature (Is 1:23), describes a society in which "laws are enacted, but ignored" (for example, in the Egyptian Visions of Neferti [c. 1900]). An efficiently administered state in the ancient Near East depended on the reliability of the law and its enforcement. To this end every organized state created a bureaucracy of judges and local officials to deal with civil and criminal cases. It was their task to hear testimony, investigate charges made, evaluate evidence and then execute judgment (detailed in the Middle Assyrian Laws and the Code of Hammurabi). There were some cases, however, that required the attention of the king (see 2 Sam 15:2-4), and appeals were occasionally forwarded on to that highest magistrate (as in the Mari texts).

19:6-7. judicial system. The term for "judges" was used for both God and humans. Their authority came from God, and their main role was to keep harmonious relations between Israelites (or Judahites in this case). During the monarchy the judges were clearly subordinate to the monarch who appointed them. Thus they did not rule as they did in the period of the judges but governed under the auspices of the king. In the ancient Near East, leaders, whether tribal, military, city, provincial or national, had the obligation of judging the cases under their jurisdiction. There was no trial by jury, though at times a group of elders may have been involved in judging a case. When only one individual judge was involved, the danger of favoring the powerful or the wealthy was very real. Both in ancient Near Eastern documents and the Bible impartiality is valued, along with discernment. There were no lawyers, so most people represented themselves in court. Witnesses could be called, and oaths played a very significant role since most of our scientific means of gathering evidence were not available.

19:8-11. role of Levites and priests. After the division of the monarchy many Levites and priests in the north were cut off from Jerusalem and other southern sanctuaries. Jehoshaphat required the Levites and priests, along with the patriarchal family head, to take over the functions of the judges in Jerusalem (i.e., judging disputes). The Levites were in essence court functionaries who carried out the decisions of the court (see comment on Deut 18:6-8). The roles of priests and judges often overlapped, because oracles were frequently used to decide cases. In situations where physical evidence was not present or was insufficient, a verdict could be determined by the reading of omens. This meant that plaintiffs had to consult religious professionals (Levitical priests in Deut 17:9), whose service

included seeking divine verdicts. Many who would come to the capital city of Jerusalem with a legal case would be seeking this type of assistance, so it is logical for this Levitical judiciary to be set up there.

19:11. administrative structure. The Jerusalem court was thus composed of Levites, priests, family heads and judges. There are some parallels with the Egyptian administrations in Dynasty 22 (tenth to eighth centuries B.C.).

20:1. Moabites and Ammonites. Shalmaneser III of Assyria mentions in his annals an Ammonite king, Ba'sa son of Ruhubi, who contributed soldiers to the Aramean confederacy that fought against Assyria in 853 and 841 B.C. The Moabite king was probably Mesha, known from 2 Kings 3 and from a long inscription in Moabite in which he describes his rebellion against Israel (see comment on 2 Kings 3:4). This particular invasion cannot be found in any extrabiblical source. It may have been during a period in which the western coalition against Assyria had broken down and individual states were fighting against one another.

20:1. Meunites. A number of very different opinions exist concerning the identification of this group. The first is that it should be identified with the Minaeans of South Arabia. Their control of the incense trade had extended up into the region of Palestine by the fourth century. Others would identify the group with the Mu'unaya mentioned in the inscriptions of Tiglath-Pileser III. A third possibility links them to the town of Maon south of Hebron in the hill country of Judah. They appear with other groups that inhabited the southern border of Judah.

20:2. Edom. The heartland of Edom is east of the Arabah (the deep gorge extending south from the Dead Sea to the Gulf of Aqaba) from the Zered (Wadi el Hasa) to the Gulf of Aqaba. During most of the period from David until Jehoshaphat, Edom had been an annexed territory of Judah. Here it appears the Edomites have gained some degree of independence, and their territory served as the strategic base for this raid against Jerusalem.

20:2. Hazazon Tamar/En Gedi. The location of Hazazon Tamar is unknown, but some have placed it near the southern end of the Dead Sea, possibly at el-Hasasa, between En Gedi and Bethlehem. The oasis of En Gedi lies midway down the Dead Sea and approximately thirty-five miles southeast of Jerusalem. Fed by a continuous spring, it is a splash of life and color in the midst of an otherwise barren landscape. It has served as a cultic site, military outpost and commercial center during its long history. There are a number of fortresses from the period of the monarchy that have been discovered in this area. One is at the spring, while another is at the top of the cliff that offers a view of travelers for miles around.

20:10. Mount Seir. Mount Seir was in Edom. Seir is generally considered the mountainous central region of Edom (elevations generally over five thousand feet) between Wadi al-Ghuwayr on the north and Ras en-Naqb on the south. In this case, the term probably referred to the entire land of Edom itself.

20:16. pass of Ziz. The pass of Ziz has often been associated with the Wadi Hasasa, which drains about nine miles southeast of Tekoa into the Dead Sea. The context of the passage suggests that the pass was an important link between Jerusalem and En Gedi.

20:16. desert of Jeruel. The wilderness of Jereul was southeast of Tekoa on the descending plain to En Gedi.

20:19. Kohathites and Korahites. The Kohathites and the Korahites were two of the principle families that were involved in the leadership of the Jerusalem temple during the period of the monarchy. They were also two of the most important Levitical families (or clans). In the genealogy of 1 Chronicles 6:22-24 (also see Ex 6:18, 1 Chron 6:31), the Korahites were descended from the Kohathites.

20:20. Desert of Tekoah. The Desert of Tekoah extended east of Tekoa (Khirbet Tequ'a), a town in the highlands of Judah. The area was approximately twelve miles south of Jerusalem.

20:26. Valley of Berakah. The location of the Valley of Berakah ("blessing, praise") is not precisely known. Some scholars believe it may have been Wadi Berekut, between Tekoa and En Gedi.

20:28. harps, lutes and trumpets. The lyre had a widespread use in the ancient Near East. Egyptian tomb paintings show individuals from the Transjordan playing the lyre. The harp was evidently used in Nebuchadnezzar's orchestra (see Dan 3). In Israel it was a wooden instrument with eight strings (see 1 Chron 15:21). There were different types of trumpets used in ancient Israel. This particular type of trumpet was used on military and religious occasions to summon the people. Trumpets are occasionally depicted in the art of the ancient Near East, including the bronze figure of a trumpet player from Caria in southwest Turkey (c. 800 B.C.).

20:31. chronology. According to Thiele, Jehoshaphat ruled 872-848 B.C., and most other reckonings only differ a year or two from

those dates. It has been suggested that he was coregent with his father Asa for the first three years of his reign. Contemporary kings in Israel were Ahab, Ahaziah and Joram. Ashurnasirpal II and Shalmaneser III ruled Assyria. No references to Jehoshaphat have yet been found in extrabiblical materials.

20:33. high places. For more information on high places, see the comments on 1 Kings 3:2-3 and Deuteronomy 12:2-3.

20:34. annals. The various annals mentioned in 1 and 2 Kings and 1 and 2 Chronicles that were recorded in the Book of the Kings of Israel are no longer extant. However, one can surmise that they were similar in structure and context to annals of kings from other areas in the ancient Near East. The Assyrians left detailed military annals of their later kings (from about 1100 B.C. onwards), describing military campaigns, strategy, relations with client kings and piety toward national gods. Hittite, Egyptian and Babylonian annals from the mid-second millennium B.C. are similar in nature. It can be assumed that other kingdoms in Syro-Palestine also composed annals.

21:1. chronology. By Thiele's reckoning, Jehoram ruled 853-841 B.C. It has been suggested that he was coregent with his father Jehoshaphat for the first five years of his reign. Contemporary kings in Israel were Ahaziah and Joram. This is a critical period featuring numerous western campaigns by the Assyrian king Shalmaneser III (see comment on 1 Kings 22:1).

21:3. gifts. Jehoshaphat followed a precedent of Rehoboam by placing his sons in fortified towns where they were well provided for (by means of the gifts, see 2 Chron 11:23). This was a well-known Assyrian practice. For example, Esarhaddon (reigned 681-668 B.C.) placed his elder son, Shamash-shum-ukin, on the throne of Babylon, while his younger son, Ashurbanipal, was given the throne of Assyria. Nonetheless, the elder son did not find this "gift" satisfactory and began a civil war soon thereafter.

21:4-20
The Reign of Jehoram

21:4. killing brothers. The practice of removing all other possible claimants to the throne was a well-known practice in the Old Testament (see Judg 9:5 and 2 Kings 11:1) and the ancient Near East. Because of monarchs having multiple marriages (or multiple concubines) and therefore many sons, there were often a large number of claimants to the throne. Rameses II of Egypt (reigned c. 1292-1225 B.C.) had over fifty sons, for example. Since most kingdoms did not always employ the practice of primogeniture, the succession to the throne was often in question.

21:6. relations to Ahab. Marriage alliances between kingdoms was not only a common custom but was considered indispensable for forging good relations with potentially hostile neighbors. One can reconstruct the present scenario here in 2 Chronicles. Jehoshaphat was a close ally of Ahab and thus cemented this alliance with the marriage of his son Jehoram to Ahab's daughter, Athaliah, daughter of Jezebel. Of course, this also brought in Baalistic worship to Judah from Phoenicia, the homeland of Jezebel. See comment on 18:1.

21:7. lamp for David. Lamps were often used metaphorically in Israel to symbolize life and prosperity. They were often placed in tombs for this reason. The expression "his lamp" is often used in Scripture to symbolize life. As an eternal flame is a symbol of endurance and remembrance, so the reign of a descendant of David in Jerusalem provides a link to God's promise to David's dynasty (2 Sam 7:8-16). Similar uses of the word in Ugaritic and Akkadian are tied to perpetuation of rule or divine presence. Assyrian king Tiglath-Pileser III is referred to as the light of all mankind. An Old Babylonian idiom expresses a family having no descendants by the image of its brazier going out.

21:8-10. Edom's revolt. Although this revolt is not described elsewhere in Scripture or in extrabiblical sources, there are destruction levels at Ramet Matred Negev dating from either the raid of Shishak (late tenth century B.C.) or the revolt mentioned in this passage.

21:10. Libnah. Libnah was a major fortress city in Judah that was one of the line of defenses of the capital city, Jerusalem. Thus, if the city revolted, the entire land of Judah was left vulnerable. The town of Libnah is usually identified with either Khirbet Tell el-Beida (nine miles northeast of Lachish) or Tell Bornat (about five miles further west), strategically located by the Wadi Zeita guarding the best route to Hebron from the coast.

21:15, 18. Jehoram's disease. One opinion is that Jehoram's "disease of the bowels" may have been chronic amoebic dysentery. Additionally, some suggest the more specific consequence of a massive rectal prolapse.

21:16-17. invasion of Philistines and Arabs. The invasion here was probably a series of raids from the west (Philistines) and south (Arabs), from well-known enemies of Judah. From the context of the passage it may be assumed that the raid was in response to the

vulnerable situation that Judah was in because of the Edomite rebellion.

21:19. fire in his honor. The funeral rites denied Jehoram were often quite elaborate and include the burning of spices in honor of the dead as well as a general lamentation and internment in the family tomb. The fire does not imply cremation of the body or an attempt to mask the odors associated with a diseased body, but was rather an expensive display of the king's wealth. The practice is well known among Assyrian kings where it was used as an apotropaic ritual.

21:20. tombs of the kings. The Judahite kings were buried in the City of David, a small ridge bordered by Kidron, Hinnom and Tyropoeon Valleys. The kings from Rehoboam to Ahaz were buried here (except for some notable exceptions). Later kings were either buried in the "garden of Uzziah" (Manasseh and Amon) or in their own tomb (Josiah). The burial place of Hezekiah and the successors of Josiah is not mentioned. The site of the royal burials in the City of David has not been determined with certainty. Many of the Egyptian kings of the New Kingdom (c. 1550-1050 B.C.) were buried in the Valley of the Kings in separate tombs. There was apparently no such common royal burial place for the kings of Assyria.

22:1-9
The Reign of Ahaziah

22:1. raiders with Arabs. The raiders mentioned as having come with the Arabs are likely related to those mentioned in 2 Chronicles 21. Thus they may have been Philistines and other diverse groups who sought to capitalize on the weakness of the Judahite monarchy. They certainly concluded that Judah was weaker without the Davidic dynastic line in power.

22:2. chronology. Ahaziah ruled in 841 B.C. and was a contemporary of Shalmaneser III of Assyria (reigned 858-824 B.C.). By this time most of the coalition that had withstood Shalmaneser at the Battle of Qarqar had been dismantled, and anti-Assyrian sentiment was becoming less and less popular.

22:5. war against Hazael. The family ties between Judah and Israel explain the joint attack against Hazael of Aram of Damascus. The parties of the western coalition had broken down and were now fighting amongst themselves.

22:6. Jezreel. Jezreel has been identified with Zerin/Tel Yizra'al at the east end of the Jezreel Valley in the territory of Issachar. The city was about fifteen miles southeast of Megiddo. It was the winter capital of the Israelite kingdom by the reign of Ahab. With the destruction of the northern kingdom by the Assyrians (722/21 B.C.), Jezreel lost its importance, which it failed to regain. For more information see 1 Kings 21:1.

22:9. Samaria. Samaria was the capital of the northern kingdom of Israel for two centuries. Omri constructed the city in the early ninth century B.C., and it was destroyed by the Assyrians in 722/21. The city was built on a hill rising three hundred feet above the nearby valleys. It was located along the crossroads of major trade routes that lead to Shechem, the Jordan Valley, Megiddo, Jezreel and Jerusalem. The site has been extensively excavated in this century. For more information see comment on 1 Kings 16:24.

22:10—23:21
Athaliah the Usurper

22:10. Athaliah's executions. As queen mother (see comment on 1 Kings 2:19) during the reign of her son Ahaziah, Athaliah enjoyed an exalted position as "sovereign," which was evidently an official title. This afforded her a special influence on ceremonial and political matters. Following the custom of other dynasts, the usurper Athaliah attempted to destroy the members of the previous Davidic dynasty, in the same fashion that usurpers in the northern kingdom had killed off members of the previous dynasty. Such annihilations of ruling families was common practice both in Israel and in the ancient Near East at large. There is wide precedent in Mesopotamian texts for the elimination of all rival claimants to the throne when a king comes to power.

22:11-12. hiding in the temple. It is not certain where the last remaining Davidide was hidden. Medieval scholars theorized that there was a penthouse where the priests retired that was off-limits to Athaliah. However, no temple bedroom is ever mentioned in Scripture. At any rate the boy was concealed in the lodgings of the high priest in the temple precinct. Besides being a place to which very few would have access, temples in the ancient world were a place of sanctuary and protection.

23:1-3. priests' political power. In much of the ancient Near East the priesthood wielded considerable political power. They had land holdings, independent assets that came as gifts to the temple and an emotional hold on the people. In Israel the power of the prophetic institution is more evident than that of the priests,

but it is likely that the priests also carried some political clout. The wife of the high priest Jehoiada, Jehosheba, was the daughter of Joram, the previous ruler, and thus Jehoiada was connected to the royal line by marriage.

23:5. Foundation Gate. The Foundation Gate is called the Sur Gate in 2 Kings 11:6. Its location cannot be determined with certainty.

23:9. weapons from the temple. It is not certain where these weapons were stored, as there is no mention of a temple armory in Scripture. Likely these are ceremonial pieces used by the king in processionals and kept on display. It is possible that they also included important weapons that had been captured in battle or taken as tribute. The Hebrew terms used for the weapons are rare. The Hebrew term that the NIV translates as "small shield" was long obscure but is now recognized as a technical term borrowed from Aramaic referring to a bow case. Ceremonial bow cases are pictured in later Persian reliefs.

23:10. temple geography. The palace guard apparently surrounded the palace on all sides and protected the route from the palace to the temple. From its description in 1 Kings, the temple of Solomon appears to have been enclosed in the larger palace complex. Very little is known of the layout of the temple precinct and palace complex of this time.

23:11. copy of the covenant. This appears to be a document that frames a constitution or charter of some sort. One possibility is that it details the people's subordination to the king and the king's subordination to the Lord. In Egypt the coronation ceremony involved a proclamation by the god Thoth that gave the official approval of the gods for the king's accession. The theme of a covenant between king, subject people and god can also be found in the Hittite annals of the late second millennium B.C. and Assyrian vassal loyalty oaths during the mid-first millennium B.C. In Assyrian records there is a ceremony where Esarhaddon of Assyria made a binding covenant with the people of Assyria to be loyal to his successor, Ashurbanipal. What is different in Scripture is the mention of a document that was physically handed over to the king, which is not mentioned in the extrabiblical sources.

23:11. anointing. The acts here are regular features of the accession ritual of the kings of Israel and Judah. First, the ram's horn was blown to signify the people's recognition and submission to the new king. The phrase "long live the king" is attested in a number of places in the historical books of Scripture and in the enthronement psalms (47, 93, 96, 97, 99). It was used after the accession of the king to the throne. The anointing of the king was also a symbolic gesture of the divine favor of the king before Yahweh. For more information on anointing see comment on 1 Samuel 16:1.

23:13. king's pillar. This may have been one of the two entry pillars at the entrance of the temple, Jachin and Boaz (see comment on 1 Kings 7:15-22). Ezekiel describes the "prince's station" at the "doorposts of the gate" of the temple (Ezek 46:2). The king may have stood on some kind of a platform reserved only for himself.

23:15. Horse Gate on the palace grounds. The Horse Gate was a gate of the temple enclosure and not the Horse Gate of the city. It may have been a passage through which mounted riders entered the city from the east (Jer 31:40).

23:17. destruction of temple (=house) of Baal. This is the only reference to the "House of Baal" in Jerusalem (parallel to 2 Kings 11:18). Thus its location can only be a source of speculation. It may have been a private shrine in the vicinity of the palace. There is, however, a large structure excavated at Ramat Rahel, two miles south of Jerusalem, that has similarities to the palace at Samaria. Its location compares to the location of the Baal Temple of Samaria, which was outside the acropolis of the city. The reaction of the populace to the destruction of the temple of Baal is similar in nature to the purge orchestrated by Jehu some years earlier. All evidences of the previous regime were eliminated. In New Kingdom Egypt, Thutmose III attempted to destroy all vestiges of the reign of Hatshepsut, while Horemheb (and others) did the same to the Aton kings.

23:19. doorkeepers. The doorkeepers were evidently royal guards who were responsible for the entrance to the temple precinct by which the king normally passed (see also 1 Kings 14:28; 2 Kings 11:19). The exact route from the temple to the palace is unclear. It may have been south between the temple mount and the City of David.

23:20. Jerusalem geography. The temple mount was at the highest point on the northern end of the City of David. The palace was situated just south of (and probably adjoining) the temple complex. Immediately southeast was the Kidron Valley, which separated the Temple Mount from the Mount of Olives. Southwest of the City of David was the Ben Hinnom Valley.

24:1-27
The Reign of Joash

24:1. chronology. Joash ruled from 835 to 796 B.C. and was a contemporary of Jehu, Jehoa-

haz and Jehoash of Israel. Shalmaneser III, Shamshi-Adad V and Adad-Nirari III ruled Assyria during this period.

24:4. ideology of temple restoration in the ancient Near East. The temple was the center of culture, economy and society in Syria, Mesopotamia and Israel. It served as the house of the city's patron deity, and thus the god's presence was considered to exist there. It was incumbent upon the ruler of the city to attend to the "care and feeding" of the deity. The statue of the god was bathed, clothed and fed daily. Just as important as the king's military success was his attention to the upkeep of the god's house. Countless building inscriptions from both Assyria and Babylonia attest to the king's piety because of his restoration of a certain god's house. Similarly, those who rebuilt or restored Yahweh's were accorded this same type of piety. Restoration entailed both physical and ritual aspects. A neglected temple would need structural repairs (see comment on v. 13) and perhaps the restoration of pilfered furniture and accessories. It is possible that gold objects or gold plating on walls would need to be replaced. Then the temple would need to have its sanctity reestablished through appropriate rituals. Finally, it would need to be provided with funding and personnel so that it could operate.

24:5. collection of funds. The collecting of funds for the restoration of a temple was a common occurrence by monarchs in the ancient Near East. Often, though, the monarch would restore the temple by means of corvee labor or by collecting building materials from his subjects. The initial collection procedure is described only in 2 Kings 12:5-7 and was unsuccessful. It entailed receiving funds from the "treasurers" (NIV). This word only occurs in this context and has now been identified in both Ugaritic and Akkadian texts dealing with temple treasuries. It could refer either to officers who distributed temple assets or to the assets themselves.

24:5. taxation in Israel. There are surprisingly few words in Scripture for "tax." The most common term was a generic word meaning to "evaluate for taxation." The term is used for the tribute that Israelite kings were obliged to pay ruling overlords. It was also used in connection with collecting funds for the temple, as here. The process of taxation is described in 1 Samuel 8:15-17. The king could also exempt a household from taxation (see 1 Sam 17:25). Solomon had a core of governors who periodically collected taxes (1 Kings 4:7-19). It appears that the rebellion against Rehoboam was motivated by tax abuse. Ostraca from Samaria record deliveries of wine for the use of the king, with the phrase, "for the king." These ostraca were from several sites that were probably depots where the local taxes were gathered. Another aspect of taxation was forced labor (see Ex 1:10; Josh 16:10; 2 Sam 20:24). Although taxation in Mesopotamia is much better documented, it appears to have similar attributes to taxation practices found in Israel.

24:6. Tent of the Testimony. The Tent of the Testimony was more commonly called the Tent of Meeting or tabernacle (see comment on Ex 33:7-10). It was the central place of worship for the Israelites before the construction of the temple of Solomon. It was the shrine that housed the ark of the covenant and various other cultic objects. The tabernacle continued to play an important link to Israel's history, even during the monarchy, and one gets the impression that somehow the tent was set up inside the temple precinct (see 1 Kings 8:4 = 2 Chron 5:5).

24:11. shared custody of funds between king and priests. The sharing of custody for funds used in temple restorations is attested in the records of Assyrian king Esarhaddon (seventh century). Here also there are accusations on both sides regarding who is responsible for the delay in the project.

24:12. repair crew. The regular maintenance of the temple complex was the responsibility of the "workmen in charge of the temple." Major repairs had to be contracted out to skilled workers. The listing of these skilled laborers is typical of contemporary Assyrian records.

24:13. nature of the work. It appears that the skilled workers restored the temple to its original foundations. The skilled workers were carpenters, builders, masons and stonecutters. The term for "builder" was used for both skilled and unskilled laborers who worked primarily with mudbrick. The carpenter was responsible for all of the wood items in construction, including the roof, door, window and stair fittings, and various cultic objects in the temple. The mason/stonecutter quarried the stones from natural caves or drove shafts in the hillside. Then the stones were cut and fitted into place. It will be remembered that Solomon contracted Phoenician craftsmen to build the temple. It is not expressly stated that foreign workers were used to refurbish the temple during the reign of Joash.

24:14. articles for the temple. The cultic vessels mentioned here were made by Solomon's craftsmen (1 Kings 7:50) and were distinct from those made by the Phoenicians (1 Kings 7:13-47). They became booty for Nebuchadnezzar II during his capture of Jerusalem

more than two centuries after Joash. The terms are best described as "vessels for the service and for the burnt offering, bowls and gold and silver vessels."

24:15. Jehoiada 130 years old. Jehoiada lived longer than Moses (120 years) and Aaron (123 years), showing his great favor with God. The fact that the Chronicler called attention to Jehoiada's age shows his great importance, equal to any of the Judahite monarchs. Egyptian texts considered 110 to be the ideal old age, while Mesopotamian ideas targeted 120. In the sixth century, Adad-Guppi, the mother of the Babylonian king Nabonidus, is said to have lived to the age of 104.

24:18. Asherah poles. The Asherah poles were apparently man-made objects and often were situated near trees (see Jer 17:2), although they may have actually been living trees on occasion (see Deut 16:21). The Asherah cult object symbolized the goddess herself. The poles were often associated with the image of the goddess, which was a separate item altogether. For more information see comment on 2 Kings 13:6.

24:23. war in spring. In the ancient Near East spring was a popular time in which to commence military ventures. First of all, the weather in the winter was prohibitive for extensive military travel. Second, because of harvesting in the spring, invading armies were able to forage for food. The Assyrian annals make a point of describing any particular military campaign that happened during the winter or the dead of summer, when there was unbearable heat for the soldiers.

24:23-24. war with Aram. In the last decades of the ninth century the Aramean kingdom of Damascus was relieved of Assyrian pressures and was able to assert its influence south and west into Judah (see comment on 2 Kings 10:32). There was an attack on Gath (probably Gittaim in the northern Shephelah, not Philistine Gath), which posed a direct threat on Jerusalem (see 2 Kings 12:18). The Aramean king at this time was Hazael (see comment on 2 Kings 8:8), who ruled from 843 B.C. to near the end of the ninth century.

25:1-28
The Reign of Amaziah

25:1. chronology. Thiele assigns to Amaziah the years 796-767 B.C. He was contemporary with Jehoash and Jeroboam II of Israel. Adad-Nirari III, Shalmaneser IV and Ashur-Dan III ruled Assyria during his time.

25:5. size of military. The term in Hebrew for thousand, *ʾeleph*, is also employed for "unit," which makes more sense in this passage. Thus Amaziah's census found three hundred units of available men to be soldiers, and there is no precise number of available soldiers given in the text. For more information on numbers see comments on 2 Chronicles 11:1; 13:2-20.

25:6. mercenaries. The use of mercenaries in ancient Near Eastern warfare was widespread. The Assyrians began to rely heavily on mercenaries by the reign of Tiglath-Pileser III (reigned 745-727 B.C.). Although mercenaries were experienced and well trained, their loyalty was often called into question when they did not get their pay in a timely fashion, or if they were fighting against a kindred foe. Ionian mercenaries left the Persian camp and fought for the Greeks at the Battle of Plataea during the Persian wars (480 B.C.).

25:6. hundred talents of silver. The talent was the largest weight measure used in the Near East. It was comparable to three thousand shekels at Alalakh and Ugarit in Syria and in the Old Testament (Ex 38:25-6). One hundred talents of silver weighed about three and one quarter tons. Obviously this was the total amount spent hiring the mercenaries and comes to one talent of silver for each division. This is not exorbitant pay and was just "earnest money"—the real payoff would come in the plunder.

25:11. Valley of Salt. The Valley of Salt has been identified with Wadi el-milh, east of Beersheba, about three miles due south of the Dead Sea. There are numerous areas in the region where the cliffs are high enough for people to be thrown to their death.

25:11. Seir. Seir was the biblical name for part of the country of Edom and was often used as a synonym for Edom. So "the sons of Seir" would be another name for the Edomites. Seir is listed as a geographic toponym in the Amarna letters from Egypt (fourteenth century B.C.).

25:12. styles of execution. Throwing enemy prisoners off a cliff is not known as a style of execution outside of this passage. It was likely the most convenient form of execution because of the geographical circumstances. In A.D. 67, during the Jewish revolt against Rome, thousands of Jews from Gamla hurled themselves off the cliff rather than be captured by the Romans.

25:13. Samaria to Beth Horon. Beth Horon is at the ascent between the Valley of Aijalon and the hill country, about twelve miles northwest of Jerusalem. From where the armies are, the main road home goes north from Arad to Hebron where it swings a bit to the west and

then proceeds north through the Shephelah. From Arad to Beth Horon along this road is about fifty miles. The city of Samaria was over fifty miles further north of Beth Horon and was the capital of the northern kingdom, so cannot be the city intended here. Either there was another "Samaria" in Judah, not known elsewhere in Scripture, or the text originally read something like "Hebron." Since most of the mercenaries' pay came from plunder, this was their way of collecting.

25:14. gods of Seir. It is generally assumed that these would be the images of the Edomite gods. The national god of the Edomites was Qos. It is not unusual that worship should be offered to deities of defeated nations. At Dan standing stones were found at a shrine just inside the city gate, and the clear remains of the presentation of votive offerings were evident. It is thought that the standing stones represented some of the deities of cities that had fallen to Israel. The votive offerings would be in fulfillment of vows made to those deities (perhaps for their aid in overthrowing the city the Israelites were fighting against).

25:21. Beth Shemesh. Beth Shemesh was a town about fifteen miles west of Jerusalem in the Shephelah region between Jerusalem and the coastal territory of Philistia. It was an important fortress town that guarded the Sorek pass from raiders who desired to plunder Jerusalem. The site of Beth Shemesh (Tell er-Rumeliah) has remains showing an extensive Canaanite occupation of the city before the Israelite conquest.

25:23. topography of Jerusalem. Scholars have supposed that the Ephraim gate was located at the northwest corner of the city of Jerusalem, while the corner gate was at the northeast corner. The northern portion of Jerusalem was the only direction that allowed easy accessibility to the town. Other areas of the wall did not make for easy access because of the Valley of Ben Hinnom to the southwest and the Kidron Valley to the southeast.

25:24. plunder of Jehoash. Assyrian records often show that the family of the defeated king was sent under guard to Assyria to be hostages in order to guarantee the good behavior of the king. Ashurnasirpal II (reigned 883-859) is described as "taking hostages and establishing victory." Here the identity of the Judahite prisoners is not mentioned, but it can be assumed they were either part of the royal family or important members of the nobility.

25:27. Lachish. Lachish (Tell ed-Duweir) was a major fortress city in the Judahite Shephelah. It is not surprising that Amaziah went to this town, since it was in the line of defense surrounding Jerusalem. Both the Assyrians and the Babylonians captured Lachish in their invasions of Judah in the eighth and seventh centuries B.C. Located about thirty miles southwest of Jerusalem, the site covers some thirty acres.

26:1-23
The Reign of Uzziah

26:2. Elath. Elath (or Eloth) was the seaport constructed by Solomon at the head of the Gulf of Aqaba (see comment on 2 Chron 8:17). It was closely associated with the nearby port of Ezion Geber. It opened trade for Judah with Arabia, Africa and India. Uzziah apparently attempted to revive the Red Sea trade instituted by Solomon.

26:3. chronology. Uzziah's long reign is calculated by Thiele as lasting from 792 to 740 B.C. Scholars postulate that he had a long coregency with his father Amaziah on one end of his reign and with his son, Jotham, on the other. He was a contemporary with Jeroboam II (for forty of the fifty-two years), Zechariah, Shallum, Menahem, Pekah and Pekahiah of Israel. Adad-Nirari III, Shalmaneser IV, Ashur-Dan, Ashur-Nirari V and Tiglath-Pileser III ruled Assyria. Assyria was weak during most of this period, allowing for expansion and prosperity for both Israel and Judah. Uzziah's name has been found on a seal from Tell Beit Mirsim. Tiglath-Pileser's records mention a king named Azriau of Yaudi, but most do not equate this individual with Uzziah.

26:6-8. military successes. Although there are no other literary sources which describe Uzziah's victories over the Philistines, Arabs and Meunites, there is archaeological evidence of destruction at the Philistine city of Ashdod, which may have been done during the time of Uzziah. There is also evidence that Uzziah constructed fortresses in these newly conquered territories. Gath (Tell es-Safi; see comment on 1 Sam 5:8), Ashdod and Jabneh form a triangle about ten or fifteen miles on each side that dominates the northern section of the Philistine plain directly west of Jerusalem. Tell Mor near the Philistine city of Ashdod provides one example of such a fortress. Since Uzziah was not able to expand north because of the power of Israel under Jeroboam II, he turned his attention to the west and south, subduing people groups that had taken advantage of previously unstable conditions in Judah. For more information on the Meunites see comment on 20:1. The site of Gurbaal remains unidentified.

26:9. Jerusalem towers. Although the towers

built by Uzziah have not been identified, they were presumably similar to the towers built by the Assyrians at their major cities of Nineveh, Calah, Assur and Dur-Sharrukin. Dur-Sharrukin was a fortress built by Sargon II (reigned 721-705 B.C.), with towers strategically placed at the four corners of the city. See 2 Chronicles 25:23 for a description of the gates where the towers of Uzziah were built. Recent discovery of a massive tower in the vicinity of the Gihon Spring may yet prove to be part of these fortifications.

26:10. towers in the desert. There is archaeological evidence of Uzziah's building activity in Judah. The tower in the stratigraphic level IIIB at Gibeah was probably built in this period. The intensive building activity at Tell Abu Selimeh may also date from this period. There is evidence of early buildings and cisterns at Qumran and Ain Feshkha that date to Uzziah's reign. Fortifications, cisterns and farms have also been located in the Negeb area near Beersheba.

26:11-13. Uzziah's army. Evidence of Uzziah's power is shown by the fact that he had a standing army and did not have to rely upon conscripting soldiers during times of conflict. Assyrian sources indicate that Uzziah's army was significant enough to have taken part in a coalition against Tiglath-Pileser III during his invasion of the Levant in the mid-eighth century B.C.

26:14. arms. The wealth of Uzziah afforded him the opportunity to arm his soldiers with the traditional weaponry in the Near East in the Iron Age. The weapons mentioned here were also those listed as ones used by the Assyrian army. The Assyrians describe their weaponry in detail in their annals, and they are often depicted in wall reliefs at the king's palace. It can be presumed that Uzziah began to build up his army because of the threat of Assyria and of neighboring Israel.

26:15. machines. The "machines" made by Uzziah were probably protective shielding devices mounted on the walls providing protection for defenders to throw stones and shoot arrows at the enemy. The material remains from the Judahite fortress at Lachish attest to the nature of Uzziah's constructions. Additionally, they are represented in the Assyrian wall reliefs at Sennacherib's palace at Nineveh. In the past some interpreters had suggested that these were catapults, but there is no evidence of the use of catapults this early.

26:16-19. Uzziah's offense. Uzziah's offense was a direct violation of priestly prerogatives concerning the temple worship (Num 16:40). The altar of incense was located inside the outer chamber of the temple which denied access to all but officiating priests. The sacrilege he was charged with ("unfaithful," NIV v. 18) is the offense that was addressed by reparation offerings (see comment on Lev 5:14-16).

26:19. leprosy. Mari king Yahdun-Lim calls down a curse of leprosy on whoever desecrated the temple that he was dedicating, so it is clear that this is a common connection. Those studying the ancient Near Eastern languages have concluded that the term often translated "leprosy" is more accurately rendered "lesion," or, less technical, "scaly skin." Such patches could be swelled or weeping, as well as flaking. Similar broad terminology also exists in Akkadian, where the Babylonians likewise considered it an unclean condition and the punishment of the gods. Clinical leprosy (Hansen's Disease) has not been attested in the ancient Near East prior to the time of Alexander the Great. None of the most prominent characteristics of Hansen's disease are listed in the text, and the symptoms that are listed argue against a relationship to Hansen's disease. The condition discussed in the text is not presented as contagious. Descriptions would suggest that modern diagnoses would include psoriasis, eczema, favus and seborrheic dermatitis, as well as a number of fungal-type infections. Because of this, it is not clear exactly what type of skin disease Uzziah had. Comparison to "snow" most likely concerns the flakiness rather than the color ("white" is added in the translations that contain it). The great cultural aversion to skin diseases may be that in appearance and sometimes odor they resemble the rotting skin of the corpse and are therefore associated with death. This natural revulsion adds considerably to the victim's outcast status when combined with the quarantine that is ritually rather than medically motivated. It is not certain whether Uzziah was quarantined because of the disease or because of his cultic offenses. Naaman had a similar disease and was able to continue his duties as commander in chief. It is presumed that Jotham, son of Uzziah, took over official duties as coregent after Uzziah's cultic offense.

26:23. Uzziah's tomb. There is an epitaph now preserved in the Israel Museum marking the burial place of Uzziah, king of Judah. It represented a secondary burial of his bones.

27:1-9

The Reign of Jotham

27:1. chronology. Jotham ruled from 750 to 732 B.C. and was possibly coregent with his fa-

ther Uzziah for ten years and with his son Ahaz for three years. Extrabiblical evidence of Jotham's reign includes a signet ring found at Tell el-Kheleifeh with his name and the picture of a horned ram. He is also named on a bulla found of Ahaz's royal seal.

27:3. Upper Gate of the Temple. Little is known of the architectural history of the temple after Solomon. The Upper Gate of the temple was located at the north entrance to the temple enclosure. Jeremiah was confined to the Upper Benjamin Gate, which was probably the same as the Upper Gate.

27:3. hill of Ophel. The hill of Ophel is identified as the section between the temple mount and the southern ridge known as the city of David. Apparently it featured fortifications that surrounded the temple-palace complex. Some believe that there was a citadel located here that was itself designated "the Ophel."

27:4. forts. Jotham continued his father's extensive building programs in Judah by constructing fortress cities in the highlands of Judah, most likely as a line of defense against invasion. Not only did he build forts in the wooded areas, he may have engaged in a program of forestation. No excavations have as yet identified fortifications that can be definitively connected to Jotham. It is in his reign, however, that the Neo-Assyrian Empire takes shape under Tiglath-Pileser III. Undoubtedly the renewed emphasis on defense projects reflects the rising threat.

27:5. Ammonites. The Ammonites lived north of the Moabites in the region around the Jabbok River. They are known from Assyrian records as Bit-Ammon and as the land of Benammanu. At the end of Jotham's reign, the king of Ammon was Sharib. No Ammonite or Assyrian records illumine the history of the Ammonites prior to 733. They had paid tribute to Uzziah but apparently tried to break free of Judah's control and had to be suppressed with force.

27:5. amount of tribute. The amount of tribute given by the Ammonites is very large and compares with the terms that the Assyrians gave to Judah during the reign of Hezekiah (2 Kings 18:14-17). A hundred talents of silver was over three tons, while ten thousand cors each of wheat and barely were about sixty-five thousand bushels each (see comment on 2:10).

28:1-27

The Reign of Ahaz

28:1. chronology. Thiele places the rule of Ahaz from 735 to 715 B.C. This would make him a contemporary of Hoshea, the last king of Israel, as well as of the Assyrian kings Tiglath-Pileser III, Shalmaneser V and Sargon II. The chronology of this period is very complicated, and the numbers from one system to another vary considerably. Most systems depend on a complex combination of coregencies. One possibility with Ahaz is to see him as being thrust onto the throne by a pro-Assyrian faction within the administration of Judah as early as 741 with the hope that cooperation with Assyria could maintain peace. Ahaz is named (referred to by the longer form of his name, Jehoahaz, in Assyrian, Iauhazi) in one of Tiglath-Pileser's building inscriptions as having paid tribute. A bulla (seal impression) of his royal seal has also been found.

28:2. cast idols. Ahaz cast idols of the Baals of Canaan, not to local representations. The plural (Baals) may be used as a parallel with the plural Elohim, the generic name for the Hebrew God. Casting idols for worship was specifically condemned in the Mosaic Law (see Ex 34:17). Metal casts of Canaanite deities (including Baals) have been found at numerous sites in Palestine.

28:3. Valley of Ben Hinnom. The Valley of Ben Hinnom was on the south side of Jerusalem and joined the Kidron Valley at the southeast corner of the city. Access from the city to Ben Hinnom came from the Potsherd Gate and the Valley Gate. The valley became infamous for Baal worship because of the acts of Ahaz and Manasseh. Josiah defiled the region in order to prevent future idolatrous acts (2 Kings 23:10).

28:3. sons passing through the fire. The biblical writers distinguished between the practice of the nations of burning their children in the service to their gods (Deut 12:31 and 2 Kings 17:31) and the idolatrous Israelites who "passed their sons and daughters through the fire." If "passing through the fire" was something different than child sacrifice, it is not certain what it was. In Deuteronomy 18:9 "passing through the fire" appears with other Canaanite divination practices. There are hints from contemporary Assyrian sources of burning children in this period. In some Assyrian economic documents the penalty clauses include "burning children to Sin."

28:4. high places, spreading trees. The worship at high places is not attributed to other Judahite kings but to the people of Judah (e.g., 1 Kings 22:44). A different verbal form is used in Hebrew to denote illegal sacrifices at shrines opposed to legal sacrifices at the Jerusalem temple. Ahaz, of course, was condemned for his illegal sacrifices. For more information

on high places see comment on 2 Kings 17:9.

28:5. defeat by Arameans. This is a description of what is called the Syro-Ephraimitic War. One popular reconstruction maintains that states in the region of Syria and Palestine (including Israel and Aram) had forged a coalition to fight against the rising power of Assyria under Tiglath-Pileser III. Rezin of Aram-Damascus headed this coalition in 733 B.C. One year earlier, Aram and Israel attempted to force Ahaz of Judah to join the coalition against Assyria. The two states sought to dethrone Ahaz (see Is 7:6). Upon an appeal from Ahaz, Assyria marched west in 733-732 B.C. and devastated the area, ending the Damascene state and setting up a puppet king in Israel (Hoshea). Others believe that the aggression of the Syro-Ephraimite coalition reflected only their own ambitions for expansion and had nothing to do with a coalition against Assyria. The Assyrian annals of Tiglath-Pileser III are badly mutilated, but a general picture of the Assyrian conquest can be obtained.

28:14-15. treatment of prisoners. The Assyrian annals and wall reliefs depict the harsh conditions of those who were deported from their own territory. The males are normally naked, often with hooks in their nose or lips, and some are missing limbs. Others are carrying their worldly belongings with them. It appears that the Israelites had a similar policy, which was condemned by the prophet Oded. The extent of care and mercy described in these verses is, therefore, remarkable.

28:16. Ahaz asking help of Assyrians. In response to the invasion of Judah by the other Syro-Palestian states, Ahaz appealed to Assyria. Although the Assyrian annals do not explicitly state his appeal, he is listed as one of the kings who gave tribute to Tiglath-Pileser III.

28:17-18. military difficulties. Not only was Ahaz fearful of Aram-Israelite invasions, it appears his appeal to Assyria was for his war against Edom and Philistia. Recent excavations along the ancient border between Edom and Judah have confirmed the expansion of Edom into the Negev of Judah at towns such as En Hatzeva and Qitmit. Pottery ostraca from Arad that contain military correspondence from this period also show that Edomite invasions were considered imminent. The Philistines expanded their presence into the Shephelah region, regaining control of the area that had been under Judean control during the reign of Uzziah (see comment on 26:6-8). The description includes the three main passes into the Judean hills (the Aijalon, Sorek and Elah Valleys). There are no archaeological finds that illumine this Philistine conquest in any of the sites mentioned here. Tiglath-Pileser's campaign of 734 included the Philistines among his targets. This led to setting up a stele in Gaza in 734 and the conquest of Ashkelon in 733. An Assyrian letter from Nimrud indicates the unstable conditions that existed in Palestine at this time. The territories lost by Ahaz were not returned to him but organized into Assyrian provinces.

28:23. gods of Damascus. Most of the people groups in the ancient Near East believed that the gods had limited geographic jurisdiction. The god's land was in effect under the stewardship of the monarch. Normally the gods did not have control of events occurring in other regions (where other gods had jurisdiction). Since most wars were conducted as holy wars, credit was given to the god(s) of the victorious army. As early as the mid-third millennium B.C. the Sumerian city of Lagash claimed that their gods gave them victory over neighboring Umma. Here Ahaz is making a frank admission that since the Arameans had been victorious over him, their gods were more powerful and in the right. The gods of Damascus were from the Aramean pantheon and included Hadad (the storm deity), which was most probably the proper name of Baal, known from Canaanite sources. Ahaz also made a large altar to the "gods of Damascus" (see 2 Kings 16:9-16). It is not clear whether the altar was Phoenician, Aramean or even Assyrian. It was to replace the bronze altar built by Solomon. The temple that Ahaz visited was probably that of Hadad-Rimmon (cf. 2 Kings 5:18). However the rites described here are typically Israelite.

28:24. furnishings of the temple. The furnishings of the temple probably included vessels, utensils, furniture and tools. According to 2 Kings 16:17-18 Ahaz was required to send very precise items, including the "Sabbath canopy," to the king of Assyria. The Assyrians did not normally interfere with local cultic practices. It appears that Ahaz sent them to satisfy a metal tribute obligation.

28:24. altars at every street corner. Babylonian texts speak of small open-air shrines or niches on street corners or courtyards. One text says that there were 180 of them in the city of Babylon to the goddess Ishtar. These shrines featured a raised structure with an altar on the top and seem to have been frequented primarily by women. In this sense the word "corner" may refer to what is basically a cultic niche.

28:25. each town with a high place. The

whole land of Judah was now made a center of foreign cultic practices. The Assyrians (and Arameans, for that matter) did not require any people group to switch allegiance to different gods, but a tributary group may have felt that their relationship with the conquerors would improve if they followed their deities. For information about high places see comment on 2 Kings 17:9.

29:1—32:33
The Reign of Hezekiah

29:1. chronology. Hezekiah's dates are the most controversial, and Thiele, in acknowledged contradiction to some of the biblical synchronisms, assigns him the date of 715-687 B.C., contemporary with Sargon II and Sennacherib of Assyria. Egyptian monarchs of this period were Shabako, Shebitku and Taharqa. Many consider it more likely that Hezekiah came to the throne in 727 and that his encounter with Sennacherib in his fourteenth year (2 Kings 18:13) took place when Sennacherib was still only the crown prince leading the armies for his father, Sargon II. Assyrian records confirm that there was a campaign to the west against Ashdod in 713. This represents the beginning of a lengthy series of conflicts between these protagonists that came to a climax in the siege of Jerusalem in 701 after Sennacherib had ascended to the throne. Archaeological evidence of Hezekiah's reign includes a seal found at Tell Beit Mirsim with Hezekiah's name that dates to his reign. The royal jar-handle stamps found in Syro-Palestine from the late eighth century onward probably also originated during Hezekiah's reign. Along with the expansion and building at Jerusalem (see the comment on 32:5), there is a great shaft at Lachish that was probably built in this period.

29:3. ideology of temple restoration in the ancient Near East. The temple was the center of culture, economy and society in Syria, Mesopotamia and Israel. It served as the house of the city's patron deity, and thus the god was believed to be present there. It was incumbent upon the ruler of the city to attend to the "care and feeding" of the deity. The statue of the god was bathed, clothed and fed daily. Just as important as the king's military success was his attention to the upkeep of the god's house. Countless building inscriptions from both Assyria and Babylonia attest to the king's piety because of his restoration of a certain god's house. Similarly, those who rebuilt or restored Yahweh's house were accorded this same type of piety. Restoration entailed both physical and ritual aspects. A neglected temple would need structural repairs and perhaps the restoration of pilfered furniture and accessories. It is possible that gold objects or gold plating on walls would need to be replaced. Then the temple would need to have its sanctity reestablished through appropriate rituals. Finally, it would need to be provided with funding and personnel so that it could operate.

29:4-15. the Levites. The Levitical families had not played a major role in the Jerusalem cult since the time of Jehoshaphat, over a century earlier. In accordance with typical restoration procedures, Hezekiah used the traditional priestly families to cleanse the temple and restore it to ritual purity. He then restored them to their original functions (see comment on 19:5).

29:15 consecration. Consecration is a process of ritual purification to prepare someone for association with that which is holy. Procedures varied from one culture to another, but most shared the idea that some ritual process was necessary so that impurity could be removed and the sanctity of the deity's house preserved. The priests were presumably consecrated based upon the detailed rules found in Exodus 29.

29:16. Kidron Valley. The Kidron Valley southeast of the temple was connected to Ben Hinnom, which had long been a dumping ground for the people of Jerusalem. Hezekiah, like Josiah, attempted to cleanse the Jerusalem temple complex by taking all of the illegal cultic items to this valley. The Kidron Valley was also used as a burial ground for the common people.

29:17. calendar. The first month was Nisan, which spanned our spring months of March and April. This was the beginning of the religious calendar of festivals. The purification procedure moved from the outer areas toward the inner ones, because each area had its own ritual requirements. When one level of purity was reached, an area could be entered. The next level of purity would allow access to the next, and so on. It took eight days to consecrate the areas contiguous to the temple, and eight more to carry out the procedure on the temple structure itself.

29:17. consecration of articles. The temple was rededicated in three steps; the temple was cleansed, it was then reconsecrated, and then there was the inaugural dedication ceremony. The articles that Ahaz removed had to be reconsecrated, because they had been removed from the sacred precincts and so were no longer pure.

29:21-24. sacrificial ritual. There were no sac-

rificial rituals used in the dedication of the tabernacle. When the temple of Solomon was dedicated, the animals sacrificed were too numerous to count. Nowhere does the text offer instructions for the numbers reflected here. For information about the sin offering see comments on Leviticus 4:1-3 and 4-12.

29:25. musical instruments. For harps and lyres see the note on 2 Chronicles 20:28. There were two kinds of cymbals used in the ancient Near East. One consisted of two shallow metal plates held with one in each hand and struck together. The others were shaped like a cup. One cymbal was held stationary while being struck with the other one. It is not certain which type of cymbal was employed here, but they were probably made of bronze.

29:27-30. singing. Reference to the words of David and Asaph suggests the Levites probably used a hymnal or psalter, possibly somewhat like the book of Psalms. Most ancient Near Eastern monarchs employed singers (both male and female) for use in the palace and temple. The Mari archives describe in detail the female singers and the daily food supplies that were needed for their sustenance. Over twenty-four classes of singers are known in Israel (1 Chron 25). The names of the three heads of families of singers are also known (Asaph, Heman and Ethan; 1 Chron 6:18-32). The singers were presumably free men, but slaves were also attached to the temple (Ezra 2:43-58; Neh 7:46-60). Women played a role in the music of the tabernacle (Ex 38:8), but there is no clear reference to there being female singers associated with the temple.

29:29-30. posture of worship. Some texts indicate that the Israelites prayed standing upright (1 Sam 1:26; 1 Kings 8:22; Jer 18:20). Other texts describe a kneeling posture (e.g., 2 Chron 6:13), the raising of the hands (Ps 28:2; Is 1:15; Lam 2:19) and even total prostration (Ps 5:8; 99:5, 9). Posture may have varied depending on the nature of the prayer. The Israelites were not unique with regard to their posture in prayer. There are many examples from Mesopotamia describing individuals in all of the postures mentioned above. For example, the incantation prayers of Mesopotamian sources, such as that to Ishtar, imply prostration of the supplicant as well as a ritual of raising the hands. Hittite sources suggest similar postures and gestures.

29:29-30. worship in the outdoors. The Israelites of Jerusalem normally prayed at the temple courts, facing the sanctuary itself (Ps 5:8; 28:2; 138:2). The Jew outside Jerusalem faced in the direction of the city of Jerusalem and temple (1 Kings 8:44-48). In most ancient Near Eastern cultures the common person did not have access to the inside of a temple but did his worship in the temple courts. The temples of the ancient world were not built to be houses of worship but residences for the divine presence. Worship (prayers and sacrifices) was carried out at the temple, but there were no regular worship services at which all of the faithful gathered.

29:31. thank offerings. The thank offerings were types of fellowship offerings (see comment on Lev 3:1-5). Portions of this offering were consumed on the altar, while the worshiper ate the remainder.

29:32-33. animals for burnt offerings. The provisions for the burnt offerings are found in Leviticus 1:1-17. Verse 32 numbers the burnt offerings, which were fully consumed by fire, while verse 33 enumerates the thank offerings, which included a token burnt portion with the rest used as a basis for a communal meal. This combination of offerings was common in public ceremonies.

29:35-6. sacrifice and feasting. Biblical feasts were different in purpose, content and origin from those of other peoples in the ancient Near East. Ancient Near Eastern feast days coincided with the New Year or the change of seasons. The Israelite took part in the feast as one who was indebted to the grace of Yahweh. The feasts of their neighbors typically included periods of mourning, processions, the performance of sacred dramas (as well as other entertainment) and an opportunity to ask oracles of the deity.

30:1. Hezekiah's initiative toward northern kingdom. The northern kingdom of Israel had been conquered by the Assyrians (see comment on 2 Kings 17:5-6), who were now bearing down on the remainder of the western states. Hezekiah's father, Ahaz, had instituted a policy of cooperation with Assyria, which is documented by his incorporation into the Assyrian tribute lists. Hezekiah attempted to reclaim some of the territory of Israel which had been gained by Uzziah and lost by Ahaz (see 2 Kings 18:4-8). Hezekiah's political ambitions could only be accomplished with the establishment of a religious base in the north. Hezekiah probably began these initiatives as a result of the death in battle of Sargon II of Assyria (705 B.C.). With Assyria in turmoil, Hezekiah began to expand his territorial horizons. This eventually results in the invasion of Syro-Palestine by Sennacherib (701 B.C.).

30:1-3. reinstitution of Passover. The disaster of the fall of Samaria likely caused an internal reformation in Israel that was sympathetic to Hezekiah's policies and his attempt to reunify

the nation in the worship at Jerusalem. Refugees from the north had no doubt fled to Judah after the Assyrian conquest, especially since Israel had now taken on aspects of syncretism (the mixing of worship with foreign religious elements). The national celebration of Passover fit well into Hezekiah's designs to reunify the nation. Both the Israelites and Judahites were able to hearken back to a past event which both groups shared, the exodus.

30:2-3. timing of Passover. The Passover was normally held on the fourteenth of the first month in the Hebrew calendar. However, there was a provision (Num 9:6-13) that allowed those who were either unclean or absent on a distant journey to observe the Passover in the second month. Hezekiah delayed the celebration to allow the northerners to attend.

30:13. pilgrimage feasts. There were three major feasts in the Hebrew calendar that called for pilgrimage to Jerusalem (for discussion see comments on Ex 23:15-17). During these feasts the number of pilgrims in Jerusalem made for very crowded conditions. Pilgrimage was more limited in the ancient Near Eastern religious practice, because most worship took place at local shrines of patron deities. Nevertheless people in outlying regions would make pilgrimage to shrines. Possible evidence of this occurs in the discovery of caravanseria, such as that at Kuntillet Ajrud, where graffiti was left by travelers who may have been pilgrims (though maybe merchants). In Babylonia some may have traveled to the capital to participate in New Year's Enthronement festivals, but it was not part of the religious expectation. In Egypt it was more likely for the gods to travel around to their various shrines in procession rather than for people to travel to any sort of centralized shrine.

30:15-17. Passover rituals. Hezekiah's Passover deviated from the general practice in two ways. First, the time of the celebration was different (see the note 2 Chron 30:2-3), and second, the Israelites were exempted from certain ritual prescriptions. Because many in the assembly had not sanctified themselves, the Levites presided over the slaying of the paschal lambs, a task normally done by the heads of families, most of whom were not sanctified in this instance (Num 9:6). However, those who were unclean were allowed in some instances to eat the paschal lamb.

30:21. Feast of Unleavened Bread. The Feast of Unleavened Bread was established to memorialize the deliverance of the Hebrews from Egypt (see comment on Ex 12:14-20). It was one of three annual festivals and was normally observed on the fourteenth day of the first month. For seven days unleavened bread was eaten and no manual labor was done. Sacrifices were offered on the first and last days of the festival (Num 28:16-25; Deut 16:1-8).

30:23-24. Hezekiah's provision of animals. It appears that the king is providing much of the meat for a religious communal feast for those in attendance. These numbers are large but are not out of proportion with some of the other figures found in ancient Near Eastern literature. When King Ashurnasirpal II throws a dedication party for his palace in the Assyrian capital city of Calah, he provides 5,000 sheep, 1,000 lambs and cattle, 500 deer, 500 gazelles, 34,000 fowl, and 10,000 fish (879 B.C.).

31:1. sacred stones and Asherah poles. See the comment on 2 Kings 17:9.

31:1. high places and altars. See the comment on 2 Kings 17:9.

31:2. functions of the Levites. Hezekiah reaffirmed the functions of the Levitical order established by Solomon. Thus the priests were in charge of the offerings, and the Levites were in charge of the worship (also see the comment on 2 Chron 29:15).

31:3. king's contributions. In contrast to the contributions for the festival in 30:23-24, this verse speaks of regular and ongoing contributions funding the operation of the temple. Hezekiah followed the precedent of Solomon by providing burnt offerings on a regular basis for the temple services (2 Chron 2:4). The provisions for the offerings are described in Numbers 28—29. In the ancient Near East the king (representing the corporate nation) was the foremost worshiper of the national god. Therefore it would be expected that the palace would play a major role in supplying the regular sacrifices.

31:4. Levites' portions. The portion for the priests and Levites was delineated in Numbers 18 (see comments there), where the gifts were for the priests (v. 12) and the tithes were for the Levites (v. 21). Clearly Hezekiah was making a great attempt to have the religious officials devote themselves to the duties prescribed in the five books of Moses.

31:7. calendar. The third month corresponded to mid-May through mid-June on our calendar. Although this month was called Sivan in the postexilic period, the name is not known during Hezekiah's time. The seventh month, Ethanim (Tishri in the postexilic age), corresponded to mid-September through mid-October. The fact that the ingathering lasted from the third to the seventh month means that it included the harvest of every major crop

(May, lentils, barley; June, wheat; September, dates, grapes; October, olives).

31:11. storerooms in the temple. Most ancient Near Eastern temple complexes contained auxiliary rooms for storage, kitchens, priestly quarters and other various nonreligious functions. For example, the temple of Ninkarrak at Terqa in Syria (c. 1600 B.C.) had a large kitchen storage complex and priestly quarters (for dressing, not as a residence). Thus the new storerooms of Hezekiah were probably in addition to previously existing rooms.

31:14. keeper of the East Gate. One of the most important tasks assigned to priestly personnel was controlling access to the temple precinct, the inner circle of the "sacred compass" (on this concept see comments on Lev 16:2 and Num 18:1-7). Defiling the sanctuary with impurity required a purification offering ("sin" offering, see comment on Lev 4:1-3) and could bring punishment on the individual as well as the people. The gatekeepers had to prevent unqualified intrusion. There were also many valuable items in the temple precinct. Gold and silver were plentiful and a temptation to the unscrupulous individual who may not have feared divine retribution for trespass or theft of temple property. These valuables also had to be guarded. Misappropriation of that which was sacred required a reparation offering ("guilt" offering, see comment on Lev 5:14-16). The gatekeepers were charged with guarding against these offenses. An additional task clarified here is disbursing officer. The east gate is the most important since the temple faces east.

32:1. Sennacherib's campaigns. Sennacherib conducted military campaigns primarily in two regions during his reign (705-681 B.C.). He had at least one major campaign in Syro-Palestine which centered around Jerusalem and Hezekiah's rebellion (701). He also campaigned vigorously in Babylonia, another major problem area during his reign. He was confronted with constant opposition by Chaldean rebels under the direction of Merodach-Baladan (see comment on Is 21:9), culminating in Sennacherib's brutal sack of Babylon in 689 B.C.

32:3. water supply. The water supply included springs, wells and conduits. The springs and wells outside the city were stopped up in order to prevent the Assyrians from using them. The Assyrian threat caused Hezekiah to secure Jerusalem's water supply. This is what is referred to as Hezekiah's tunnel. It is cut through bedrock for 1750 feet from the Gihon spring on the east of the city by the Kidron Valley to the Pool of Siloam on the western flank of the southern tip of the city. In the late 1800s an inscription was found inside the tunnel that describes the diggers' meeting as they dug from both ends. For more information on water systems see the comment on 2 Samuel 5:8.

32:5. expansion of wall of Jerusalem. Recent archaeological study has shown evidence of the enlargement of the city of Jerusalem dur-

---

SENNACHERIB'S INSCRIPTIONS

Our material for Sennacherib's reign is derived from various sources. The "annals" are not precisely annals as such, as they were not contemporary with the campaigns they described but are referred to in this way because they were in a formal chronological succession. Many of the inscriptions were deposited in the compartments of building foundations; some were even found in their original locations. The annals generally passed through a number of editions. One intriguing nonannalistic text is a fragment of a literary type called a "letter to God."

The account of the campaign against Jerusalem was probably composed several months after the campaign itself (c. 700 B.C.). In addition to depositing the texts in building foundations, the Assyrians displayed their inscriptions as bas reliefs illustrated on the palace walls. There are a number of copies of this campaign inscribed upon large barrel-shaped cylinders. There are also stone carved reliefs at Nineveh relating to the Assyrian siege of Lachish (an important fortified city of Judah), which were found in room 36 of Sennacherib's palace. The annals describe the destruction of a wide area of Judah but do not mention the taking of Jerusalem, as drastic operations against the Judahite capital were never completed, although Sennacherib claims to have encircled Jerusalem with watchtowers. Forty-six cities of Judah were plundered, many of which were given over to their rival, Philistia. There is no statement about Sennacherib being magnanimous with Hezekiah as he was with the king of Tyre. Other rulers were replaced in this area (e.g., Sidra of Ashkelon). The testimony of the Assyrian sculptures is important; Lachish was exhibited, but not Jerusalem. The annals claimed that over two hundred thousand Judahites were taken captive (but not necessarily into captivity), and a number of Philistine cities that rebelled were also identified as having been taken. Sennacherib placed responsibility for Judah's fate in the hands of Hezekiah (the Assyrians typically blamed the enemy monarch for the invasion). We are told that the Assyrians demanded from Hezekiah his daughters, weapons, women, gold and numerous other artifacts. The lists of tribute are the longest and most detailed of any of Sennacherib's inscriptions, suggesting that the author sought to draw attention away from the fact that Jerusalem had not been taken. Hezekiah, however, was subdued. This battle had been won, but Hezekiah was still an Assyrian vassal, and he sent tribute to Sennacherib back at Nineveh.

ing Hezekiah's time, as well as an expansion of the city's population. He appears to have augmented fortifications and probably established administrative centers and command posts. Excavations in the Jewish Quarter of the Old City of Jerusalem have found segments of Hezekiah's wall that extended the enclosed portion of the city perhaps as much as seven hundred yards to the west of the north-south ridge that the city had occupied prior to this time.

32:9. siege warfare. The Assyrian reliefs at Nineveh depicting the siege of Lachish show battering rams, seven siege engines and Judahite deportees, as well as Sennacherib, seated on a lounge chair, watching the booty of Lachish pass by. The panels assert the expert military technology of the Assyrians. Their army was very orderly, with bowmen, spear throwers, slingers, ramps and siege engines. The siege engines were heavily armored four-wheeled vehicles (earlier models had six wheels) with a long, pointed, iron-headed shaft protruding from the front. They were ten to twenty feet long and four to six feet high. From the top they were open in the back and closed in the front. Sennacherib's innovations to this war machine included covering it with leather. Additional mobile towers were used to move archers close to the ram to protect it with cover fire. There are numerous other wall reliefs depicting Assyrian siege warfare throughout the ancient Near East. Nevertheless, the Assyrians preferred the technique of negotiation, as described in 2 Kings 18—19.

32:11. deity's role in battle. It was not unusual in the ancient Near East for military events to be directed by foreign gods. Yahweh was thus presented as being on the side of Assyria, and Judah was to be defeated (see Is 7:19; 10:5-6; 2 Chron 35:20-2)! This is paralleled in texts that show enemy gods calling upon the Assyrians. In one Assyrian text, Marduk calls upon Sargon II to come and invade Babylon. In a Babylonian text, Marduk calls upon Cyrus of Persia to come and take the city. In a similar manner, Yahweh is viewed as mustering the armies that will come and overthrow Babylon (Is 13:4). For more information on the divine role in battle see comments on Exodus 15:3; 1 Samuel 4:3; 8:7; 17:37.

32:12. god's high places removed. This action had been part of Hezekiah's reform designed to establish centralized worship only in Jerusalem. From the biblical author's standpoint, this would have been a positive accomplishment. From the Assyrian perspective, however, this action could be used against Hezekiah in a couple of ways. First of all, Assyrians would have considered it a negative thing to reduce the shrines at which a deity could be worshiped. From their perspective, the more worship the better. Second, it is possible that they would also have understood Hezekiah's action in light of a common practice in the ancient world: when invasion was imminent, the images of gods were often gathered from outlying shrines and collected in the capital city.

LACHISH

The city of Lachish (Tell ed-Duweir), was a powerful garrison city or royal citadel. Fortified by Rehoboam (c. 920), it was strategic because it strengthened a weak northern boundary. The city was a rectangular mound located in the Shephelah foothills between the Judahite hills and the coastal plain, resting on a natural promontory, surrounded by deep valleys on all sides. Lachish had an outer and inner gate complex, with an inner wall that was over twelve feet thick. The gate chambers had bronze pieces in debris dated to the Assyrian period. Eighteen ostraca (pottery shards with writing on them) from the Chaldean period relating to Nebuchadnezzar's invasion have been found. Lachish was subject to two sieges in the period of just over one century; many of those levels are mixed and hard to separate. As the city is enveloped by hills on all sides, the possible Assyrian siege site exists only at the southwest corner, although there is presently no archaeological evidence placing the position of the Assyrian camp. Over the whole area of the town is indication of destruction, including much charcoal debris. There is a siege ramp with heaped stones. It is the oldest attested in the Near East and the only one that is archaeologically attested in Israel. Similar-looking ramps have been depicted on Assyrian wall reliefs. The city was demolished within a few feet of its foundation. All buildings were consumed by fire and show an intense burning, along with reddened bricks. The floors were strewn with smashed vessels and utensils. The city was ransacked; only unimportant and heavy items remained. Hundreds of arrowheads were found, as well as twenty pieces of scale armor, and a bronze crest mount for a helmet. A mass of fifteen hundred human bones and decapitated human skulls (considered by the excavators to be civilians) which had rolled down the apex into a large pit were found. Thrown on top of the bones were many animal bones (including pig) and many pottery vessels. Over four hundred of the jars were also found here stamped *lmlk* ("for the king"); the only dated context for these jars is at Lachish. The Assyrians felt that this siege was of paramount importance. As stated, they created an entire room of reliefs at Nineveh commemorating the venture. The Lachish room (36) was situated in a strategic place in the palace, intending to show the conquest of Judah and Lachish. The panels show the Assyrian army advancing toward the city in three columns, with a landscape similar to that of Lachish behind the host; thus scholars were given an unprecedented opportunity to compare a Neo-Assyrian stone relief depicting an ancient city and the site itself.

This was one of the steps taken by Merodach-Baladan in the days of Sargon. The rhetoric of the invader would follow the line of thinking that these gods were upset and deprived because of having been removed from their shrines. The invader can then fashion himself as having been called in by these gods to restore them to their rightful place.

32:18. Hebrew versus Aramaic. The Judahite scribes told the Rabshakeh (see comment on 2 Kings 18:17) to stop speaking Hebrew, since they did not want the people on the wall to hear this message. He was asked to speak in Aramaic, which was the language of the Judahites after the exile, but not at this point. He surprised them with his knowledge of Judahite (biblical Hebrew). The crude response by the Rabshakeh showed that his role was to persuade and to agitate. The Rabshakeh (as provincial governor) may even have been an Israelite employed in the service of Sennacherib, like Nehemiah and Ahiqar (a "wise sage of Esarhaddon" identified as an Israelite in the book of Tobit). Aramaic is a language closely related to Hebrew. At this period it had already become the diplomatic language of the ancient Near East.

32:27-29. Hezekiah's prosperity. Hezekiah's prosperity is described in terms of the increase in royal assets. The gold, gems and spices suggest success in trade and perhaps in collection of tribute. The crops and herds suggest bountiful harvests and the administrative savvy to collect and stockpile effectively. Such success is surprising in light of his vassal status and would serve as evidence of God's blessing.

33:1-20
The Reign of Manasseh

33:1. chronology. Manasseh's long reign is placed by Thiele from 696 to 640 B.C. This may include a coregency with his father. Contemporary Assyrian kings were Sennacherib, Esarhaddon and Ashurbanipal. Significant Egyptian kings were Taharqa and Psammeticus I. Assyria continues to exercise strong influence in the west during most of this period.

33:4-5. altars in the temple. The location of the two temple courts has puzzled scholars. The floor plan of the temple in 1 Kings 6 describes only the inner court in any detail. Thus the exact placement of these altars in the very large enclosed area of the outer court is not known.

33:5. Manasseh's pagan practices. The heavenly host (sun, moon, stars and constellations) was worshiped at the altars in the temple courts and on the roof of the palace (see 2 Kings 23:12). There are ancient Near Eastern texts from Syro-Palestine as early as the second millennium B.C. that describe astral worship. This practice was also common throughout Mesopotamia at this time, and stamp seals from Israel show that astral deities were very popular there as well. The stars were believed to be mediators between gods and men, and able to control events on earth. Assyrian kings are occasionally portrayed wearing emblems of the planets, which, of course, were closely associated with particular deities (for more information see comment on 2 Kings 23:4). Assyrian policy of this time did not override or restrict local religious practice, so there is no reason to think that Manasseh was being forced to set up these worship practices.

33:6. sons passing through the fire. Evidence for this practice outside of Scripture is rare indeed. Assyrian legal texts describe a penalty clause as "he will burn his son to Sin (a lunar deity), and his daughter to Belet-seri." Also see the comment on 2 Chronicles 28:3.

33:11. Manasseh's relations with Assyria. Manasseh inherited from his father Hezekiah a small vassal state subject to Assyria. The annals of Esarhaddon of Assyria (reigned 681-668) mention Manasseh along with a group of kings from the Syro-Palestine region who were required to transport material to Nineveh for a building project. Esarhaddon's successor, Ashurbanipal, also lists Manasseh in a group of rulers who sent gifts to him. In both of these texts, Manasseh is described as a loyal vassal.

33:11. Manasseh's imprisonment. When Esarhaddon died, the rule of Assyria was divided between his two sons. Ashurbanipal was given Assyria and soon dominated his brother, Shamash-shum-ukin, who had been given control over Babylonia. In actuality, Shamush- shum-ukin was little more than a governor, and, by 652, apparently tired of his subordinate role, he led a bloody civil war (supported by the Elamites) that lasted for five years. It ended when Shamash-shum-ukin was killed in the fire that swept through the city of Babylon after a two-year siege. It is documented that Shamash-shum-ukin had attempted to recruit support among the vassal states, and some have speculated that Manasseh had aligned himself with the Babylonian governor during the revolt. It is interesting that Manasseh was imprisoned by the Assyrians at Babylon (with other rebels to witness the result of a failed revolt?), rather than at Nineveh. Rebellious client kings were often deported by the Assyrians for undetermined periods. There is evidence that those

who "repented" (i.e., were domesticated by the Assyrians) were often returned to their throne.

33:12. Manasseh's prayer. The text of Chronicles records nothing concerning the content of Manasseh's prayer, but later Apocryphal literature preserves an elegant prayer that is attributed to him.

33:14. expansion of Jerusalem. The expansion of the Jerusalem fortifications by Manasseh may not have been for the same reasons as his father Hezekiah (see comment on 32:5). The rising power of Egypt under Psammeticus I may have caused the Assyrians to help fortify Judah, which was fast becoming a buffer state. Remains of fortifications that may have been constructed during the reign of Manasseh have been found at Tell el-Hesi and Arad.

33:21-25
The Reign of Amon

33:21. chronology. Amon's brief reign was from 642 to 640, during the rule of Ashurbanipal of Assyria.

34:1—36:1
The Reign of Josiah

34:1. chronology. Josiah was king of Judah from 640 to 609. Ashurbanipal's reign was followed by a period of anarchy in Assyria, ending in that nation's collapse in 610. Psammeticus I and Necho II were kings in Egypt. Nabopolassar was the king of Babylon (626-605). This was a period in which Assyria was collapsing and Babylon was moving into Assyrian territory. Egypt was attempting to take advantage of the confusion to stake a claim to Palestine.

34:3-5. religious purge. The most famous purge of antiquity was when the Egyptians rejected the religious reforms of Akhenaten in the fourteenth century. It was during the brief reign of Tutankhamun that the attempt was made to return to the worship of the traditional gods through the traditional priests and to eradicate the heresy of Akhenaten. This included restoring the ancient shrines and temples, providing them the assets and personnel needed to operate and returning that which had been confiscated. The competing shrine and capital city that had been established by Akhenaten at Amarna was abandoned. Horemhab destroyed the temples at Amarna, dismantled the site and recycled the materials into other building projects. What was left was burned. Evidence of Josiah's purge is found in the record preserved in Israelite stamp seals. The seals portraying familiar symbols of fertility gods, sun god and astral deities of earlier periods are replaced in this period with seals that contain only the inscription identifying the individual, with occasional decoration such as pomegranates.

34:6. purging of north. Though there had been purges of high places and pagan altars in the past (e.g. by Hezekiah), Josiah's purge was unprecedented for its thoroughness. Second Kings 23:15 adds that he burned the high places in the north, which had not been done before. He was able to do this because of the weakened Assyrian hold on the region.

34:8. ideology of temple restoration in the ancient Near East. The temple was the center of culture, economy and society in Syria, Mesopotamia and Israel. It served as the house of the city's patron deity, and so the god was believed to be present there. It was incumbent upon the ruler of the city to attend to the "care and feeding" of the deity. The statue of the god was bathed, clothed and fed daily. Just as important as the king's military success was his attention to the upkeep of the god's house. Countless building inscriptions from both Assyria and Babylonia attest to the king's piety because of his restoration of a certain god's house. Similarly, those who rebuilt or restored Yahweh's temple were accorded this same type of piety. Restoration entailed both physical and ritual aspects. A neglected temple would need structural repairs and perhaps the restoration of pilfered furniture and accessories. It is possible that gold objects or gold plating on walls would need to be replaced. Then the temple would need to have its sanctity reestablished through appropriate rituals. Finally, it would need to be provided with funding and personnel so that it could operate.

34:9. funding of restoration. Information given here suggests that some sort of temple tax was levied to provide for the necessary funds. The collecting of funds for the restoration of a temple was a common occurrence by monarchs in the ancient Near East. Often, though, the monarch would restore the temple by means of corvee labor or by collecting building materials from his subjects.

34:10-11. workers and materials. The regular maintenance of the temple complex was the responsibility of the "workmen in charge of the temple." Major repairs had to be contracted out to skilled workers. The listing of these skilled laborers is typical of contemporary Assyrian records. The skilled workers were carpenters, builders, masons and stonecutters. The term for "builder" was used for both

skilled and unskilled laborers who worked primarily with mudbrick. The carpenter was responsible for all of the wood items in construction, including the roof, door, window and stair fittings, and various cultic objects in the temple. The mason/stonecutter quarried the stones from natural caves or drove shafts in the hillside. Then the stones were cut and fitted into place.

34:12-13. role of the Levites. These were all typical functions for temple personnel in the ancient Near East. For more on the role of the Levites see comment on 19:8-11.

34:14. finding of the Book of the Law. The discovery of old documents found during the repairs of temples is known from both Egypt and Mesopotamia. Scrolls were found located in the masonry of buildings in Egypt, while foundation deposits and stelae were often found in Mesopotamia. In earlier times foundation inscriptions (for instance, inscribed on bricks) had been used to dedicate the building project to the deity. These gradually became more elaborate, and by this period it was common to bury a foundation box when building a temple or palace. These would include royal inscriptions describing the king's military and building accomplishments. One purpose of these documents was to offer information to any king who might undertake the restoration of the building in future days. These recoveries were often duly recorded. Nabonidus, the last king of Babylon (reigned 556-539) is well known for his search for ancient documents buried in buildings. Shabaka, an Egyptian pharaoh from about 700, claims to have found a forgotten theological text concerning Ptah's creation of the world on a badly damaged ancient papyrus. He had the text (today called the Memphite Theology) inscribed on stone. The Book of the Law (or teaching) may have been a document that had been enshrined in a foundation box or concealed in the walls of the temple. Alternatively, it could have been found in the temple archives. It is not certain which books of the Old Testament it contained, but it at least included Deuteronomy.

34:22. prophetesses. Prophetesses, though somewhat rare, are known from Mesopotamia. The Mari texts from Syria in the early second millennium give evidence of both male and female prophets. Women are also known to have spoken out as prophetesses during the reign of Esarhaddon of Assyria. The females appeared to have served in the same function as the male prophets.

34:22. keeper of the wardrobe. One of the functionaries of the Baal temple in Samaria had a similar title (see 2 Kings 10:22). There is also a Babylonian text from this period with a similar title. These robes would have been cultic vestments for the worship of the deity (see Zeph 1:8). But in these situations there was an image of deity in the temple to clothe, and that was not the case in the Jerusalem temple. The only wardrobe here would have been that which housed the priestly garments. These would require special care so that they would not become defiled.

34:22. second district. The Second District is also mentioned in Zephaniah 1:10 in connection with the "hills of the city" and the Maktesh quarter. Some have identified this area as the suburbs of the City of David, which grew on the western hill of Jerusalem. Excavations in this area have exposed a large urban settlement dated to this period. For more information see comment on 32:5.

34:29-33. Josiah's reform. See comments on 2 Kings 23:1-20.

35:7. king's contribution. Josiah's contribution to the Passover is comparable to that of Hezekiah. See the comment on 2 Chronicles 30:23-24.

35:10-14. Passover procedures. For more information on the procedures for the Passover see comments on Exodus 12:1-11. For its observance in Hezekiah's day see the comment on 30:15-17.

35:18. unique celebration. This was the first centralized celebration of the Passover since that mentioned in Joshua 5:10-11. The Passover had basically remained a family rite from that date until Josiah's policy change (though see the observance in the time of Hezekiah in 30:15-17). An example of restoring ancient festivals that had been discontinued can be found in the Babylonian Akitu festival. For twenty years (689-669) this enthronement ceremony (the most important of the Babylonian festivals) was not celebrated. It was reestablished by Esarhaddon when Babylon regained its prominence.

35:20. Necho's march to Carchemish. The Babylonian Chronicle states that in 609 Necho was on a mission to aid Assyria, which was attempting to retake the provisional capital of Harran in Syria that had been captured by the Medes and Babylonians the year before. Necho's troops would reinforce the garrison base at Carchemish. The Egyptians had transferred their allegiance to Assyria when they saw that the balance of power had changed from Assyria to Babylon. It can thus be presumed that Necho saw greater opportunity for his own expansionist ambitions in Palestine and Syria if Assyria successfully fended off the Babylonians and Medes. It is easy to

understand Josiah's anti-Assyrian stance, since Judah had been under Assyrian domination for over a century. However, even with Egyptian aid, the Assyrians were unsuccessful in dislodging the Medes and Chaldeans from Harran.

35:22. Battle of Megiddo. The Great Trunk Road (see sidebar on Major Trade Routes in Gen 38) that went across the fertile crescent from Egypt to Babylon proceeds along the coast of Palestine until it reaches the obstacle of the Carmel range. It then moves inland past the city of Megiddo (see comment on Josh 12:21) and into the Jezreel Valley (see comment on Judg 6:33). This is the logical place to intercept an army passing through the region, and many battles have taken place in this famous geographical arena. Nothing is known of this battle outside of Scripture. Although Josiah failed to block the Egyptian movement northward, he may have delayed them long enough so that they were of limited use to the Assyrians in the war against the Medes and Babylonians.

35:25. composition of laments. The lamentation composed by Jeremiah is no longer extant. Lamentation dirges were common for monarchs who had died (especially untimely deaths) and cities that had been taken and destroyed. Aside from the book of Lamentations in Scripture, there are Sumerian lamentations from the early second millennium concerning ruined cities, such as Ur, Eridu, Nippur and Uruk, as well as ruined temples. The literary pattern of the Sumerian lamentations is strikingly similar to the biblical models. The city in question has been allowed to be destroyed by its own god, resulting in a spiritual and physical crisis. Both the Sumerian and biblical lamentations expect a reversal of fortune of the city in question in the future.

36:1-23
The Reigns of Jehoahaz, Jehoiakim, Jehoiachin, Zedekiah and the Fall of Jerusalem

See comments on 2 Kings 23:31—25:30.

36:22-23. For information concerning Cyrus and his decree see comments on Ezra 1.

EZRA

1:1-11
The Decree and Provision of Cyrus

1:1. chronology. Based on the proclamation in the Cyrus Cylinder that calls for the rebuilding of the temples of the gods held captive in Babylon, the "first year of Cyrus" most likely refers to 539 B.C., the year he conquered Babylon and issued his decree. Cyrus had become king of Persia (Anshan) in 559 and had spent twenty years consolidating the kingdoms as far north as Lydia in Asia Minor (capturing Sardis in 546 B.C.) before turning against Babylon and its king, Nabonidus.

1:1. Cyrus. Careful use of Herodotus's *Persian Wars* (see sidebar in the book of Esther) and the Babylonian Chronicle reveal that Cyrus was the chief of a Persian tribe (Achaemenid) who won a struggle for power with Astyages, the last king of the Medes, in 550 B.C. By combining the force of these two areas east of the Tigris (modern Iran), he was able to eventually stage campaigns against Lydia (547 B.C.) and, after the capture of Sardis in western Asia Minor, Ionia. He consolidated his northern and eastern borders between 546 and 540 and then turned west to conquer Babylon, adding the Neo-Babylonian kingdom to his domain in 539 B.C. The city of Babylon opened its gates to Cyrus in October of that year, and in return he protected the sanctuary of Marduk from destruction or desecration. His administrative strategy permitted the worship of local gods and the recognition of native cultures. An excellent example of this policy is preserved on what is called the Cyrus Cylinder (see next comment). Cyrus was killed fighting the Scythian tribes on his northeastern border in 530 B.C. and was succeeded by his son Cambyses.

1:2-4. Cyrus Cylinder and Persian policies. It is evident that Persian administrative policy differed from that of Assyria or Neo-Babylonia with regard to the treatment of vassals and their cultures. The Cyrus Cylinder preserves a decree that reflects Cyrus's tolerance of a degree of autonomy for the peoples of his empire. Although it does not specifically mention Judah, it decrees that repairs be made to the

shrines and temples that had been damaged, that all that had been destroyed be rebuilt, and that all sacred images that had been held hostage in Babylon be returned. Excavations of the temple at Uruk have yielded bricks used for restoration of the shrine stamped with the name of Cyrus. Captive peoples were allowed to return to their homelands and were encouraged to serve the Persian empire under royal governors, who in many cases were natives of those countries. All this suggests that rather than ruthlessly condemning and dismantling native cultures, the Persians chose a more benevolent approach. The expectation was that recognition of regional identities and a measure of local autonomy in the form of religious freedom would prevent the breakup of the empire and the almost continuous revolts that the Assyrians and Babylonians faced. It is possible that these policies were due in part to the inclusive nature of Zoroastrianism, the official religion of the Persian court. It should also be understood that the Persians did not turn a blind eye to local rulers who overstepped their bounds or made statements condemning or criticizing the Persian government (see Zerubbabel's reluctance to act despite the urging of the prophets Haggai and Zechariah).

1:2. "God of heaven" in Zoroastrianism. In the Cyrus Cylinder, King Cyrus gives credit for his victory over Babylon to the chief god of Babylon, Marduk. Isaiah 45:1-5 adopts this theme but gives Yahweh the credit even though Cyrus does not "know" him. Both statements fit well with the inclusive nature of Zoroastrianism in which the chief god, Ahura Mazda, is in continual struggle with the dark forces of the evil god Ahriman. Those gods who are perceived as aiding the Persian king, such as Marduk or Yahweh, would be recognized by the Persians as members of Ahura Mazda's heavenly army of the forces of light. The biblical writer in Ezra presses the same point as Isaiah, not mentioning Ahura Mazda but instead proclaiming Yahweh as the God of heaven. The phrase "God of heaven" also appears in the Elephantine papyri, Jewish documents from Egypt from the end of the fifth century. The fact that Yahweh is here called the God of heaven does not reflect Cyrus's personal beliefs. Similar deference was given to other gods when decrees were made concerning the restoration of their shrines.

1:3. God who is in Jerusalem. The reference to the God in Jerusalem reflects the language in the Cyrus Cylinder directing the hostage peoples and their gods to return to their homelands. There is a sense in this verse both of a universal God, motivating the actions of the world's most powerful leader, and of a God whose seat is still, as always, in Jerusalem.

1:4-6. provision of goods and offerings. Since not all of the Israelites chose to return from exile, this statement may refer either to those who remained behind or to their non-Jewish neighbors. If it is the latter, then there is a strong tie to the "despoiling" of Egypt during the exodus, when the Israelites took gold and silver on their departure from Egypt (Ex 11:2; 12:35-36). The "freewill" offerings may be compared to those made to equip the Tent of Meeting in the wilderness (Ex 25:2-9). In this way, both the needs of the returnees (livestock and other provisions) as well as the means of rebuilding the temple in Jerusalem were provided for.

1:7-10. articles of the temple. As we know from references in the Mari texts as well as the Cyrus Cylinder, sacred objects, including idols and the many types of vessels used in worship, were taken hostage when a people was conquered. A way of demonstrating the power of your god over the god of conquered people was to desecrate their sacred objects or place them in a position of submission (see Dan 5:1-4 and 1 Sam 5:1-2). Now, as part of the restoration of the temple and proper Yahweh worship there, all of the sacred objects are inventoried, numbered to insure that none are missing and returned to Jerusalem (see comments on 2 Chron 4:8-11 for description of some of these bowls).

1:11. Sheshbazzar. Despite attempts to equate Sheshbazzar with Shenazzar (1 Chron 3:18), in order to give him a Davidic tie as a "prince of Judah" (Ezra 1:8), or with Zerubbabel, in order to reconcile events in Ezra with those in Haggai and Zechariah, it seems that this little known individual has his own separate identity. The title "prince of Judah" may indicate royal ancestry, in which case he should be viewed as a ranking member in the Davidic line. Alternatively the title could refer to a function, in which case he could be seen as the Persian who served in the official capacity of accompanying the exiles back to their land and supervising the transition to a local governorship (turned over to Zerubbabel). He is the first governor appointed by the Persians to administer Judah (Yehud) and is given charge of the sacred vessels as well as the task of laying the foundation for the restored temple in Jerusalem. Archaeologists have recovered jar handles and seals containing the names of three more governors of Judah about which we know nothing else and who were not even mentioned by Ezra and Nehemiah.

1:11. journey from Babylon to Jerusalem. The

most likely route would have taken the returning exiles north, up the Euphrates to either Mari or Carchemish and then south and west to Damascus and on down the caravan route to either the coastal road or perhaps back through the Jordan Valley to Jericho and then northwest to Jerusalem. The distance between Babylon and Jerusalem was roughly nine hundred miles, so the journey would have taken eight to ten weeks.

2:1-70
The Returning Exiles

2:1. province. The province of Judah (Yehud) was part of the satrapy of Babylon until the reign of Xerxes, when it became a portion of the satrapy "Beyond the River" (Trans-Euphrates). The text is thus talking about exiles originally of the province of Judah now returning to Jerusalem. Archaeological finds based on the distribution of coins suggests the province of Judah extended south as far as Beth Zur (six miles north of Hebron), west to Gezer, north to Mizpah and east to the Jordan.

2:2. what is known about leaders. Zerubbabel is known to have been governor under Darius, but Sheshbazzar preceded him. Bigvai (a Persian name) was a governor of Judah following the administration of Nehemiah. Of the others, Jeshua (Joshua in Haggai and Zechariah) served as high priest during the time of Zerubbabel (Zech 3:1-10). It is interesting to find the names Nehemiah and Azariah (an alternative form of the name Ezra) in the list, but possibly they were common ones. Mordecai should not be confused with the relative of Esther, and Mispar and Bilshan are unknown elsewhere. Rehum is mentioned in Ezra 4:7-24 as one of the officials ("commanding officer") who wrote a letter complaining to King Artaxerxes about the activities in Jerusalem.

2:3-67. classes of individuals. The principal groups of returnees consisted of members of clans or kinship groups (17 in vv. 2-19), some listed by geographical region, most of which are north of Jerusalem (22 names in vv. 20-35), as well as members of four priestly families (totaling 4,289, vv. 36-39), and a small number of Levites (just 74 listed in v. 40). The remainder of the inventory of names includes persons associated with the temple or service to the priesthood: musicians, gatekeepers, and 35 temple servants (vv. 43-54), who may have been non-Israelite in origin (there are possible comparisons to be made with Ugaritic and Neo-Babylonian guilds of designated temple servants). A group descended from "Solomon's servants" (vv. 55-58) was also of non-Israelite origin (see forced labor groups in 1 Kings 9:20-21) and was probably attached to the temple community as the need for labor increased. The final group (vv. 59-63) could not maintain their family genealogies far enough back to be able to claim a position in the priesthood but had otherwise escaped assimilation into Babylonian culture.

2:69. amount of gifts. The drachma was equal to approximately half a shekel. The Babylonian shekel weighed about 8.4 grams and was represented in the Persian coin known as the *daric* once it began to be minted in the time of Darius (a few decades after the time of Cyrus). In this way about 565 pounds of gold and 3 tons of silver were provided for the rebuilding.

3:1-13
Rebuilding the Altar and Temple

3:1. seventh month. The seventh month in the calendar year is known as Tishri and is in the autumn (September-October). The tie to the Feast of Tabernacles is also found in Ezra's covenant renewal ceremony in Nehemiah 7:73-8:2.

3:2. Jeshua. Jeshua is the high priest in the early postexilic period. His grandfather, Seraiah, had been executed by Nebuchadnezzar when Jerusalem fell to the Babylonians (2 Kings 25:18-21; note that Ezra is also from the line of Seraiah, see 7:1). Judah's heir to the throne, Zerubbabel (see next entry), served as governor, but since Judah was still under Persian control, there were restrictions on the extent of his control (so as not to compete with the Persian king). Consequently, rule in the community was now divided between the governor and the high priest, giving the priest a more prominent role. Little is known about him except that he was one of the leaders who helped get the temple rebuilt. There are no contemporary extrabiblical references to him.

3:2. Zerubbabel. Zerubbabel was the heir to the Davidic throne (grandson of Jehoiachin, see comments on 2 Kings 24) and served as governor of Judah under the Persian king Darius I. There was a significant amount of expectation surrounding him that had a messianic flavor to it. Undoubtedly some expected him to set up the promised kingdom and bring freedom from their slavery (to the Persians). While his duties were primarily secular, he is described in Ezra, along with the priest Jeshua, as the force behind the rebuilding of the temple in Jerusalem. Governing under the auspices of the Persian king, he was responsible for maintaining law and order,

and for the collection of taxes. Though Zerubbabel is the last Davidic heir to serve in the role of governor, archaeologists have found a seal of Shelomith (listed as a daughter of Zerubbabel in 1 Chron 3:19), where she is designated as either a wife or an official of Elnathan, the governor who is thought to have succeeded Zerubbabel.

3:2. burnt offerings. The restoration of the temple and the proper worship of Yahweh began with the construction of an altar and the resumption of burnt offerings (see the precedent in Deut 27:6-7). Interestingly, the Elephantine papyri refer to the desire of that community to rebuild their destroyed temple, but they pledge not to stage burnt offerings on their altar so that the preeminence of Jerusalem could be maintained. For general information on the burnt offerings, see comments on Leviticus 1.

3:3. foundation. In order to maintain continuity with worship in the temple in Jerusalem prior to the exile, it was essential that the altar be constructed upon the foundations of the old one (see similar reconstruction in 2 Chron 24:12-13). In this way, the sacred space was revived as the one true spot for the sacrificial rituals of Yahweh worship. In the ancient world the choice of a site for a shrine or temple was never arbitrary. As early as 2000 B.C. the tablets of Gudea record an elaborate dream through which he was instructed concerning the intimate details of the location, dimensions and orientation of a temple. As a result, once an appropriate spot had been identified, rebuilding would always seek to recover the original plan and location. In one of his inscriptions, Nabonidus, the last king of Babylon, reports that he rebuilt the temple of Sippar on the foundations laid by Sargon nearly a century earlier without deviating even an inch. Some archaeological sites in Mesopotamia preserve over a dozen levels of building and rebuilding of temples on the same spot.

3:3. morning and evening sacrifices. Maintaining the continual observance of the daily morning and evening sacrifices was a signal of complete compliance to the temple regimen. According to Exodus 29:38-42 and Numbers 28:3-8 (see comments on both contexts for additional information) this involved the sacrifice of a year-old lamb along with flour, oil and wine each morning and evening. On two other occasions the practice had had to be revived (by Joash in 2 Chron 24:14 and Hezekiah in 2 Chron 29:7, 27-29) after a period of neglect or suppression due to pressures from Assyria.

3:4. Feast of Tabernacles. See the comments on Exodus 23:16b; Leviticus 23:33-43; and Deuteronomy 16:13-17 for information on this major religious festival. Its celebration is also tied to the dedication of the temple by Solomon (2 Chron 5:3) and to the covenant renewal ceremony of Ezra (Neh 8:13-18). In all three cases a new beginning for the people is signaled, and a celebration involving a feast has always been a means of solemnizing a covenant or treaty agreement (see the comment on Gen 31:54).

3:5. New Moon and other sacred feasts. See the comment on Numbers 28:1-30 for background on these religious festivals in the Israelite religious calendar (note also 1 Sam 20:5). What is evident here is the determination to once again regularize religious practice through the restoration of all of the previous sacrificial rituals.

3:7. food, drink and oil. Standard wages for laborers always included a daily ration of food, drink and olive oil (see the list in 2 Chron 2:10). Evidence of this is found in ration lists from Babylon, Mari and many other Mesopotamian cities (including amounts for both free laborers and slaves).

3:7. cedar logs by sea. Just as the eleventh-century Egyptian priest Wenamon contracted with the ruler of Syria for cedar logs that would be transported by sea, here a similar arrangement is made for the transport of logs to the port of Joppa to rebuild the temple (see the comment on 2 Chron 2:16 for additional examples of this practice).

3:8. chronology. Like the temple of Solomon, the construction of this second temple will begin in the spring during the second month, Ziv (1 Kings 6:1, 37). The work is said to begin in the second year of Zerubbabel's arrival at the temple. But the text is never very clear about when Zerubbabel came. He is never explicitly identified as a contemporary of either Shesh-bazzar or Cyrus (though 4:1-5 could suggest such an association), but is always tied to Darius. Ezra 2 is often thought to refer to a separate return, perhaps fifteen years later than the one described in chapter 1. As a result it is not easy to identify which year the second year is.

3:10. importance of foundation. See the comment on 3:3 for the significance of the foundation laid on sacred space. In addition it was the common practice in Mesopotamia to make a foundation sacrifice and bury tablets or cylinder cones describing the laying of the foundation by a king (much like our own practice of including a time capsule in the corner stone of a public building). For example, the foun-

dation inscription of Yahdunlim, a nineteenth-century B.C. king of Mari, describes not only the building of the temple of Shamash but also a campaign to the Cedar Mountains and the Mediterranean Sea. The interest of the Persians in relaying foundations at traditional sanctuary sites is evidenced in Cambyses' personal role in the celebrations for the newly laid foundation of the Neith temple in Egypt around 525.

3:10. trumpets and cymbals. Musical instruments, such as trumpets, cymbals, lyres and harps, are often mentioned as the means of punctuating the start and the procession accompanying religious ritual (see 1 Chron 16:5-6; 2 Chron 25:11-13). The clashing of cymbals might be used to symbolize the clapping of thunder or as a means of marking time for the procession. Trumpets functioned as signaling devices on the battlefield and on occasions of great importance.

3:12. comparison of first and second temple. The splendor of ancient temples was based on several factors. While size could be of some significance, more important were the materials used in construction and the artistry of the craftsmanship. Solomon had far greater resources to commit to the materials than the postexilic community had—even with the sponsorship of the Persian government. The amount of gold, the quality and the size of the stones and the skill of the stonecutters and metal workers were all aspects in which the second temple could not hope to compare favorably with the first. The disappointment of the older generation does not necessarily reflect an obsession with external appearances. It was true then, as it had been at the time of the exodus, that the expense and grandeur of the edifice and its furnishings were a legitimate way to give honor to the God who inhabited the sanctuary. The people felt sadness at their own inability to provide surroundings with splendor commensurate to God's glory.

4:1-24

The History of Opposition to the Rebuilding Program

4:1. enemies of exiles. The land of Israel and Judah was not uninhabited at the time of the return from exile. The descendants of those people who had not been taken to Babylonia as well as those who had been brought into that area by the Assyrians (2 Kings 17:1-6) would have existed as distinct population groups. The fact that the writer of Ezra identifies them as "enemies" suggests that there had already been clashes with these people (Ezra 3:3) and that their offer of help in rebuilding the temple was not an honest one. In any case it is likely their understanding of Yahweh worship differed from that of the returned exiles (see 2 Kings 17:33). That would help explain Zerubbabel's curt answer to them.

4:2. Esarhaddon's relocation. After the fall of Samaria in 722 B.C., the Assyrian king Sargon II had ordered the relocation of the bulk of the Israelite population to Halah and to Media (see the comment on 2 Kings 17:6). In their place, peoples from within the Assyrian empire were settled in Israel (see comment on 2 Kings 17:24). Additional deportations must have taken place under the reign of Esarhaddon (681-669 B.C., see comment on Isaiah 7:8). The descendants of these people, possibly taken from Sidon after the campaign of 676 B.C., are described as "enemies of Judah and Benjamin," but they are not in this early Persian period known as the Samaritans.

4:5. Cyrus to Darius. The Persian king Cyrus reigned until 530, when he was killed in battle against the Scythians on the northeastern border of his empire. He was succeeded by his son Cambyses, whose major accomplishment was the conquest of Egypt. However, he was murdered shortly thereafter, and a struggle ensued that eventually resulted in the accession of Darius, who had gained the support of the majority of the Persian nobility and married Cyrus's daughter. He began his reign in 522, and it will be during his administration (515 B.C.) that the Jerusalem temple will be finished.

4:6-23. chronological sequence. The author is writing from the time of Ezra-Nehemiah, about 440 B.C. These early chapters have looked back at the events that occurred nearly a century earlier between 538 and 518. At the mention of the opposition and delay in verse 5, the author digresses to recount the long history of opposition that continued from this initial incident down to his own time, before going back and resuming his story where he left off, about 520 B.C. The common theme throughout this digression is the continual opposition to the desires of the returned exiles in Jerusalem. His digression takes him from Darius through Xerxes and Artaxerxes (who was king in the author's time). Xerxes (Ahasuerus) began his reign in 486/485 B.C. and immediately became embroiled in suppressing revolts in Babylon—an event that may have also sparked uprisings in the western provinces, perhaps even in Yehud. In any case, a general sense of disturbance would have been sufficient reason to delay action on the Jerusalem

construction projects, even into the reign of Artaxerxes (465-424 B.C.), and to cast suspicion on its leaders, given the continued stream of letters charging the Israelites with disloyalty.

4:6. Xerxes. Xerxes (Ahasuerus), the son of Darius, came to the Persian throne in 486/485 B.C. His early years were taken up with putting down revolts in Babylon and in Egypt. The result was the establishment of Babylon as a separate satrapy under the direct control of the Persian government. Subsequently Xerxes continued his father's ambition of conquering the Greeks. His massive army crossed the Hellespont into northern Greece and succeeded in burning Athens. However, the destruction of his fleet at the naval battle of Salamis left his army without an adequate supply line and the death of his general Mardonius in 479 at the Battle of Plataea ended any chance of a victory. Xerxes is known for a number of monumental building projects, but his reign ended in assassination in 465 B.C. For more information see comment on Esther 1:1.

4:7. Artaxerxes. Three Persian kings were named Artaxerxes. The one mentioned in Nehemiah is most likely the successor of Xerxes I, Artaxerxes I (465-424 B.C.). Outside of Scripture, little is known of this king. The Greek historian Herodotus described a taxation list and some poor economic policies that occurred during this king's reign. The Greek city-states, fresh from their victories against the Persians at Salamis and Plataea (480-479 B.C.), used every occasion to undermine Persian authority in the Near East. Thus, Artaxerxes endured two revolts during his reign (see the note on Nehemiah 1:1). He was, however, able to rule for forty years.

4:7. use of Aramaic. Aramaic, a close relative of Hebrew, was already an important language in the Assyrian period (see comment on 2 Chron 32:18), and both the Babylonians and the Persians employed it as the international diplomatic language. While they kept internal documents in Persian (often translated from the Aramaic), correspondence from officials like Tabeel would have been written in Aramaic. In this way, bureaucrats in every part of the empire had a common language for use in carrying out the king's business (compare the Roman use of Greek and modern diplomatic use of French).

4:9-10. titles used by speakers. The title for Rehum, translated as "commanding officer," applies to a civilian official with the power to issue orders or royal edicts. Shimshai's office of "secretary" (*sapar)* required him to make copies of official documents, translate them into Aramaic or some other language, and create tax roll records. These individuals were found throughout the empire, including Elephantine, since their services were always needed by higher ranking officials. The other titles ("judges and officials") are less well defined and probably refer to members of Rehum's entourage.

4:10. Ashurbanipal's relocation. The biblical text does not make any other specific mention of this deportation by the Assyrian king. However, there were many campaigns by each of the Assyrian kings to suppress revolts or to deal with coalitions of opponents (such as the Ashdod Revolt of 711 B.C. referred to in Is 20:1-4). It is easily possible that Ashurbanipal's expedition against the rebellious Babylon in 648 B.C. extended into the western provinces and resulted in a relocation of Israelites implicated in the uprising.

4:12-16. nature of the accusation. The reference made to the returned exiles may mean those who came to Jerusalem during the reigns of Cyrus and Darius or else those who arrived more recently during the time of Artaxerxes I. The officials' concern about the rebuilding of the city seems to imply, based on past experience, that Jerusalem had a history of being a rebellious and troublesome people who will spark further revolts throughout the region. It is also possible that the true threat was from the rebellious satrap, Megabyzus (c. 448 B.C.), who might easily have found Jerusalem a willing ally. The charge that they will withhold taxes is equivalent to treason (a similar charge was made against Hezekiah in the Assyrian annals of Sennacherib). Exaggeration of the situation may be a diplomatic ploy to gain the king's attention and force the people of Jerusalem to go through channels such as requesting permission of royal officials before starting construction.

4:15. nature of the royal archives. Archives would have included annals and chronicles. Royal annals were kept throughout the ancient Near East, with most examples coming from mid-second millennium Hittite kings and from ninth- to sixth-century Assyria and Babylon. The annals could be represented by annalistic royal inscriptions giving detailed accounts of military campaigns. In addition there are court chronicles that give information of important events in each year. No annals from Achaemenid Persia have as yet been discovered by archaeologists, though it is likely that the Persian bureaucracy would also have made an effort to amass as much as possible of the official records of the Assyrians and Babylonians. This would have given them historical perspective

on the peoples they now ruled. It is thus possible that the request that the royal archives be searched would have included previous dealings with Israel and Judah (particularly the annals of Sargon II, Sennacherib and Nebuchadnezzar) as well as more recent events recorded by the Persian scribes.

4:16. Trans-Euphrates. The region west of the Euphrates river, excluding Babylon, which was a separate satrapy, comprised a very large Persian province ruled by a governor (satrap) as well as subordinates with the title *paḥat* (see Tattenai in Ezra 5:3) and royal investigators known as *patifrasa.* Within the satrapy were smaller administrator units, such as Yehud, which had their own royal appointee governing them.

4:18. translated to what. Although Aramaic was used for all diplomatic exchanges (correspondence, treaties), the official language of the Persian court was Persian. As a result, when the letter was read to King Artaxerxes, the scribe would have translated the Aramaic into Persian for the king's benefit and to maintain a sense of official decorum within the inner circle of the king's court.

4:24. second year of Darius. The narrative now resumes, following the interlude dealing with the construction of the wall system, with the reign of Darius and the issue of rebuilding the temple in Jerusalem. The second year of Darius would have been 520 or the beginning of 519 B.C. By that time the disputes over his succession to the throne after the death of Cambyses had subsided, and he would be ready to consider matters like the Jerusalem temple.

5:1-17

Tattenai's Letter to Darius

5:1. Haggai. Among the returned exiles were the prophets Haggai and Zechariah. Both expressed fervent messianic hopes with regard to Zerubbabel's leadership of the people and both actively promoted the rebuilding of the temple in Jerusalem. Haggai is particularly concerned that the returnees had spent their time and energy rebuilding their lives and homes while neglecting the temple (Hag 1:2-11). The name Haggai appears a number of times in the Elephantine papyri (over a century later), but that simply proves it was a fairly common personal name in this period.

5:1. Zechariah. With the meaning "Yahweh remembers," Zechariah was a common name in the exilic and postexilic period. This sixth-century prophet is identified as a member of a prominent priestly family descended from Iddo (see Zech 1:1). His message, like Haggai's, emphasized the rebuilding of the Jerusalem temple, but he also promoted the increased political role of the high priest alongside the Persian-appointed governor in the province of Yehud.

5:3. Tattenai, governor of Trans-Euphrates. Tattenai was a *paḥat* or *peḥu,* who served under the satrap Ushtannu. He is later appointed as a satrap in a Babylonian source dated to 502 B.C. As the local official on the scene, he took the responsibility for investigating the temple building process and asked for confirmation from Darius as to whether it was legitimate activity. Once he receives affirmation, he demonstrates that he is a good bureaucrat by diligently carrying out the king's orders (Ezra 6:13).

5:3. Shethar-Bozenai. If this is a personal name, it refers to an associate of Tattenai (possibly a scribe) who participated in the investigation of Jerusalem's temple building activities. It is also possible that the name is a title applied to Tattenai meaning "chief clerk of the chancery."

5:8. large stones and timbers in the walls. There is some difference of opinion on the meaning of the Aramaic word translated "large stones." Some commentators tie it to the root meaning "roll" and thus speculate that the large stones were cut in such a way that they could be rolled into place before they were shaped to fit together. Others point to an Akkadian phrase, *aban galala,* meaning ashlar stones. The timbers may have been designed for either earthquake protection or a mimicking of the style of building in Solomon's temple (see comment on 1 Kings 6:36).

5:12. God of heaven. See the comment on Ezra 1:2.

5:12. Nebuchadnezzar's destruction of Jerusalem. It is interesting to compare the arguments made by the elders of Jerusalem for the rebuilding of the temple with those found in the Elephantine letter requesting permission to rebuild the destroyed temple in that Egyptian military colony about 400 B.C. In both cases the "God of heaven" is invoked, as well as arguments of past history. The case in Ezra makes use of an explanation that blames the Babylonian destruction on the unfaithfulness of the people of Judah and the need for a period of cleansing (see Jer 25:8-14). The Persian king is now called upon to serve as the instrument of their religious restoration as his predecessor Cyrus had (see Is 45:1-3).

5:14. Sheshbazzar. See the comment on Ezra 1:11.

6:1-12

Darius Grants Permission

6:1. archives in the treasury of Babylon. See the comment on Ezra 4:15 on archive keeping in the Persian empire. During the reign of Darius, Babylon was still the capital of the satrapy of Trans-Euphrates and thus would be the repository of all records concerning its provinces. Many of these documents would have been on clay tablets or cylinders, although some might have been on papyrus or leather scrolls.

6:2. citadel of Ecbatana. Until 550 B.C. Ecbatana had been the capital of the Medes. It was located in the Zagros mountains in northwestern Iran, at the foot of Mount Orontes. After its capture by Cyrus it became the summer residence of the Persian kings, as they moved their court back and forth between Susa and Ecbatana to take advantage of more temperate climates. The extent of the search for the record of Cyrus's dealings with the Israelite exiles was broadened to this royal archive when nothing was found in the regional center at Babylon. Scrolls of leather were widely used in the Persian empire for this type of document.

6:3. dimensions. The numbers given for the dimensions are generally considered to have confused by a scribe, since the temple of Solomon had been only sixty cubits long, twenty cubits wide and thirty cubits high. Since this temple was to be built on the foundations of the former, it would be expected that it would have the same dimensions. Alternatively, the numbers in the text of the decree may represent ideal figures or maximum allowable dimensions. It is interesting that Cyrus and Darius took such an interest in sponsoring temple building, since temples are not attested (in either literature or archaeology) as playing any significant role in Zoroastrianism, the religion of Achaemenid Persia. Herodotus likewise notes the absence of temples in Persian religious practice.

6:7. rebuilt on its site. One of the tasks most often recorded in Mesopotamian royal annals was temple restoration (for example, those of Ur-Nammu from Ur III and the Kassite king Kurigalzu). Once sacred space has been identified and used for religious purposes, it becomes essential that it remain in use. Thus, kings like Cyrus would expect that the only appropriate site for the restoration of a temple would be on the foundations of the old one (see the comments on Ezra 3:3 and 3:10). This practice also explains why conquering nations or religions tend to build their places of worship on the sites of earlier temples and churches.

6:8. payment out of the royal treasury. The inclusion of dimensions for the restored temple (see v. 3) implies a concern for cost overruns on the part of the Persian government. It is possible that a special tax or levy on the satrap of Trans-Euphrates was exacted to help pay for the restoration project, but these funds would have first been sent to the general treasury and then disbursed as needed to the contractors in Jerusalem. There is also an official stamp given to the project since it has a line in the royal budget. The Cyrus Cylinder (see comment on 1:2-4) is unclear about the extent to which the royal treasury contributed to the rebuilding projects mentioned there, though excavations in a number of sites throughout Babylonia have recovered bricks used for sanctuary rebuilding that are stamped with Cyrus's name. This suggests that the royal treasury financed the project.

6:9-10. use of the goods provided in sacrifice. Darius's generosity as reflected here is also evidenced in inscriptions throughout the empire. In fact, the Egyptians who benefited from his magnanimity dubbed him "the friend of all the gods." The animals mentioned are specifically designated for burnt offerings (see comment on Lev 1:3-4). The ration of wheat, salt, wine and oil may have been divided between the priests and the construction workers, since this is a daily portion, but may have been used in offerings as well. Grain offerings (made with oil and semolina) often accompanied other offerings, and portions were given to the officiating priest (for the use of wheat, oil and salt in these offerings see the comments on Lev 2). For the use of wine for libations see the comment on Leviticus 23:12-13. Josephus reports the provision of funds for temple construction and of these same ingredients for sacrifices to the Jews several centuries later by Antiochus the Great.

6:10. praying for the well-being of the king. This request parallels similar remarks in the Cyrus Cylinder, asking the gods and presumably their worshipers to "recommend" Cyrus and his son to the god Marduk so that they would be granted "a long life." While this may represent a simple desire to receive the blessing of the god, it may alternatively be designed to prevent petitioning the gods to overthrow or curse the king. In fact, Herodotus reports that prayers for the king had to accompany every sacrifice. The Elephantine papyri also offers prayers to a Persian official if he would aid them in the reconstruction of their destroyed temple. The

drafting of a decree so as to portray the king as knowledgeable and concerned about the religious practice of the subjects involved is demonstrated in the Xanthos Charter. This document from Lycia (in modern day Turkey) dated to 358 B.C. formalizes Persian support for the cult there with some of the same issues addressed as here.

6:11. punishment for disobedience. It is common for treaties and royal decrees to end with a curse or clause threatening punishment for disobedience to the stipulations of the document. It would be possible to compare Joshua's curse on the man who would rebuild Jericho in Joshua 6:26 and the curse on any prince who replaces the gate constructed by King Azitawada of Karatepe with this injunction. Such a statement is also found in the epilogue to the Code of Hammurabi, charging future rulers to provide justice or face a curse from the gods. The punishment of impalement is depicted in Assyrian Lachish reliefs and mentioned in a number of royal archives. The practice was to impale the corpse of the executed victim on a pointed stake in public view. Impalement is known in Persia, for instance in Amestris's execution of Inaros (leader of a Libyan revolt) during the reign of her son, Artaxerxes. The victim was thus denied proper burial, as the birds and insects devoured the remains. One curse used by Darius in his inscriptions is: "If you should blot out these words, may Ahura Mazda slay you and your house be destroyed," while another says "What you make, may Ahura Mazda pull down."

6:12. curse in the name of local god. Since many of the peoples of the ancient world believed that gods were localized, that is, tied to particular places and peoples, it would be appropriate that events within that divine "jurisdiction" should be handled by the local deity.

6:13-22

Completion, Dedication and Passover Celebration

6:15. date of completion. Such an important event as the completion of the second temple required careful recording. The date provided places it in the twelfth Babylonian calendar month, Adar, which would have been in February-March. The sixth year of Darius would have been 515 B.C., and the third day of the month of Adar would make the completion date March 12, 515. It should be noted that 1 Esdras 7:5 and Josephus both place the date on the twenty-third of Adar, and this has been preferred by some since the third was a Sabbath.

6:17. dedication sacrifice compared to 1 Kings. See the comment on 2 Chronicles 7:5-7 for dedicatory activity for Solomon's temple. The actual number of sacrificial animals in the dedication ceremony for the second temple is much smaller than at the time of Solomon (1 Kings 8:63): 22,000 oxen versus 100 bulls; 120,000 sheep versus 200 rams and 400 male lambs. The sin offering of twelve male goats is according to priestly ritual (Lev 4:22-26; see the comment on Lev 4:13-32) and fits into Ezra's attempt to reestablish the idea of a twelve-tribe coalition, now reborn through the exile experience and prepared to resume its covenantal relationship with Yahweh in Judah and Jerusalem.

6:19. Passover. There has been no mention of a celebration of Passover since the time of Josiah (over one hundred years earlier; see comment on 2 Chron 35:18). Now, as a part of the rejuvenation of the restored Jewish community in Judah, this ritual (see the comment on Ex 12:1-28), which parallels the escape from bondage just experienced by the returned exiles, must be reinstituted. The date of the fourteenth of Nisan (the first month) is based on the religious calendar (Ex 12:2-6; Lev 23:5). Note the previous celebrations of Passover following the cleansing or renovation of the temple (see comments on 2 Chron 30).

6:21. separated from unclean Gentiles. There are several possibilities for this group of people. It is possible that they were remnants of the people of the northern kingdom or those from Judah who were not taken into exile (see 2 Chron 30:17-21). Their contact, during the period of the exile, with non-Israelites could have been perceived as a contamination from which they would have to consciously separate themselves. It is also possible that the Passover ceremony was, as in Exodus 12:48, extended to proselytes *(gerim)* who had converted to Yahweh-only worship.

6:22. Feast of Unleavened Bread. See the comments on Exodus 12:14-20 and Leviticus 23:6-8. Since the celebration of this festival is also attached to Hezekiah's (2 Chron 30:13) and Josiah's (2 Chron 35:16-17) celebration of the Passover, it is appropriate here as well. The joy expressed in this seven-day celebration is tied to the act of God in "changing the attitude of the king of Assyria" (a symbol for the Persian rulers of Mesopotamia), which has made the restoration possible.

7:1-28
Ezra's Arrival with Commission from Artaxerxes

7:1, 7-8. chronology. If these events occur during the reign of Artaxerxes I, then the seventh year of that king would be 458 B.C. This is nearly sixty years after the events described in the last chapter. The departure date given is the first day of Nisan (April 8) and the date of their arrival in Jerusalem is the first of Ab, the fifth month (August 4). This time of year, spring through midsummer, is dry and hot, and would have required a northern route, avoiding the desert and careful planning to insure adequate water resources were available for the returnees.

7:1-5. Ezra's ancestry. It was important that Ezra be recognized as having the proper credentials so that his mission would be sanctioned and his actions would have the force of law. Unlike Jeshua (see comment on 3:2) there is no suggestion that Ezra was a high priest, but the Aaronide genealogy provided for him (that only provides sixteen generations between Aaron and Ezra; for complete list see 1 Chron 6:5-53) shows that he is of prominent ancestry. The text likely suggests that he is a descendant of the Seraiah who was high priest at the time of the destruction of the temple in 586 B.C. Since Jeshua is not mentioned in his ancestry, it is likely that he was either from a different part of Seraiah's line or that this is a different Seraiah (a common name of the period).

7:6-12. Ezra's expertise. Ezra is given a variety of attributes, most of them centering around his ability as a scribe and teacher of the law of the God of heaven. As a scribe, Ezra was possibly a member of the Persian bureaucracy. It was a common practice for ancient Near Eastern governments to employ persons trained not only as secretaries or clerks, but as diplomats and lawyers. These individuals were used to interpret documents from subject and allied peoples. They were also sent on investigative missions to aid the king and his advisors in making decisions (for more information see comment on Neh 8:1). Examples include the seventh-century Assyrian scribe Ahiqar and the description of the scribal profession in the Middle Kingdom Egyptian "Satire on the Trades" where the profession of scribe is praised as a worthy vocation with benefits that far exceed other types of employment.

7:8. four-month journey. As is so often the case, the actual events of a long journey are not recounted here (see Gen 12:1-9). Since they departed in April and arrived in early August, this would have been a dry and hot trek. Most likely they would have taken the northern caravan route (approximately nine hundred miles) up the Euphrates, perhaps turning west at Mari across to Tadmor, then southwest through Damascus and on into Palestine. Considering the size of the company, including whole families, an average of ten miles a day could be expected.

7:14. seven advisors of the king. Based on the reports of Esther 1:14 and the ancient historians Xenophon and Herodotus, we know that the Persian kings relied on a group of seven princes or advisers as their privy council. It would be natural that an investigative commission, such as that given to Ezra, would come in the name of the king and his advisers.

7:14. nature of commission. The Persian kings showed a consistent interest in insuring that their subject peoples maintained the favor of their gods. Restoring temples had been one way to accomplish that, and here we find that obeying religious mandates was another. If the God of Israel was pleased by the people's obedience to his instructions, then by all means they should be enforced. Personnel should be put in place to instruct as well as monitor and assess compliance. It is, therefore, Ezra's commission to determine whether the Jews in the Persian province of Yehud are obeying the law found in the Torah. There had been enough complaints and queries sent from persons there to suggest such an investigative mission was necessary. As a scribe, Ezra has the expertise to handle this mission and to make judgments about compliance. In this way, the Persian king used a member of a subject people (just as Nehemiah was used) to try and insure continued divine approval for his empire and avoid the wrath of God (see v. 23).

7:15-17. Persians offering sacrifices to Yahweh. The Persian kings are known to have made public sacrifices to local deities as a way of showing respect, as well as for the political advantage it would give them in placating the newly conquered people (such as Cyrus's actions for Marduk in the Cyrus Cylinder). The actual list of sacrificial animals and the addition of cereal and drink offerings (see Num 15:2-10) suggests that Jewish experts had been consulted in order to draft the Persian decree. Such a practice is evidenced during the reign of Cambyses (530-522). An Egyptian priest of Sais, Uzahor, played a significant advisory role in attracting the king's interest in the restoration of the sanctuary of Neith and overseeing the process of restoration. This

restoration included laying a foundation, reestablishing the rituals and festivals, and providing for government grants to fund the operation of the temple.

7:22. amounts provided. The ration list issued by Artaxerxes to his provincial officials has limits, but the numbers are still amazingly high: 3 3/4 tons of silver, 650 bushels of wheat, 600 gallons of wine, 600 gallons of oil, and unlimited quantities of salt. These amounts are not necessarily based on an assessment of what is required to operate the temple. Instead, as the next verse suggests, it was calculated as what was necessary to avert the wrath of Israel's god.

7:23. theological mentality. In the appeasement mentality of the ancient world, if God's wrath were not appeased, rebellious factions in Israel could claim that their actions against Persia were taken at the instigation of Yahweh. There was revolt in progress in the Persian empire at the time of Ezra. Inarus, a Libyan, had seized control of Egypt in 460 and had found ready support from the Athenian fleet in the Mediterranean. The revolt was crushed by Megabyzus between 456 and 454, so Ezra's journey (458) comes right at its height. By showing great respect for Yahweh, the temple and the priesthood, Artaxerxes followed previous Persian policy (Cyrus Cylinder), acknowledging the power of the God of heaven and adding a sense of urgency to the decree: "let it be done with diligence."

7:24. temple personnel tax exempt. There may have been a dual purpose behind this exemption from taxation. Ezra was coming into a situation where he was unknown and was associated with a foreign power. Tax exemption would have helped him gain some support from the Jerusalem temple community. Precedent for this practice by the Persians is found in the Gadatas Inscription from the reign of Darius, which granted tax exemption to the priests of the Greek god Apollo.

7:25. appointment of officials. It seems very appropriate that Ezra would have been given the right to appoint magistrates and judges within the area of his jurisdiction. In that way he would not have to contend with judicial opposition, and he could insure a common set of policies (see Jehoshaphat's judicial reform in 2 Chron 19:4-11). Persian administrative structure consisted of a dual set of officials—one for local and customary issues and the other charged with enforcing royal decrees and statutes. It is possible that Ezra would have jurisdiction to appoint both within the Trans-Euphrates satrapy, but more likely, given the reference to the "laws of your God," his prime concern was with local magistrates, who would be dealing with Jewish law throughout the province.

7:26. empowered to punish. Since Ezra is operating under the aegis and with the power of the Persian government, the list of penalties match those of the Persian penal code. Capital punishment and confiscation of goods do appear in Israelite law, but there is no mention of imprisonment, other than house arrest (Lev 24:12), except for prisoners of war and those in protective custody for political reasons (Jer 37:11-16). The word translated "banishment" might better be rendered "flogging" or "corporal punishment" based on its common usage in Persian law. The right to punish signifies the seriousness of Ezra's mission, whether or not he is ever forced to exercise this power.

8:1-36
Ezra Leads the Return to Jerusalem

8:2-14. size of returning group compared to first return. The total number of males listed in Ezra's returning group is 1,513. An estimate of 5,000 total returnees (based on a conservative number of wives and children) would make this group about one seventh the size of that listed in Ezra 2:64-65 (42,360).

8:15. canal of Ahava. This is most likely one of the many canals that radiated out from the Euphrates River near Babylon (at least within a radius of ninety miles). It may also be a settlement along one of these water channels, but variations in the sources (LXX; 1 Esdras 8:61 has Theras as the site) have confused the issue. As a result the exact site is still unknown.

8:17. Casiphia. If this is a place name, then it is in the vicinity of Ahava, but neither site has been identified beyond the general direction north of Babylon. It is also possible, based on the LXX reading, that this is a noun (a variant of Hebrew *kesep*, "silver") and thus reflects either that Iddo was the leader at a treasury site or of a guild of silver smiths.

8:20. temple servants. In addition to the 38 Levites who were induced to join Ezra's returning group, a body of 220 temple servants are also enrolled. The importance of these individuals as assistants to the Levites should not be overlooked. With such a small number of Levites available, their servants would have been essential to proper ritual activity, since there were many menial tasks to be done. Ezra certifies them by the mention of a list of names with their ancestry.

8:21. fasting. Fasting is little attested in the ancient Near East outside the Bible. It generally

occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). As indicated in the text, the Jews are here concerned about their safety. Their request is to procure the protection of God so that their journey may be seen to have been undertaken at his bidding.

8:21-23. danger of being robbed. Since Ezra's group will be traveling without a military escort (compare Nehemiah's entourage in Neh 2:9), the dangers of the road were a serious matter. Political forces were at work upsetting the balance in the western portions of Persia's empire. Plus, an unarmed group, transporting large quantities of gold and silver, might have easily been picked apart by a determined band of outlaws.

8:26-27. amounts. In weighing out and recording the gifts given by the Persian king, Ezra fulfills that portion of his mission. The 650 talents of silver equal 24½ tons, while the 100 talent weights of silver objects and 100 talents of gold each weigh approximately 3¾ tons each. The 20 golden bowls weighing 1,000 darics are equal to 19 pounds. While this is an extremely large amount, it does represent both royal gifts as well as those from exilic Jewish families.

8:31. length of journey. Since it was April at the time of departure, a journey directly across the desert (approximately five hundred miles) would not have been possible. Thus the travelers took a longer, northern route, up the Euphrates and then west to Damascus and on to Palestine (approximately nine hundred miles). See the comments on 1:11 and 7:8.

8:35. sacrifices. See the comment on Ezra 6:17 on the dedicatory sacrifices for the second temple. The Persian king had ordered that these sacrifices be made when the exiles returned to Jerusalem (Ezra 7:17). Ezra is now recorded carrying out these orders. The mention of "sin offering," as in Ezra 6:17, is a further indication of the need to purify each returning group.

8:36. satraps and governors. The Persian empire was divided into twenty-one satrapies (twenty-two after Babylon became a separate province). Each was administered by a governor or satrap. However, considering the huge size of some of these provinces, it was necessary to have a secondary layers of officials, each known as a *peḥa,* to aid in carrying out tax collection and enforcement of royal decrees (see the comment on Ezra 5:14).

9:1-15
The Problem of Intermarriage

9:1-2. nature of accusation. Ezra is soon informed of a major violation of the Law that he had come to establish: intermarriage with a standard list of non-Jewish people, a practice that endangered the cultural and religious existence of Israel. Endogamy, or marriage only within a select group (which did include converts), had become a tenet for the exilic community (see comment on 9:10-12). They realized that intermarriage would create cultural divisions and weaken their religious identity as a separate and "chosen" people. What makes this charge particularly outrageous is that priests and Levites, who should know the Law (compare Hos 4:6), are also participating in this "unfaithful" practice.

9:1. people list significance. The list of non-Israelite peoples names the standard population groups from the time of the conquest (that the Israelites had been charged with driving out) and mixes in some of those that had treated Israel poorly in the exodus period (Deut 23:3-6). It therefore reflects the time period of the law Ezra is citing rather than the postexilic period. A number of these people groups were no longer in existence in Ezra's time. The intent of the list is not, then, to target these particular peoples but to identify certain categories. In the postexilic context there were those who could be identified as needing to be driven out, as well as those who had set themselves up as enemies of the Jews. Any people identified in one of those categories would thereby be ineligible for intermarriage.

9:3. Ezra's response. Ezra's initial response to the charges of intermarriage are traditional grief rituals: tearing clothing and pulling hair. These practices were common throughout the ancient Near East and are found depicted in Egyptian tomb paintings and in literature (Ugaritic Tale of Aqhat). For more information on these and other mourning practices see comment on Esther 4:1.

9:10-12. the offense of exogamy. Although the prohibition against exogamy, marriage outside the designated group, comes primarily from Deuteronomy 7:1-5, the citation here is actually a synthesis of several passages from Leviticus and Deuteronomy. It was common among ancient Near Eastern societies to marry inside one's clan (endogamy), or to make a

marriage alliance with another friendly group. Cultural attitudes discouraging exogamy can be seen as early as the Sumerians. The myth The Marriage of Martu describes the Bedouin people as barbarians who eat raw meat and do not bury their dead—a group with whom no civilized people should intermarry. The Israelites had been commanded to marry within their "spiritual" clan (i.e., the worshipers of the Lord). In this time period, however, the issues went beyond spiritual homogeneity. Election and covenant issues made landownership theologically significant. Intermarriage was one of the ways that land tenure could be jeopardized and, with it, covenant benefits. The Elephantine texts (Jewish texts less than fifty years removed from Ezra and Nehemiah) show how land became redistributed and lost to a family through foreign women marrying into Jewish families and becoming enfranchised. Marriage with peoples of the land would culturally contaminate the Israelites, weakening their religious identity as a people set apart by God and violating the terms of the covenant that allowed them to "eat the good things of the land" (Deut 6:11).

10:1-44

The Solution to the Problem of Intermarriage

10:3. divorce in the Persian period. There is no specific requirement in Jewish law that a man is to divorce his foreign wife. According to Deuteronomic legislation (Deut 7:1-5), this sort of union was not supposed to occur in the first place. What is known of divorce in the Persian period comes from the Jewish documents from Elephantine. Marriage contracts often included stipulations concerning the disposition of the dowry, bride price, property and children in the event of a divorce. Divorce appears to have been common and uncomplicated, with economic implications being of greatest concern. At Elephantine no reason for the divorce had to be offered.

10:8. forfeiture of property, expelled from assembly. A three-day period is sufficient for all citizens to make their way to Jerusalem to answer for the practice of mixed marriage. Forfeiture of property to the temple (seen also in the apocryphal 1 Esdras 9:4) and expulsion from the assembly are complementary punishments, since membership in the assembly entitled a citizen to property (note the death sentence in 2 Chron 15:13). The crime is considered a violation of the covenant and a sign of disloyalty to the community. As early as Hammurabi's Code sexual crimes could lead to the sentence of exile. In both cases the crime involved inappropriate sexual activity and a violation of societal norms.

10:9. chronology. This event occurs on the twentieth of Kislev (the ninth month) during the third week in December in the year 458 B.C., just over four months since his arrival. The heavy rains and cold in Jerusalem at that time of the year would have certainly discomforted the assemblage. Their trembling and the high emotions associated with the dissolution of their marriages were simply compounded by the weather.

10:13. rainy season. October through February is the cold and rainy season in Judah and Jerusalem. The word used here often describes torrential rains. It would not be unusual for temperatures to be in the forties at this time of year. It is possible that holding an assembly in an open square during the rainy season of late December (the nineteenth) might dampen spirits enough that the men would be willing to compromise and accept Ezra's solution to the marriage issue. However, the discomfort of the cold and the rain might also have raised tempers, especially if the men had to stand there very long. Referring the matter to a commission at least would get them out of the elements.

10:16-17. chronology. A ten-day delay was needed to assemble the commission. They began work on the first day of the tenth month (Tebeth) and continued until the first day of the first month (Nisan). Thus their task required them to make inquiries from late December until late March (March 27, 457 B.C.; about seventy-five days).

10:16-17. what is being investigated. At issue is whether the wives of 110 individuals were in fact non-Israelites. There certainly must have been numerous ambiguities concerning questions of ancestry and regarding which groups the new legal rulings referred to. The list of those questioned includes priests, Levites, singers, gatekeepers and persons not associated with the temple community. Since many of these men were influential, it may be assumed that the commission had to handle their task diplomatically. Each must have been carefully questioned. The matter of any children by these marriages was determined, since this also affected inheritance patterns within the community. Then each was required to take an oath (see 1 Chron 29:24) to put aside their wives and disown their children by these foreign women. In addition, it would be determined what the appropriate guilt offering should be (see Lev 5:14-26).

NEHEMIAH

1:1-11

Nehemiah's Prayer Concerning His Mission

1:1. Nehemiah. Nehemiah held the important position of cupbearer to the king of Persia in the mid-fifth century B.C. during the reign of Artaxerxes I (465-424 B.C.). A revolt broke out in Egypt in 460 B.C. that took five years to put down. Megabyzus, a satrap north of Mesopotamia, also rebelled in 448 B.C. Thus this was a turbulent period in the life of the empire. Because of this, it can be surmised that the Persians were willing to ally themselves with a number of the minority groups within the empire, such as the Jews. It is thus plausible that Jews such as Nehemiah held high positions within the empire in the middle of the fifth century B.C.

1:1. Kislev. Kislev was the postexilic Hebrew month name corresponding to our mid-November to mid-December. The Jews apparently followed the Babylonian monthly calendar after their deportation to Babylon in the late sixth century B.C. and continued to employ this system into the Persian period.

1:1. chronology. It is not certain what the "twentieth year" refers to. It may refer to the twentieth year of Nehemiah at Susa. More likely is the idea that the twentieth year refers to the reign of Artaxerxes I (r. 465-424 B.C.), and his name was simply omitted (see Neh 2:1). If this is the case, then the twentieth year was 445 B.C.

1:1. citadel of Susa. The citadel of Susa was the winter residence of the Persian kings. It was set apart from the remainder of the city of Susa, an area that had an ancient past. Susa had been inhabited since at least the fourth millennium B.C. Later, Susa was an Elamite stronghold until it was captured by the Medes and Persians in the seventh century B.C. The ten-acre citadel is located on an elevated area on the northern point of the site, the Apadana. The palace was built by Darius and used by several of his successors. Excavation of the palace has identified many of its features, including the audience hall, where the Persian kings held court. It was a square building over 350 feet on each side featuring seventy-two stone columns each estimated at sixty-five to eighty feet tall. Greater Susa, located about 225 miles east of Babylon, was built on three hills overlooking the Shaur River. The diamond-shaped mound is about two and a quarter miles in circumference, covering nearly 250 acres. An additional twenty acres comprises the merchant quarter across the valley to the east.

1:2-3. condition of Jerusalem. Jerusalem still lay in ruins from its destruction by Nebuchadnezzar II 140 years earlier. A city that had its walls and gates broken down was entirely vulnerable to outside aggression. The book of Ezra describes an earlier aborted attempt to restore the walls during the reign of Artaxerxes I (c. 458 B.C.). Thus it is apparent that the individuals were describing this most recent endeavor which failed. Some have suggested Persian action against Jerusalem during the reign of Xerxes, but the evidence is scant, though fighting between the Persians and Greeks in the southern Levant is attested.

1:4. Nehemiah's response. The response of Nehemiah was in fact typical of Jews who were confronted with tragedy (see Ezra 9:3-5). Mourning was often accompanied with the shaving of the head and beard. Fasting was often added to prayer so the individual could concentrate wholly on the issue at hand, at the expense of physical needs.

1:4. "God of heaven" in Zoroastrianism. The term "God of heaven" was well-known in the Persian empire and had become part of the religious language of the Jews. The term is also found in the Jewish correspondence in texts from Elephantine in Egypt dating to the fifth century B.C. The origin of the term can be traced to Zoroaster, an Iranian holy man who probably lived in the late second millennium B.C., although his exact dates are not known and remain controversial. Zoroastrianism had become the religion of the Persian kings by the time of Darius I (r. 521-486 B.C.). The Zoroastrians worshiped the "God of heaven," known as Ahura Mazda, an eternal being with moral designs. They also acknowledged the existence of an evil deity who was the exact counterpart to Ahura Mazda and equal to him in power. Nehemiah, however, does not hesitate to attribute this familiar title to Yahweh.

1:11. cupbearer. The cupbearer in the ancient Near Eastern court held a very important position. He had direct access to the king and thus had great influence. Texts and reliefs describe cupbearers in Assyrian and Persian courts. The cupbearer was in close proximity to the king's harem and thus was often a eunuch, although there is no evidence that this was the case with Nehemiah. Later sources

identify the cupbearer as the wine taster. In addition he was the bearer of the signet ring and was chief financial officer.

2:1-10
Nehemiah Sent on a Mission

2:1. Nisan. The Hebrew month of Nisan corresponds to our mid-March to mid-April. Nisan brought early rains as well as the barley and flax harvests. Nisan was a month name borrowed from the Babylonians during the Jewish captivity. Abib had been the previous name of the month.

2:1. Artaxerxes. Three Persian kings were named Artaxerxes. The one mentioned in Nehemiah is most likely the successor of Xerxes I, Artaxerxes I (r. 465-424 B.C.). Outside of Scripture, little is known of him. The Greek historian Herodotus described a taxation list and some poor economic policies that occurred during this king's reign. The Greek city-states, fresh from their victories against the Persians at Salamis and Plataea (480-479 B.C.), used every occasion to undermine Persian authority in the Near East. Thus Artaxerxes endured two revolts during his reign (see the note on Neh 1:1). He was, however, able to rule for forty years.

2:1. responsibilities of courtiers in king's presence. In Persian reliefs courtiers are sometimes portrayed with their hands shielding their mouths so as not to offend the king by breathing on him. Whether this represents health consciousness (unlikely), the prevalence of bad breath or simply extreme deference is unknown. As a result, however, facial expressions would be somewhat masked. It would have been expected that the joy of being in the king's service would be reflected on every face.

2:5. rebuilding of city where fathers are buried. Family ties were of supreme importance in most ancient Near Eastern cultures. The living inhabitants of a family were required to pay strict attention to the preservation of the remains of family members who had passed on. In the ancient cultures this entailed performing ritual acts to ensure the maintenance of the dead. In Israel the bones of the dead were preserved. It was apparently thought that they did have a conscious existence after death. Joseph implored his family to return his bones to Canaan when they left Egypt, and Nehemiah was concerned about maintaining the tombs of his fathers.

2:6. queen sitting beside king. There are numerous examples in ancient Near Eastern iconography of the queen seated next to the king, usually upon her own throne. Many have argued that queens had an unusually powerful influence at the Persian court in this period, based upon the writings of the Greek historian Herodotus. Artaxerxes' wife was Damaspia, but there is a possibility that the queen's throne was occupied by the queen mother, Amestris, known to be a strong personality (see the comment on Esther 5:3), who was still taking an active role as late as 449 and perhaps was still alive at this time.

2:6. length of journey (distance and time). Nehemiah most likely took a long overland route from Susa to Jerusalem on the Persian Royal Road into northern Mesopotamia and west into Syro-Palestine. The distance was about nine hundred miles and would have taken about four months. That is the length of time it took Ezra to make the journey (see comment on Ezra 7:1).

2:7. governors of Trans-Euphrates. The term used here for "governors" can either refer to a district governor of a small province or a satrap, a major regional governor of the Persian empire. The empire was organized into a large number of compact satrapies that were highly efficient and often somewhat autonomous. The Trans-Euphrates governors ruled the area due north of Mesopotamia in the region of Armenia and Georgia.

2:7. letters of safe passage. Since Nehemiah's purpose was political, he may have anticipated hostility from the local Persian officials. He also may have been concerned because of the unrest that existed in various parts of the empire (see comment on Neh 1:1). Aramaic documents from the fifth century include such a letter. Its main function is to instruct regional officials to provide the travelers with provisions from the king's stores.

2:8. keeper of the king's forest. The keeper of the king's forest had a Hebrew name (Asaph). The forest was probably in Lebanon (which the Persians had overtaken in the mid-sixth century B.C.), although some areas in the coastal plain of Palestine may have served in this capacity. Greek historians such as Xenophon and Diodorus mention local parks under the care of officials of the Persian government.

2:8. use of timber/intended construction. The timber was requested for clearly specified uses: (1) the gates of a citadel, the forerunner of the Antonia fortress, built on the north side of the second temple by Herod the Great; (2) the reconstruction of the city wall (though the walls were built of stone and mud brick, timbers were used for stabilization and for gateways); and (3) for Nehemiah's own residence

(as governor). Though mud brick and stone were the most common materials for residence construction, cedar would be used for interior paneling.

2:10. Sanballat. Sanballat the Horonite was governor of Samaria. He is attested in Aramaic papyri from Elephantine in Egypt, which also mentions two of his sons. Papyri from Wadi Daliyeh give a sequence of Samarian governors, three of whom were named Sanballat. As his sons had names with the theophoric element of Yah, Sanballat may have been a worshiper of Yahweh (although see Neh 13:28). The term Horonite is not clear, although it may simply mean a person who came from one of the towns with the element "Horon" in it. Sanballat opposed Nehemiah because Jerusalem and Judah had previously been under his jurisdiction, though it is unclear whether Judah was part of his province or that he had been given administrative oversight of the Judean district.

2:10. Tobiah. Tobiah was an Ammonite and thus was of foreign origin. He may have been an ancestor to the important Tobiad family from Jordan in later generations. Though it is not expressly stated, he may have been governor of Ammon, as his grandson (also Tobiah) of the third century was.

2:11-20
Nehemiah's Night Inspection

2:13-15. topography of fifth-century Jerusalem. It has been very difficult to locate the places mentioned in these verses. The walls and gates inspected by Nehemiah on the north and west sides no longer exist, or are buried under Herod's temple platform. The King's Pool on the eastern side is probably to be identified with the Pool of Siloam. The valley referred to here is most likely the Kidron Valley. Excavations have shown a strewn mass of stones, which are at least like the ones that blocked Nehemiah's path. Nehemiah had evidently chosen to abandon the eastern slope of the town and to build the new city wall there. Thus the city was certainly smaller than in preexilic times. It is estimated that the circumference of the city at this time was about one and a half miles, enclosing perhaps eighty or ninety acres.

2:16. groups referred to. The *officials* were likely representatives of the Persian empire, either those who had come with Nehemiah or those who had local jurisdiction. The term *Jews* referred to the citizenry at large. The *priests* took on a major role in the life of the Jerusalem community after the exile, with an increasing political role. The *nobles* refers to the heads of the important families in the area, perhaps the equivalent to what are called elders in earlier literature.

2:19. Geshem. Geshem the Arab is known from extrabiblical sources. There is a Geshem in Libyanite and Aramaic inscriptions who is known as the king of Kedar. The name is also found in a later inscription at Beth Shearim, as well as on a silver vessel dedicated by his son Qainu to the goddess Han-'Ilat found at Tell el-Mashkuta in the Egyptian Delta. The Arabs had recently settled in the Negev and Transjordan regions (see Neh 2:10).

3:1-32
Building Assignments

3:1-32. assigning sections. In Assyrian times the building of walls was assigned out by sections to various groups of laborers. When Sargon built his capital at Khorsabad, the wall was assigned in sections to workers from the various provinces of the empire.

3:1. Sheep Gate. The Sheep Gate (other times called the Benjamin Gate) north of the temple mount, exits from the area of the Bethesda Pool (known in this period as the Sheep Pool) into the Kidron Valley. It is toward the northern side of the east wall and would have led to the Jericho road.

3:1. tower of the hundred and tower of Hananel. These two towers were positioned on the northwest side of the city near the Temple Mount. This is about the same location as the Antonia fortress in Herod's Jerusalem.

3:3. Fish Gate. The Fish Gate (otherwise known as the Ephraim Gate) led out of the city toward the northwest. This would be one of the routes one would take to the coastal plain.

3:3. gate structure. The text mentions four parts of the gate: the doors, the beams, the bolts and the bar. Two gate doors were generally set into stone sockets buried just under the ground. The beams flanked the gate on either side. They were made of wood and joined to the wall. The bars slid across the gates and the end fit into holes or brackets in the beam. These bars could be locked in place by a series of small wooden dowels that slipped into holes on a block mounted on the gate. One could therefore not exit the city without a key once the gate was locked.

3:6. Jeshanah Gate. Sometimes called the Old Gate, this gate is generally located just south of the Fish Gate. Some would identify this as the Mishneh Gate that opened into the western quarter of the city.

3:8. goldsmith and perfume-maker. In an-

cient cities certain quarters were occupied by the members of particular guilds. Craft guilds often were made up of families that had developed their own techniques and trade secrets, which would be practiced and passed on from generation to generation.

3:8. Broad Wall. Excavators on the western hill in Jerusalem have uncovered an unusually thick wall (over twenty feet thick) from this period that extends toward the west from the western wall of the Temple Mount. Repairs were not made to the Broad Wall itself for it seems that the western hill was not occupied during this time.

3:9. ruler of a half district. The familiar Assyrian title *rab pilkani,* "head of the district," offers the best understanding of the terminology used only in this context. Unfortunately, little is known of the details of the administrative districting of the region.

3:11. Tower of the Ovens. Most interpreters associate this with the bakers' district, which was situated in this part of town so as to be near the palace and temple complex (see Jer 37:21).

3:13. Valley Gate. The Valley Gate is in the western wall along the slope of the City of David leading into the Tyropoeon Valley. What is believed to be this gate was identified in Crowfoot's excavations in 1926-27. It is approximately twelve feet wide.

3:13. Zanoah. This is a town in the Shephelah region about fifteen miles west-southwest of Jerusalem.

3:14. Dung Gate. The Dung Gate is at the southern tip of the city of David, a little over five hundred yards south of the Valley Gate. It opens into the Valley of Hinnom and the road to the spring at En Rogel and is to be differentiated from the Dung Gate in the present configuration of the city (near the southwest corner of the Temple Mount, dating to the Ottoman period).

3:14. district of Beth Hakkerem. Beth Hakkerem is modern Ramat Rachel, just outside of Jerusalem.

3:15. Fountain Gate. Located at the southeastern side of the city, this gate is only a few hundred yards from the Dung Gate and probably gave access to the Pool of Siloam where the Gihon Spring was channeled. Such a gate was excavated in the 1920s.

3:15. district of Mizpah. Mizpah is identified as Tell en-Nasbeh about eight miles north of Jerusalem.

3:15. wall of the Pool of Siloam and the King's Garden. This pool is generally thought to refer to a canal that channeled the waters of the Gihon Spring for irrigation along the eastern flank of Jerusalem. It was located at the southern end of the city and provided water for the King's Garden, at the juncture of the Kidron and Hinnom Valleys.

3:15. steps from city of David. These steps were located at the southern end of the city to ease the steep ascent from the Kidron Valley. Remains of an ancient staircase have been found in this area.

3:16. half district of Beth Zur. Beth Zur was the southern extremity of the province. It is located about four miles north of Hebron.

3:16. tombs of David. The place often identified to tourists as David's tomb on present-day Mount Zion is a late tradition. The only monumental tombs from the first temple period are in the modern village of Silwan across the Kidron Valley from David's Jerusalem. These are from Iron Age II but are not royal tombs. The Judahite kings from Rehoboam to Ahaz were buried in the City of David (except for some notable exceptions). Later kings were either buried in the "garden of Uzziah" (Manasseh and Amon) or in their own tomb (Josiah). The burial places of Hezekiah and the successors of Josiah are not mentioned. The site of the royal burials in the City of David has not been determined with certainty.

3:16. artificial pool. This was a separate pool from that referred to in the last verse but was in the same vicinity.

3:16. house of the heroes. This most likely refers to the barracks used by the elite troops, represented early by David's mighty men (see comment on 2 Sam 23:8).

3:17. half district of Keilah. Keilah is located nearly between Zanoah (v. 13) and Beth Zur (v. 16), twenty miles southwest of Jerusalem.

3:25. description. The palace area was just south of the temple mount. The tower at the corner of the palace complex was skirted by the city wall, and this angle is most likely the one being referred to.

3:26. Ophel. The Hill of Ophel is identified as the section between the Temple Mount and the southern ridge known as the City of David. Apparently it featured fortifications that surrounded the temple-palace complex. Some believe that there was a citadel located here that was itself designated "the Ophel."

3:26. Water Gate. This gate was across the ridge from the Valley Gate and opened to the east, leading to the Gihon Spring and the Kidron Valley.

3:27. wall of Ophel. The wall of Ophel extended from the Ophel to the southwest along the Kidron Valley to the Water Gate. In earlier times this portion of the wall had been positioned partway down the slope, but Nehemi-

ah repositioned it at the crest of the slope. Portions of this wall have been found in the excavations in the City of David.

3:28. Horse Gate. This gate led from the temple complex east down into the Kidron Valley.

3:29. East Gate. Some associate this with what is now commonly called the Golden Gate on the east side of the temple complex. Beneath the current Golden Gate the arch of an older gate has been observed.

3:31. Inspection Gate. Little is known about this gate, which is sometimes called the Muster Gate. Most would identify it as a gate in the wall of the temple complex rather than in the city wall itself.

3:31. room above the corner. This is generally associated with the northeast corner of the city. It most likely functioned as a watchtower.

3:32. Sheep Gate. See comment on 3:1.

3:32. goldsmiths and merchants. One of the important merchant centers of the city was located by the gates on the north, so it is logical that these groups be assigned this section.

4:1-23
Enemy Opposition

4:1. Sanballat. See comment on 2:10.

4:2. army of Samaria. Though not a military colony, the governor of Samaria had an army to aid the Persian king. However, it is not certain whether these troops were Persian garrison troops or a local militia.

4:2. sacrifices. Typically major construction projects were dedicated with sacrificial rituals. Foundation sacrifices are well known in the ancient Near East.

4:2. bring stones back to life. This phrase may refer to the ancient Near Eastern idea that stones blackened with fire were cursed and could not be reused as building material. The Israelites do not have the time to quarry fresh stone, and the burnt limestone from the previous walls would be too unstable and fragile to reuse.

4:3. Tobiah. See comment on Nehemiah 2:10.

4:18. man who sounded trumpet. Throughout the biblical period trumpets were used for signaling in religious, civil and military contexts. This text speaks of the ram's horn (shofar) that is used for signaling all the way back at Mount Sinai (Ex 19:13). For more information on signaling, see comments on Numbers 31:6 and Joshua 6:4-5.

5:1-19
A Ruling to Aid the Poor

5:3-5. nature of the complaint. Because of the work of reconstructing Jerusalem, these people were not able to produce enough grain to stay alive. They had to buy grain but did not have enough funds, causing them to mortgage their property (fields, vineyards and houses). Furthermore, the Persian kings evidently took over a real estate tax that had been imposed by the Chaldeans. Darius I (r. 521-486 B.C.) levied a tax on the crops yielded in fields. Often both in Israel and elsewhere in the ancient Near East, parents sold their children into slavery to enable them to meet their material needs, hoping to redeem them at a later date (see comment on Ex 21:2-6).

5:7. usury. Usury in its purest sense was the charging of interest for a loan. An individual was forbidden to charge a fellow Israelite interest on a loan (see comments on Ex 22:25; Lev 25:38; and Deut 15:1-11). It was permissible, however, to charge a foreigner interest. Interest is mentioned as being permissible in the Babylonian Code of Hammurabi (eighteenth century B.C.). However, these were commercial loans, and there was no counterpart in Israel. An Israelite loan was considered charity and was done to help a needy fellow countryman, not to help a merchant build up his business.

5:11. solution. Any land that had been seized because the individuals had been unable to repay a debt was now to be returned without any conditions. It was a common practice in the ancient Near East to take over one's property (including children) if that person could not repay a debt. It appears that interest had also been raised in this case and was returned to the debtors.

5:14. time period of Nehemiah's governorship. Nehemiah was appointed governor from 445 to 433 B.C. This was his first term as governor. Some believe a second term followed some time later (see comment on 13:6-7). There is no extrabiblical information concerning Nehemiah or his term as governor.

5:14. food allotted to governor. Like a satrap, a Persian governor had the right to collect taxes from his subjects for his own treasury, not just for the Crown. Monies collected in this way paid for local projects and supported the administration. Food and drink went to the governor and his household. Elamite texts from this period discovered at Persepolis (Treasury Texts) reflect this practice as they document outlays from the royal treasury.

5:15. forty shekels. While the previous governors referred to may have been Judean, it is possible that the reference is to non-Jewish governors appointed by the satraps of the region. The only other governor mentioned in

the biblical text is Zerubbabel seventy years earlier. It is unclear in the text whether the forty shekels was an annual amount paid by each citizen or the daily amount used to support the administration. In either case it is a large amount. Storage jars have been found in excavations that are thought to have been used by the Persian governors as a tax-gathering apparatus. Stamp impressions are also believed by some to preserve the names of governors of this period.

5:18. daily provision. The meal provisions for the 150 Jewish officials were likely part of their salary. Like other governors, Nehemiah was required to entertain regularly for both domestic officials and foreign dignitaries. Because of the great cost of this, it is all the more amazing that he did not collect taxes for his personal treasury.

6:1-19

Conspiracy Against Nehemiah and the Completion of the Wall

6:2. Plain of Otto. The Plain of Otto (or Ono) is about twenty-seven miles northwest of Jerusalem. During the Persian period, it was either at the northernmost border of the province of Judah or in neutral territory between the provinces of Ashdod and Samaria. At any rate, it was dangerous territory in which to meet one's enemies.

6:7. prophetic proclamation of kingship. Though there is little known about the prophetic offices in postexilic times, prophets played a role as "kingmakers" in earlier periods. The northern kingdom, Israel, had come into being by means of a prophetic pronouncement (1 Kings 11:29-39), and each of the major dynasties (Jeroboam, Baasha, Omri, Jehu) rose and fell in accordance with prophetic pronouncement. In the ancient Near East priests often play significant political roles, but no prophets from the ancient Near East are known to have played the same role as these Israelite kingmakers. Nonetheless, throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. One can understand why rumors of prophetic proclamations might incite insurrection or impose doom.

6:15. time of completion. Although the Jewish historian Josephus (A.D. 37-100) claims the walls were built in two years and four months, the biblical text does say it took a mere fifty-two days to complete the work. There are some parallels in antiquity for such a feat. For example, Thucydides claims that a wall around the city of Athens was built in one month (fifth century B.C.). Since Jerusalem was small (archaeologists consider that the circuit of the wall in this time was merely one and a half miles), only the eastern wall was built from the foundation (as the other walls were refurbished), and archaeologists claim that the work was not one of a high standard, it is not unreasonable to assume that the task was completed in such a short time.

7:1-73

Family Records

7:2. commander of the citadel. The Persians employed numerous military commanders of garrisons throughout their empire. Though often staffed with Persian troops rather than local militia, they were under the command of the governor or his appointees.

7:65. eating restrictions. This restriction is repeated in Ezra 2:63. Those priests with uncertain genealogies were restricted from eating from the "most holy things" (see Lev 2:3; 7:21-36), food that priests ate as their portion after the cultic rites. The Urim and Thummim were oracular devices (see comment on Ex 28:30) that would be used to inquire of God as to the credentials of those who claimed priestly ancestry.

7:70. a thousand drachmas of gold. Gold drachmas were either the Persian daric, the Median shekel or the Greek drachma (which was in more common use). Darics were not coined until the time of Darius. Darics were about 8.4 grams, so one thousand of them would equal about eighteen and a half pounds. The shekel was equal to the daric, while the Attic drachma was the equivalent of half a daric.

7:72. twenty thousand drachmas of gold, two thousand minas of silver. In gross weight this represents about 370 pounds of gold and 2220 pounds of silver (a mina was equal to sixty shekels). To compare this to the amounts used for Solomon's temple, see the comments on 1 Chronicles 22:14. A number of silver coins have been found in archaeological excavations that were minted at or near Jerusalem during the Persian period. These were struck with the inscription *yhd* or Yehud (Judah). They depicted the head of Pallas Athena, with an owl (the insignia of Athens) on the back side. The craftsmanship was clearly inferior to the Greek drachma. The coins had only a fractional value of silver and thus were worth less than counterparts found along the coast at Tyre and Sidon.

8:1-18

The Reading of the Law

8:1. chronology. It is presumed that the Israelites gathered together in the year that Nehemiah arrived, 445 B.C. Ezra would have already been there for thirteen years. The seventh month is Tishri (spans September-October), the beginning of the civil new year and the month that Yom Kippur and the Feast of Tabernacles are celebrated.

8:1. Water Gate. The Water Gate (see Neh 3:26) was near the Gihon Spring and thus afforded access to the water source. It has been argued that the gate referred to a preexilic wall that was not rebuilt by Nehemiah. It is not known whether this gate was included in the new wall or was east of it. In any case, Ezra did not read the Torah in or near the temple.

8:1. scribe. In Persian and general Mesopotamian usage, the position was that of a local commissioner charged with maintaining law and order, but a much broader scope is observable in the ancient world. Scribes would have been trained in reading of the various languages in use at the time, in the production of texts (whether copying, receiving dictation or composing), in the knowledge of traditional literature (canonical and noncanonical), in the range of international literature (particularly wisdom literature) and in the interpretation of literature (perhaps including legal literature or ritual literature). Scribes in Israel were, therefore, experts in the Law of Moses. One of their primary duties was to study the Scriptures. They became paramount in Jewish life in the postexilic period. They may have been organized into families and guilds (see 1 Chron 2:55). Later they were originators of the synagogue service. Many scribes were also priests and/or community leaders, as Ezra was. They were guardians of culture and tradition. Persian interest in this is shown in Darius's commissioning of an Egyptian high priest to reorganize the scribal school and temple practice of Sais. It is likely that scribes had the most significant role in the canonization process of the Old Testament.

8:1. Book of the Law of Moses. The Book of the Law of Moses contained, if not the entirety, at least a large proportion of the first five books of our Old Testament (Genesis—Deuteronomy).

8:3. public reading of state documents. Because of the lack of accessibility of written materials in the ancient Near East, the public reading of state documents by a scribe or herald was a very common occurrence. Letters from Kalhu in Assyria feature an Assyrian official reading a pronouncement in front of the people of Babylon.

8:4. reading platform. The platform referred to here can be compared to the platform Solomon used at the dedication of the first temple (2 Chron 6:13). The term used here has the root meaning of tower, emphasizing the height of the structure, so everyone could view Ezra as he read.

8:5. books or scrolls? Although the Hebrew word is translated as "book," Ezra certainly read from a scroll. Folded pages in the form of a modern book were not in existence until the second century A.D. and did not fully replace the scroll until some two centuries later.

8:5. stand up for reading. Standing up was a sign of respect in the Old Testament (see Judg 3:20; Job 29:8; Ezek 2:1).

8:6. worshiped. The response to the reading of the Scriptures was one of worship. The raising of the hands showed the people's dependence on God (see Ezra 9:5; Ps 28:2; 134:2). Prostration demonstrated their humility before God and his word. Prostrating oneself before a superior was a common occurrence throughout the Near East. The princes in the Akkadian letters from Amarna in Egypt symbolically prostrate themselves before Pharaoh.

8:7-8. interpretation of religious documents. The thirteen people mentioned in verse 7 were Levites who were responsible for the interpretation of the Law (2 Chron 17:7-9). They also translated the text, presumably from preexilic Hebrew into Aramaic, the common language of Palestine by the fifth century B.C. It also is possible that the word "translate" means that the Levites "broke down" the text, or in other words translated or interpreted the text paragraph by paragraph. Akkadian documents have various terms for commentaries on documents as well as attesting an oral commentary tradition. These commentaries are connected to canonical literature such as the omens of *Enuma Anu Enlil* as well as to legal traditions.

8:10. food. We are not told the specific type of feast the Israelites had when they were sent to their homes. It was certainly a feast of thanksgiving, since they were required to give a portion to their neighbors. Eating of the "fat," or choicest portions, was a common occurrence (see Lev 3; 2 Sam 6:19; 1 Chron 12:40-41; 29:22; 2 Chron 7:8-10; 30:21-26).

8:14-17. celebration of the Feast of Booths. For information on the feast see comments on Exodus 23:16; Leviticus 23:33-36, 39-43; and Deuteronomy 16:13-15. The Feast of Booths was normally celebrated on the fifteenth day of the seventh month. The uniqueness of the

celebration appears to have to do with the combination of traditions. Leviticus 23:40 instructs the celebrants to gather branches, and verse 42 tells them to live in booths. But Leviticus does not specify the building of booths, nor does it require pilgrimage to Jerusalem. Deuteronomy 16:15 designates the festival as one of the three pilgrimage feasts but says nothing about gathering branches or living in booths. Ezra's ruling combines these traditions so that the people are gathering branches and building booths in which to live in Jerusalem for the time of the feast.

8:16. Water Gate and Gate of Ephraim. For the Water Gate see the note on verse 1. The Ephraim Gate was part of the preexilic wall (see comment on 2 Chron 25:23) and was located about six hundred feet from the Corner Gate. This gate may have opened in the direction of Ephraim to the northwest. However, there is no mention of this gate in the list in Nehemiah 3.

9:1-38
Confession of Sins

9:1. chronology. The fasting occurred a few days after the celebration of the Feast of Booths, in the seventh month of 445 B.C. If it started on the fifteenth as prescribed in the Law, it would have continued through the twenty-second. In that case it would be odd that there is no mention of the Day of Atonement, which is supposed to be observed on the tenth day of the seventh month. Verse 13, however, suggests that the festivities began on the second day and therefore would have lasted until the ninth. Perhaps the Day of Atonement was also slightly out of time and is represented in this fast, though no reference is made to the rituals of Leviticus 16.

9:1. occasion for fast. Fasting is little attested in the ancient Near East outside the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). As indicated in the following prayer, the Jews are here concerned about their own sins and the sins of their forefathers that have violated the covenant. This has become evident in the reading of the law. Their request is to be delivered from foreign rule.

9:1. sackcloth. Sackcloth was a typical sign of mourning and repentance in the Bible. It was a coarse cloth, normally of black goat's hair. It was usually worn next to the skin as a band or a kilt tied around the waist. The symbolic significance of the wearing of sackcloth can be found among the Assyrians, Moabites, Phoenicians and Arameans.

9:6. you alone are Yahweh. This is a typical biblical admission of the absolute uniqueness of God (see comment on Deut 6:4). The uniqueness is expressed particularly in relation to creation and the covenant.

9:6. creator deities in Persian period. The Persians (or at least the Persian state) were primarily Zoroastrian during the period of Nehemiah. They believed that the god representing the power of good, Ahura Mazda, by his spirit created the world perfectly good. However, an equally powerful deity existed, Angra Mainyu, who brought forth evil and ignorance, thus perverting the creation of Ahura Mazda. However, by way of foreknowledge, Ahura Mazda made his creation to combat this evil god, paving the way for the restoration of the world to its original pure state.

9:6. multitudes of heaven. The "(starry) host" early in the verse and the "multitudes of heaven" near the end of the verse translate the same Hebrew term. The term can refer either to the stars or the angelic host, both of which were objects of reverence (and often indistinguishable since the stars were manifestations of gods) in the surrounding cultures. In Zoroastrianism, Ahura Mazda created all the other gods *(yazatas),* but he was, in some ways, dependent on them and offered sacrifices to them.

9:7-37. recitation of history in prayer. The reciting of Israel's history in prayers or hymns is a common occurrence in the Bible (e.g., Ps 78; 105; 135; 136). In this regard the Israelites were unique. Their neighbors referred to the New Year in prayers but did not refer to either creation or past historical events.

9:20. Spirit to instruct them. Because of the phrase "your good Spirit," a common appellation for the Zoroastrian god, Ahura Mazda, some have argued for a Persian influence upon Judaism. However, the differentiation between the Spirit of the Lord and an evil spirit was used long before any contact between the two peoples (see 1 Sam 16:14; 1 Kings 22:23-24). Additionally, in the Persian period the Israelites were not shy about adopting titles familiar from Zoroastrianism and attaching them instead to Yahweh (see comment on 1:4). Such reuse of familiar divine titles can be observed as early as Abraham (see comments on Gen 14:17-24).

9:36. slaves to the Persian king? The Jews, like all other people groups of the Persian empire, were subjects of the Persian king and were required to pay taxes. In virtually all ancient Near Eastern monarchies all inhabitants were considered slaves (or subjects) to the king. However, the monarch himself was a slave to the national deity (Ashur in Assyria, Marduk in Babylon).

9:38. seals. Seals were very commonly used throughout the ancient Near East from Egypt to Iran from the fourth millennium B.C. onward. Literally thousands of seals have been found in archaeological excavations. They were used as a mark of authenticity and prestige, to witness a document or to prevent anyone from entering doors or opening other receptacles. The most common form of seal in Mesopotamia was the cylinder seal, but Israelites favored stamp seals. Most seals were engraved by a skilled seal-cutter, using a variety of materials. Hundreds of Hebrew seals have been found, as well as over one thousand jar handles with seal impressions.

10:1-39
Decision of the People

10:30. endogamy clause. The legal background for this clause is found in Ezra 9:1-2. Since the Law of the Pentateuch, Israelites had been forbidden to take foreign wives (see comment on Deut 7:3). The Israelites had intermingled with the nations about them and thus had been contaminated by their religious practices. It was common among ancient Near Eastern societies to marry inside one's clan (endogamy) or to make a marriage alliance with another friendly group. The Israelites were thus encouraged to marry within their "spiritual" clan (i.e., the worshipers of the Lord). In this time period, however, the issues went beyond spiritual homogeneity. Election and covenant issues made landownership theologically significant. Intermarriage was one of the ways that land tenure could be jeopardized and, with it, covenant benefits. The Elephantine texts (Jewish texts less than fifty years removed from Ezra and Nehemiah) show how land became redistributed and lost to a family through foreign women marrying into Jewish families and becoming enfranchised.

10:31. Sabbath regulations. Sabbath regulations prohibited Israelites from engaging in their vocations on the seventh day. At first this would have included mostly farming and herding activity. As Israel developed a merchant economy in the monarchy period, the prohibition had been applied to engaging in the vocation of trade, that is, in the selling of merchandise. In this postexilic period the question arose whether buying of merchandise from those not prohibited from selling it (foreign merchants) was permitted on the Sabbath. It could be argued that buying is not the exercise of one's vocation. Nevertheless, the community leaders extended the Sabbath prohibitions to apply to selling as well as buying.

10:31. seventh year regulations. The "seventh" year described here is likely the sabbatical year described in Exodus 23:10-11 and Deuteronomy 15:1-3 (on which see comments). It is speculated that Nehemiah was combining the two and perhaps even regulating their observance so that everyone was practicing the two together at the same time. This would certainly have made the law more enforceable.

10:32-33. temple tax. Originally there was no annual tax levied for the upkeep of the temple. Exodus 30:13 prescribes one-half of a shekel to be paid to the temple at the time of a census, but that is a different matter. Though the Persian kings Darius I and Artaxerxes I had promised to assist the building of the temple (see Ezra 6:9-10; 7:21-24), they had not endowed its operation budget (though Ezra 7:21-22 may refer to some ongoing aid). Coinage had become the economic standard during the reigns of Darius and Xerxes. The development of a cash-based economy during this period required cash support for the operations of the temple. The third of a shekel mentioned here was probably due to an adjustment made to adapt to the monetary system used in the Persian empire. At this time the basic coin of the Persian empire, the daric, weighed 8.4 grams and was equated to the Babylonian shekel. The Aramaic *zuz* was one-half of that and equivalent to the Greek drachma. The standard Israelite shekel, however, had long been 11.4 grams (as was the Assyrian shekel), but there was also a royal shekel ("heavy" shekel in Ugaritic terminology), which is represented in archaeological finds as weighing 12.5 to 12.8 grams. Therefore a *zuz*, at 4.2 grams, could be roughly equated to one-third of the traditional royal shekel.

10:34. wood provision. In the monarchy period the temple had sufficient staff to gather the wood that was necessary. Cutting wood was one of the jobs assigned to the Gibeonites in Joshua 9:27. In this period, however, the temple is significantly understaffed, so an alternate plan is necessary for the provision of the wood.

10:35. firstfruits commitment. The general religious principle involved in offering the

"firstfruit" (animal, vegetable or human) to the gods is based on the promotion of fertility. From earliest times, the assumption is made that the gods create life in its various forms and that they expect to receive as their due offering the first of the harvest or the firstfruit of the womb. Israelite religion tempered this by allowing for the redemption of some animals and all human firstborn males (Ex 13:11-13; Num 18:14-15). The giving of the firstfruits could also take on a political character. The Assyrian annals of Sennacherib (705-681 B.C.) contain his command that conquered peoples pay their firstfruit offerings of sheep, wine and dates to the gods of Assyria. In Israel the firstfruits of the harvest were traditionally part of the support of the priests. Numbers 18:12-13 specifies grain, wine and oil. Here fruit trees are added to the list.

10:36. firstborn commitment. Since human children and unclean animals were redeemed, this practice provided for some "cash flow" for the temple operations. For more information on the laws concerning the firstborn see comment on Exodus 13:1-3.

10:37. offerings to priests and Levites. Whether or not the worshiper ate a portion of the sacrifice, a number of the sacrifices provided an opportunity for the priests to eat. This was also true in Babylonian practice, according to which the king, the priest and other temple personnel received portions of the sacrifices. As early as Sumerian texts it was considered a grievous crime to eat that which had been set apart as holy. Most peoples in other ancient Near Eastern religious traditions were required to maintain temples in much the same way. The food was to be "consumed" by the god(s) but, of course, was instead eaten by the temple personnel. For more information on tithing see comment on Numbers 18:31-32.

11:1-36
Populating Jerusalem

11:1-2. why would people not want to live in Jerusalem? The mere fact that lots were cast implies that some were forced to live in Jerusalem. Lot casting was considered in the ancient Near Eastern and Mediterranean world as a way of allowing God (or the gods) to determine the fate of a certain situation. Thus the people who were chosen to go considered it a divine mandate (for more information about the casting of lots see comments on Josh 7:14-18 and Jonah 1:7-10). Since Jerusalem had been devastated and was the point of great contention between the Jews and neighboring peoples, it was not an attractive nor a safe place in which to live in the fifth century B.C. Additionally, it can be understood that people would not be anxious to abandon their farms and jeopardize their landholdings.

11:23. singers under the king's orders. The king referred to here is most likely the Persian king Artaxerxes I, who was interested in the continuation of the cultic practices (see Ezra 4:8-10; 7:21-24). Most ancient Near Eastern kings from the third millennium B.C. onward employed professional singers in their courts. For instance, Zimri-Lim of Mari (c. 1780-1760 B.C.) had a large retinue of singers connected to his court. For singers in Israel see comment on 2 Chronicles 29:27-30.

11:24. the king's agent. There is evidence in the sources dealing with the Persian empire of high-level emissaries who represented the king in the various satrapies. They occasionally appear in the Persian court to make appeals on behalf of the satrap, and they report to the king about activities in the region and advise him on local matters.

11:25-36. territorial settlements. All of the names of the cities in the list appear in Joshua 15, except for Dibon, Jeshua and Meconah. The list shows that the Jews lived in a comparatively large area. The Judah list focuses on the Negev and the Shephelah, while the Benjamin list covers the central hills and the coastal plain. This may offer the parameters of the Persian province.

12:1-26
List of Priests and Levites

12:8. in charge of songs of thanksgiving. There is a detailed account of the organization of the Levitical choir and orchestra by David in 1 Chronicles 15:16-24. However, few other descriptions of the music of the court are given. There may have been an equal number of males and females in the choir (see Ezra 2:65). Some have argued that the choir actually chanted rather than sang. Apart from this passage we have no evidence of the responsibilities of the person in charge of the songs of thanksgiving. Musicians are counted among temple personnel in Neo-Assyrian inscriptions and included both male and female singers. A chief singer is mentioned in one text from Nimrud.

12:24. instructions of David. The only instructions for worship associated with David are those found throughout 1-2 Chronicles (e.g., see 1 Chron 15—16; 23—29).

12:25. gatekeepers who guarded the storerooms at gates. For a discussion of the func-

tion of the gatekeepers see comment on 1 Chronicles 9:22-27.

12:27-47

Dedication of the Walls

12:27. cymbals, harps and lyres. For information concerning musical instruments see the comments on 2 Chronicles 5:12 and 29:25. The terminology used for musical instruments in Israel has close parallels with terms used at Ugarit.

12:28-29. surrounding villages. The guild villages are all in close proximity to Jerusalem: Netophah, southeast of Jerusalem, Geba and Azmaveth, two Benjaminite cities six miles north of Jerusalem. Beth Gilgal was likely a longer term for Gilgal near Jericho.

12:30. purifying gates and wall. It is unclear what is meant by the purification of the gates and wall, as it is an unprecedented idea in the Bible. The term used here normally applies to objects used in rituals or to places where rituals were performed, though houses that have mildew needed to be purified (see comments on Lev 14:34-53). If the former is in mind, it may reflect an idea of the sanctity of Jerusalem as a holy city. If the latter, it seeks to remedy the uncleanness brought on at the time the walls were destroyed (specifically by corpse contamination or idolatrous practices performed in the gates or on the walls, or generally from their moral corruption; see Jer 13:27). The purification ritual is not described here. The walls may have been sprinkled, a concept that was practiced with the cleansing of private houses.

12:31-37. placement of first choir. The processions appear to have begun in the vicinity of the Valley Gate on the west side of the city. This first choir procession walked southward (counterclockwise) on the top of the wall to the Dung Gate at the southern tip of the city. They then proceeded north along the eastern flank to the Water Gate directly east across the narrow saddle of the ridge from the Valley Gate. They thus made the circuit of the southern half of the city, the old City of David.

12:38-39. placement of second choir. Another procession followed Nehemiah clockwise from the west to the north and east. They also began around the Valley Gate and did the circuit of the northwest end of the city. The gates and towers are mentioned in Nehemiah 3, while the Ephraim Gate is mentioned in Nehemiah 8:16. The Guard Gate is mentioned only here in Scripture and is generally considered the meeting point of the two groups by the temple complex (the first group arriving from the Water Gate, the second from the Sheep Gate). Each group traveled about two-thirds of a mile on the walls. That distance on the modern ramparts is from the Jaffa Gate to Herod's Gate, which takes about thirty minutes to walk.

13:1-31

Other Reforms

13:1-3. exclusion of foreigners from worship. The law referred to here is Deuteronomy 23:3-6, concerning the exclusion of Ammonites and Moabites from worship. The law was thus interpreted in a wider sense to include any foreigner in the community who did not worship the God of Israel. The Ammonite reference was especially relevant, since Tobiah's Ammonite ancestry was well known (see Neh 2:10).

13:4-5. provisions for Tobiah. For information on Tobiah, see comment on 2:10 (see also 6:17-19). The Persian king, Cambyses, is similarly reported to have purged foreigners from the temple complex at Neith in Egypt.

13:6-7. details of Nehemiah's two terms as governor. Since this section deals with other matters, we are told little of the details of Nehemiah's terms as governor of Judah. Nehemiah was absent from Jerusalem for an undetermined period of time. Since he had to ask permission to return, it probably was not the intention of Artaxerxes I to have him return for a second term of office. The text does not say nor imply that he returned in the same capacity of governor. It is possible he returned specifically because of the aforementioned circumstances concerning Tobiah.

13:16. men from Tyre. The men of Tyre were famous Phoenician merchants (see Ezek 27:12-36; 28:16) who traded throughout the entire Mediterranean world. Ancient economists had concluded that it was not enough to have caravans traveling the cities and towns of the region. They went the next step of establishing merchant colonies in the large trading centers as an ongoing outlet for their merchandise. There was evidently a colony of Tyrians in Jerusalem who had been permitted to operate outside the parameters of Jewish law. See the comment on 10:31.

13:24. language of Ashdod, language of Judah. Though Ashdod had been a Philistine city in preexilic times, it is not known what language was spoken here during this period. They would have spoken either a dialect of Aramaic, the diplomatic and trade language of the Persian empire, or some generic Canaanite dialect. The "language of Judah" refers to biblical Hebrew (see comment on 2 Chron 32:18).

13:28. Sanballat. See comment on Nehemiah 2:10.

ESTHER

1:1-22
Vashti Deposed

1:1. Xerxes. Xerxes, the Greek name for the king the Hebrew text refers to as Ahasuerus, ruled Persia from 486 to 465 B.C. His father was Darius the Great, and his mother was Atossa, the daughter of Cyrus. He inherited an extensive empire from his father but was unable to expand its borders during his reign despite several attempts. His policies toward religious groups changed dramatically from the tolerance that had characterized Cyrus and Darius. His own religion, like that of his father, was Zoroastrianism. He was more sensitive to religion as a basis for rebellion and was known to have destroyed many temples in an effort to curb nationalism. The lack of new conquests also created economic tensions that had not previously existed. The wars with Greece, rather than supplying booty and tribute to the treasuries and expanding trade opportunities, became a drain on the economy. There are over twenty inscriptions associated with Xerxes, the most important known as the Daiva Inscription. For more information see comment on Ezra 4:6.

1:1. 127 provinces. The primary administrative geographical division in the Persian empire was the satrapy. The number of these varied between twenty and thirty-one, so the text is not referring to satrapies. It is likely a reference to smaller administrative districts or to the people groups who constituted the empire.

1:1. India to Cush. The territory of the Persian empire extended from the Indus Valley in northwest India, across the Near East and into northern Africa, including Egypt, Libya and Cush (modern Sudan). In the northwest it included Thrace, the Scythians and all of Asia Minor, and ranged east across Armenia, Urartu and Bactria.

1:2. citadel of Susa. The ten-acre citadel is located on an elevated area on the northern point of the site, the Apadana. The palace was built by Darius and used by several of his successors. Excavation of the palace has identified many of its features, including the audience hall, where the Persian kings held court. It was a square building over 350 feet on each side, featuring seventy-two stone columns each estimated at sixty-five to eighty feet tall. Greater Susa, located about 225 miles east of Babylon, was built on three hills overlooking the Shaur River. It had long been the capital of ancient Elam. The diamond-shaped mound is about two and a quarter miles in circumference, covering nearly 250 acres. An additional twenty acres comprises the merchant quarter across the valley to the east. Susa served as the capital for the Persian kings only in the winter months. Since temperatures soared to as high as 140 degrees in the summer the court moved north to Ecbatana.

1:3. chronology. Xerxes came to the throne upon the death of his father in November of 486. The third year of his reign was therefore March 483 to March 482 B.C. The main events that are known from this period are the two revolts in Babylon, a minor one in 484 and a more significant one in August 482.

1:3. officials on guest list. It was common for kings to sponsor lavish parties. Assyrian king Ashurnasirpal once claimed to have entertained nearly seventy thousand for a ten-day extravaganza. The guest list details people from all over Assyria in addition to foreign dignitaries, people from the capital city (Kalah) and palace dependents. Persian banquets were known to host up to fifteen thousand guests. The guests in Esther include the aristocracy of Media and Persia, the courtiers who were ranking officials in the administration, the military brass and perhaps the provincial governors.

1:4. six-month display. Verse 5 speaks of another banquet, one for the citadel staff. The

---

HERODOTUS

Herodotus was a Greek historian who lived in the fifth century B.C. He is best known for his *Histories* (written about 445 B.C.), which document the history of the Persian Wars against the Greeks, including the battles at Marathon, Thermopylae and Salamis. As a contemporary of the events, he provides valuable information concerning the history and culture of both Greece and Persia during this period. Though he is considered too willing to accept the validity of rumors, his work is valuable both for its reports on events and its descriptions (for instance, of the city of Babylon). Above all, Herodotus is valued as a great storyteller. Though his stories can at times be contradictory, he is considered an important chronicler of events, places and practices. There are numerous places in the book of Esther where comparison can be made with the information contained in Herodotus. These comparisons sometimes clarify what is found in the book, while at other times they can bring confusion.

citadel was a residence only for the king's household and administration, but the wording here suggests that lower ranking officials who served in the citadel were also included. The six-month display of the treasury stretches between the two banquets. The practice of showing off the royal treasury is also seen in Israel (Is 39:2).

1:5. enclosed garden of king's palace. The enclosed garden is connected to the *bitan* (NIV: "palace"), which is a technical term from the Akkadian, *bitanu,* a separate building in the palace complex. The *bitanu* in Esarhaddon's palace complex measured 150 by 50 feet. It is understood as a gazebo-style pavilion reserved for royal use. This building was often surrounded by a private garden planted with fruit trees and shade trees, with watercourses, pools and paths—more like a park. Its arboretum often contained many exotic trees and plants. Such gardens have been excavated at Pasargadae, Cyrus the Great's capital city.

1:6. garden decor. The main area for the banquet was a large colonnaded courtyard outside the pavilion paved with mosaics. In the classical world mosaics were very popular. The stone was not artificially colored, but rather stones of different shades were imported from wherever they could be found to give color to the mosaic. The earliest mosaic floors were made from colored pebbles laid out in geometric designs. Only later did they begin cutting the stone into cubes (tessellation) and forming them into pictures. The earliest examples of mosaics in the Near East date to the eighth century B.C. (Gordion in Asia Minor), though the art of inlay was known as early as the third millennium (as in the royal standard of Ur). A number of the words used in the description of the garden furnishings are obscure, but the extravagance was clearly spectacular. The fabrics are the best available and colored with the most expensive dyes (see comment on Num 4:6). The variety of vessels used to serve the wine (not goblets for drinking as in the NIV) was typical of Persian elegance.

1:6. marble. Some translations call this alabaster. Marble had to be imported from Greece and is not evident in the ancient world until its introduction into Phoenicia in the Persian period. Marble capitals (the decorative tops of pillars) are not attested archaeologically in the Near East until the first or second century A.D. Oriental alabaster was a calcium carbonate-like marble, unlike European alabaster, which is gypsum. It was used for fine vessels throughout the region during the biblical period, as well as for columns in architecture. In Sennacherib's "palace without rival" mostly white limestone was used, though he had some access to alabaster.

1:7-8. drinking protocol. The alleged protocol for these gala affairs was that when the king drank, everyone drank. In contrast, here the guests were not obliged to follow that guideline. They were not required to follow the king's lead by drinking every time he did, and there was an "open bar" policy that allowed them to drink freely. Examples of beautifully crafted golden drinking cups have been found dating to this period. One famous one features a winged lion whose hindquarters flare up into a goblet shape.

1:9. Vashti. Vashti is never mentioned in Herodotus, nor is she known from contemporary Persian records. Her name is a typical Persian name, but no further information is available. In Herodotus's account, Xerxes' wife is named Amestris. She is the mother of Artaxerxes, the successor of Xerxes, who was born about 483. Ctesias records several examples of the cruel power she exercised as queen mother during the reign of Artaxerxes, as well as her death in 424. Some linguists believe that Vashti and Amestris are the respective Hebrew and Greek attempts at rendering the same Persian name.

1:9. separate banquet for women. It is known that Persian queens had considerable estates and were well provisioned. On the other hand, there is no documentation for the women eating separately from the men or banquets that are just for one group or the other.

1:9. Xerxes' harem. Xerxes followed a policy of monogamy, but that did not eliminate his harem. Though he had only one wife at a time, his harem consisted of over 360 concubines. His many affairs were likewise well documented and were the cause of much court intrigue.

1:10. high in spirits. Herodotus reports that the Persians typically made important decisions while drunk and then validated them once they were sober.

1:10. seven eunuchs. Eunuchs were highly valued in government service in many varied roles. The great demand for eunuchs led to young boys being included in the tribute paid to Persia so that they could be castrated and trained for government service. They had no families to distract them from their service. They were often entrusted with the care and supervision of the royal harem. Having been castrated, they posed no threat to the women of the harem and could not engender children by the harem women who might be mistaken for royal heirs. They would be less likely to become involved in conspiracies, because

they would have no heirs to put on the throne. Assyria, Urartu and Media had all made use of eunuchs in government offices prior to the Persian period. Four of the names in this list have been attested in Elamite documents and can therefore be considered authentic names of the period. Herodotus names the chief eunuch of Xerxes Hermotimus. Herodotus describes the men surrounding Xerxes as cringing, fawning leeches who tell the king only what they think he wants to hear.

1:11. display her beauty. One need not think that Vashti was asked to do anything immodest or morally compromising (as early rabbinic interpretation assumed). In some eastern societies, the harem was carefully sequestered and the law prohibited anyone from looking on the faces of the royal women. Persian women of this period went about in closed carriages so as not to be exposed to the gaze of the general public. If this is the case, as Josephus reported it was, Xerxes would be requesting Vashti to do something beneath her station and demeaning to her royal personage. Exposing her to the gaze of the entire citadel population would be a far greater humiliation than not bowing to an honored official, but would be a similar violation of protocol.

1:13-14. consulting experts in matters of law. Herodotus reports that the Persian kings had a panel of judges with lifetime appointments whom the king relied upon for interpretations of the law. Xenophon likewise confirms this panel of seven principal advisors.

1:19. laws of the Medes and the Persians. No concept of "laws of the Medes and Persians that cannot be changed" has been documented outside the books of Daniel and Esther. Nonetheless, a tradition at least as early as the time of Hammurabi (eighteenth century B.C.) recognized that a judge could not change a decision that had been made. In this sense, we may be dealing with a ruling rather than a law. Greek sources conflict with one another, as Herodotus indicates significant freedom on the part of Persian kings to change their minds, while Diodorus Siculus cites an instance where Darius III could not. Certainly no lower official could countermand the decrees of the Persian king, and the king himself may have thought it humiliating to go back and reconsider something he had already decreed. The royal code of honor would have made it out of the question for the king to rescind an order.

1:19. Vashti's punishment. The punishment decreed for Vashti is not execution or divorce. She was simply demoted within the harem so that she would have no chance of an official presence in Xerxes court. This would effectively strip her of power and prestige, and remove her from a position where she could hope to receive favors from the king.

1:20. circulation of dispatches. The Persian Empire was renowned for its communication system—similar to that used by the Pony Express in the American West over two millennia later. Herodotus describes the system as featuring stations for every day of the journey with a man and a horse for each day. He even comments that neither snow, rain, heat or darkness deters them from their task.

2:1-18

Esther Becomes Queen

2:1. time interval. The gathering referred to in chapter one is generally assumed to involve planning for the Greek campaign. Herodotus mentions such a conference at which Xerxes makes a stirring speech urging action against the Greeks. The campaign was launched in the spring of 481, Xerxes' fifth year. For over two years he was engaged in the west, as the Greeks and Persians fought in the Battles of Thermopylae (August 28, 480), Salamis (Sept 22, 480), Plataea and Mykale (August 479). In the fall of 480 Xerxes left Greece but wintered in Sardis on the west coast of Asia Minor. He did not return to Susa until the fall of 479, about the seventh month of his seventh year. Perhaps it was during his winter in Sardis that he began to miss Vashti and put the plan into action to replace her.

2:3. beauty search. This practice is only documented in the time of the Sasanian king, Chosroes II (about A.D. 600), when each satrap was commanded to seek out beautiful girls to be sent up to the king.

2:3. harem life. Life in the royal harem clearly had its advantages and disadvantages. While the women enjoyed every sort of material comfort and were indulged and pampered in many ways, they had no recourse for intimate relationship with a husband. Their opportunities to be intimate with the king would have been rare and would offer no companionship. Undoubtedly they found companions among the other women of the harem or even occasionally with the eunuchs entrusted with the care of the harem. But the special relationship found with a husband, raising children within a family setting—these pleasures were denied them.

2:5. Benjaminite son of Kish. This is a familiar pedigree—King Saul had also been a Benjaminite son of Kish, and Shimei is known as a relative of Saul's in the time of David (2 Sam

16:5). It is difficult to know whether the Kish and Shimei referred to here are actually the characters from the books of Samuel or just ironically share the same names. Given the extensive use of irony throughout the book of Esther, the latter would not be out of place. For further intriguing connections see the comment on 3:1.

2:6. chronological perspective. Chapter 2 is taking place in 479/478 B.C. The exile of Jehoiachin under Nebuchadnezzar took place in 597 B.C., about 120 years earlier. For this reason it is logical to assume that it was one of the listed ancestors who had been taken captive in 597 rather than Mordecai himself.

2:9. special food. This simply indicates that Esther was put on a regulated diet provided through the palace kitchens.

2:12. nature of beauty treatments. One common suggestion is that a process was used in which the woman was daily exposed to the smoke of burning spices so that both her clothing and her skin would absorb the aroma. Archaeologists have discover many cosmetic burners that they believe were used in this way. While this would suit the details given in the passage, the actual practice is not attested until modern times. Ointments were used to moisturize the skin, which easily became dry in the arid climate of the Near East. Myrrh was imported from southern Arabia (modern Somalia and Yemen), where it was manufactured from the resin collected from *commiphora* bushes when they were tapped.

2:14. concubines. Concubines were girls who came to a marriage without a dowry. They had not been taken into the harem in connection with political alliances with other countries nor for associations to be made between the crown and a wealthy family. As concubines they would continue to be supported as a member of the royal household but would be unlikely to enjoy any of the king's attention in the future (see comment on 2:3).

2:16. chronological placement. Xerxes had returned from his stay in Sardis (in connection with the Greek campaign) by the seventh month of his seventh year (see comment on 2:1). Esther was summoned in the tenth month of that same year. This would be January-February 478. Herodotus gives little information concerning Xerxes after the Greek campaign ends, so there is no detailed record of the events of this period.

2:17. Esther in Persian records. There are no contemporary records from either Persian inscriptions or Greek historians that mention Esther or any of the events in which she was involved.

2:19-23

Mordecai Reports a Conspiracy

2:19. king's gate. Excavations at Susa have identified a monumental gatehouse about one hundred yards east of the main palace. The passageway through the gate was about fifty feet long. Four towers graced the outside of the structure, and four pillars (about forty feet high) decorated the 12,000-square-foot chamber through which the passageway entered the palace complex. An inscription ordered by Xerxes at the gate identifies it as having been built by his father Darius.

2:23. hanged on a gallows. "Gallows" is somewhat interpretive since the Hebrew text vaguely indicates a wooden object. From what is known of Persian practice, this likely does not refer to the actual means of execution. Instead, it is generally agreed that this reflects the practice of impaling the corpse of the executed victim on a pointed stake in public view. This practice is known in Persia, in, for example, Amestris's execution of Inaros (leader of a Libyan revolt) during the reign of her son, Artaxerxes. The victim was thus denied proper burial, as the birds and insects devoured the remains. Hanging is unattested as a form of execution in the ancient world. If a form of execution is intended here, it would most likely be crucifixion (as interpreted by the Septuagint), which is identified by Herodotus as a Persian practice. But it must be noted that for Herodotus even crucifixion could be something done to a corpse.

2:23. royal annals. Royal annals were kept throughout the ancient Near East, with most examples coming from mid-second millennium Hittite kings and from ninth- to sixth-century Assyria and Babylon. The annals could be represented by annalistic royal inscriptions that give detailed accounts of military campaigns. In addition there are court chronicles that give information of important events in each year. As of yet no annals from Achaemenid Persia have been discovered.

3:1-15

Haman's Plot

3:1. Haman the Agagite. Just as Mordecai was identified in such a way as to evoke memories of King Saul (see comment on 2:5), Haman is now introduced in a way that associates him with Saul's ancient protagonist, Agag, king of the Amalekites (see 1 Sam 15:7-9, 32-33).

3:1. Haman's office. Though no title is given to Haman in the text of Esther, those who study the book often title him the vizier. In

Persian reliefs the high-ranking official pictured in the king's presence is designated the *hazarapatish* (often translated "chiliarch") and holds the king's weapons. This officer commanded the royal guard and determined who could or could not get in to see the king. Another important official in the Persian court was designated the "King's Eye." Xenophon reports that this office observed the peoples of the provinces and reported what he saw.

3:2. homage protocol. Herodotus reports that the Persians of equal rank greeted one another with a kiss on the mouth. Someone of slightly lower status would greet a superior with a kiss on the cheeks. If there was a great difference in their status, prostration was the required protocol. Mordecai's refusal is unlikely to concern inhibitions about worship, for there is no suggestion that Mordecai had trouble prostrating himself before the king. The Israelites were known to show deference through this sort of obeisance. Though obeisance could be an act of worship, that was because it was a way of showing reverence and respect. There was no inferred deification here. More likely is that Mordecai was not willing to acknowledge the wide difference in status between himself and Haman that the act would have implied.

3:7. chronology. The twelfth year of Xerxes is 474 B.C., so Esther has been queen for about four years. The month of Nisan begins in our March. The month of Adar was the twelfth month, beginning in February.

3:7. casting of the *pur*. *Pur(u)* is the Babylonian word for lots. Archaeologists have discovered an example of these clay cubes. The lot of Iahali, the vizier of Shalmaneser III (ninth century) measures about one inch per side. Though shaped like dice (which go back at least to the third millennium), this has an inscription (prayers for good luck) rather than dots. The purpose of the casting of lots is to determine which would be a favorable day for the type of action that Haman plans to undertake. One speculation concerning a way the month could be determined would be by casting the *pur* on a board that had each month's name written on it to see in which space it would land. Typically the same answer would have to come three consecutive throws in order to be considered valid.

3:8-9. Persian intolerance. The Persians are often considered by historians to be relatively tolerant. This assessment is supported mainly by the policy of Cyrus allowing exiled peoples to return and rebuild their temples. But it need not be assumed that an attitude of tolerance motivated this decision. There are economic, political and religious factors that would commend such a policy. It had now been sixty years since Cyrus's decree, and it had become obvious that tolerance did not eliminate revolt. In general in the ancient world, religious persecution, where it existed, had political or economic roots (perhaps today is no different). As Haman presents the problem, it is not a religious group or worship practice that needs to be eradicated, but an ethnic group with customs that preserve a nationalism whose fervor has brought it to the brink of revolt.

3:9. amount provided by Haman. Ten thousand talents of silver (according to the standard set by Darius) is about 333 tons. At current market value of roughly five dollars an ounce, this would be the equivalent of about $5.6 million. A more useful understanding, however, can be gained when we compare this amount to contemporary quantities. Herodotus reports the amounts of annual tribute paid by twenty provinces to Darius. The highest paying province, Assyria-Babylonia, paid one thousand talents (thirty-three tons). The total tribute income from these twenty provinces is the equivalent of about thirteen thousand talents of silver (by the standards of Darius). This then is a significant amount that Haman feels is necessary to fund the extent of military activity he has in mind (the last phrase in v. 9 makes it clear that the money is offered for funding purposes). An even more interesting comparison can be made to the contribution offered by the Lydian, Pythius, to finance Xerxes' war effort in Greece. Pythius, reported in Herodotus to be the second wealthiest man in the world (after Xerxes), had a fortune valued at 16,400 talents of silver, which he placed entirely at Xerxes' disposal. For one final comparison, Thucy-dides reports that Athens, in its golden age, had a total reserve of 9,000 talents of silver (= 10,440 by the Persian standard).

3:10. signet ring. Current evidence suggests that the early Persian kings used cylinder seals for empire business and stamp seals or signet rings for personal business, though the latter were growing in usage through this period. A signet ring held the official seal of the king by which he authorized the business of the empire. Only a few of these have been found by archaeologists. The seals were typically made of chalcedony and featured pictures of the king doing heroic acts (like killing beasts) under the protection of the winged sun disk (representing Ahura Mazda). Many of the Persepolis fortification tablets contained stamp seal impressions.

3:11. keep the money. The phrase NIV trans-

lates "keep the money" actually says "the silver is yours" (as several commentaries observe) and suggests that Xerxes thus approved the expenditure (notice that 4:7 assumes the money has been transferred). It is unclear whether Haman is providing the funds from his personal fortune or from funds that he has access to. Each district had its own treasury and staff. If Haman was a provincial official, he may be transferring funds from his provincial treasury into the royal treasury, from which it was disbursed for the military expedition under the auspices of the crown. The Persepolis treasury texts illustrate the role of the treasurer, who assigns work groups and disburses funds for their rations.

3:12. chronology. Passover, that great celebration of deliverance of the Israelites, was celebrated on the fourteenth of Nisan. The edict was written on the thirteenth of Nisan, so it began to be distributed on the fourteenth. Thus, just as the Jews were celebrating deliverance from their great enemy of the past, the Egyptians, they were learning of a new plot from a new enemy.

3:13. nature of the decree. It is clear from verse nine that formal military action was intended (NIV: "for the men who carry out this business"; the same phrase is used in 9:3 for the ones who helped the Jews). Since each of the provinces provided troops for the Persian army, there were garrisons placed in each of the nations that made up the provinces. We do not need to assume that a decree went out to the general public encouraging and allowing anybody who wanted to kill Jews. Rather, all of the troops of every people, in every garrison, in every province were put on alert for concentrated military action on the given day. It is not necessarily confined to a "single" day. The Hebrew expression is best rendered "the same day" meaning that this was a coordinated action--all the provinces were acting at the same time.

4:1-17
Esther's Help Enlisted

4:1. torn clothes, sackcloth and ashes. The practice of putting dirt, dust or ashes on one's head was a typical sign of mourning throughout the Old Testament and into the New Testament period. It is a practice also known from Mesopotamia and Canaan. Many mourning rites function as a means for the living to identify with the dead. It is easy to see how dust on the head and torn clothes would be symbolic representations of burial and decay. Sackcloth is made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. Persian mourning as recorded by Herodotus included tearing clothes, weeping and wailing.

4:2. limitations on going beyond king's gate. Herodotus identifies the king's gate as a place where supplicants stand and wail when they are victims of an injustice created by the system that they desire the king to rectify. It would be logical that there would be restrictions against such supplicants crowding into the palace complex, but no such law is known from ancient sources.

4:4. maids and eunuchs. These are the two categories of personal attendants for the queen. For more information on eunuchs see comment on 1:10.

4:11. limited access to king. It was a common necessity of proper court function that there must be limited access to the king, and Herodotus gives indications that the same was true of the Persian rulers. But the details concerning the death penalty and the gold scepter are not described. Many commentators have wondered why Esther could not have simply gone through proper channels to secure an audience with the king or perhaps even waited longer to see if she would be summoned (the set time was many months away). If, however, Haman holds the office of *hazarapatish* (see comment on 3:1), she would have to make arrangements through him and thereby jeopardize the whole plan.

4:11. gold scepter. Persian reliefs of kings in audience scenes depict them holding long scepters.

4:11. Esther's lack of access. Whereas one might think that the queen and chief wife of the king would have many opportunities to have a passing word with the king, such was not necessarily the case. The queen did not regularly share the king's bed, nor were their meals taken together. She had her own private quarters. While she could be invited to join the king in the audience chamber, she did not have unlimited access.

4:16. fasting. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about their spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10).

5:1-14
Esther's Request and Haman's Plot

5:1. topography of palace. Since the king is on

his throne, this is undoubtedly the audience chamber. Despite the extensive excavations at Susa and at palaces at other Persian sites, the terminology used here is too vague to attach it to specific areas of the palace complex. See comment on 1:2 for what has been found of the palace complex at Susa.

5:3. Xerxes' granting of requests. Herodotus tells of two occasions when Xerxes made open-ended offers to grant requests and ended up regretting it. On the first occasion his offer was intended to win the favors of his intended mistress, Artaynte. Unfortunately for everyone she requested his beautiful robe that had been handwoven by his wife, Amestris. Amestris therefore discovered Xerxes' affair and sought revenge. She gained it when, on his birthday, she was granted a request and asked for Artaynte's mother (whom she believed to be behind the whole fiasco). She had the woman brutally mutilated, and this led the woman's husband, Xerxes' brother, to instigate a revolt. The offer of half the kingdom is known as early as Neo-Assyrian literature, when it is suggested that the Assyrian king would have given away half the kingdom for someone to cure his son's illness.

5:4. banquets in the Persian world. Banquets were popular among the Persian royalty and were sumptuous affairs. Herodotus describes a typical birthday banquet as featuring a whole cooked animal (ox, horse, ostrich, camel or donkey). Persians were especially fond of desserts and large quantities of wine. Musicians and attendants to care for every detail were present. Their feasts tended to be dignified rather than disorderly, and did not honor or encourage the cycle of gluttony and disgorging.

5:14. gallows. See comment on 2:23.

6:1-14
Haman Honors Mordecai

6:1. circumstance in Esther. In the book of Esther, circumstance is a powerful literary motif. While men such as Haman try to harness circumstance to their advantage through schemes and omens, the Jewish audience would have seen circumstance as being in the hands of God who works behind the scenes. Of interest, then, are the words that Herodotus places in the mouth of Artabanus, an adviser to Xerxes, on the threshold of what will become a disastrous Greek campaign: "Men are at the mercy of circumstance, which never bends to human will." Haman is about to learn the same lesson.

6:1. book of the chronicles. See comment on 2:23.

6:7. royal robe. The Persian king's robe is described by Xenophon as purple with gold embroidery. In Plutarch's *Themistocles*, Demaratus, the exiled king of Sparta (contemporary of Xerxes), requests as his gift to ride through Sardis wearing the crown of the Persian kings. Plutarch also reports that Artaxerxes once honored a request for his royal robe but qualified the gift with the command that it not be worn. Xerxes had a famous robe featured in one of Herodotus's stories as a gift begrudgingly and fatefully given to his lover (see comment on 5:3).

6:8. royal crest on the horse. Persian reliefs at Persepolis depict a horse with a crest perched between its ears.

7:1-10
Haman's Fall

7:7. palace garden. The banquet was probably being held in the same location as the banquet in chapter 1 (see comment on 1:5).

7:8. couch where Esther reclined. Persian style was to recline on couches while eating. Haman, in his desperation, had violated strict protocol about approaching the person of the queen. To be found on the same couch on which any member of the harem was reclining had the direst consequences. In eleventh-century Assyria, no one could approach within seven paces of a member of the harem.

7:8. covered face. Greeks and Romans typically covered the head of criminals condemned to death, but if that were the case here we would expect the word "head" instead of "face." In an Assyrian elegy covering the face is seen as a treatment of the dead. Since the hanging is generally considered to be a treatment of the corpse rather than a means of execution (see comment on 2:23), this face covering can be presumed to indicate Haman has died. The king does not issue a death sentence.

8:1-17
Deliverance for the Jews

8:1. Haman's estate given to Esther. Herodotus gives examples of confiscation of the property of those executed by order of the crown. That Xerxes would have been likely to grant Esther such property is demonstrated by another example from Herodotus. After Artaynte had asked for the cloak that Amestris had woven for Xerxes (see comment on 5:3), the king had offered her whole cities, vast amounts of gold and even her own personal army in an attempt to get the cloak back.

8:1. Mordecai in Persian records. There is a Persian official, Marduka, identified in a tablet from Borsippa, who is sometimes equated with Mordecai by commentators. Marduka is an accountant who lived during the last days of Darius and the early days of Xerxes. The name occurs frequently on the Elamite Persepolis tablets dating between 505 and 499 B.C. and belongs to several different individuals. Whether any of these individuals represents a Mordecai before his elevation cannot be determined. There are no sources that refer to him in the elevated position in which the book places him.
8:2. signet ring. See comment on 3:10.
8:9. chronology. Sivan 23 fell in the month of June 474 B.C., seventy days after the issuing of the edict.
8:9-10. Comments on the provinces and the extent of the empire can be found in 1:1. For comment on the signet ring see 3:10. For the courier service see comment on 1:20.
8:11. strategy of decree. Since the previous edict could not simply be revoked, the strategy was to offset the first by the second. The first had removed the protection of the empire from the Jews and had provided the financing for military action against them. The second edict allowed the Jews to form their own militia groups and, in effect, withdrew the royal protection (though not the funding) from those who had been hired against the Jews. Royal support was neutralized so that action against the enemies of the Jews would not be construed as rebellion against the crown. This puts Haman's crew in the same situation as the Jews, making them targets that could be attacked without fear of reprisals from the government.
8:15. Mordecai's garments. The colors and materials of Mordecai's regalia identified him with nobility and high political station. The royal colors could only be worn by those closely associated with the king. The gold "crown" does not designate rule but favor. So Herodotus reports that Xerxes rewards a ship master whose advice had saved the ship from sinking with a gold crown. It is gold, so it is not just a turban. But since this type of headgear is generally bound on, a coronet worn on the forehead is most likely.
8:17. became Jews. This word occurs only here in the Bible and has been interpreted in a number of different ways. The non-Jewish population could "become Jews" by conversion, by claim ("made themselves out to be Jews" because of the potential benefits) or by association ("sided with the Jews"). The last would explain the upcoming victory of the Jews, as they would have had many willing participants in their militia groups.

9:1-17
Victory for the Jews

9:1. chronology. This is now late February or early March of the year 473 B.C.
9:1-10. enemies of the Jews. The enemies of the Jews are those who are still engaged in Haman's plot against them. They are groups of mercenaries or garrison troops who had been organized by Haman and funded by him for this military action. Verses 7-10 suggest that Haman's sons had carried through with the plot of their father. Herodotus tells how during the reign of Darius a high-ranking official and close associate of the king was judged to be involved in a revolt. As a result most of his family was executed. Additionally Herodotus tells the fascinating story of how two magi attempted to seize the throne after the death of Cambyses and were assassinated by Darius and seven other conspirators. The day turned into a public outrage against all the magi, in which the general populace became involved in killing every magus they could lay hands on. Herodotus even reports that the anniversary of the day became an important holiday in the Persian calendar.

9:18-32
Establishment of Purim

9:18-32. Purim. Though this passage gives account of the origins of the celebration of Purim, the evidence for the celebration's being customary does not come until much later. The apocryphal book of 2 Maccabees (15:36) contains the earliest reference to the festival outside of Esther. There the thirteenth of Adar is identified as the day before Mordecai's day. In the first century A.D. Josephus called the holiday *phrouraious,* and soon after that, the Mishnah uses the term Purim.
9:24-26. *pur.* See comment on 3:7.

10:1-3
Mordecai

10:2. book of the annals of the kings of Media and Persia. See comment on 2:23.
10:3. Mordecai's position. Though identified as second to the king, no official position is named for Mordecai. Positions that may be significant enough to designate the official second to the king are discussed in relation to the position of Haman in the comment on 3:1.

POETIC & WISDOM LITERATURE

Introduction

A modern reader acquainted with the book of Psalms would sense some resemblance when reading certain Egyptian or Babylonian material. The attributes that deity is praised for, the issues that induce prayer, the personal and corporate concerns, and even the turn of phrase would ring a chord of familiarity. In any of the ancient Near Eastern societies the gods were considered responsible for maintaining justice and were concerned about justice in the human realm. This was frequently the subject of praise and the basis for petition. Additionally, all peoples shared the plight of humanity and wanted relief from common ills of sickness, oppression, abandonment and life's trials.

Hymns and Prayers

Despite the surface-level similarities, deep-seated differences in the worldviews of Israel and her neighbors can be discerned from this literature. When requests for deliverance and rescue, or mercy and grace, are made, certain assumptions are exposed about how the divine world works and how it interacts with the human world. Both the Israelites and their neighbors believed that they suffered because of deity's inattention. In the ancient world at large it would have been typical to believe that the deity was inattentive because he or she had been offended. Since ethical behavior played a much less significant role in how they understood their responsibilities to deity, the assumption would usually have been that the deity had become offended at not receiving the appropriate attention from the afflicted individual. The worshiper would have little hope of discerning what ritual might

have been omitted or what had caused the offense. The only option was to try to relieve the god's anger rather than specifically redressing the offense. Thus the individual would willingly concede guilt (for who knows what) and direct the prayers, incantations and rituals toward appeasement (soothing the heart of the deity) to try to regain the attentive care and protection of deity.

The Israelites were less convinced that Yahweh's inattention was due to his anger. They readily confessed that they were sometimes mystified as to why he didn't come to their aid. As individuals they were usually not willing to concede guilt but focused their prayers on pleas for vindication. They needed vindication because their suffering would naturally lead others to conclude that God was punishing them for some sin. God's answer to their prayer would demonstrate that he was not angry with them and that they had not committed some grave offense. When they committed offense, it was recognized as concerning ethical failure rather than ritual omission. They expected God's grace to emerge from who he was; they did not expect to be able to induce it by means of gifts and flattery or to conjure it out by magical rites.

Despite these fundamental differences, there is much in the ancient Near Eastern literature that can lend understanding to the biblical psalms. Many biblical metaphors come out of the cultural setting of the time. The imagery of God as, for instance, a shepherd, a rock or a shield will find ready parallels in the literature of Mesopotamia. Phrases such as the "desire of one's heart," being "raised from the pit" or using the winds as messengers have precedents that help explain what Israelites would have meant by them.

There are scores of compositions from all parts of the ancient world that fall into the general category of address to deity. Sumerian, Akkadian and Egyptian literature all have numerous representatives. There is very little hymnic material in Ugaritic or Hittite. In addition to praise hymns, there is an extensive incantation literature in Mesopotamia. These include *ershemmas,* psalms intended to appease an angry deity; *ershaḫungas,* laments concerning sorrow or calamity; *shuillas,* prayers of petition; *shigus* and *dingirshadibbas,* prayer of penitence; and *shurpu,* prayers of purification, just to name a few of the more prominent categories. Egyptian hymns date primarily to the second millennium and are full of descriptive praise. They are grandiose, optimistic and confident, with little trace of lament or petition (with notable exceptions in the Nineteenth-Dynasty texts of Deir el-Medina and Papyrus Anastasi II).

Wisdom Literature

A modern dictionary definition of wisdom would include words such as common sense, prudence, discernment, judgment, insight and understanding. Any reading of the biblical wisdom literature would indicate that these same components would be associated with Israelite wisdom. But we would be mistaken if we thought that wisdom in the ancient world was restricted even to areas such as knowledge, intelligence, education or maturity. Instead, wisdom reflected a much broader concern to understand the place of human beings in the cosmos. It is probably best understood as the ability to bring order out of chaos or to perceive order in the midst of chaos. The wisdom of deity (whether Israelite or otherwise)

was reflected in bringing order out of chaos by organizing, maintaining, sustaining and operating the cosmos. That is why there is such a prominent creation theme in wisdom literature. Wisdom includes understanding the natural world and the human world; society and civilization; the commoner and the king; the world of the gods and the world of nations. Human beings are faced with the challenge of achieving wisdom as they bring order out of chaos in their own world and perceive the order that God has built into the cosmos. This includes ethics and etiquette; philosophy and psychology; and understanding how the world works (science) and how the human heart works (establishing justice).

Egyptian thought is most linked to the order that comes in establishing truth and justice. The term *ma'at* encompasses this aspect of natural, social and political propriety. Mesopotamian literature shows a great concern for understanding the order that can be achieved through the reading of omens, the recitation of incantations and the performance of rituals. This wisdom is the skill that is expressed by the term *nemequ*. Many of the proverbial sayings found in Mesopotamia are connected to omen series and can be classified as omen-wisdom. Omens made observations (often from natural phenomena) and drew conclusions (often about destiny or future happenings). Wisdom likewise makes observations (often about behavior) and draws conclusions (often about inevitable results). Old Testament wisdom literature insists that only the fear of the Lord (as the beginning of wisdom) can bring order out of the chaos of life. Additionally, however, the rituals of the temple were also a means by which order was maintained.

The materials from the ancient Near East include proverbial sayings, admonitions and instructions, and philosophical debate in the form of dialogues, monologues and fables. These deal with many of the same subjects as the Israelite wisdom literature, including, notably, several examples in which a sufferer is exploring the reasons for his suffering.

The problem under discussion that ties all of these "righteous sufferer" works together is theodicy—the justice of deity. Tension is created between divine justice and human suffering based on a belief in what is termed the retribution principle. Simply stated, this principle affirms that the righteous will prosper and the wicked will suffer. If an apparently righteous person is suffering and the retribution principle is accepted, then doubt is cast on God's justice. This tension was not as strongly felt outside of Israel because there was not as strong a belief in the ethical qualities of deity. Furthermore, in a polytheistic setting an individual's behavior might please one deity but offend another. Human suffering for no apparent reason or doubts concerning the existence of divine justice understandably undermined the ability to affirm an ordered world. When life is going wrong, one feels surrounded by chaos rather than order. Mesopotamian wisdom literature typically resolved the problem by objecting that there really was no such thing as a righteous sufferer. They were also willing to accept that the gods were inscrutable.

Instruction literature is most prominent in Egypt, where over a dozen compositions range over more than two thousand years (early third millennium to late first millennium). These compositions demonstrate that Israelite wisdom literature such as that found in Proverbs was part of an international genre (just as the book of Kings claims, 1 Kings 4:30). Ancient Near Eastern instruction literature

includes short, pithy statements like those found in Proverbs 10—29, as well as longer admonitions like Proverbs 1—9. The closest parallel is found in comparing the *Instruction of Amenemope* (about 1200 B.C.) to Proverbs 22:17—24:22, where there are quite a few similar phrases and topics.

The treatise of Ecclesiastes has been related to a subcategory known as "pessimism literature" and exemplified by the Akkadian Dialogue of Pessimism and by the Egyptian Songs of the Harper and *The Dispute Between a Man and His Ba*. These all display a tongue-in-cheek cynicism about life. The Dialogue of Pessimism portrays a conversation between a master and his slave in which the master states his intention to embark on various different enterprises. Each suggestion is met with the slave's affirmation of the benefits of the proposed course of action. In each case the master then changes his mind and decides not to carry out his plans. The slave then replies with an affirmation of this decision as well, citing all the disadvantages the action would have incurred. The topics include going to the palace, eating, hunting, settling down with a family, leading a revolution, loving a woman, offering sacrifice, setting up a creditor business and serving public charity. The piece ends as the master finally asks the slave about a suggested course of action. He responds, "To have my neck and your neck broken and to be thrown into the river is good." The basis of this type of literature is to make the point that it is not simple to find meaning and purpose for life and its pursuits. Drawing order out of chaos is rarely accomplished to one's satisfaction.

The Song of Songs is also often included in the wisdom literature. This categorization can be supported by the realization that the book uses love poetry to illustrate a wisdom teaching (8:6-7). Other examples of the love poetry genre are known in the Sumerian mythological literature concerning Dumuzi in the third millennium, but the closest parallels are found in a group of Egyptian love songs from the period of the Judges (Egyptian Nineteenth and Twentieth Dynasties, 1300-1150 B.C.). These love songs were typically performed at festivals and share many of the features found in Song of Songs. They lack, however, the wisdom teaching that the biblical book considers crucial: romance, love and sex can also be forces of chaos that need to be brought under the umbrella of order.

It is evident in all of the above that as God included poetic and wisdom genres in his revelation to Israel, he did not design new literary styles to use or new issues to address. Instead he used that which was very familiar to any resident of the ancient Near East. He met his people where they were and communicated in clear and powerful ways. Increasing our knowledge of ancient Near Eastern culture and literature can therefore only enhance our understanding of the Bible.

JOB

1:1—2:13
Trials of Job

1:1. Uz. The location of the land of Uz is not precisely known. It may have been a general term for the Near East. A southern location is implied in Lamentations 4:21, where the daughter of Edom lives in the land of Uz. However, in Jeremiah 25:20-21 Uz is associated with Philistia, Edom and Moab.

1:3. size of herds. The size of Job's herds was enormous. Aristotle claims that the Arabs had as many as three thousand camels, the same number listed here. The numbers can be compared to the three thousand sheep and one thousand goats of Nabal (1 Sam 25:2). Third-millennium texts record temple flocks of about fourteen thousand sheep, but personal flocks were usually much smaller. In the ancient Near East sedentary herds would generally not exceed three hundred animals. Transhumant herds (practicing controlled migration) would range from two to five hundred. Nomadic herds would be the largest, numbering in the tens of thousands. The ratio of small animals to large in Job's herd is fairly typical. Most numbers that are available in ancient sources are connected with Assyrian tribute lists that give little indication of what personal holdings would be.

1:3. people of the East. The "people of the East" (literally, "sons of the east") in Semitic languages usually refers to the inhabitants of the region east of Byblos where seminomadic Semites lived. This is how the term is used in the Egyptian Story of Sinuhe from the early second millennium B.C. In Genesis 29:1 the term refers to Arameans living along the northern Euphrates River, in Isaiah 11:14 to the Edomites, Moabites and Ammonites, and in Judges 6:3 to the Midianites. In sum, the "people of the East" appears to be a general term like "Uz."

1:5. purification after feasts. Purification usually provides for an individual to enter sacred space or to participate in ritual activities. In Israel there were levels of purity required for remaining "in the camp" and for entering the sacred enclosure or temple precinct. Job is ritually fastidious as he seeks to maintain a level of purity for his family at all times. Like Balaam in Numbers 23, Job presided over the sacrifices as the patriarch of his family, without a priest. It is possible that the purification involved washing and changing of clothes (Gen 35:2 and Ex 19:10).

1:5. cursing God in heart. The term for "cursed" is literally "blessed," a euphemism found elsewhere in Scripture (e.g., Job 1:11; 2:5, 9; 1 Kings 21:10, 13). The term often means "to despise, esteem lightly." Thus, instead of actually cursing God, Job's children may have neglected or disregarded God. The term can refer to anything from treating with disrespect to outright repudiation.

1:6. angels (sons of God). In the ancient Near East the "sons of the gods" were lesser members of the pantheon. In both Mesopotamian and Ugaritic texts there are glimpses of the meetings of the gods and their divine court. In Israel the sons of God are angels, who, like the sons of the gods, station themselves before God at the divine court. Micaiah ben Imlah had a vision of God holding court with his subordinates (1 Kings 22:19-23). The sons of God are also called "gods" in Psalm 82:1, 6.

1:6. Satan. It is important to note that the term here, *saṭan* (literally, "the accuser"), is preceded in Hebrew by the definite article ("the"). Thus, in the context of Job it appears to describe a function rather than serving as a proper name. Though the individual functioning as an adversary to Job here may well be the one who later bears the name Satan, that cannot be concluded with certainty. The Hebrew word *saṭan* is used to describe an adversary and can be used of human beings or supernatural beings. Even the angel of the Lord can exercise this function (Num 22:22). The term does not clearly take on the role of a personal name until the intertestamental period (specifically the second century B.C.). Those who serve as adversaries are generally in the role of monitoring or challenging God's policies and decisions. It is not clear whether Satan was one of the sons of God (NIV's "angels").

1:6. role of accuser. The term *saṭan* refers to one who acts like a prosecuting attorney. The same term is used for a political foe who attempts to overthrow the king (e.g., 2 Sam 19:22). It also refers to one who brings charges against another in court (Ps 109:6; Zech 3:1-2). In Persia and Assyria similar secret agents toured the empire, attempting to discern the allegiance of particular groups and individuals, and then bringing charges in court.

1:15. Sabeans. There are three groups of Sa-

beans in Scripture. One group is from Sheba, modern Yemen, an area that was highly urbanized and had achieved a complex degree of civilization by this period (1 Kings 10). Many inscriptions have been found from the Sabeans in this area. There are also Sabeans in Ethiopia (Is 43:3). In Job 6:19 the Sabeans are equated with Tema in north Arabia, and are probably identified with the Saba of the Assyrian inscriptions of Tiglath-Pileser III and Sargon II in the late eighth century B.C. These Sabeans are most likely the ones mentioned here in Job 1.

1:16. fire of God. Lightning is described here as the "fire of God." During the contest between Yahweh and Baal in 1 Kings 18:38, the lightning is called the "fire of the LORD" (also see 2 Kings 1:12; Job 20:26; Num 11:1-3; 16:35; and 26:10). Storm gods are typically pictured with lightning bolts clutched in the hand.

1:17. Chaldeans. The Chaldeans are known from Assyrian annals as early as the time of Ashurnasirpal II (r. 884-859 B.C.). They appear to have been a seminomadic group that had settled in Babylonia and was successful in controlling the area in the late eighth century B.C. Moreover, they succeeded the Assyrians as the great empire builders of the Near East in the late seventh century B.C. The height of their power came during the reign of Nebuchadnezzar II (r. 605-562 B.C.), the destroyer of Jerusalem.

2:7. painful sores. In Ugaritic this term refers to fever rather than sores. In Hebrew the term has usually denoted a variety of skin diseases (see comment on Lev 13:2). In Ugaritic texts the disease strikes the loins and leaves the victim prostrate. It is not certain which skin disease is depicted here in Job 2. Pathology in the ancient Near East was always considered in the light of supernatural cause and effect. Either hostile demons or gods angry at the violation of some taboo were considered responsible. Categories of disease are classified by symptoms rather than by cause, so diagnosis is often difficult if not impossible.

2:8. broken pottery. Broken pottery (Greek, *ostraca)* has been found in great abundance in archaeological excavations throughout the Near East. Such broken pottery was often "recycled" or put to some use. It is not clear in this context whether the ostraca were used to scratch the skin for relief or to scrape the body as a sign of grief. In most cases in Scripture ostraca are used for the latter purpose. In Mesopotamia and in the Ugaritic tale of Aqhat the "mound of potshards" appears to have been a name for the abode of the dead. In the Baal epic, when El mourns for Baal he puts dirt on his head and scrapes his skin with a stone.

2:8. sitting among the ashes. The ashes mentioned here were most likely found on a "dunghill" or town dump outside the city limits, where dung from the town was periodically burned. Mourners in the Near East went to sit amidst the dung ash heap and lacerate themselves. Priam, the father of Hector in the *Iliad,* rolled himself in the dung of the city ash heap.

2:11. lands of Job's friends. Classical (Pliny the Younger) and early church scholars (Eusebius and Jerome) associate Teman with Nabataean territory near the city of Petra in present day Jordan. Cuneiform sources identify a Suhu as a site along the Middle Euphrates south of the Habur River. However, Shuah was the son of Abraham and Keturah, and an uncle of Sheba and Dedan, thus implying a southern locale for the Shuhite. Nevertheless its location is not certain. The Naamathite is possibly identified with Jebel el Na'amaeh in northwest Arabia, although that is not certain.

2:12. mourning practices. In ancient Israel tearing one's garments and sprinkling dust on one's head were considered signs of mourning. They are also known from Mesopotamia and Canaan. Many mourning rites function as a means for the living to identify with the dead. It is easy to see how dust on the head and torn clothes would be symbolic representations of burial and decay.

3:1-26
Job's Lament

3:3-6. cursed and unlucky days. Day lists in Mesopotamia identify evil days in the month (days 7, 14, 19, 21 and 28). These were inauspicious days in which the person was encouraged not to engage in business activities, to build a house or to marry. It was even forbidden to eat fish and leeks on the seventh day of the seventh month. In addition, Mesopotamian omen lists describe days in which it was improper for a man and woman to engage in sexual relations, for a woman to give birth and for people to engage in a variety of other social activities. Furthermore, certain events that occurred caused a day to be unlucky (e.g., the birth of an anomaly or the death of a king). In the *Myth of Erra and Ishum* the governor of the city that is being destroyed is portrayed as expressing to his mother a wish that he had been stillborn or obstructed in the womb so that he would not have been born to this destiny.

3:8. rousing Leviathan. Leviathan appears in the Bible as a sea monster representing the forces of chaos who is defeated by God (Ps 74:14; Is 27:1). This text requests the services of

a skilled magician who would even be able to rouse a dormant Leviathan by an incantation. The description of Leviathan has similarities with Babylonian and Ugaritic sea monsters who threaten the existence of creation (see comment on 41:1).

3:9. morning stars. The morning stars here are Venus and Mercury, which should have remained "dark." These planets were considered the forerunners of each day.

3:13-19. afterlife concept. The Israelite concept of afterlife was very similar to that of their neighbors in Ugarit and Mesopotamia. However, death is not usually described as a place of rest as it is here in Job. Death (Hebrew, *sheol)* is a precise place where the dead eat dust and drink dirty water. According to the Akkadian epic of the *Descent of Ishtar,* there are bars and gates keeping the dead in. Sheol is also a place of darkness where there is no light, only silence. The dead cannot praise God in their condition. For more information see sidebar in Isaiah 14.

4:1—5:27

First Speech of Eliphaz

4:9. destructive breath of God. Here in Job the breath of God represents the wind of the desert that destroys vegetation (Hos 13:15 and Is 40:7). Normally it refers to God's dynamic activity (see Gen 2:7).

4:13-15. spirit bringing dreams. The theme of God causing a heavy sleep to fall on a person in order for them to receive a dream recurs throughout Scripture. For example, God caused a heavy sleep on Abraham during the covenant ceremony (Gen 15:12-21). This also occurred with deities in Mesopotamia. Dagan (biblical Dagon) often spoke to temple worshipers at Mari and Terqa in northeast Syria through the use of dreams. These worshipers often stayed overnight to sleep in the temple, hoping to receive a dream. In the Gilgamesh Epic a zephyr passes by that brings sleep and gives a dream. In Mesopotamian thinking, Zaqiqu was the god of dreams, and his name is from the word that denotes a spirit. This spirit or breeze passes through the cracks in doors to come to people at night. Both the *Odyssey* and the *Iliad* attest the same idea.

4:18. charging angels with error. Second Peter also describes the punishment of rebellious angels, but clear evidence of such a belief in the Old Testament is not available. In Ugaritic myths, subordinates to the gods (specifically,

RETRIBUTION PRINCIPLE

Verses seven and eight articulate what is referred to as the retribution principle. In its most basic form it contends that the righteous will prosper and the wicked will suffer. On a national level this principle is built into the covenant, with its potential blessings and threat of curses. On the individual level it had been determined that this was necessary in order for God to maintain justice. Since the Israelites had only the vaguest concept of the afterlife and no revelation concerning judgment or reward in the afterlife, God's justice could only be accomplished in this life. Most Israelites believed that if God were to be considered just, rewards and punishments in this life would have to be proportional to the righteousness or wickedness of the individual. These beliefs had also then led most Israelites to believe that if someone was prospering, it must be a reward for righteousness, and if someone was suffering, it must be a punishment for wickedness. The greater the suffering, the greater the wickedness must be. Babylonian and Assyrian writers of magical texts describe this same principle of retribution. But since they were not completely convinced of the justice of the gods, it was not as big a theological issue in Mesopotamia. In the book of Job this principle is turned on its head, because Job, the apparent epitome of righteousness, is suffering every possible disaster. All of the characters in the book believe in the retribution principle. This is the basis on which Job's friends accuse him, and it is the reasoning by which Job questions the justice of God. It is even the logic by which the satan can feel so confident about his accusation. He uses the retribution principle to create the tension for his accusation against God. If God operates by the retribution principle, the satan argues, then he will prevent the development of true righteousness, because people will behave righteously only to gain the reward. On the other hand, if God does not operate by the retribution principle, then people like Job will conclude that God is unjust. The satan's case can be won if Job relents to the pressure of his friends. They want him to appease God by simply confessing to anything and everything, regardless of whether he considers himself to be faultless or not. In this way he can rejoin the ranks of the righteous and regain his prosperity. This is the integrity that Job refuses to compromise—he is not a righteous man simply for the gain. He is interested in being exonerated, not just in regaining his prosperity. His integrity is a vote of confidence for God, because it insists that to God, righteousness is more important than appeasement. The book resolves the problem by suggesting that the retribution principle does not constitute a guarantee or a promise, but that God delights in rewarding righteousness and takes seriously the need to punish the wicked. God's justice cannot be evaluated, because no one has sufficient information to call him to account. Instead people can believe that he is just because they are convinced that he is wise (the thrust of God's discourses).

divine slave girls) are often found to be disobedient and untrustworthy. To add to the difficulty, the term translated "error" occurs only here in the Old Testament, and its meaning is uncertain.

4:19. houses of clay. "House" is used as a figure for the body in the apocryphal work Wisdom of Solomon 9:15, in 2 Corinthians 5:1 and in 2 Peter 1:14, but the idea of the spirit inhabiting the body is unknown elsewhere in the Old Testament. Clay and dust signify the weakness of the human body and human mortality.

5:1. holy ones. The term "holy ones", which designates servants or angels, occurs elsewhere in Scripture (Hos 11:12; Zech 14:5; Dan 4:10, 14, 20; 7:13; and Ps 89:7). They are holy because of their closeness to God, not because of any inherent purity.

6:1—7:21

First Speech of Job

6:2. anguish and misery on scales. Balance scales were used by merchants to quantify objects by weight. Job desires here that his misfortune be weighed against the largest thing that he knows, the sand of the seas, which often represents an immeasurable amount or massive weight.

6:4. Almighty *(Shaddai).* *Shaddai* ("almighty") is occasionally an epithet of God (Gen 17:1). Here *Shaddai* functions as a reverser of fortunes, similar to Resheph, the god of plague and war in the Canaanite pantheon, who spread diseases by shooting victims with bow and arrow.

6:15-17. wadis. The wadis of Palestine are similar to overflowing rivers in the rainy season. However, they have little or no water during the summer season, precisely the time when water is most needed.

6:19. caravans of Tema. Tema (modern Teima) was an important oasis and trade center in northwestern Arabia, two hundred miles south of Damascus. Tema is also listed as a son of Ishmael (Gen 25:13-15).

6:19. merchants of Sheba. Sheba was an important trade center in southwestern Arabia. See the note on Job 1:15.

7:1. hard service, hired man. The term for "hard service" was used of military service and occasionally corvee labor, such as that which Solomon exacted for laborers to cut down trees in Phoenicia (1 Kings 5:13-14). The hired man also was used both for military service (Jer 46:21) and domestic service (Lev 25:40). They were considered to be poor and were obliged to be paid daily (Lev 19:13). In the Babylonian creation epic, humankind was created specifically to do the menial tasks that the gods were unwilling to do (build the god's houses and provide food for the gods).

7:6. weaver's shuttle. Some of the language needs clarification here. The word NIV translates "weaver's shuttle" is elsewhere always rendered "loom." The adjective they translate "swift" has the basic meaning of "light" or even "insubstantial." Finally, the word translated "hope" also means thread (e.g., Rahab's scarlet thread in Josh 2:18). On the horizontal looms of the day, four stakes were driven into the ground in a rectangular pattern. The threads that would make up the warp of the fabric were tied at regular intervals to sticks on both ends, and the sticks were then used to stretch out the threads between the stakes. When the ends of each stick were braced behind the stakes, the threads would be stretched horizontal to the ground, taut for weaving. A shuttle would then be tied to the thread that was to be woven in as the woof of the fabric, with a bar being used to separate alternating threads of the warp to allow the shuttle with the woof thread to pass through. Once the woof thread was in place, the pin would be used to tighten that row against the previous rows. When the fabric was complete, the warp threads would be cut from the loom, leaving only remnants of threads tied to sticks. The following translation picks up the imagery: "My days are more insubstantial than a loom in that they come to an end with no hope/thread."

7:8. the "eye." In Egyptian mythology the sky god Horus had one eye injured in a battle with Seth. The sun is seen as his good eye and the moon as his injured eye. Thus day and night the eye of Horus looks down on the world of men.

7:9-10. afterlife concept. Here the emphasis is on the finality of death. For more information about concepts of afterlife, see comment on 3:13-19.

7:12. sea monster under guard. In ancient Near Eastern traditions the sea or the monsters that inhabited it represented the forces of chaos that had to be defeated and contained so that order could be brought to the world. Marduk, the divine champion in the Babylonian creation myth, took hold of Tiamat and put her under a vault, where a bar was pulled down and guards were posted. Yamm, the sea monster in Ugaritic mythology, was taken captive by Baal and placed under guard. This sort of imagery is also used in poetic sections of the Old Testament (Ps 74:13; 89:9-10; 104:7-9).

7:14. frightened with dreams. Nightmares

were traditionally seen in the ancient Near East and the classical world as coming from a demonic or malevolent divine agent. There are also references to demonic terrors of the night in the writings of the classical authors Ovid and Plutarch. Here in Job 7:14, however, the agent is God. In the Babylonian story of the man who is suffering without knowing why *(Ludlul bel Nemeqi),* the sufferer also reports being plagued by fearful omens and terrifying dreams.

7:15-16. preference for death in ancient Near Eastern wisdom literature. The unique Mesopotamian Dialogue of Pessimism is a satirical discussion between a master and his slave. At the end of the discussion, the master asks what is good, and the slave responds by saying that both he and his master should have their necks broken and then they should be thrown into the river. However, the cynical context for these statements does not allow us to argue that suffering Mesopotamians preferred death to life.

7:20. watcher of men. In ancient Near Eastern usage the divine watcher is usually serving a positive role of protection. Perhaps the closest parallel would be found in the occasional reference to the seven ancient sages as watchers. This is also usually true of Yahweh's protective watching over Israel (Deut 32:10; Ps 12:7; 25:20; 31:23; 40:11; 61:7). In this case, Job sees God as a scrutinizer rather than a preserver of human beings.

8:1-22

First Speech of Bildad

8:6-7. retribution principle. See the sidebar in chapter 3.

8:8-10. importance of traditional instruction from ancient Near East wisdom. Along with other passages in Scripture (Job 15:18; Deut 4:32; and the apocryphal Ecclus 8:9), a great deal of wisdom literature from Mesopotamia (e.g., the Babylonian Theodicy, "I Will Praise the Lord of Wisdom" and various Sumerian proverbs) contends that wisdom from the ancients is significant. In Mesopotamian tradition the bearers of wisdom are the seven sages of old, known as the *apkallu,* who brought wisdom and the crafts of civilization to humankind. This tradition is represented in the works of Berossus by his statement that the sum total of revealed knowledge was given by the antediluvian sages.

8:11-12. papyrus analogy. Papyrus was not only used in Egypt but also in Palestine. Ugaritic texts describe papyrus coming from the marshlands of Lake Samak. It was used for a variety of things, including baskets, mats and parchment for writing. Papyrus grows to a great height, sometimes over ten feet. But its luxuriance quickly dissipates if the water source dries up.

9:1—10:22

Second Speech of Job

9:2. no one righteous before God. The Sumerian wisdom text titled *Man and His God* states that "never was a sinless child born to his mother." This was no concept of original sin however, as this thought echoes the Sumerian idea that the gods had incorporated evil into human civilization from the outset.

9:5-9. cosmic control by deity in ancient Near East. The last half of verse 4 along with verse 8 make it clear that the context for these comments is the cosmic conflict of the divine warrior. The cosmic conflict motif depicts the principal deity overcoming cosmic forces (usually forces of chaos like death or sea) to bring order to the cosmos. In the ancient Near East these forces are usually personified as gods, but this passage preserves a certain ambiguity on that count. Here Yahweh overcomes mountains (v. 5), terrorizes the netherworld (v. 6; the Hebrew word translated "earth" at times means netherworld, and the verbs here convey shuddering in horror, not earthquake), extinguishes the sun (v. 7; probably by eclipse), locks the stars in their sequence of appearance (v. 7), stretches out the heavens (v. 8; with corpse of defeated enemy as in *Enuma Elish*?), vanquishes the sea (v. 8) and forms the constellations (v. 9).

9:6. pillars of the earth. Pillars are sometimes thought to represent boundaries. Solomon's temple featured two free-standing pillars on the portico, which may have served as a boundary to the holy place. The tabernacle used pillars from which the partitions were hung to create a boundary for the courtyard. Even when the pillars supported something (as in the Philistine temple that Samson tumbled), archaeological information suggests that they stood as boundaries to porticos or courtyards. In Babylon, boundary markers known as *kudurru*s were pillar-shaped, but the connection may be incidental. Ancient Near Eastern literature has no parallel for the earth being supported by pillars. The only other reference in the Old Testament is Psalm 75:3, which could be interpreted as maintaining boundaries of distinction. In Job 26:11 the heavens have pillars, but this comment also occurs in the discussion of boundaries (v. 10). It is more likely that cosmic boundaries of the

earth would be those between the living and the dead. The word translated "earth" in this verse sometimes refers to the netherworld. In Akkadian literature, the boundaries of the netherworld are represented by gates.

9:7. seals the stars. The word "light" (NIV) does not occur in the Hebrew, which says, "He affixes a seal around the stars." This would suggest that Yahweh is the one who dictates the sequence of their appearances and the paths they will follow. In Mesopotamian astronomy (Mul-Apin series) the thirty-six principal stars were divided into three segments known as the paths of Anu, Enlil and Ea. These fixed stellar paths occupied the northern, southern and equatorial bands of the sky. In the omen series known as *Enuma Anu Enlil* the gods Anu, Enlil and Ea established the positions, locations and paths of the stars. In *Enuma Elish* Marduk sets up the stations of the stars. In Mesopotamian understanding the stars were engraved on the Jasper surface of the middle heavens, and the entire surface moved. All of these examples give explanation to the verb "to seal" used here in the text, since that which is fixed or inscribed is sealed.

9:8. treads on waves. The term "waves" is more likely denoting the "back" of something. This is how the same Hebrew word is used in Deuteronomy 33:29, where the backs of the enemy are trampled. In the Baal myths, Yam, "Sea," is one of Baal's main opponents. Since *Yam* is also the Hebrew word for Sea in this verse, treading on its back would be an appropriate image of subjugation. Egyptian iconography pictures the pharaoh using the defeated enemies as his footstool. Just as treading on the back expresses defeat of an enemy, stretching out the heavens evokes the imagery of Marduk using the corpse of the defeated enemy, Tiamat, to form the heavens. Both of these reflect back on verse 4: "Who has resisted him and come out unscathed?"

9:9. constellations. Textual evidence from Babylonia, including the "Venus tablet" of Ammisaduqa (c. 1650 B.C.), indicates that astronomical studies were conducted with skill and precision. Although astrology was also prevalent in late Egyptian periods and in Persian period Mesopotamia, it seems that this divinatory activity, interpreting omens (see Is 47:13), is only an extension of the work of a true science. There are records of the movement of the planets, placement of the major fixed stars and constellations, as well as descriptions of the phases of the moon and solar and lunar eclipses. Given the widespread knowledge of the stars and the planets in both Mesopotamian and Egyptian cultures, it would have been necessary for the biblical writers and prophets to attribute these celestial bodies to Yahweh's creation. Mesopotamian constellations included: animal figures such as a goat (=Lyra) and snake (=Hydra); objects such as an arrow (=Sirius) and a wagon (=Big Dipper); and characters such as Anu (=Orion). The most popular of the constellations was Pleiades, often portrayed on seals even in Palestine and Syria. Neo-Assyrian texts preserve sketches of stars in constellations. A prayer to the gods of the night from about 1700 B.C. invokes the constellations by name calling on them to give answers to the diviner seeking an omen. The first constellation mentioned in this verse is uncertain. Leo and Ursa Major are the two prime candidates.

9:9. constellations of the south. In Mesopotamian literature the southern band of the sky is referred to as the path of Ea. But the text here refers to the "chambers" of the south, which may or may not refer to constellations.

9:13. Rahab and cohorts. Rahab is described as one of the sea monsters slain by God (Job 26:12, Ps 89:11, Is 51:9). In both the Babylonian and Ugaritic myths of creation, the champion deity (Marduk in Babylon and Baal in Ugarit) fights and slays a sea monster and its cohorts in a manner similar to that of Yahweh. In other contexts, Rahab is symbolically used as a designation for Egypt (Is 30:7; Ps 87:4). The name Rahab has not yet been found in extra-biblical sources.

9:17. crush with storm. Some interpreters have argued (with support of an ancient version) that the Hebrew word for "storm" is actually "hair" since one is not necessarily "crushed" with a storm. It would thus read "for a hair, He crushes me," meaning, that God crushes Job for a hair (or for little or no reason). Against this is the fact that the verb need not be so specific as "crushed," but refers to dealing someone a potentially mortal blow (same verb as that used twice in Gen 3:15). The reference to storm would also fit better in the cosmic context.

9:26. boats of papyrus. There are artistic representations from Egypt showing that they used papyrus reeds for the construction of some of their boats. This is stated explicitly by the classical author Pliny in his *Natural History.* Isaiah 18:1-2 refers to these reed vessels which were considered to be very light and swift but very fragile.

9:30. soap, washing soda. The terms used here are soapwort, derived from the plant Leontopetalon, and lye, and alkaline solution, two of the strongest cleaners known to the Israelites.

Since the cleaning of the body was normally done by covering the skin with oil which was then rubbed off, the use of these powerful detergents was an extreme measure.

9:31. slime pit. Although the term for slime pit usually designates the abode of the dead in Israel (Job 17:14, 23:22; 28) and the ancient Near East, here the term refers to a cesspool.

9:33. arbitrator in the ancient Near East judicial system. Sumerian texts often describe an individual's personal god who pleaded the person's cause before the high council of the gods. He was in fact his advocate. Moreover, the judicial system in Mesopotamia was very sophisticated. A judge often arbitrated between two parties that were contesting movable and immovable property (e.g., inheritance, location and dimensions of land, and the sale price of property). The Egyptian *Instruction of Amenemope* advises "Do not say, 'Find me a protector, for one who hates me has injured me.' Indeed, you do not know the plans of god" (translation of M. Lichtheim).

10:15. full of shame. Given the belief in the retribution principle (see sidebar in chap. 3), shame would be the natural result of suffering. Suffering would proclaim to all around that the victim was being punished by God. The more dramatic the change of fortunes and the more serious the suffering, the greater the sin was supposed to be. Job therefore would have been judged a vile person based on the circumstantial evidence, thus leading to public humiliation.

10:18. wish to have never been born. In the *Myth of Erra and Ishum* the governor of the city that is being destroyed is portrayed as expressing to his mother a wish that he had been stillborn or obstructed in the womb so that he would not have been born to this destiny.

10:21-22. land of deepest night. Five Hebrew words are used here to describe darkness in the land of "deepest night," Sheol, the abode of the dead. This place was considered darker than the dead of night on earth. The netherworld in the ancient Near East is typically considered a place of darkness (Akkadian "house of darkness") where there is no light.

11:1-20

First Speech of Zophar

11:13. stretch out hands. Stretching out one's hands as a common gesture of prayer was a typical form in ancient Near Eastern iconography. The individual raised the hands with the palms outwards but close together and at face level. It was considered a gesture of humility.

12:1—14:22

Third Speech of Job

12:24. leaders deprived of reason. There were many examples in the ancient world of kings who became victims of their own quests for glory. Whether individual quests such as Gilgamesh's search for immortality that took him to the ends of the earth; religious (economic?) quests such as Nabonidus' thirteen-year self-imposed exile in Teima; or military quests such as Persia's disastrous attempt to expand into the western Mediterranean, these were fed by colossal megalomania and characterized by insatiable self-indulgence.

13:4. physicians methods in the ancient Near East. There were two types of medical technicians in Mesopotamia: a magician who cured the patient by means of incantations (usually to expel evil demons), and a doctor who usually used herbs and drugs. The doctor was normally subservient to the magician, who directed the former by means of the incantations. The functions of the two were not exactly distinct; the magician often used drugs in his cures, and the doctor often used incantations.

13:12. proverbs of ashes. Ashes were mixed with water to form soot that was used for a writing substance. It was used only in the most informal and temporary situations. Much like chalk today, it was easily erased or obliterated. One would certainly not want to record memorable truths for all time using ashes. Job suggests that the legacy of his friends' wisdom is nothing but chalk graffiti.

13:12. defenses of clay. The uncertain meaning of the word translated "defenses" creates several possibilities here. If "defenses" is part of the metaphor, and a city's defenses are referred to, then the clay is that used to make mud brick. In Mesopotamia the clay bricks were baked resulting in a very durable material. In other regions, including Israel, sun-dried brick was a significantly inferior building material, and city walls of mud brick would not withstand attack. A second possibility is that "defenses" refers to verbal defenses, that is, the rhetoric of the friends. In this case the clay might refer to a clay tablet that could be written on but then wiped clean, continuing the theme of how vacuous their arguments were.

13:27. marks on the soles of feet. The exact symbolism of this phrase has escaped commentators. Some suggest the prisoner's feet were marked or branded in some way so that he would be successfully tracked, but there is no evidence of such a practice.

14:5. number of man's days decreed. The idea

that man's days were numbered is known elsewhere in Scripture (Ps 39:4). However, the idea here is probably not that any particular lifespan was predetermined but that any lifespan was a comparatively insignificant period of time. In the Gilgamesh Epic Gilgamesh tells Enkidu that the gods live forever, but man's days are numbered and nothing they achieve is of any substance.

14:10-13. afterlife concept/Sheol. See comment on 3:13-19.

14:13-14. resurrection in ancient Near East. There are several different concepts of afterlife that are evidenced in the ancient Near East. The most fundamental concept is continued existence in a gravelike netherworld where there is no differentiation in the treatment of the righteous and wicked. The Israelites called this place Sheol, and they believed that it allowed for no interaction with God. In Canaan and Mesopotamia there were netherworld deities who governed this realm. In Egypt the netherworld existence was more congenial for those who passed the judgment and entered its confines. Those who were not approved were devoured. None of these concepts include the idea of resurrection out of the netherworld. In general, the only awakening that took place in the ancient worldview was the calling up of spirits of the dead (which was not permanent and not a bodily presence) or the awakening of the fertility gods of nature cycles. These died annually when the agricultural cycle came to an end, and "wintered" in the netherworld. Then they were ritually awakened in the spring. None of this bears any resemblance to a theological doctrine of resurrection. Likewise not comparable are the occasional revivifications (when an individual is restored to life) or the indications of national return to life (Ezekiel's dry bones). A fully developed doctrine of resurrection in the modern sense includes six elements: (1) individual, not national; (2) material, not spiritual; (3) universal, not isolated; (4) outside of the netherworld; (5) permanent immortality; and (6) distinctions drawn between righteous and wicked. Zoroastrianism appears to have all of these elements, but the nature of the sources makes it difficult to determine how early the Persians developed these concepts (For further discussion see comment on Is 26:19).

14:17. sealed in a bag. Important items (such as papyrus documents) were often put in a bag and sealed, usually with clay, and thus were made inaccessible to unauthorized persons. Thousands of clay sealings have been found throughout Mesopotamia and elsewhere in the Near East. In Mesopotamia, however, clay sealings and bags (or jars) were not used for documents. Important clay tablets were sealed by a clay envelope that actually summarized the contents of the document inside.

15:1-35

Second Speech of Eliphaz

15:7. first man equated with wise man. In Israelite tradition the first man, Adam, was made, not born, and was never equated with a tradition of wisdom. In the Mesopotamian tradition, Adapa, sometimes considered the first man, was given as a model for mankind by Ea, the god of wisdom. Adapa was given wisdom but not, however, eternal life. When offered eternal life by Anu, the king of the gods, Adapa was tricked into refusing it. Thus, all of mankind was now resigned to a fate without eternal life and that instead now included death and disease. Adapa was considered first in a line of seven sages who passed the arts of civilization on to mankind. It is unlikely, however, that a specific tradition is being referred to in this verse.

15:27-28. connection between fat and prosperity. Fat was equated with health and wealth in Israel because only those who were wealthy and prosperous had the resources to overeat and the leisure to grow fat. Thus obesity was a sign of God's blessing and favor.

15:33. vine stripped of unripe grapes. This is speaking not of an unhealthy vine but of one that has its young (sour) grapes stripped off before they can ripen.

15:33. olive tree shedding blossoms. Although the olive tree brings forth a great amount of blossoms, most of them are shed and do not come to full maturity. Thus, the wicked's designs, like the sour grapes and olive tree blossoms, will not come to full maturity.

16:1-16

Fourth Speech of Job

16:9. ruthless gods. Belligerent deities would not have been unusual in the religious worldview of the ancient Near East. In a polytheistic system the gods were not considered to be friendly, forthright or predictable. Examples would include the Mesopotamian god Ea telling his "favorite" Adapa that the food he would be offered was "bread of death" when in reality it would have procured eternal life for him. In the Gilgamesh Epic, Ea advises deceiving the people into thinking that blessings cannot rain down on them unless Utnapishtim leaves in his boat. After they send him off

they are rained on in a totally unexpected way as the flood comes and destroys them. Around 1200 the Libyans complain that the gods gave them initial success against Egypt with the intent to eventually destroy them. In Egypt the mortuary texts (Pyramid texts and Coffin texts) are targeted against hostile deities. Many examples exist of both of the gods as well as practitioners of magic casting an evil eye on someone.

16:15. sackcloth. Sackcloth was worn by those in sorrow over a catastrophe or the death of a loved one. It was the most conventional sign of mourning in the ancient Near East. The clothing itself was most likely a large piece of cloth, probably in the shape of a sack of grain, or a smaller cloth worn around the midsection. The reference here in Job is the only occasion in Scripture where sackcloth is stitched, although this is probably a metaphorical reference to Job stitching it permanently to his skin (i.e., he will be in mourning for the remainder of his life).

17:3. pledge/security. The making and receiving of pledges was common in Scripture (see comments on Ex 21:2-6; 22:6-7, Deut 24:10-15) and in the ancient Near East. However there are proverbs warning people not to make pledges without collateral (Prov 6:1; 11:15; 17:18; 22:26). The pledge was a piece of property (garment, ring or even a child) which the individual gave to his creditor as a guarantee that he would repay his debt.

17:16. gates of death. Sheol was believed to be like an earthly city in that it contained houses and even a city wall (primarily to keep its inhabitants in Sheol). In the *Descent of Ishtar* the netherworld has a gate complex with seven gates and gatekeepers at each one to control access.

18:1-21

Second Speech of Bildad

18:13. death's firstborn. The prevailing opinion is that Job is describing a deadly disease. Ugaritic texts describe a deity named Death (Mot), who was the ruler of the underworld, although there is no mention of his first-born. A logical choice would be Resheph, the god of plague, sometimes equated with the Mesopotamian ruler of the netherworld, Nergal. Unfortunately no indication is given of Resheph's ancestry.

18:14. king of terrors. Mot was the king of terrors in Ugaritic mythology. Terrors were most likely the demonic host commissioned by Mot to inflict the living. Demonic hosts in both Mesopotamia and Greece were considered to be terrors to the living.

18:15. burning sulfur. Burning sulfur (brimstone) is found in regions with volcanic activity (e.g., the Dead Sea area). When it burns it forms the noxious sulfur dioxide gas. The term is often associated with God's wrath (see comments on Is 30:33 and Ezek 38:22). The land affected by burning sulfur was infertile (see comment on Deut 29:23).

19:1-29

Fifth Speech of Job

19:20. skin of my teeth. Some have thought there is an irony here, in that the teeth, like the nails, are a part of the body that is not covered by skin. Alternatively, others have considered it a reference to the gums, meaning that all his teeth have fallen out.

19:24. iron tool on lead. It has been assumed that this is describing an iron stylus that incised letters, which were filled in by lead. The Behistun inscription of Darius I of Persia in Iran appears to have been inlaid with lead. Moreover, lead tablets were used by the Hittites, as well as the Greeks and Romans.

20:1-29

Second Speech of Zophar

20:8. dream flies away. "Flying away" can be used for death (Ps 90:10). Other texts describe enemies as phantoms in dreams (Ps 73:20 and Is 29:7). In Mesopotamian thinking, dreams were brought from the gods by the deity Zaqiqu, whose name is derived from a word meaning spirit or breath.

20:24. iron weapon/bronze tipped arrow. Iron and bronze together were considered symbols of strength (Job 40:18). The word for weapon is a general term referring to anything that would be found in an armory (both defensive and offensive; see representative list in Ezek 39:9). An iron weapon would therefore refer to a lethal weapon. It may be significant, however, that the Ugaritic cognate refers more specifically to a dart. "Bronze tipped arrow" is the NIV's interpretation of "bronzed bow." The effectiveness of a bow depends on its flexibility. One would not therefore expect a bow to be made of bronze. Bronze models of bows have been found that have been dedicated display pieces, but no operational bows with bronze ornamentation have been discovered.

21:1-34

Sixth Speech of Job

21:12. tambourine, harp and flute. These are

all typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. The "harp" is hand held and consists of a few strings with a frame made of wood. The tambourine has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines. The instrument translated as flute is likely a double pipe made of either bronze or reed.

22:1-30

Third Speech of Eliphaz

22:2. man's benefit to God. In Mesopotamia mankind was considered to have been created for the express purpose of serving the gods and doing the menial tasks that they were unwilling to do. Thus, the gods were dependent on mankind for the upkeep of their houses (i.e., temples), for their daily nourishment and for their clothing needs. The statues of the gods were literally dressed daily, and food offerings were presented on a daily basis.

22:6. security. A creditor was allowed to accept something for security that the debtor selected, except for a tool that he used in his work (see Deut 24:6, 10-11). If it was a cloak, it had to be returned to the debtor at evening, as protection from the cold (Ex 22:26-27, Deut 24:12-13).

22:14. vaulted heavens. A Babylonian hymn to the sun god, Shamash, extols him as the one in the circle of heaven who is the director of people. The Hebrew word NIV translates as "vaulted" is the same word that is translated "circle" in Isaiah 40:22 (see comment there). The Akkadian term used in this and similar contexts suggests a circular but flat shape, a disk rather than a sphere for the shape of both the heavens and the earth. There is some textual evidence that suggests the heavens were viewed as a dome, but more information would be needed to arrive at that conclusion. Israel, having no revelation otherwise, shares this ancient view.

22:24. gold from Ophir. Gold from Ophir is mentioned in an eighth century inscription from Tell Qasile. The precise location of Ophir is unknown. The fact that it was shipped in at Ezion Geber suggests an Arabian location, though sites in India and East Africa have been considered.

23:1—24:25

Seventh Speech of Job

23:10. come forth as gold. The analogy here is that of the process of the purification of gold. Gold is refined or purified by means of a process called cupellation. The gold is placed in a crucible with lead and melted. As air is blown across the surface of the molten mixture, the impurities are absorbed as dross and the purified metal remains. Like the gold that comes forth from the purifying process, Job will have his honor restored after his own "purifying process" (i.e., his troubles).

24:2. moving boundary stones. Unlawfully moving a boundary stone (i.e., property marker) was considered a terrible crime (Deut 19:14; Prov 23:10). The purpose of the stones was to protect family property (usually land). In Mesopotamia the boundary stones were inscribed with a description of the property lines and a terrific curse that was leveled against the criminal who transgressed the stone. These curses were usually a description of diseases directed toward the offender's body. Ironically, they have taught us much about the Mesopotamian understanding of disease.

24:9. infant seized for debt. In Mesopotamia infants were sometimes given as surety for a debt or simply seized by the creditors when the debtor could not repay their debt. However, the creditors are considered to have been unlawful in this case. Also see the comment on Job 17:3.

24:11. olives among the terraces. It is possible that the term used here *(shur)* refers to terrace walls that allowed the olive trees to grow on hillsides. Other interpreters believe the term refers to the equipment used for processing olive oil. The twenty-two olive oil factories in the caves of Maresha provide details of the process by which olive oil was made. The initial crushing of the fruit was done in a stone basin by means of a lens-shaped rock on its edge that was rolled over the olives. In the second stage reed baskets full of pulp were put into presses hollowed out of the rock where weights suspended from beams would be used to extract the remaining oil. One of the Akkadian words for reed basket is *shuru*.

24:11. winepresses. The final stage of wine-making is mentioned here, as the grapes were tread by foot into the winepress, which emptied the juice into vats. Winepresses have been found by archaeologists in Palestine. They were usually square or circular pits cut out of rock or dug out of the ground, sealed with plaster or lined with rocks. The grapes were placed in the pit and then trampled on. The juice then flowed from a channel into a lower vessel (wine vat) which collected the grape juice and functioned as a fermenting container.

24:17. terrors of darkness. The use of "king of terrors" in 18:14 and the context of the term in Ezek 27:36 and 28:19 suggest that "terrors" can be used as a reference to the spirits of the dead, those who have been consigned to the netherworld.

25:1-6

Third Speech of Bildad

25:2. order in the heavens. The literal phrase is "He makes peace in His heights," that is, in the heavens. Most have argued that the writer is alluding to the primordial conflict (Job 9:13; 26:12-13) where God defeated Leviathan and other monsters. Both Baal (Ugarit) and Marduk (Babylon) made peace in the heavens after the defeat of their enemies. The NIV translation is not unrelated since the defeat of the chaos monsters is the means by which order was established in the cosmos.

25:5. stars not pure. There is no known tradition of personified or deified stars being guilty of some trespass or sin. The word "pure" can also carry the connotation of clear or clean, and probably here refers to the fact that the stars do not always shine clear and bright in the night sky but can be obscured or dimmed.

26:1—27:23

Eighth Speech of Job

26:6-11. cosmology. There was a triparite division of the cosmos: the heavens, the earth and the realm of the dead below the earth (Sheol and Abaddon in v. 6). This threefold cosmology was roughly similar to that known from Mesopotamia and somewhat like that in the texts from Ugarit. The picture of the universe described here was the common cosmological view of the ancient Near East. The sky was a circle (dome? See comment on 22:14) that arched over the disk of the earth, which sat on top of a primordial ocean. Under the primordial ocean was the netherworld, virtually a mirror image of the space above the earth. Thus, the entire universe was an enormous sphere, cut in the center by the earth.

26:6. Abaddon. The parallel to Sheol (NIV: death) suggests that this refers to a place rather than a person. The Hebrew root from which it is built confirms that it is a place of destruction. In 28:22 it is personified along with Death (Hebrew, *mot*), a well-known name for the Canaanite god of the netherworld. The Hebrew is adopted as a personal name in Revelation 9:11 where it is equated with the Greek Apollyon. In Greek mythology, Apollo is a god of plague and destruction. In Akkadian the netherworld is referred to as the house of darkness but not as the place of destruction.

26:7. north. The Hebrew word *Zaphon* only comes to mean north because it refers to a mountain that was in the north (commonly identified with Mt. Casius, Jebel al'Aqra, in Syria, elev. 5807 ft.). Its function here is not as a direction but as the "sacred mountain" (Ps 48:1), the high heavens where the gods meet in assembly and, in Ugaritic literature, where Baal's house is.

26:7. spread out on nothing. It is the vast trackless waste of primordial waters that is described as the "nothing" on which the earth sits. Evidence for this is that the word describing what the north is spread out on (NIV: "empty space") is the same word that describes the watery cosmic chaos of Genesis 1:2 (NIV: "formless"). In Babylonian literature, Shamash is praised as the one who suspends from the heavens the circle of the lands. This was part of ancient perception of the cosmos rather than a covert allusion to modern scientific understanding. See comment on Psalm 24:2.

26:10. horizon as boundary. In the ancient Near Eastern worldview, the sun, moon, stars and clouds enter the sky through gates, and the horizon serves as the boundary where the gates are. So when the sun rose or set, it was passing through the gate on the horizon that passed into the netherworld. They believed that during the night the sun passed through the netherworld to arrive at the other side. Here this is described as the boundary between light and darkness.

26:11. pillars of heaven. See comment on 9:6.

26:12. churning sea. This description indicates a typical mythical scene in which the churning of the cosmic ocean disturbs the creatures (often sea monsters) who represent the forces of chaos and disorder. In *Enuma Elish* the sky god, Anu, creates the four winds that stir up the deep and its goddess, Tiamat. It is also reminiscent of Baal's defeat of Yam in Ugaritic mythology.

26:12. Rahab. Rahab is described as one of the sea monsters slain by God. In both the Babylonian and Ugaritic myths of creation the champion deity (Marduk in Babylon and Baal in Ugarit) fights and slays a sea monster and its cohorts in a manner similar to that of Yahweh. In other contexts Rahab is symbolically used as a designation for Egypt (Ps 87:4 and Is 30:7). The name Rahab has not yet been found in extrabiblical sources.

26:13. gliding serpent. This is most likely another allusion to the defeat of the sea monster and its allies. Marduk defeated Tiamat by means of a mighty wind and the use of a net

to capture her. The fleeing or gliding serpent also appears in Isaiah 27:1 (see comment there).

27:18. watchman's hut. The hut built by a watchman was by nature flimsy, as it was used only on a temporary basis. Farmers put up temporary booths in the middle of their fields in order to guard the crops during harvest.

27:23. claps hand in derision. Gestures and body language take on different meanings in different cultures. In current Western society clapping hands can be used to show appreciation, to summon subordinates or children, to get someone's attention, to accompany music or to express frustration (one clap). There were also several functions in the ancient world. Clapping could be used in praise (Ps 47:1) or applause (2 Kings 11:12), or as a gesture of anger or derision (Num 24:10). Variations may exist in the precise movement involved: compare the different significations in Western culture of (1) striking the palms together parallel to the body on a horizontal plain (applause); (2) slapping the palms together in a roughly vertical movement (frustration); and (3) striking the palms together perpendicular to the body while alternating which hand is on top and which is on bottom (as if knocking the dust off).

28:1-28
Wisdom Hymn

28:1-11. mining in ancient Near East. Palestine, like Mesopotamia, was generally poor in mineral resources. There are numerous deposits of a poor quality of iron ore in Palestine, but few of high quality ore. The only major deposits of iron ore known in Palestine today are at Mugharat el-Wardeh in the Ajlun hills by the Jabbok River. Copper mining sites are mostly in Transjordan. While iron can be mined on the surface, copper mining requires shafts. Gold was mined in Nubia and South Arabia, while Turkey was mined for its silver. Evidence for the mining of ores comes from Egypt as early as the First Dynasty (c. 3000 B.C.). The method of metallurgy described here in Job can be seen on a number of Egyptian funerary wall reliefs from the New Kingdom (c. 1550-1050 B.C.). The underground mining that is described here (commonly called *pitting)* begins about 2000 B.C. in the ancient Near East. It involved digging vertical shafts at intervals in order to reach the horizontal ore-bearing strata. In Egypt they preferred open cut mining and sometimes dug horizontal shafts into the sides of mountains or cliffs. By the middle of the second millennium they were doing more shaft mining. The copper and turquoise mines of Egypt in the Sinai have yielded much information of mining techniques and the profession.

28:5. fire. In ancient mines rock was broken up by a process called fire-setting in which the rock was heated by large fires and then doused with cold water mixed with vinegar (believed to enhance the cold).

28:6. sapphires (lapis lazuli). Sapphire (lapis lazuli) was a deep, dark blue stone found primarily in Iran. It has often been found in archaeological excavations in the Tigris-Euphrates region, especially in Mesopotamian royal graves. Lapis deposits were often veined with pyrites, perhaps the gold referred to here.

28:16-19. gems. The various gems were all of great value. The term for gold comes from an Egyptian word from where it was obtained, probably Nubia. The identity of the precious stone in verse 16 is not certain, some have suggested either onyx or carnelian. Glass was made in Egypt as early as the fourth millennium B.C., primarily for ornamentation (although glass vessels were not common in Palestine until the first century B.C.). The first gem in verse 18 has been considered coral, a red gem used for ornamentation. The word for crystal *(gabish)* is the origin of the term gypsum, and is used only here in Scripture. The gem in verse 18 is a type of ruby, while topaz designates yellow chrysolite.

28:20-28. source of wisdom in ancient Near East thinking. Wisdom in Mesopotamia was not considered an intellectual ability or as having moral content, but a specific skill, usually in cultic and magical rituals. The primary deity associated with wisdom was Enki (or Ea), who bestowed the cultic and ritual arts on mankind. Thus, the source of wisdom was Enki himself, though he is simply the most informed repository rather than the originator. Likewise Yahweh, in verses 23-27, is portrayed as one who knows where to find wisdom rather than as its originator or creator. If, however, wisdom is viewed as the ability to discern the inherent order in the created world, it can only be achieved through the one who established the order. Likewise, then, the sovereignty attributed to Marduk by the Babylonians allowed him to be addressed as the Lord of Wisdom.

29:1—31:40
Job's Discourse

29:6. path drenched with cream. The imagery here emphasizes the wealthy nature of Job.

His flocks produced such an abundance of curds (cream) that Job was able to wash his feet in them.

29:6. olive oil from rock. Olive trees, which were the main source of oil, were able to grow in rocky soil because they could thrive with minimal amounts of water. This meaning of the verse is affirmed through comparison with Deuteronomy 32:13.

29:7. seat of respect at the gate. The city gate in ancient Near Eastern cities was a broad, open area that also housed the town square, or marketplace. It was also where business was transacted and where judicial and other governmental proceedings took place. Thus, it was the most visible area in the town. As Job was a family head (i.e., elder), he took his "seat" (residence) at the city gate, emphasizing his distinct importance.

29:12. help for orphan and widow. See comments on Exodus 22:22-24.

29:20. glory fresh, born new. One's glory (literally liver) signified his innermost feelings. Job's fresh "liver" meant that he had a strong emotional stability, and felt content and happy. A bow could dry out and become brittle or could be overused and lose resilience. The bow often signified one's virility and physical vigor. Thus, Job was a "new man" with youthful strength.

30:4. salt herbs. Salt herbs, or saltwort, has been identified as *artiplex halimus,* an edible plant with a very sour taste. The Talmud says this plant was for the poor and those who were in danger of starving.

30:4. broom tree. The roots of the broom tree *(retana roetam)* were not edible, but were used for making charcoal (see Ps 120:4). It grows primarily in the desert regions of the Sinai and Dead Sea.

30:11. imagery of unstrung bow. An unstrung bow appears to signify Job's loss of strength. The term for bow here, however, is obscure and has been interpreted in different manners. It may also denote a tent cord, which if loosened would cause the entire tent to collapse. The imagery is clear; Job's body is frail and near death.

30:28. blackened. The term "blackened" appears to refer to Job's skin (although some argue it may refer to his garments). The term translated "blackened" is usually used for mourning, and that would make the best sense here. The same phrase is used in Psalm 38:6 where the NIV translates "mourning." Though it could refer to the black (goatskin) sackcloth, perhaps more likely is the black soot from the ashes that a mourner puts on their head. In verse 30 the blackened (different word) skin is related to Job's disease.

31:1-40. legal parallels to Job. Job's renunciation of evil is similar in many respects to the negative confession from the Egyptian Book of the Dead. In this work an individual after death is presented before the judgment seat of Osiris where he recites a lengthy list of forty-two sins that he did not commit. The list includes lying, theft, murder, killing the sacred bull, eavesdropping, homosexuality, being disruptive, talking loud, being impatient and conjuring against a god, just to give a range of examples. Even more to the point, in a Hittite prayer to the Storm-god for relief from suffering, Kantuzilis declares his innocence of a list of items (breaking oaths, eating forbidden things, withholding sacrifices). This oath has clearly put Job in the position of defendant. A declaration of innocence was a common element in legal proceedings that were being appealed to a judge for a public hearing. Since it was often impossible to gather sufficient evidence in this type of court case, the swearing of an oath took on great significance. Up until this point Job has been distressed that God has been silent. By swearing to this oath of innocence, Job hopes to turn any continued silence to his advantage. If God ignores his oath it will be tacit admission of Job's innocence.

31:12. Abaddon/destruction. Along with Sheol, Abaddon is a name for the abode of the dead (see comment on 26:6), and is paralleled with the grave. The term literally means destruction. The term appears as Apollyon in Revelation 9:11, where it refers to the angel of the bottomless pit.

31:36. wearing indictment on shoulder. Wearing or carrying something on the shoulder caused the item to be considered important, and the bearer displayed it proudly (see Is 9:6; 22:22). Moreover, an item inscribed or bound on the hand, neck or forehead became a constant reminder for the wearer, and an advertisement to spectators (Prov 6:21; Ex 8:16; Deut 6:8; 11:18).

32:1—37:24
Elihu's Discourses

32:2. Buzite. Buz was the nephew of Abraham (Gen 22:20-21) and presumably the ancestor of this Aramean clan (Ram). Jeremiah mentions Buz along with Sheba and Dedan (Jer 9:25; 49:32). The annals of the Assyrian king Esarhaddon mention the geographic name Bazu, which has been identified on the island of Bahrein in the Persian Gulf.

32:19. bottled up wine/new wineskins. New wineskins are able to endure fermenting wine, since the skins expand along with the wine. If the wineskins are bottled up in this process, they are in danger of exploding, unless they are vented (Jer 20:9).

33:15-16. God speaking in dreams. See the comment on Job 4:13-15.

33:22. pit/messengers of death. Akkadian also has a word for the netherworld that is translated "pit" *(ḫashtu).* The terminology is drawn from the hole dug to serve as the grave. The identity of the messengers of death is not certain. In Mesopotamian literature there are several gods that are called the "death bringers." But the word "messengers" is not in the text here, and some interpreters have plausibly suggested "place of the dead" as a parallel to the pit.

35:10. songs in the night. Since troubles were associated with the night, songs in the night would be a welcome change whether individuals sang about their disappointments or expressed their confidence in God's presence. Alternatively, there are some Semitic cognates of the term translated "song" that mean strength or protection, and that would fit with some of the parallels in Hebrew (for instance, in Ex 15:2, where it would be "The LORD is my strength and protection").

36:14. male prostitutes. The male prostitutes described here are probably referring to a Canaanite fertility cult. For more information concerning cultic prostitution in general, see the comment on Deuteronomy 23:17-18. The term used here occurs in both feminine and masculine forms and refers, perhaps euphemistically, to ones who have been set apart for particular functions. This same term is used in Akkadian literature to refer to those who have been consecrated as functionaries serving at the shrines or temples. The prostitute was among those functionaries, as was the wet nurse and the midwife. It is unclear what other functions the males might have served. For more information see comment on 2 Kings 23:7.

36:27. water cycle. Though some modern interpreters have attempted to read this verse as a scientific description of the condensation-evaporation cycle, the context is clearly operating from a different perspective (see v. 32, where God fills his hands with lightning bolts that he throws like spears). The two verbs in this verse speak of a process of drawing out or refining (as precious metals would be drawn out in the refining process). It was believed in the ancient Near East that raindrops came from a heavenly stream or ocean, a great body of water that enveloped the earth, and from subterranean waters. Thus there were waters above and below the earth. It was these waters from which God is seen as drawing out raindrops.

37:2-4. storm gods. In Ugaritic myths the storm god Baal-Hadad struck terror in his enemies and caused them to flee by the power of his voice (also see Ps 29). The Akkadian equivalent, Adad, also thundered with his voice. Storm gods typically were pictured with lightning bolts clutched in the hand.

37:9. chamber of the tempest. It was believed that winds were stored in chambers in the heavens. The chambers were periodically emptied by God. The Canaanites and Babylonians attributed manifestations of storms to Adad, the storm and wind god. Similar (and more frequent) imagery describes Yahweh having storehouses of rain, hail and snow, which are set in motion by the wind, presumably instigated by his breath. The word translated storehouses can be used to refer to treasuries that would store precious objects, as well as royal weapons. Hail, snow, wind, thunder and lightning are often seen as the weapons that God uses to defeat his enemies. Likewise storehouses could serve for the storage of raw materials such as barley, dates, grain or tithes in general. In the same way God rations out the products from his storehouses as necessary. Cosmic storehouses are not common imagery in the ancient Near East.

37:13. rain as judgment of God. Storms were used by God for both blessing and judgment, depending on the situation. It brought much needed water for the crops to grow but could also come in destructive storms. In the ancient world the people believed that the weather was under total control of deity and was used to reward or punish. They did not view the world as operating by natural laws.

37:18. bronze mirror. Mirrors in antiquity were made out of bronze and were very hard and difficult to break. The imagery was appropriate to the sky on those dry, hot summer days when the heat of the sun reflected on the rock and dirt through the still, golden haze. Additionally in the ancient world it was believed that the sky was a solid dome or disk.

38:1—41:34

God's Discourses

38:1. God speaking out of storm. God often presented himself by means of a storm (2 Kings 2:11, Ezek 1:4) and he came in tempest to judge the nations. Storm gods in the ancient Near East (Baal-Hadad at Ugarit, Adad

in Mesopotamia) also manifested themselves in this way. Yahweh is portrayed as master of the storm and controller of the winds, which can bring life as well as destruction. This type of figurative language demonstrating God's majesty is a common feature in ancient Near Eastern epic poetry. For example, in the Ugaritic epic of Baal and Anath, the god Baal is described as the "Rider of the Clouds" and his "voice" is the sound and fury of thunder and lightening. Similarly, in the Babylonian story of creation, *Enuma Elish,* the storm god Marduk defeats the primordial goddess of watery chaos, Tiamat, through his control of the winds and his use of the lightning. See comment on Zechariah 9:14.

38:4. God responding to challenge using rhetorical questions. In the *Erra Epic* Erra (=Nergal) challenges Marduk concerning his loss of divine dignity. Marduk's long answer gives explanation for his condition but then defends his sovereignty by posing a series of unanswerable "where" and "who" questions to Erra in order to demonstrate his wisdom and control.

38:4-6. earth's foundation, footings, cornerstone. In the ancient world the cosmos was viewed in terms of a temple, and the temple was understood to represent a microcosmos. Here the most important elements in building the temple are referred to in God's setting up of the cosmos. The foundation determined the size and orientation of the temple and so was laid out very carefully. It involved survey of the site but, more importantly, communication from the deity because of the importance of the orientation. The word translated "footings" is most often used for the sockets that held the pillars used in the tabernacle. The cornerstone or, better, the foundation brick is always significant in temple building and restoration. One of the most detailed temple building accounts in ancient Near Eastern literature describes Gudea's construction of a temple for Ningirsu around 2000 B.C. The ceremony concerning the premier brick shows its centrality to the building procedure.

38:5. measuring line in creation. The placement and orientation of a temple was considered extremely important (see the comment on Ex 26:1-36). This is also evidenced in temple building texts both mythological and historical in Mesopotamia. When Marduk is preparing to build his cosmic temple in *Enuma Elish,* he measures the Apsu (the area where the foundation of the temple will be laid). From Sumerian times through Assyrian and Babylonian periods, the possession of the measuring equipment is a sign of the divine commission for the rebuilding project. It is through this equipment that the leader is given divine direction.

38:7. morning stars/angels. It was typical that the bringing in of the "premier brick" was accompanied by great celebration. The morning stars (usually planets such as Mars and Venus) were worshiped as divine beings in the ancient Near East, and were personified as part of the heavenly hosts in Israel. In the context of Job 38, these "stars" are parallel to the created angelic beings. A Ugaritic poem describes the birth of a number of astral deities.

38:8. sea from womb. In Mesopotamian thinking, the cosmic region from which the subterranean waters emerge is called the Apsu, and is located between the earth and the netherworld. In one incantation the mother of Apsu is the river goddess. The Babylonian creation myth recounts how Tiamat, the sea goddess, was the mother of all creation who was defeated by Marduk. Similarly, Baal in the Ugaritic creation myth defeated Yam, the sea god. The motif here in Job concerning the birth of the sea god is not known elsewhere. Some have concluded that Yahweh's restriction of the sea from the womb suggests that he did not have to defeat a rebellious sea threatening with chaos (as Marduk and Baal had done) but that it had always been under his control.

38:10. doors and bars of sea. Marduk, after having defeated Tiamat, created the seas and placed guards to keep back the waters. The Babylonian *Atrahasis Epic* refers to a bolt of the Sea in the possession of the god Ea (=Enki). Other texts speak of locks of the sea. One of the main tasks of the head of the pantheon was to keep the sea in check so that chaos would be restrained and order would prevail.

38:14. clay under seal. Stamp seals and cylinder seals were produced by engraving a pattern into clay or rock (see sidebar at Jer 32). A stamp seal pressed into wet clay brings shape, contour, design and meaning to that which has had no distinct or distinguishable features. The light of sunrise likewise brings topographical features into sharp relief.

38:17. gates of death. In the Mesopotamian epic of the Descent of Ishtar the goddess Ishtar had to traverse seven gates to arrive in the netherworld and then to return back to the land of the living. The Israelites also believed that death (Sheol) was held by gates.

38:19. abode of light. The question most likely concerns where each one goes when the other is present. In the ancient Near East the sun passed through the netherworld during the night or resided in sequestered chambers. The

Gilgamesh Epic refers to a place called the region of darkness. This is an area that is constantly in darkness along what is called the Path of the Sun.

38:22. storehouses of snow and hail. The Israelites believed that snow and hail, like rain, were collected in storehouses to be used when necessary (see comment on 37:9).

38:28-29. birth of nature. In the ancient Near East and Greece there is a strong tradition of theogony (birth of the gods as natural elements of the universe). The Babylonian epic of creation commences with the divine natural elements all generated from a watery mist (Tiamat). These natural elements in turn generated other divine natural forms. Similar imagery is found in Greece in Hesiod's *Theogony.* It is difficult to determine whether the verse here discounts this view or is just indicating Job's ignorance of the answer. Canaanite literature knew of Pidrya, daughter of mist, and Taliya, daughter of showers in the Ugaritic Epic of Baal. In Mesopotamian literature, dew is sometimes seen as coming from the stars. Shamash, the sun god, is seen as the one who provides dew, mist and ice.

38:31-32. constellations. The three constellations mentioned here (Pleiades, Orion and the Bear) are the same as mentioned in Job 9:9 (see comment there). The fourth constellation is not certain, but may be a term for the planets. The Babylonians were quite adept at charting the stars (cf. Is 47:13) and believed that the movements of the heavenly bodies influenced earthly affairs. Moreover, by charting their movements one was able to forecast the weather.

39:13-18. behavior of the ostrich. Engraved art from Israel starting about 1000 B.C. and continuing for several centuries portrays a deity flanked by ostriches. O. Keel believes these represent the numinous powers that survive in the wilderness under the control of a deity. It is not difficult to see why the peculiar habits of the ostrich have become the core of proverbs. They appear to be indifferent to their young in that when predators attack, the ostriches attempt to draw them away from the young by running off and leaving them reasonably camouflaged, lying flat on the ground. The eggs of an ostrich are indeed laid in the sand, but the danger of crushing them is not as great as it may seem. The shell is six times thicker than that of a chicken egg. The male shares the incubation responsibilities and undertakes the greater part of the chick's care after it is hatched. An adult ostrich can maintain a speed of fifty miles per hour for a half-mile or so. Ostriches were hunted by pharaohs (portrayed as the prey of Tutankhamun) who prized the plumes for fans. They became extinct in western Asia only in the twentieth century.

40:15-24. Behemoth. Since about the seventeenth century Behemoth has traditionally been identified with the hippopotamus, which flourished in Egypt and much of Africa. The monarchs of Egypt hunted this animal, as depicted on numerous wall reliefs. The hippopotamus plays a role in many Egyptian myths, where it often symbolized enemy powers against the throne. There was even an Egyptian festival where a hippopotamus was ritually slain, symbolic of pharaoh's enemies. The difficulty with this identification is that the description in the text is not particularly suitable to a hippopotamus (especially v. 17). Early intertestamental interpretation favors a mythical/supernatural identification (for instance, many would equate the beast and the dragon of Revelation to Behemoth and Leviathan). In Ugaritic literature the seven-headed dragon (see comment on 41:1 below) is paired with a creature identified as Arshu, also known as El's calf, Atik.

40:24. means of capture. The hippopotamus was considered in antiquity very difficult to capture. One tactic was to pierce the nose of the creature so that it was obliged to breathe through its mouth. It could then be killed by shooting a harpoon in the mouth's opening.

41:1. Leviathan. Leviathan has often been identified as a crocodile, which were found mostly in Egypt (where it symbolized kingly power and greatness) but also sparsely in Palestine. However, the multiple heads in Psalm 74:14 and the fiery breath here in verses 19-21 make the crocodile identification difficult. Alternatively Leviathan has been depicted as a sea monster (see Ps 74:14; Is 27:1). Support for this is found in Ugaritic texts which contain detailed descriptions of a chaos beast, representing the seas or watery anarchy, in the form of a many-headed, twisting sea serpent who is defeated by Baal. There is a close affinity between the description of Leviathan in Isaiah as a "coiling serpent" and the Ugaritic Baal epic, which speaks of how the storm god "smote Litan the twisting serpent." In both cases there is a sense of the god of order and fertility vanquishing a chaos monster. Several other passages in the Old Testament mention Leviathan, but most of them, like Psalm 74:14, speak in terms of God's creative act that establishes control over watery chaos (personified by the sea serpent). In Isaiah 27:1, however, that struggle between order and chaos occurs

at the end of time. It may be that the fall of Satan, portrayed as a seven-headed dragon in Revelation 12:3-9, also echoes the Ugaritic image of Litan as "the tyrant with seven heads." Biblically, Leviathan would therefore most easily fit into the category of "supernatural" creature (like cherubim) as opposed to natural or purely mythological. As such it may appear in extrabiblical mythology, as well as being symbolized by something like a crocodile (as in Ezek 29:3, though Leviathan is not specifically referred to in that context).

41:18-21. flame-emitting creatures. Flame-emitting creatures were known from Ugaritic myth of Baal against the sea (Yam). Yam's terrible messengers terrorized the divine assembly by their fiery appearance. In the Gilgamesh Epic the guardian Huwawa is described by the phrase "his mouth is fire itself."

42:1-17

Job's Restoration

42:11. gifts. The Hebrew term here for "piece of silver" *(qesita)* was an ancient unit used primarily in the Patriarchal age (Gen 33:19). One hundred *qesita*s were required to buy a sizable piece of real estate (see Josh 24:32), and thus one *qesita* was a substantial gift. The gold ring may have been a nose ring or earring worn usually by the wealthy.

42:12. size of herds. Job now has double the size of herds that he had at the beginning of the story (see Job 1:3).

42:15. daughters inheriting along with sons. Daughters normally inherited in ancient Israel only when there was no son (see Num 26:33). Thus the daughters inheriting along with sons is unique in the Old Testament, although there are parallels from the Aegean in the early first millennium B.C. and from Ugarit.

PSALMS

COMMON CONCEPTS

Acrostics. "Acrostic" is a literary form in which the first letters of consecutive lines form a pattern. In alphabetic acrostics the pattern is the alphabet (the first line begins with the first letter of the alphabet, the second line with the second letter, etc.). Other forms of acrostic might spell out a message or a name (for instance, the scribe who composed the work or the deity being honored). There are a number of acrostics in the book of Psalms (9—10, 25, 34, 37, 111, 112, 119, 145). Psalm 119 is the most complex in that each letter of the Hebrew alphabet is represented by eight consecutive lines. All Hebrew acrostics in the Bible are alphabetic acrostics. The seven examples of acrostics in Mesopotamian literature are name/sentence acrostics (since Akkadian was syllabic, there was no alphabet and, therefore, no alphabetic acrostics) and generally date to the first half of the first millennium. Egyptian examples offer numerical sequences or complex messages that involve both horizontal and vertical patterns. They are more dependent on puns to accomplish their stylistic objective. Acrostics depend on writing and therefore would not be composed orally. They are intended to be read, not just heard, because of the importance of the visual element. This is especially clear in the Babylonian examples, where a variable sign needs to be read with one value in the poem but a different value in the acrostic. Some of the Babylonian examples also contain a pattern in the last sign of each line. Another variation is found in those examples where the acrostic is repeated each stanza.

Afterlife. *Sheol* is the Hebrew word for the netherworld. Though it may be considered an act of judgment for a person to be consigned to Sheol from life, it is not in itself a place of judgment to be contrasted with a heavenly destiny of rewards. The word is sometimes used as a synonym for grave because the grave was the portal through which one entered the netherworld. Besides "Sheol" the Psalms also frequently refer to "the pit." This type of terminology occurs as a variant term for the netherworld as early as the Sumerian period. This is entirely logical given the understanding of the grave (a pit dug in the earth) as the entry to the netherworld. The Israelites believed that the spirits of the dead continued to exist in this shadowy world. It was not a pleasant existence, but it is never associated with the torment of hellfire in the Old Testament (the imagery seen in Is 66:24 is not associated with Sheol). It is not clear that in Israelite thinking there were any alternatives to Sheol. People who were spared from Sheol were spared from it by being kept alive rather than by going somewhere else. There was at least a vague idea of somewhere else to go seen in the examples of Enoch and Elijah, who avoided the grave and presumably did not go to Sheol.

But those texts are very unclear about what the other alternative was. Lacking specific revelation to the contrary, Israelite beliefs conformed generally to many of those current among their Canaanite and Mesopotamian neighbors.

A composite sketch of Mesopotamian beliefs would suggest that the dead needed to cross a desert, mountains and a river, and then descend through the seven gates of the netherworld. Though described in Mesopotamian literature as a place of darkness where the inhabitants were clothed in bird feathers and ate dust, kinder accounts were also current. The denizens of this shadow world also were sustained by the offerings presented by those who were still alive, and they enjoyed some light as the sun god passed through the netherworld when it was night in the land of the living so he could rise in the east again the next morning. The rulers of the netherworld, Nergal and Ereshkigal, were assisted by a group called the Anunnaki. Despite the depressing descriptions, no one wanted to be turned away from the gates because the alternative was to be a wandering spirit with no access to funerary offerings.

There are some expressions in Psalms that have often been interpreted as a reference to an afterlife in God's presence, though other explanations are possible. Some psalms speak in terms of awakening and seeing God's face (11:7; 17:15). In the context of Psalms this is an anticipation not of heaven but of an experience in the temple, as 27:4 and 63:3 make clear. This phrase occurs with the same meaning in Akkadian, where, for instance, Ashurbanipal longs to look at his god Ashur's face (in the temple) and bow before him. In a hymn to Ishtar it is said that the sick man who sees her face revives. In more general terms the Babylonian sufferer in *Ludlul Bel Nemeqi* says that he calls to his god, who does not show his face, yet he hopes that the morning will bring him good things. The psalmist also expects his deliverance to come when he awakes in the morning (139:18). A second expression concerns being redeemed from Sheol (49:15). This only means that the psalmist has been spared from death for the moment, not that he will go to heaven instead of Sheol (compare the wording and contexts in 18:16-19; 30:2-3). Again, comparable wording occurs in Mesopotamian literature, where Marduk is considered one who restores life from the grave (see comment on 30:3) or gives life to the dead. Gula, the goddess of healing, states that she can return the dead from the netherworld. These are expressions not of resurrection but of healing. For discussion of resurrection, see comment on Daniel 12:2.

Creation in Psalms. The praise of Yahweh as the Creator in Psalms is focused mainly on his ordering and maintenance of the cosmos. His control and his sovereignty are indicated as he shows his mastery of the heavens, clouds, sun, moon, stars, earth, seas, thunder and lightning. As in the rest of the ancient world, in Israel it is more important who is in charge than where things ultimately come from. Nevertheless, Yahweh is also seen as the originator of every part of the cosmos. This also extends to the inhabitants of the cosmos from people and down through the various species of animal life, no matter how obscure. The poetic language of the Psalms does not hesitate to adopt the imagery of the cosmos that is common to the worldview contained in the mythology and old-world science of the ancient Near East. Though today in our scientifically enlightened world, some would desire to find in the Psalms a scientific accuracy garbed (disguised) in poetic language, such an approach poses a methodological dilemma. The Israelite audience was familiar only with its own cultural perspectives. Since these were not informed by revelation (e.g., God had not told them that a round earth revolved around the sun and was held in orbit by gravity), they would have closely resembled those common in the ancient world. If this is so, then the words, images and ideas used in the text communicated to them what to them was reality, not just poetic language. Nevertheless, God's sovereign control of nature is the point.

Whether his control of the storm is depicted in the imagery of God armed with lightning bolts and riding on clouds or is understood in his control of high and low pressure systems and the jet stream, the point of his sovereignty remains unchanged. God did not inform them concerning the science of meteorology so that he could give them an "accurate" idea of his control of the weather. He used the understanding that they had. In the same way God did not inform them that the organ they actually used for thinking was the brain, not the heart or the kidneys, as the ancient world believed. Instead he affirmed his interest in their minds, using the understanding that they had of physiology. The ancient worldview concerning the cosmos is evident in many passages of the Old Testament. For a sampling see the comments in Genesis 1:6-8; Deuteronomy 32:22; Job 9:6, 7; 22:14; 26:7, 10; 36:27; 38:1-31; Psalms 8:3; 24:2; 104:1-35; Proverbs 3:19-20; and Isaiah 40:22. There is no instance in which the text supersedes the science of the day or assumes a more sophisticated view of science.

Lament. Laments may be personal statements of despair, such as that found in Psalm 22:1-21, dirges following the death of an important person (David's elegy for Saul in 2 Sam 1:17-27) or

communal cries in times of crisis, such as Psalm 137. The most famous lament from ancient Mesopotamia is the *Lament over the Destruction of Ur,* which commemorates the capture of the city in 2004 B.C. by the Elamite king Kindattu. For more information on this latter category see the sidebar in the book of Lamentations. In the book of Psalms more than a third of the psalms are laments, mostly of an individual. The most common complaints concern sickness and oppression by enemies. There are a number of technical terms that describe the lament literature in Mesopotamia, and many of them are connected to incantations (that is, magical rites are being performed to try to rid the person of the problem). The petitions that accompany lament are very similar to those found in prayers from the ancient Near East. They include requests for guidance, protection, favor, attention from the deity, deliverance from crisis, intervention, reconciliation, healing and long life.

Praise. Praise psalms can be either individual or corporate. Over a third of the psalms in the book are praise psalms. Corporate psalms typically begin with an imperative call to praise (e.g., "shout to the LORD") and describe all the good things the Lord has done. Individual praise often begins with a proclamation of intent to praise (e.g., "I will praise you, O LORD") and declare what God has done in a particular situation in the psalmist's life. Mesopotamian and Egyptian hymns generally focus on descriptive praise, often moving from praise to petition. Examples of the proclamation format can be seen in the Mesopotamian wisdom composition *Ludlul Bel Nemeqi.* The title is the first line of the piece that is translated "I Will Praise the God of Wisdom." As in the individual praise psalms, this Mesopotamian worshiper of Marduk reports a problem that he had had and how his god brought him deliverance.

Private worship. How much of the worship connected to Psalms was associated with the annual festivals at the temple and the pilgrimages made to those festivals? How much of it was associated with sacrifices that were being made? A large percentage of the people who lived in Israel lived many miles from the temple. Only those who lived in close proximity to Jerusalem could visit there regularly (though there would be no reason to if one had no sacrifice that needed offering). The observant Israelite male might have traveled there three times each year as the law required (see comments on Ex 23:15-17), but there is little evidence in the text that such observance ever became commonplace in the Old Testament period. As a result many Israelites would perhaps only see the temple a few times in their life. Certainly, then, there must have been other contexts in which worship could take place. The synagogue is generally thought to be a postexilic invention at the earliest, and the high places throughout Israel were disapproved in the ideal world of biblical religious practice. Sabbath was not clearly designated as a day set aside for worship, though at the temple in Jerusalem, at least, there were worship activities that took place on that day. We know that Israel's worship centered around sacred space (the temple), sacred times (Sabbath, festivals), sacred rituals (sacrifice) and sacred words (prayers). Additionally we know that the focus of worship was preserving the holiness of God's presence, preserving the Law and the covenant, and recognition of who God was and what he had done. Nevertheless, we have very little idea of the routine of worship in the individual's life.

Retribution principle. In its most basic form the retribution principle contends that the righteous will prosper and the wicked will suffer. On a national level this principle is built into the covenant, with its potential blessings and threat of curses. On the individual level it had been inferred that this was necessary in order for God to maintain justice. Since the Israelites had only the vaguest concept of the afterlife, and no clear idea of judgment or reward in the afterlife, God's justice could only be accomplished in this life. The Israelites believed that if God were to be considered just, rewards and punishments in this life would be proportional to the righteousness or wickedness of the individual. These beliefs had also then led Israelites to believe that if someone was prospering, it must be a reward for righteousness; and if someone was suffering, it must be a punishment for wickedness. The greater the suffering, the greater the wickedness must be. Because of the retribution principle, suffering had become a source of shame. The authors of Babylonian and Assyrian magical texts describe this same principle of retribution, but since they were not completely convinced of the justice of the gods, it was not as big a theological issue in Mesopotamia.

Temple worship. The temple was not a structure designed for corporate worship. It was a structure to provide a place for God to dwell in the midst of his people. It had to be maintained in holiness and purity so that God's continuing presence could be vouchsafed. The priests existed to maintain that purity and to control access. The temple idea was not invented so that there would be a place to offer sacrifices. Rather, several of the sacrifices existed as a means of maintaining the temple. God's presence was the most important element to preserve. The most important acts of worship were those which recognized his holiness and worked to maintain the holiness of his sacred space. For this reason, words of worship often included acts of worship. Though corporate

worship at times took place at the temple, it was not a place that was set up for worship to take place. It was designed to adequately house God, and consequently worship there was inevitable. The word most often used for worship in the Old Testament also means "service." In the ancient Near East most people saw worship as serving the needs of the gods by providing them with food (sacrifice), clothing (placed on the idols) and shelter (luxurious and ornate temples). The God of Israel did not have needs, but it was still appropriate to serve him, as, for instance, the priests and Levites did.

Festivals in the ancient world centered around cycles of nature (New Year's or fertility festivals), mythological events (enthronement of deity conquering chaos), agricultural events (harvest) or historical memorials (dedications or deliverances). They celebrated what deity had done and sought to perpetuate deity's action on their behalf. Often these elements were combined. They usually were celebrated at a holy place and therefore often required pilgrimage. The major religious festivals and holy days celebrated throughout the ancient Near East were for the most part agriculturally based. While daily offerings were made to the gods, there were "patron days" in specific towns and villages for locally honored deities as well as occasions when the national god(s) were processed from one town to another, "visiting" shrines and promoting the general fertility and well-being of the land. The single most important of the Mesopotamian festivals was the *Akitu* or New Year's celebration. The monarch assumed the role of the chief god, while the high priestess served as his consort and represented the chief goddess. Their performance of a series of intricate sacred rituals and sacrifices were designed to please the gods and thus insure a prosperous and fertile year ahead. During the year, based on a lunar calendar, New Moon festivals were celebrated, as were the events of the agricultural calendar (the coming of the rains or annual flood waters, plowing and harvesting). Some rituals grew out of the changing of the seasons, such as the mourning for the "dying god" Tammuz (or Dumuzi), who could only be released from the underworld through the tears of devotees (see Ezek 8:14). At these corporate festivals individuals were generally little more than spectators. It was not unusual for there to be festivals of one kind or another six or eight times during a month.

COMMON METAPHORS FOR GOD

In the ancient Near East it was a common practice to multiply names and titles for deity, sometimes using metaphors, other times just descriptive phrases. At the end of *Enuma Elish* the champion and new head of the pantheon, Marduk, is praised by having his fifty names declared. Some of the most intriguing, along with part of the description connected to them, include Namtilla, the one who gives life; Namru, the pure god who purifies the path; Agaku, who created human beings to set them free; Shazu, director of justice; and Agilima, who built the earth above the water. Below are a few of the common metaphors used as titles for Yahweh in Psalms.

Horn (18:2; 75:10; 89:17; 92:10; 112:9; 132:17; 148:14). This metaphor is only used for God in one place in the Psalms (18:2). In ancient Near Eastern iconography, rays or horns on the crowns of deities symbolize power. These are related to the divine glory (Akkadian, *melammu)* that emanated from the gods and especially from their heads or crowns. So, for instance, one text makes reference to the god Enlil "whose horns gleam like the rays of the sun." It was common in Mesopotamia for kings and gods to wear crowns featuring protruding or embossed horns. Sometimes the sets of horns were stacked one on another in tiers. The winged lion from Ashurnasirpal's palace has a conical crown on its human head with three pairs of tiered horns embossed on it. Both in the Bible and the ancient Near East, then, the awe-inspiring power of the deity could be invested in humans, particularly the king.

Judge. The judge had the responsibility of making decisions concerning legal cases that were brought before him. In the cultures of the ancient Near East the king represented the highest court of appeals from a human standpoint. In many cases, however, there was simply insufficient evidence to allow a human being to arrive at a confident decision. As a result, cases were often settled by deity, thus giving rise to the concept of deity as the judge who sees all the evidence and gives an informed and just decision. There were three significant mechanisms by which this system worked. First was the oath. An oath was taken in cases where physical evidence was unavailable or responsibility for loss was uncertain (Ex 22:10-13; Hammurabi). In this way God was solicited as a witness, and the person taking the oath laid himself open to divine justice. Second was the oracle. In this situation a priest would oversee a process by which the deity would be questioned concerning the innocence or guilt of the accused party. In the ancient Near East omens were generally used in oracular cases. An animal would be sacrificed and the entrails examined to determine

what the deity's verdict was (favorable meant innocent; unfavorable meant guilty). In Israel the Urim and Thummim were used for this purpose. The third mechanism by which deity was involved was trial by ordeal. "Ordeal" describes a judicial situation in which the accused is placed in the hand of God using some mechanism, generally one that will put the accused in jeopardy. If the deity intervenes to protect the accused from harm, the verdict is innocent. Most trials by ordeal in the ancient Near East involved dangers such as water, fire or poison. When the accused was exposed to these threats they were in effect being assumed guilty until the deity declared otherwise by action on their behalf. In each of these situations, God was understood to be the judge who was rendering verdicts. Beyond these more formal contexts, deity was also understood as the judge in the sense that he maintained justice in society. This meant taking up the cause of the unfortunate, the poor, the vulnerable and the oppressed. In Ugaritic literature, Baal is sometimes given the title "Judge," but more frequently it is associated with Yamm ("sea"), who is regularly called "Judge River" (perhaps alluding to the river ordeal by which judgments were passed). In Akkadian literature the sun god Shamash is the god of justice and therefore frequently cast in the role of divine judge. In Egypt, Amon-Re, also the sun god, was seen as responsible for justice.

King. In the ancient Near East the role of king was attributed to the chief national god, the head of the pantheon. During the Old Testament period this included El or Baal for Canaanites, Marduk for Babylon, Chemosh for Moab, Milcom for Ammon, Ashur for Assyria, Dagon for Philistia, Ra for Egypt, Qos for Edom and Hadad for Aram. The rule of these gods in the divine realm was exercised over the other locally worshiped gods (as head of the divine assembly). In the human realm these gods would be closely identified with the human king as they were involved together in military exploits, building projects (especially temples) and maintaining justice in society. All of the areas that the human king was seen as responsible for, the divine king was ultimately responsible for. Military success meant that the rule of the deity was extended over other national deities whom he had conquered. Thus Sennacherib tried to intimidate Hezekiah by listing the gods that had fallen before him (see comment on 2 Chron 32:11). In the days of Ahab, Yahweh had to compete with Baal for kingship of Israel (see comment on 1 Kings 17:1). In the days of Samuel the people had lost faith in Yahweh's kingship and sought to replace him with a human king (see comment on 1 Sam 8:7). In Psalms, Yahweh is repeatedly proclaimed as king. Whether or not this is associated with a formal enthronement festival in Israel (see comment on Day of Yahweh in the sidebar in Joel), Yahweh's position as king recognizes his sovereignty over individual crises and the events that drive them, over national disasters, over the nations and their gods, and over the cosmos and its operation.

Redeemer. In Israelite society the redeemer's *(go'el)* role was fulfilled by a kinsman who helped recover the tribe's losses, whether those losses were human (in which case he hunted down the killer), judicial (in which case he assisted in lawsuits) or economic (in which case he recovered the property of a family member). He was a family member who protected the interests of the family when there had been some intrusion on the rights or holdings of the family. This is the term most frequently used in Psalms. A second term *(pdh)* refers in the legal sphere to freeing someone from standing claims against them or from obligations they have incurred. So redeeming the firstborn involved freeing him from obligation by paying an agreed price. In the Old Testament neither these words nor any of their synonyms refer to redeeming or saving someone eternally from their sins. Psalm 130:8 is the closest, but even that refers only to freeing from the obligations of punishment the nation had brought on itself. In both Ugaritic and Akkadian this verb is used with deity as the subject.

Rock (18:2, 31; 19:14; 28:1; 31:2; 42:9; 62:2; 71:3; 78:35; 89:26; 92:15; 94:22; 95:1; 144:1). There are two different Hebrew words that are used for this divine title, with no discernable difference in their usage. The title does not occur as such in the literature of the cultures surrounding Israel, but we know that it was used because it can be found as the theophoric element in Aramaic and Amorite personal names. A rock could be a foundation for a building, it could provide protection (to hide behind) or shade (to sit beside), and it could be impervious and unmovable. All of these qualities made it an apt metaphor for describing God.

Shepherd. In the ancient Near East both kings and gods were often portrayed as shepherds of their people. Just as the sheep were totally dependent on the shepherd for their care and protection, people depended on the king and the gods. Shamash, the Mesopotamian sun god and the god of justice, is praised as being the shepherd of all that is below. The Egyptian sun god, Amon, is described as a shepherd who brings his herds to pasture, thus providing food for his suffering people.

Shield (3:3; 5:12; 7:10; 18:2, 30; 28:7; 59:11; 84:11; 144:2). In battle the type of shield would be chosen

to suit the type of combat one expected to encounter. If siege was being laid to defend city walls, one would want a body-length shield that would provide protection from arrows and sling stones raining down from the walls. In contrast, hand-to-hand combat in the open field would favor a small maneuverable shield that could be used to ward off thrusts by sword or spear. Nearly all of the examples in Psalms refer to the latter (all of the above except 5:12). The metaphor of deity as a shield is familiar from the ancient Near East in, for instance, a prophetic oracle given to the Assyrian king Esarhaddon, who is assured by the goddess Ishtar that she will be a shield for him. Ishtar, as the goddess of war, is referred to as "lady of the shield," and her planet, Venus, takes the Akkadian word for shield, *aritu,* as one of its names.

Stronghold/fortress (9:9; 18:2; 27:1; 31:2; 37:39; 43:2; 46:7; 48:3; 52:7; 59:9,16,17; 62:2, 6-8; 71:3; 91:2; 94:22; 144:2). There are three different Hebrew terms that are used in conveying this metaphor, with the occurrences divided fairly evenly. The range of meaning that they cover extends from naturally defensible locations like a rocky outcrop or a cave, to garrison forts, to fortified cities and even to fortified citadels within cities. In an Assyrian text the king is identified as a fortress to the people. There is no sign of this metaphor for deity in Egyptian or Akkadian literature.

Warrior. In the divine warrior motif, the deity is fighting the battles and defeating the deities of the enemy. In Assyria, Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. In this worldview human warfare is viewed simply as a representation of warfare among the gods. The stronger god would be victorious regardless of the strengths or weaknesses of the human combatants. Thunder and lightning were considered to regularly accompany the presence of a deity, often in a battle setting. From the Sumerian *Exaltation of Inanna,* to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. In Psalms, Yahweh is sometimes portrayed as the divine warrior coming to the aid of the psalmist against his enemies. Additionally, however, he is depicted as doing battle against the forces of cosmic chaos. Ancient mythologies often portrayed gods in battle against chaos, resulting in the harnessing and organizing of the cosmos. Both Marduk (Babylonian) and Baal (Canaanite) subdue the sea, which is personified in their divine foe (Tiamat and Yamm respectively). The cosmic conflict motif depicts the principal deity overcoming cosmic forces (usually forces of chaos like Death or Sea) to bring order to the cosmos. In the ancient Near East these forces are usually personified as gods, but Psalms preserves a certain ambiguity on that count.

MUSICAL TERMS

As would be the case with any hymnal, the text of the book of Psalms also contains instructions on orchestration, which tune to use to perform a psalm, the appropriate tempo, as well as performance markings or rubrics such as pauses, breath marks and the use of crescendo and decrescendo modulations. In modern music much of this information is written in Italian or Latin. A musician or singer must learn these technical terms in order to perform the music properly. However, two thousand years from now the meaning of many of these terms may well be lost to memory. It is not surprising therefore to discover that we cannot translate and do not fully understand some of the technical terms that appear in the superscriptions of the Psalms.

Alamoth. Title of Psalm 46. This term only appears in Psalm 46, but it is also mentioned in 1 Chronicles 15:20, where temple musicians are to play their harps "according to Alamoth." By comparison with the Greek word *élumos,* which means small flute, this may refer either to a high-pitched voice or to playing on the upper register of the instrument.

Death of the Son. Title of Psalm 9. This is an incipit or set of cue words for a tune now lost. There is some difficulty translating *'alumot.* The LXX renders it "the strength of youth." The translation in the NIV is apparently based on connection with the Ugaritic god Mot, "death" (see Ps 48:14).

Do Not Destroy. Title of Psalms 57—59; 75. This is likely an incipit, the opening words of a text or song title (possibly based on Is 65:8). Accompanied by *miktam,* it may also serve as a shorthand means of forbidding the destruction or removal of an inscription or text.

Doe of the Morning. Title of Psalm 22. This short phrase is a cue given to the director of the psalm to perform it according to a popular tune, "The Doe of the Morning." It would be a common practice to set new words to an old, familiar tune. Some have suggested a tie to the Ugaritic god *šḥr* and thus an ancient origin for the song.

Dove on Distant Oaks. Title of Psalm 56. The phrase is a cue for a song title and tune for the performance of this psalm. There is some uncertainty in whether to translate *'elim* as "doves" or "gods."

Flutes. Title of Psalm 5. It is suggested that the term translated "flutes" here (neḥilot) refers to "lamentation-pipes" such as those that are depicted in Egyptian art of professional mourners. Note also the instruments used by the ecstatic prophets in 1 Samuel 10:5, which may have been flutes. The phrase "to the flutes" may also be a cue for the tune of the psalm.

Gittith. Title of Psalms 8; 81; 84. Some interpreters tie this term to a musical instrument, possibly associated with the Philistine city of Gath. It is also possible that it is a cue word signifying a rhythm, a song or a dance patterned after the work of grape treaders in the winepress (Hebrew *gat;* see Is 16:10; Jer 25:30).

Higgaion. 9:16. This term may be an orchestration cue to the musicians. It has the meaning "utterance" or "musings" (see Is 16:7 for its use as "mourn") and thus may indicate a type of glissando or fluttering sound, perhaps by string accompaniment.

Jeduthun. Title of Psalms 39; 62; 77. Since this is the personal name of one of David's temple singers (1 Chron 25:1-6), it is possible that its appearance in three superscriptions is simply a reference to that person or possibly to a style of performance attributed to him. It may also be a cue to a tune associated with Jeduthun.

Lily of the Covenant. Title of Psalms 60; 80. This is a set of cue words or an incipit for a song title whose tune is now unknown. See also Psalms 45 and 69 and 2 Chronicles 4:5 for the use of this word for "lily."

Mahalath. Title of Psalm 53. Based on 1 Kings 1:40 this term probably refers to a type of flute or pipe used in celebratory processions. Since it can also be translated as "sickness" (1 Kings 8:37), it is possible that the instrument was used in healing rituals.

Mahalath Leannoth. Title of Psalm 88. The word *le'annoth* means "to afflict" and therefore may be added here to coincide with the theme of penitence in Psalm 88. Since this term may be a form of the Hebrew word *'anah,* "to chant" (Ex 15:21), its use along with Mahalath, "flute," could therefore be a reference to an antiphonal line of music for more than one instrument or alternating chanted and instrumental lines.

Maskil. Title of Psalms 32; 42; 44; 45; 47; 52—55; 74; 78; 88; 89; 142. Since it appears in so many psalms and has the meaning "to comprehend" (from Hebrew *sakal*), this may have been a general label for a set of didactic or penitential songs (see the possible connection to mourning in Amos 5:16-17). It may also refer to an "artfully crafted" song or argument, with uplifting words, exhorting the people to praise God (see 2 Chron 30:22).

Miktam. Title of Psalms 16; 56—60. This term always appears accompanied by "of David." The LXX translates the word *miktam* as *stelographia,* "inscription carved on a monument," and thus the word may represent formal declarations or an official song or ritual performance. It may also refer to a song or declaration that was both inscribed on stone and recited publicly in the temple.

Petition *(Hazkir)*. Title of Psalms 38; 70. The root verb, *zakar,* appears in Leviticus 2:2 and Numbers 5:15 in reference to a cereal offering accompanied by frankincense. Similarly, in Isaiah 66:3 it refers to an offering of frankincense. Elsewhere it is used to refer to invoking God's name (Ex 20:21; Amos 6:10). Thus it may refer to a public ritual including both an offering and a petition for God's aid.

Prayer *(Tephillah)*. Title of Psalms 17; 86; 90; 102; 142. This is a term for a psalm designed to call on the people or on a sinner to pray to God for forgiveness (see 1 Kings 8:38). The song takes the form of a lament, recognizing the right of God to chastise the people, and bids them to pray while wearing mourning clothes and engaging in fasting (Ps 35:13).

Psalm *(Mizmor)*. Title of Psalms 47—51; 62—68; 76; 77; 80; 82—85; 87; 88; 91; 98; 100; 101; 108—110; 139—141; 143; 145. This technical term appears fifty-seven times in the superscriptions of Psalms and is accompanied by "of David" thirty-five times. Because of its relation to the Hebrew verb "to prune a grapevine" (Is 5:6), some commentators suggest it refers to a stringed instrument whose strings would be plucked in much the same manner as a vine is snipped by the thumbnail of a vinedresser. However, comparison with the Akkadian *zamaru,* "to sing," may point to *mizmor* simply being a generic term for a song or for a song accompanied by stringed instruments.

Selah. Psalms 3; 4; 7; 9; 20; 21; 24; 32; 39; 44; 46—50; 52; 54; 55; 57; 59—62; 66—68; 75—77; 81—85; 87—89; 140; 143. This is the most ubiquitous of the technical terms in Psalms. It appears seventy-one times in thirty-nine psalms and three times in Habakkuk 3, but never in a superscription. Since it is impossible to determine if the word's placement is original or is the result of editors or copyists, its exact purpose remains uncertain. Among the suggestions for its meaning is "interlude," indicating a break in the text or performance. It is also possible that it is a cue for the choir to repeat a litany or affirmation of a statement in the psalm or for

a particular instrument, possibly a drum, to be beaten to keep the rhythm or emphasize a word.

Sheminith. Title of Psalms 6; 12. It is possible that this technical term can be translated as "eight-stringed instrument" and that the reference here is either to the use of this device or possibly to the use of the eighth string. This upper register would provide a high pitched sound, imitating the voices of female singers (see 1 Chron 15:21).

Shiggaion. Title of Psalm 7. Based on comparison with the Akkadian *šegu,* "to howl or lament," it is likely that this term (also found in Hab 3:1) is a label or indicator of a psalm of lament. The word in Hebrew means "to go astray" and in this context may refer either to the subject of the song or poem or perhaps to an exaggerated rhythm or enthusiastic chant.

Song *(Shir)*. Titles of Psalms 46; 48; 65—68; 75; 76; 83; 87; 88; 91; 108. This is simply a generic term for "song," appearing many times in the Psalms and elsewhere (Ex 15:1; Num 21:17; Deut 31:19). It is placed both in the superscriptions and in the body of some psalms (69:30; 78:63) and is sometimes accompanied by *mizmor.* As such it must have had both a general as well as a technical meaning within the body of religious music, for instance in the title "Songs of Ascent" (Ps 120—134).

Songs of Ascent. Title of Psalms 120—134. Medieval and rabbinic tradition held that these fifteen psalms were to be sung on the fifteen steps leading up from the court of the women to the court of the Israelites in Jerusalem's postexilic temple. More likely, however, is the explanation that they were chanted or sung by religious pilgrims as they made their way up to Jerusalem or "Zion" during the three major religious festivals each year (see the comment on Ex 23:17).

Stringed Instruments. Title of Psalms 4; 6; 54; 55; 61; 67; 76. It is unclear whether a specific type of stringed instrument is indicated by this term, *neginot,* "to run over the strings." However, refer ence to the lyre played by David in 1 Samuel 16:16 and the string player in 2 Kings 3:15 and in the Egyptian Tale of Wenamon suggest this is a hand-held instrument (see also Is 23:16).

Tune of Lilies. Title of Psalms 45; 69. This is an incipit or set of cue words for a tune now unknown. It may also be an instruction to accompany the song with a lily-shaped instrument played with either six strings or six bells. It is possible the term for "lily" derives from the Akkadian *šuššu,* "a shock of," but that cannot be confirmed.

Wedding Song. Title of 45. Psalm 45 contains the celebration of an Israelite king's marriage to a princess from Tyre, possibly Ahab to Jezebel (1 Kings 16:31). It only appears here but may have been applied to documents solemnizing the marriage.

Psalms 1—41

Book One

1:5. standing in judgment. One who stands (arises up) in judgment or in the assembly is one who is given the floor or provided a forum in which to speak his or her piece. Usually the action applies to a witness (as in Deut 19:15 and Ps 27:12), but in Job 30:28 it describes Job as the plaintiff. In the Ugaritic Baal Cycle an accuser of some sort stands up and spits on Baal in the assembly of the gods (sons of El).

1:5. assembly of the righteous. The assembly is a formal judicial body, just as the assembly of the sons of El was in the previous entry. This phrase is similar to an idea in Psalm 82:1, where God functions in relation to a judicial council as cases are decided. In the heavenly realm there was a divine council that served this function (see comment on Is 40:13-14), but human courts also operated by means of an assembly (Josh 20:9).

2:6. deity installing king. The term to anoint or install has been found as a Ugaritic root in a mythological text. The office of king was a divine appointment in ancient Israel and other areas of the Near East. Sargon of Akkad (c. 2300 B.C.) claims to have been installed by Ishtar, while the Sumerian King List (compiled sometime after 2000 B.C.) claims that towns received their monarchs by divine appointment. This ideology continued into the Israelite period. Kings of Assyria and Babylon celebrated yearly enthronement festivals in which the chief deity was celebrated as king and the whole enthronement process for both god and king was reenacted. Mesopotamian kings saw themselves as established on the throne by means of a divine decree. In Egypt Horus installed the kings in a coronation ceremony that involved consecration and purification rites.

2:7. king as son of deity. In the ancient Near East kings were commonly understood as having a filial relationship to deity and were often considered to have been engendered by deity. Egyptian kingship was particularly strong on this point, since the kingship of the pharaoh was seen as derived from the divine

realm. More particularly he was conceived as the son of Re, the sun god. In Ugaritic literature, Keret, king of Khubur, is identified as the son of El, the chief god of the Canaanites. Furthermore, iconographic evidence shows two princes suckling the breasts of the goddess Anat. Among the Aramean kings the designation was even included in their throne names (Ben-Hadad means son of Hadad). In Mesopotamia, from Gilgamesh in the mid-third millennium through kings such as Gudea, Hammurabi, Tukulti-Ninurta and Ashurbanipal, just to name a few, it was part of the royal prerogative to claim divine heritage. The Israelite kings, however, were sons of the deity on the basis of a covenant and not sons by nature (see Ps 89:26; 2 Sam 7:14).

2:9. iron scepter. The scepter was representative of kingship, and iron was symbolic of strength. Egyptian rulers as early as the Narmer palette are portrayed as striking enemies with a rod/scepter. Of particular interest is the fact that the evidence from the execration texts (see next entry) suggests that the pots were smashed with a mace.

2:9. dashed to pieces like pottery. Egyptian kings celebrated their rule by writing the names of their enemies on pots and symbolically smashing them. These are referred to as the execration texts. Assyrian kings likewise used the metaphor of smashed pottery to assert their supremacy over enemies.

4:6. light of God's face. The metaphor "light of God's face" is found in royal letters from the Egyptian city of Amarna and in Ugaritic correspondence. For example, "the face of the Sun (i.e., Pharaoh) shone brightly upon me" is a statement made by one of the Egyptian king's subordinates. Two small silver scrolls (about one inch long) have been found in the area known as Keteph Hinnom in Jerusalem. They were amulets in a burial cave from the sixth or seventh century B.C., and they contained the benediction from Numbers 6:25, which includes the request that the Lord "make his face shine upon you." At present they represent the oldest example of any text of Scripture. The concept of the shining face of the deity resulting in mercy is found in Mesopotamian documents and inscriptions from as early as the twelfth century B.C.

6:6. Israelite beds. The poetical metaphor of crying on one's bed is also found in Ugaritic literature: "His tears are poured forth like shekels upon the ground, like pieces-of-five upon the bed." Beds in ancient Israel were most likely like those represented iconographically in the Near East. They were in essence reclining couches and high beds. The poor probably slept on flat mats on the floor, while the average person used a cot.

7:13. flaming arrows. The Old Testament never uses the word for arrows to describe the flaming arrows used by human armies ("firebrands" of Prov 26:18). In Akkadian there are a few references to the use of flaming arrows that kings rain down on the enemy. These arrows were presumably dipped in a type of oil or pitch and set on fire. The arrows shot by Yahweh are usually considered to be bolts of lightning (see 2 Sam 22:15; Ps 77:17-18 for the two in parallel). Lightning would fit well with the concept of flaming arrows in that it is sometimes just called fire. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess raining down flames in war. The Canaanite Baal and the Babylonian Marduk are divine warriors. Thunder and lightning were considered to regularly accompany the presence of a deity, often in a battle setting. From the Sumerian *Exaltation of Inanna,* to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion.

8:3. heavens as work of fingers. In Akkadian literature the various levels of heaven are said to be made of various types of stone. The lower heavens were made of jasper, and Marduk, the chief god of Babylon, was reported to have drawn (etched) the constellations on them. This verb is used when pictures or reliefs are being made. In *Enuma Elish* Marduk draws the boundary lines for the year in the heavens. This refers to his setting the courses of the stars. The second half of verse three indicates that this psalm also has the heavenly bodies in mind. God elsewhere inscribes with his finger (Ex 31:18; Deut 9:10), but fingers can also be used parallel to hands with regard to handiwork (Is 2:8).

8:4-6. dignity of humankind. The status of the human race in Israelite thinking was very high when contrasted with the status people were given in Mesopotamian thinking (as seen in the Babylonian epic of creation). In the Mesopotamian view the gods had no plan to create people as an integral part of the world that they had set up for themselves. People

were only brought into existence as a consequence of the gods becoming tired of working so hard to provide for themselves. Humans were made to be servants to deities, who had no interest in hard labor. In this way of thinking human dignity was achieved through the idea that the gods needed them. Here, instead, people rule over all other creatures.

9:12. avenger of blood. See the comment on Numbers 35:9-34 for a discussion of the responsibility of the family to avenge a death. It is possible that the title "avenger of blood" evolved out of the family obligation to engage in blood revenge when one of their clan members was slain. Such a process, while typical of tribal society, is extremely disruptive to the maintenance of order within an organized state. As a result the "avenger of blood" may have been appointed by the government to serve both the needs of the family and the state by apprehending the accused and then carrying out sentence if the verdict was murder. It is possible that a more general function is intended in this psalm, since it does not use the same technical term used in the Numbers passage. See the comments on Genesis 4:14-15 and 9:5-6.

9:13. gates of death. The netherworld, Sheol, was believed to be like an earthly city in that it contained houses and even a city wall (primarily to keep in its inhabitants). In the *Descent of Ishtar* the netherworld has a gate complex with seven gates and gatekeepers at each one to control access. In Egyptian iconography the gates of death are portrayed as gateways into the necropolis.

9:20. striking with terror. The dread of a deity as a divine warrior was often believed to precede a powerful, successful army into battle. Egyptian and Assyrian texts and reliefs portray the god as a winged disk terrifying the enemy before the arrival of their own armies. In the inscriptions of Thutmose III this terror is attributed to Amun-Re, and Hittite, Assyrian and Babylonian texts all have their divine warriors who strike terror into the hearts of the enemy. The concept of deity having an awesome, unapproachable appearance was not limited to Israelite theology, for in Mesopotamia the gods displayed their power through their *melammu,* their divine brilliance. The splendor or "glory" of God overwhelms the enemy. In the face of such divine magnificence, both the gods and the forces of other nations are utterly defeated and forced to submit to the supreme deity.

11:6. fiery coals and burning sulfur on the wicked. In Akkadian texts sulfur burnt on coals is a fumigating agent. The gods Ea and Enlil send down sulfur as a purifier that counteracts witchcraft. But it is not part of the divine warrior's arsenal for the judging of enemies. The terms here are reminiscent of, though not identical to, those used in the account of the destruction of Sodom and Gomorrah (see also Ezek 38:22).

11:7. seeing face of judge. Seeing the face of a judge or god was a metaphor in Mesopotamia and was equivalent to being on their "good side," because it referred to gaining access to their presence. It usually refers to a supplicant or plaintiff gaining an audience with a judge. If a judge or god turned his face toward you, you were looked on with favor.

12:6. clay furnace. The Hebrew term used for furnace is found only once in the Bible. Because of the mention of silver, the context implies that a clay crucible used for smelting purposes is being described. Crucibles appear in Egyptian wall paintings, and clay exemplars have been found by archaeologists.

12:6. seven purifications. Usually silver went through the refining process a few times to remove all of the dross. The imagery here is that if one is purified seven times (the number of completion in Hebrew), one is completely purified.

13:2. how long? This question occurs nearly twenty times in Psalms, usually in connection with a lament psalm. It is found also in Mesopotamia as the Sumerian *Lament over the Destruction of Sumer and Ur* asks, "How long will the enemy eye be cast upon my account?"

16:4. blood libations. Most libations in the ancient Near East were of beer, wine or water, though honey, oil and milk are also found. No evidence of blood libations has yet been found.

16:6. boundary lines. The imagery of God determining boundaries is also found in Deuteronomy 32:8, where God made boundaries for the nations. In Mesopotamian land-sale contracts the boundary lines were usually clearly delineated. Furthermore, the Kassites of Late Bronze Age Babylonia used boundary stones (Akkadian, *kudurru)* to mark property divisions. They had texts on them that included detailed curses for those who violated the boundaries. In an inheritance the property was divided among the heirs, and obviously certain portions of land would be more desirable and productive than others.

For common concepts, metaphors for God and musical terms, see pages 511-18.

16:8. positioned at the right hand. A fully armed warrior would hold his weapon in his right hand and his shield in his left. The person to the right of a king would have the privilege of defending him. For a king to put someone there would be an affirmation of trust and therefore an honor. In contrast, when the Lord takes up his position at someone's right hand, as here, he is in a position to offer defense with his shield (see Ps 109:31). The metaphor transitions easily from the battlefield to the courtroom. Akkadian usually juxtaposes right and left in parallel lines, but there are occasions where deity is said to walk at the right side of a person in battle.

16:10. not abandoned to the grave. In the context this refers to not allowing someone to be put to death at the hand of malicious enemies. The psalmist will not be consigned to Sheol; he will not see decay because his life will be spared (see Ps 30:2-3). An early Sumerian text recounts the tale of an individual who is facing capital punishment for the crimes of which he is accused. Instead, however, he finds himself snatched from the jaws of destruction and praises the goddess Nungal for his deliverance.

17:8. apple of eye. Literally the term is "the little one of the daughter of your eye." This idiomatic expression is also found in Deuteronomy 32:10. The pupil or apple of the eye is the most sensitive part of the body and thus the part needing the most protection.

17:8. shadow of wings. The metaphor of taking refuge under the wings of deity is found also in other psalms (36:7; 57:1; 61:4; 91:4) and is consistently related to issues of care and protection connected with the covenant. The metaphor is also known from other ancient Near Eastern cultures, particularly Egyptian, where even disembodied wings represent protection. Deities with wings are often portrayed overshadowing the king. Likewise an ivory from Arslan Tash dated to the eighth century shows characters in human form with wings protecting a figure in the center.

18:4. cords of death/grave. Noose snares were commonly used by hunters in the ancient Near East. In this metaphor, death or Sheol is the hunter. For many cultures in the ancient Near East, Sheol, the abode of the grave (i.e., underworld) was a very real place where individuals led an amorphous existence, eating clay and dust, and hoping that their descendants would take care of their needs. There were gates and gatekeepers to keep the dead inside, and thus it was called "the land of no return." This description can be found in the second-millennium B.C. Akkadian epic *The Descent of Ishtar.* Apparently the Hebrew view of the grave was not unlike this, although there is no elaborate description of it in the Old Testament.

18:8 smoke from nostrils, fire from mouth. This imagery is not found elsewhere in the ancient Near East. The closest example is in *Enuma Elish*, where it is said of Marduk that when his lips moved, fire blazed forth. Though Yahweh could not be portrayed in any form (animal or otherwise), poetic description of Yahweh by means of animal imagery in order to highlight certain attributes was legitimate (lion/leopard in Hos 13:7; flying birds in Is 31:5; bear in Lam 3:10; wild ox in Num 24:8 [all translations but NIV]).

18:9. dark clouds under feet. The term for "dark clouds" has been found in the Ugaritic epic of Baal and Anath, where the god Baal is described as the "rider of the clouds" and his "voice" as the sound and fury of thunder and lightning.

18:10. mounted cherubim and flew. In Syro-Palestine iconography deities are often portrayed standing on the backs of wild creatures (usually bulls). An Assyrian relief from Maltaya pictures seven gods, each standing on the back of a different animal. Most intriguing is an Assyrian relief that pictures a storm god replete with weapons, riding the back of a composite creature with a lion's body, an eagle's wings and a bull's head. In the Old Testament Yahweh is described as enthroned on the cherubim in the Holy of Holies in the temple (see comment on 1 Sam 4:3-4), and in Ezekiel's throne vision (chaps. 1, 10) Yahweh is transported on a mobile chariot-throne borne by composite creatures.

18:12-15. weapons of divine warrior. Yahweh's arrows are usually considered to be bolts of lightning. In the divine warrior motif, the deity fights the battles and defeats the deities of the enemy. In Assyria, Nergal is the King of Battle, and Ishtar is viewed as a war goddess. The latter rains down flames in war. The Canaanite Baal and the Babylonian Marduk are divine warriors.

Thunder and lightning were considered to regularly accompany the presence of a deity in the ancient Near East, particularly in a battle setting. From the Sumerian *Exaltation of Inanna* to the Hittite myths about the Storm God to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is also picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments

of the gods, thundering against those who have violated treaties or stood in the way of empire expansion.

18:16. deep waters. When the Babylonian god Marduk brings restoration he is praised for taking hold of the individual and drawing him out of the waters of the Hubur River. This is the river that flows at the gates of the netherworld, and being drawn from its waters indicates being saved from death at the last moment. This imagery continues into Greek mythology with the famous River Styx and even finds its way into Christian literature as indicated by the river of death that flows in front of the golden city in *Pilgrim's Progress.*

18:28. keeping lamp burning. Lamps were often used metaphorically in Israel to symbolize life and prosperity. They were often placed in tombs for this reason. The expression "his lamp" is used often in Scripture to symbolize life. As an eternal flame is a symbol of endurance and remembrance, the reign of a descendant of David in Jerusalem provides a link to God's promise to David's dynasty (2 Sam 7:8-16). Similar uses of the word in Ugaritic and Akkadian are tied to perpetuation of rule or divine presence. Assyrian king Tiglath-Pileser III is referred to as the light of all humankind. An Old Babylonian idiom expresses a family having no descendants by the image of its brazier going out. Alternatively, in the superstitious world of the ancient Near East there were demons lurking everywhere who especially favored the dark. One of the ways that gods were figuratively seen as providing protection was by imparting continuous light, suggested by phrases such as "the lamp of the gods" in texts from Ugarit. The Canaanite god Sapash was given the attribute of "divine lamp." In Mesopotamia, Lamashtu was a particularly feared demon. The god Nushku was represented by fire, and his lit lamp held the feared demons at bay. Here the psalmist may be referring to the lamp lit on his behalf. Yahweh is the lamp by the side of the psalmist warding off danger.

18:33. feet of deer. The term used here refers to one of the species of deer known throughout the ancient Near East. It is often discussed with other caprids such as the Nubian ibex, mountain sheep and gazelles. All of these caprids are known for their sure-footedness on treacherous paths. As early as Sumerian literature (e.g., *Dumuzi's Dream)* this type of metaphor is used for swift sure-footedness.

18:34. bow of bronze. If this expression reflects an actual weapon, it may either indicate a wooden bow decorated with bronze or bronze-tipped arrows. On the other hand, it may simply be a poetic way of denoting the strength of the warrior's bow. The bow was a symbol of royal strength in both Assyria and Egypt, as well as one of the weapons of the gods. In the latter regard the sun disk is portrayed as drawing a bow that, as the weapon of the sun god, could be understood to be bronze. An Assyrian relief from about the time of David portrays the sun god, Ashur, delivering what the connected inscription calls a magnificent bow into the hands of the king.

19:1-4. nature revealing God. In the Egyptian *Papyrus Insinger* (a composition from the intertestamental period), it is observed that the hidden work of a god is made known on earth day by day. For the next twenty lines he describes many of the aspects of the operation of nature that have been created by the god and presumably are involved in this revelation. These works of creation included light and darkness; day, month and year; summer and winter; constellations; the birth process; sleep; and the succession of generations.

19:5. bridegroom pavilion. The chamber of a bridegroom was the specially prepared room in which the marriage was consummated. The use in Joel 2:16 suggests this in its parallelism. It has this meaning in early rabbinic Judaism, but after the destruction of the temple in 70 A.D. it takes on a reference to the pavilion in which the formal wedding ceremony was conducted.

19:6. ancient perceptions of sun's journey. In many ancient Near Eastern cultures it was assumed that the sun ran a daily course through the heavens. Mesopotamian texts refer to the gates of the heavens where the sun enters and exits. In these texts all of the heavenly bodies have paths or courses that they follow, represented as bands across the sky. Egyptian materials also offer these concepts in both text and iconography. The sun god is portrayed as riding in his barque across the skies between entry and exit spots on either horizon.

19:7. Law and sun. In the ancient world the sun god was usually the god of justice. For the psalmist, then, it is natural to move from the relationship of Yahweh and the sun to Yahweh's provision for justice through the law. Much of the imagery used to describe the law can also be found related to sun gods in the ancient world.

19:8. light to the eyes. Light to the eyes refers

to life and therefore, in one sense, is given to all (Prov 29:13). The law, however, is able to bring extended life to those who follow its commands. When the light goes from the eyes, death is near (13:3; 38:10).

19:10. pure gold. The imagery of "pure gold" is known from other ancient Near Eastern cultures. For example, a number of inscriptions on doors at a Ptolemaic period Egyptian temple at Edfu read, "Everyone who enters by this door, beware of entering in impurity, for God loves purity more than millions of possessions, more than hundreds of thousands of fine gold." The word translated "pure gold" is somewhat obscure (it is a single word, not a noun with an adjective). It could refer to a particular grade or to a particular variety, for instance, red gold or white gold.

19:10. date honey compared to bee honey. Honey represents a natural resource, in most occurrences the syrup of the date rather than bees' honey. Since sugar was not available, honey was the most commonly used sweetener. There is no evidence of bee domestication in Israel, though the Hittites had accomplished that and used bee honey in their sacrifices (as did the Canaanites). In the Bible honey occurs in lists with other agricultural products (see 2 Chron 31:5). It is possible that the reference to honey in the third line of the verse is date honey, but the last line of the verse is clearly referring to bee honey since the honeycomb is mentioned.

19:12. unwitting sin. The belief in the ancient world was that the gods had many more regulations, requirements and restrictions than were known to people. In a "Prayer to Every God" an Assyrian worshiper goes through an elaborate listing of possible offenses (the forbidden thing I have eaten, I do not know; the prohibited place on which I have set foot, I do not know) asking that his unwitting sins be pardoned, claiming the offense was committed in ignorance. Additionally the penitential prayers from Mesopotamia known as *shigu* prayers contain frequent reference to being absolved of unknown sins. Egyptians were also concerned as reflected in a late demotic wisdom piece *(Papyrus Insinger),* where the author begs forgiveness for unwitting sin.

20:5. banners. Banners were used by the Israelites and others, including the Assyrians, as standards of warfare (Song 6:4) and as an assembly of tribes (Num 2:2). In the Egyptian army the divisions were named for various gods (e.g., the division of Amun, division of Seth), and the standards would identify the division by means of some representation of the god. Holding high the banners was evidently a sign of victory. Banners are described in significant detail in the texts from Qumran.

21:8. right hand seizing foes. In its attempt to be colorful, the NIV has unfortunately distorted the picture of this verse. The verb ("to find") used in both lines of the verse describes attacking the enemy with a weapon, not apprehending him. Most soldiers were right-handed, so one would not seize the foe with the right hand—that is where the weapon would be held. The right hand, then, is used for offense, and it will "find" its mark. A hymn to Shamash says that the god's weapon will make straight for the wicked man and there will be none to save him. In Egyptian reliefs and paintings (also Ugarit) the king often strikes a pose with his weapon upraised in his right hand, while his left hand lays hold of the enemy. This verse is only describing part of that picture because the lines are parallel, not contrasting. Both lines describe what the right hand does.

21:9. fiery furnace. God is pictured as a fiery furnace that destroys everything that is put into it. The writer is probably referring to the large ovens used to bake bricks and to smelt metals. For more information about furnaces see comment on Daniel 3:6.

22:12. bulls of Bashan. Bashan was a very fertile region east of the Jordan River, well known for its sheep and plump cattle. In this prime cattle-grazing area, one could find pampered cattle being raised for the market, as well as a breed of ferocious undomesticated cattle that roamed free. Legal texts demonstrate that goring oxen were a danger, and that they could even occasionally be found wandering the streets.

22:13. lions. It is known that lions were captured and kept in cages so that they could be released for hunting. In Assyrian texts oath-breakers were put into cages of wild animals set up in the city square to be publicly devoured. More relevant to this passage, in seventh-century Assyrian literature the lions' pit occurs as a metaphor for vicious and antagonistic courtiers of the king. In one piece of Babylonian wisdom literature Marduk metaphorically closes (muzzles) the mouth of the lion (the oppressor) to put an end to his devouring tactics.

22:14. bones "out of joint." "Out of joint" is somewhat interpretive here; the Hebrew reads "scattered about" (comparable verb form only occurs in three places: Job 4:11; 41:17; Ps 92:9), as when a predatory pack has devoured a victim and each member of the pack carries off its share. Some of the cultures of the ancient Near East practiced secondary burial: the

body would be laid out (in a cave, for instance) until the flesh decomposed, and then the bones would be buried in the final resting place. Even if a body was devoured, proper burial could be carried out if the bones could be retrieved. So Ashurbanipal speaks of punishing his enemies by taking their bones out of Babylon and scattering them around outside the city. He also boasts of opening the graves of past kings of his enemies and carting off their bones "to inflict unrest upon their ghosts." For more information see comment on 53:5.

22:16. dogs. Dogs are equated with evildoers in this passage. Though in the Near East they were domesticated at a very early date in the Neolithic period, they still lived as scavengers, often roaming in packs on the outskirts of town (Ps 59:6, 14) and scavenging in town itself (1 Kings 14:11). For these reasons the term *dog* is often one of derision and contempt in the Bible. However, this may not have been the case throughout the entire Near East. A large Persian period dog cemetery (in an apparent noncultic context) of over seven hundred burial pits has been uncovered at Ashkelon. Dogs were revered in Zoroastrian Persia but were not, however, buried in cemeteries. Dogs (and puppies in particular) played a major role in elimination and purification rituals in Anatolia and Mesopotamia. Many cult functionaries in Hittite Anatolia and Phoenicia (who were condemned in Israel) were called "dogs." Finally, canines in Mesopotamia were considered to have healing qualities. In fact, Ninkarrak, the goddess of healing in Mesopotamia, was often represented by a dog figurine. See comment on 1 Kings 21:19.

22:16. description of hands and feet. The understanding of the description of the hands and feet here has been problematic. The Hebrew verb, traditionally translated as "pierced," occurs only here and can only be translated that way if it is emended. As it stands it indicates that the psalmist's hands and feet are "like a lion," which some commentators have interpreted to mean that the psalmist's hands and feet were trussed up on a stick as a captured lion would be. Unfortunately, despite all the lion-hunting scenes that are preserved and described, no lion is shown being transported this way. If a verb is desirable here, a suitable candidate must be found among the related Semitic languages. The most likely one is similar to Akkadian and Syriac cognates that have the meaning "shrink or shrivel." Akkadian medical texts speak of a symptom in which the hands and feet are shrunken. Matthew 27 is of no help because it does not refer to this line.

22:18. casting lots for clothing. Although the Roman soldiers had the right to the clothes of the convicted criminal (as the soldiers gambling by means of lots for Jesus' tunic), there is no evidence of this for soldiers supervising an execution in the Old Testament period. Nevertheless, in this period we do know that booty was sometimes divided by lot, so it is not difficult to understand a person's clothing being divided that way on his demise. It should be noted, however, that the psalm does not indicate that those casting lots for the clothing were the executioners. Inheritance procedures often used lots to divide the property among the heirs. A Mesopotamian lament indicates this as the person on his deathbed bemoans the fact that his valuables are already being divided up before he is dead.

23:2. needs of sheep. Sheep in the Levant grazed on the fertile grass produced by rain. In the summer and autumn they fed on weeds and stubble left over from harvest. Like camels sheep can go long periods of time without water and then drink as much as nine liters. In contrast to goats, who are quite independent, sheep depend on the shepherd to find pasture and water for them. Shepherds also provide shelter, medication and aid in birthing. In sum, they are virtually helpless without the shepherd. In an Old Babylonian text King Ammiditana claims that the god Ea gave him the wisdom to shepherd his people. He continues the metaphor by saying that he provides them with fine pastures and watering places, and makes them lie down in safe pastures.

23:4 use of rod and staff. The rod was a club worn at the belt, while the staff was a walking implement that doubled as a weapon in time of need (1 Sam 17:35) and guided and controlled the sheep. These were traditional tools of the shepherd, as is shown already in a cylinder seal inscription of the third millennium.

23:5. anointing with oil. Banqueters in the ancient world were often treated by a generous host to fine oils that would be used to anoint their foreheads. This provided not only a glistening sheen to their countenance but also would have added a fragrance to their persons and the room. For example, an Assyrian text from Esarhaddon's reign describes how

he "drenched the foreheads" of his guests at a royal banquet with "choicest oils." Oil preserved the complexion in the hot Middle Eastern climate. Both the Egyptian Song of the Harper and the Mesopotamian Epic of Gilgamesh describe individuals clothed in fine linen and with myrrh on their head.

23:6. dwelling in house of the Lord. The house of the Lord is used as a term for the temple but never for the heavenly dwelling place of God (very clear in 27:4). The term "forever" could be confusing in this regard, but the Hebrew says only "for length of days," that is, for extended periods (Lam 5:20). If the translation "dwell" (following the Septuagint) is correct, then it would suggest a priestly office for the psalmist, for priests were the only inhabitants of the temple precinct. If instead we should follow the Hebrew text by translating "I will return to the house of the Lord," we would find here the anticipation of enjoying many future opportunities to worship at the temple ("time and again"). The Babylonian king Neriglissar expresses to his god that he wants to be where he is forever. Another text requests, "May I stand before you forever in worship and devotion." A Hymn to Marduk requests that the worshiper may stand before the deity forever in prayer, supplication and entreaty. In the third millennium B.C. Sumerian worshipers tried to accomplish this objective by placing statuettes of themselves in the posture of prayer in the temple. In this way they would be continuously represented in the temple.

24:2. earth founded on seas. In the Babylonian perception of the cosmos the earth's foundation is on what is called the *apsu.* This is a primordial watery region that is under the jurisdiction of the very important deity Enki/Ea. From the standpoint of physical geography it represents the water table that surfaces, for example, in marshes and springs as well as being associated with the sweet water cosmic seas and rivers. In *Enuma Elish* one of Marduk's names, Agilima, identifies him as the one who built the earth above the water and established the upper regions.

24:4. lifting up soul to idol. This expression means to "nurse an appetite" for something. The word translated "soul" here refers, physiologically, to the throat, and thereby the meaning arrives at appetite or desire. In a number of contexts the same expression is used with God as the object (Ps 25:1; 86:4; 143:8). The term for idol here is related to the word for emptiness or vanity. Other writers use the term "no-gods" for idols (e.g., Jer 5:7).

24:7. gates and ancient doors. In a Hymn to Shamash, the Babylonian sun god, various parts of the temple are said to rejoice over Shamash, including the gateways and entrances. A Nabonidus text refers to the gates of the temple being open wide for Shamash to enter. These would occur in the context of regular processions of the statue of the deity into his temple. If the "head" of the gates refers to an architectural feature, it would most likely be the beam or projection across the top of the gates that served as a cornice. This was a common feature in Egyptian and Mesopotamian architecture, and the Akkadian word for it, *kululu,* also refers to a headdress or turban. The idea that these would be lifted off the posts of the gates to allow something large to pass through is ingenious but not persuasive in that the usual design of gates would not have unencumbered cornices that could be so easily moved. The alternative, that the lifting of the heads is metaphorical, seems more likely. In Ugaritic literature the gods lower their heads when they are being humbled, and they raise up their heads when they have reason to rejoice.

27:4. dwelling in the house of the Lord. See comment on 23:6.

29:1. comparison to Ugaritic hymn. This psalm has more connections to Ugaritic literature than any other psalm. A commonly cited scholarly view goes so far as to claim that this psalm was originally a Phoenician/Canaanite hymn that was modified and adapted into the Hebrew religious corpus. It is claimed that all three of the places named are in Syria (vv. 6-8) and that the psalm features terms, concepts and even grammatical structures that are more familiar from Ugaritic than from the Old Testament. However, though there are sufficient parallels and similarities to identify Canaanite-like elements in the psalm, there is as yet no evidence of a Canaanite original. All of the elements that have been identified as Canaanite in nature also occur in other clearly Israelite settings, so they only show the general similarities that existed between Israelite and Canaanite language and culture. It is possible that the psalmist is using this psalm to attach to Yahweh many of the Baal functions but not to argue against Baal so much as to elevate Yahweh and proclaim his glory. On the other hand, it would present no problem if the psalmist did choose to pattern his composition after a Canaanite original so that praise was transferred from Baal to Yahweh.

29:1. mighty ones. In Canaanite mythology the "mighty ones" or "sons of god" were lesser gods who were subordinate to El, the king of the gods. In the Old Testament the phrase

refers to angels who gathered in Yahweh's heavenly court (see Ps 89:7; 103:20; 1 Kings 22:19; Is 6:2; Job 1:6; 2:1).

29:3. thundering voice. Ancient Near Eastern literature is full of references to storm gods whose voices are heard in thunder. These include Baal in Ugaritic and Amarna texts and Adad in Akkadian texts. It is also common in descriptions of Yahweh (see comment on 7:13).

29:5-6. cedars break, mountains skip. In the Ugaritic tale concerning the building of Baal's palace his enthronement is preceded by his voice thundering forth with the result that the high places of the earth leap or quake. A few lines later he is described holding a cedar in his right hand as a weapon. Similarly, in a hymn to Marduk his thundering voice is said to make the earth quake. His word is a deluge that sweeps away lotus trees. The Hebrew verb translated "skip" is often thought to describe a frolicking or gamboling type of motion but is more likely the undulating appearance of a flock of sheep or goats moving along a path (see comment on 2 Sam 6:14-21). This would be an appropriate image to describe the heaving of the earth in an earthquake.

29:6. Sirion. Sirion is equated with Mount Hermon (see comment on Deut 3:9) and is poetically synonymous with Lebanon. Sirion may appear in parallelism with Lebanon in Ugaritic texts, but this is not clear. They are clearly used in parallel in the Gilgamesh Epic as they are broken up during the battle waged against Huwawa by Gilgamesh and Enkidu. They occur as well in other Akkadian literature, showing that they are used not exclusively in Canaanite literature but throughout the ancient Near East.

29:8. desert of Kadesh. The desert or steppe of Kadesh is also mentioned in a Ugaritic text and is presumably in Lebanon in the vicinity of the city of Kadesh near the Orontes River. Alternatively, it could be a reference to Kadesh Barnea in the south, where the Israelites spent much of their time during the forty-year wilderness period.

29:10. enthroned on the flood. A sculptured scene from the temple of Shamash on a tablet from the Neo-Babylonian king Nabu-Apla-Idinna shows Shamash, the sun god, residing on a throne under a cosmic mountain and a number of wavy lines that are considered to represent the cosmic ocean. The scene is remarkably like Yahweh sitting enthroned over the flood (or better, the celestial sea, see comment on 104:3) in this verse. In this regard, it may be of interest that in Akkadian the word for deluge can also refer to a chaos monster. More prominently in Akkadian literature, the deluge is seen as a weapon of the gods and is sometimes even used in descriptive titles of kings and gods. The deluge can precede the warrior and can be put on by the god going into battle. Shamshi-Adad V refers to the god Ninurta as the exalted lord who rides on the deluge. In contrast to the Hebrew *tehom,* which represents the cosmic waters on the earth, this word, *mabbul,* represents the cosmic waters in the heavens where rain comes from. In Genesis 6—8 it is the *mabbul* that comes on the earth in Noah's time.

30:3. brought up from Sheol, spared from pit. In the Babylonian composition titled *Ludlul Bel Nemeqi* the god Marduk is reported as bringing restoration to one of his followers who has been suffering for unknown reasons: "The Lord took hold of me, the Lord set me on my feet, the Lord gave me life, he rescued me [from the pit,] he summoned me from destruction, […] he pulled me from the *Hubur* river, […]. He took my hand" (from W. G. Lambert, *Babylonian Wisdom Literature,* 59).

33:2. harp, lyre. These are both typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which one as "lyre." The one the NIV translates "lyre" is here identified as a ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. A musical text has been discovered at Ugarit that sheds light on Late Bronze Age music. This text has the chords to be played on a lyre accompanying a Hurrian cult hymn.

35:2. shield and buckler. The "shield and buckler" represent the two extremes in personal defensive equipment. Respectively they refer to a small, round shield and a large, full-length body shield; the latter most likely carried by an aide. In the same way spear and javelin (v. 3) represent the full range of offensive weaponry. The Hebrew root *(sgr)* translated "javelin" occurs nowhere else as a weapon in the Old Testament. Herodotus refers to a Scythian double axe *(sagaris),* and the Dead Sea Scrolls use the root for the handle of a

lance. In the latter case the text simply speaks of two uses for the same piece of equipment. The long wooden handle can be used to parry and deliver blows as a staff, while the pointed end is used for the finishing blow. There are numerous depictions of these and other Iron Age I-II pieces of military equipment on wall reliefs at the Assyrian cities of Nineveh and Kalah (Nimrud).

36:7. shadow of wings. See the comment on Psalm 17:8. The Canaanite goddess Anat is shown with outstretched wings on an ivory footboard from Ugarit.

36:8. river of delights. Since the word translated "delights" has the same root letters as Eden, there is possibly a reference to the waters flowing out of paradise in this phrase. The association between ancient Near Eastern temples and spring waters is well attested. In fact some temples in Mesopotamia, Egypt and the Ugaritic myth of Baal were considered to have been founded on springs (likened to the primeval waters), which sometimes flowed from the building itself. This would explain the parallel between God's house in the first part of the verse and these rivers (see Ezek 47).

36:9. fountain of life. In many other places the fuller expression "spring of living waters" is used (as in Jer 2:13). Living water refers to flowing spring water (in contrast to collected runoff or rainwater). This is most likely the divine source of life in this world (also see Prov 10:11; 13:14). Certainly in the ancient Near East the gods are considered to be the source of life, but the metaphor of a fountain is not attested.

37:4. desires of heart. In Akkadian texts this phrase is used to refer to the reception of a favorable omen concerning either intended activities or needs such as illness or oppression from which one seeks deliverance. One text reports that when the individual prayed to the gods, he was granted his desire. If the Israelite concept has any similarity, the desire referred to here is not just any desire but particularly the desire that concerns the psalmist in this prayer (which is articulated in v. 6; see Ps 20:4, where the context is a request for one's plans for relieving distress to succeed).

Psalms 42—72

Book Two

42:title. sons of Korah. The superscriptions of Psalms 42; 44—49; 84—85; and 87—88 contain the phrase "sons of Korah." The Korahites are first listed in Numbers 26:58 among the chief Levitical families. In the description of the temple bureaucracy in 1 Chronicles 24—26 the Korahites are listed as "gatekeepers" (1 Chron 26:1). Their association with praising the Lord in 2 Chronicles 20:19 may also be the basis for their mention in the Psalms and as a part of cultic psalmody.

42:1. deer/soul. A number of engraved seals from Judah during the eighth and seventh centuries feature a doe wandering around (seeking water?). O. Keel suggests that this artistic motif's popularity is connected to the metaphor used in this psalm.

42:2. soul. Within the Hebrew Old Testament the word translated as "soul" is *nephesh.* It refers to the "self" or to "a living being" (see Gen 2:7) but not to the "immortal soul" of the New Testament writings. So there is no intimation of the *nephesh* surviving after one's death. The word is related to Akkadian *napašu,* which refers to the neck or throat and by extension to breath. There is no differentiation in the Hebrew usage between the body and the life principle, and therefore in passages like 1 Kings 19:4 *nephesh* is used to mean "life." The body's energy or life force can be drained by a "pouring out of the soul" (1 Sam 1:15; Ps 42:4), as it is in this lament. In Egyptian thinking the *ba* is the animate vital force and is portrayed as a human-headed bird. It is separated from the body at death and is considered immortal. Its place is in heaven rather than in the netherworld to which the body is consigned. Egyptian literature preserves a composition entitled *Dispute Between a Man and His Ba,* which is a discussion of the feasibility of suicide. In contrast, the *ka* is more like the shadow of what is left of the person after he has died. It inhabits the funerary statue and receives the offerings to the dead, and is therefore more like the spirit of the dead. In Mesopotamia this spirit is called the *eṭemmu;* it receives offerings and must be appeased. It is often associated with a ghost. The other element of one's being in Mesopotamia is called a *zaqiqu* and appears to be closest to the soul. Like the *eṭemmu* it also survives death, but little else is written about it. In Israelite terminology the spirit of the dead was called *elohim,* as shown when the term is used to refer to Samuel's spirit (1 Sam 28:13).

42:4. festival processions. Although such processions are seldom mentioned, this probably refers to the festal celebration described in Psalm 68:24 in which a procession led by priests and accompanied by singers, string players and other musicians makes its way to the entrance of the Jerusalem temple. Psalm 118:27 also refers to a festal procession in which the participants carry branches in hand,

dancing up "to the horns of the altar" (see comment there).

42:6. Hermon. The geographical perspective of the psalmist seems to begin with a very general term, "the land of Jordan," and then gradually becomes more specific with reference to "the heights of Hermon." The Anti-Lebanon range is usually considered the northern border of Israelite control (Josh 11:17), and Mount Hermon, the highest peak, is over nine thousand feet above sea level. Archaeologists have uncovered the remains of more than twenty temples on the slopes of Hermon. This may be due to its prominence and the association of high places with the worship of gods in the ancient world.

42:6. Mount Mizar. The exact location of this place is unknown. The name means "the little hill," and therefore it may refer to a specific peak in the Hermon range. However, this would depend on the geographical perspective and poetic intent of the writer. It is quite possible that the psalmist is referring to Mount Hermon as "little" in terms of its sacredness in comparison to Yahweh's holy hill, Zion (Ps 43:3).

44:title. sons of Korah. See the comment on Psalm 42:title.

44:2-8. divine warrior. See the comment in the sidebar on common concepts in Psalms for more information.

44:20. forgetting the name. A deity's name is often associated with that god's power and essential being (see Ex 3:13-14; Is 9:6). In Jeremiah 23:27 the false prophets plan to remove God's name from the people's memory so they will be enticed to follow Baal. For more information see comment on Deuteronomy 12:5. Failure to invoke the name of Yahweh as their God is a violation of the covenant and cause for God to punish the people (1 Sam 12:9).

44:20. spread hands. The position described here is one of prayer or supplication. It is also mentioned in Ezra 9:5 and in Psalm 88:9. For a full discussion see comment on 2 Chronicles 6:13.

45:title. sons of Korah. See comment on Psalm 42:title.

45:1. verses for king. Psalms directed to the king rather than to the deity are common in the ancient Near East, but this is one of the few examples in the book of Psalms. Like the Egyptian marriage stele of Rameses II, the marriage portrayed in this psalm is the result of military strength—it represents a political alliance that is desirable because of the king's military victories.

45:1. bards. Scribes and sages were the official storytellers of the kings of the ancient Near East. Their command of the traditions and their association with the royal bureaucracy made it appropriate that they perform songs and stories that remind the people of the king's role to feed and protect the land as God's political agent. Thus during the New Year's festival in Babylon, the *Enuma Elish* creation epic was recounted, representatives from other cities came to give their homage to the king, and sacred procession wound their way through the streets of the city to the great temple of Marduk, the patron god of Babylon. When Ezra the scribe performs a covenant renewal ceremony, he reads the people the Law, reminding them of their sacred story (Neh 8:1-13).

45:7. anointing with oil of joy. Middle Assyrian Laws feature the bride being anointed by the father of the bridegroom as part of the wedding ceremony, but in this psalm the anointing is part of the kingship (rather than the wedding) section and represents God anointing the king to his position (for more information see comment on 1 Sam 10:1).

45:8. fragrant robes. This psalm contains language and detail suitable for a marriage anthem or the anointing of a king (Ps 133:2). In the ancient Near East these two were combined in the sacred marriage ritual described in Ur III, which involved a magnificently robed king processing to the temple, portraying himself as the god as he participated in a marriage/fertility ritual. It seems likely that the robes of the participants would be oiled and dusted with fragrant herbs and perfumes. For discussion of these substances see the comments on Song of Songs 1:3 and Proverbs 7:17.

45:8. ivory palaces. For the lavish use of ivory to decorate furniture and wall panels see comments on 1 Kings 22:39 and Amos 3:15; 6:4. The wealth of a nation might well be displayed in the king's palace—a sign of power and prestige for the state.

45:8. string music. This translation is based on an emendation of the Hebrew text from *minni* to a plural noun *minnim,* based on a similar usage of the word in Psalm 150:4. It is not clear what sort of instrument this refers to except as a generic term for strings.

45:9. gold of Ophir. See the comments on 1 Kings 22:48 and Isaiah 13:12 for this choicest quality gold.

45:12. gift. Letters from Mari record how the king of Mari sought to contract a marriage with the daughter of the king of Aleppo. From this correspondence it is clear that the year-long negotiations were considered as finalized when the wedding gift arrived at the palace of Mari and was deemed acceptable by the king.

45:12. daughter of Tyre. While it is possible that a particular daughter of the king of Tyre is mentioned here, it is more likely that the expression is a euphemism for the inhabitants of this Phoenician port city. Similar expressions exist, such as "daughter of Zion" (Ps 9:14) and "daughter of Babylon" (Ps 137:8). Since the Phoenicians had become quite wealthy as a result of their control over the carrying trade in the Mediterranean Sea, gifts from Tyre were expected to be lavish, exotic and expensive. Note here the parallel with "men of wealth."

45:13. gold threads. Clothing was a status marker in the ancient world. The princess-bride in this psalm is dressed in the richest garments. Like the young bride in Ezekiel 16:10-13, she wears elaborately embroidered robes, probably dyed with Phoenician purple. Adding to the majesty of her ensemble is gold stitching. It would have been impossible to create a durable thread made from gold, but gold dust could have been encrusted into the thread and the garment to give it this added touch of wealth. Exodus 39:3 explains the process by which gold was worked into each thread used to weave the garment.

46:title. sons of Korah. See comment on 42:title.

46:9. wars cease. Just as Yahweh functions as the divine warrior to aid the Israelites in battle (see the comment on Josh 3:17), the God of the covenant is also the source of peace and prosperity. This theme of world peace is one of the hoped for aspects of the restoration of the nation in prophetic and apocalyptic literature. As Isaiah 2:4 notes, God will settle all disputes between nations, and "they will beat their . . . spears into pruning hooks." Similarly, Ezekiel states that one of the means Yahweh will use to insure that "the nations know that I am the Lord" will be to create an age when weapons of war can be used for fuel (Ezek 39:7-9).

47:title. sons of Korah. See comment on 42:title.

47:5-8. enthronement in ancient Near East. One of the most important ceremonies in the ancient Near East was the ritual of enthronement of a king and the investiture of that person with his symbols of office. This can be seen in the investment of Marduk with his royal insignia in the *Enuma Elish* creation epic. He was named king and then given his scepter, throne, robes and weapons by the other gods. This ritual was mirrored in the coronation practice in Assyria in which all court officials surrendered the symbols of office, resigning so that the king could decide whether to reappoint them to their duties. In Mesopotamia enthronement was also tied into the majesty and power of the gods since it was believed that "kingship descended from on high." For instance, in the prologue to Hammurabi's code of laws the king of Babylon states that the gods called him by name and installed him to carry out their commands on earth, including the restoration of cities, purification of sacred rites, and to "establish truth and justice as the declaration of the land." During the Babylonian New Year's festival *(Akitu)*, the grant of power to the king had to be reinvested in his person, so an enthronement ritual was reenacted. Many scholars assume that Israel used psalms like this one in their own enthronement festival (for Yahweh and his king), but no positive proof has yet come forth to confirm that hypothesis.

48:title. sons of Korah. See comment on 42:title.

48:1. holy mountain. The book of Psalms repeatedly refers to Mount Zion as Yahweh's "holy hill" or holy mountain (Ps 2:6; 3:4; 15:1; 43:3; 99:9). However, it should be understood that this place ascribes its importance and sanctity entirely from God's presence there. Other sacred mountains are associated with the gods: Baal with Mount Zaphon, and Marduk and others with the artificial mountains, the ziggurat temples of Mesopotamia.

48:2. heights of Zaphon. This refers to Mount Casius (Jebel el-Aqra, elev. 5807 feet), twenty-five or thirty miles northeast of Ugarit, the mountain associated with the dwelling place of Baal (see the comment on Is 14:13). In Ugaritic literature Mount Zaphon is considered to be the mountain of the gods where the divine assembly meets. In the announcements of Baal's messengers Mount Zaphon is praised as beautiful and a hill of victory. In the context of this psalm it may be serving either as a direction, north, or as a reference to the temple at Dan, technically on Mount Hermon at the northern boundary of Israel. However, it is also possible that in this psalm Yahweh is seen as a universal God who will replace all other gods in their sacred locales, with Zion becoming what Zaphon had once been considered, the seat of God.

48:7. ships of Tarshish. See the comments on 2 Chronicles 9:21 and Isaiah 23:1.

48:9. worship within temple. Unlike the kings

who fled away at the sight of God's power (48:4-7), the Israelite pilgrims gain great comfort from the majesty of God's presence at Zion because that is where their deliverance comes from. The use of *ḥesed* (NIV: "unfailing love"), the legal term employed in connection with the covenant, indicates a sense of fulfillment on their part and is the basis for their fervent worship. "Within" in this case may be simply entrance into Jerusalem (Mount Zion) or into the Temple Mount complex, since pilgrims would not be allowed access to the inner precincts of the temple itself.

48:12-13. towers, ramparts and citadels in a fortified city. The basic architecture of a fortified city functioned as its defense system and also served as a form of monumental display of the physical power of the state. Towers were placed at regular intervals within the wall system and dominated each gate. The ramparts, ranging as high as forty feet (as at Tell Dan) were set between the towers, often in an offset-inset pattern that provided more angles for archery and other missiles dropped or thrown by the defenders. Within the city a citadel would be constructed as the strong point in case the city walls were breached. Since it was usually constructed at a high elevation, the citadel tower could also serve as a link in the signal fire system used to communicate between cities (see the comments on Is 32:14 and Neh 3:26 for the Hill of Ophel in Jerusalem). For further discussion of towers and wall systems as city defenses, see the comment on Isaiah 2:15. For discussion of fortified gateways, see the comment on Isaiah 54:12.

49:title. sons of Korah. See comment on 42:title.

49:4. proverb. The term translated here as "proverb" is *mashal.* It has a wide range of meanings: "allegory" (Ezek 17:2), "poem" (Num 21:27), "oracle" (Num 23:7). In this case, as in Proverbs 10:1, it refers to an "instruction" from God to the people, warning the Israelites specifically but relying on the universality of a wisdom theme so that "all peoples" can be addressed, not just the Israelites. It may also be compared to the "dark saying" in Habakkuk 2:6 in which the Chaldean aggressors are taunted with the loss of their ill-gotten wealth.

49:4. wisdom accompanied by harp. The measured parallelism of the verse would be aided in its rhythm by the strumming of a harp or zither. This might be compared to the musician employed by Elisha when he spoke an oracle (2 Kings 3:15). A similar occurrence also appears in the Egyptian *Tale of Wenamon* where a musician and a prophet are paired. Certainly words of praise were chanted or sung to the sound of lyre and harp (Ps 92:1-3). It would be natural for minstrels and story tellers to recite the mighty acts of God and of Israel's heroes to the sound of music (Judg 5:11).

49:14. death will feed on them. In the Ugaritic Baal epic the image of death, the god Mot, is of a ravening monster whose open mouth consumes the living: "The dust of the grave devours its pray. Death eats whatever it wants with both hands." Job (24:19) describes a similar picture of Sheol, the underworld, which "snatches away those who have sinned." Job 18:2-13 also contains this description of death devouring the limbs of the wicked. Proverbs 1:12 describes the grave as a mouth that swallows its victims, and this same concept is echoed in the epic of Baal and Anath where the god of death, Mot, is said to "devour its prey," eating them "with both hands."

49:15. Israelite hope. Like the people of Mesopotamia, with whom they shared a number of religious and social ideas, the Israelites did not have a widespread understanding of resurrection from the dead, a last judgment or an afterlife of reward or punishment. This only becomes evident in Judaism in the postexilic period, as exemplified by Daniel 12:2. Thus in this context the psalmist is contrasting the fate of the psalmist's enemies, for whom there will be no escape from the grave, and the psalmist's own hope of redemption by Yahweh. It is unlikely that the writer is referring, as some have suggested, to escape from death altogether in the manner of Enoch (Gen 5:24) or Elijah (2 Kings 2:11). The NIV's inclusion of the phrase "to himself" is totally interpretive, not being found in the Hebrew text. The concept of God "taking" a person as a reference to saving his life can be seen clearly in Psalm 18:16-17, where the NIV translates the same phrase as "took hold of me." See the comments on afterlife in the sidebar on common concepts in Psalms.

50:title. Asaph. This may be an abbreviation for the "sons of Asaph" and thus a reference to one of the temple choirs or their repertoire of music. In Ezra 2:41 the singers who returned to Palestine with Ezra were "descendants of Asaph." According to the list of temple musicians in 1 Chronicles 6:39, Asaph was appointed by David to serve in the Jeru-

salem temple as Heman's associate.

50:1-4. sun god as judge imagery. There is a drawing at the top of the seven-foot-high diorite pillar containing a copy of Hammurabi's law code. It depicts the Babylonian sun god Shamash seated on his throne with Hammurabi standing before him. In the prologue that follows, the king accepts the responsibility "to make justice prevail in the land" and "to rise like Shamash over all humankind." He becomes the god's judicial representative for the Babylonian empire. Shamash's role as divine judge is also found in Akkadian prayers for forgiveness. The Egyptian *Hymn to the Aten,* composed for the court of Pharaoh Akhenaten in the fourteenth century B.C., contains creation imagery very similar to that in this psalm. This is especially the case with regard to a sense of order and universality: "Your glory shines high above the land; your rays enrich the land you have created." See the comment on God as judge in the sidebar on common concepts in Psalms.

50:8-15. ideology of sacrifice. A proper understanding of the purpose of sacrifice is outlined in this psalm. This is intended to serve as a contrasting ideology to the sacrificial practices of Israel's neighbors. Two points are emphasized here. First, God does not need to be sustained with food like the gods of Mesopotamia and Egypt (as in the Gilgamesh flood epic, where the gods flock like starving flies to Utnapishtim's sacrifice). Second, and perhaps more important, is that the Israelites have an obligation to God to make "thank offerings" as a sign of their acknowledgment of the covenant. It is the failure of the people to differentiate between ritual and the knowledge of God that is so often condemned by the prophets (1 Sam 15:22; Hos 6:6). Micah in particular parodies these ineffectual offerings and notes that all God requires of Israel is "to act justly and love mercy" (Mic 6:8).

50:21. god like people. God accuses the people of forgetting that the deity is not "just like them," willing to look the other way when evil occurs or even able to approve of their sinful actions. This ultimate form of anthropomorphizing God is a terrible crime deserving of rebuke and punishment. Divine silence is not to be considered a sign of weakness or of disinterest. Jeremiah in his "temple sermon" (Jer 7:9-11) makes similar accusations, noting that the people of Judah seem to believe they can commit any sin and then come to the temple and proclaim, "We are safe." He declares that God is watching them and is not blind to their deeds. The Old Testament begins its story by relating how people wanted to become like God and thereby fell into sin. Having failed in their attempt, human history becomes the story of people remolding God in their own image. The gods of Mesopotamia and Egypt are described as acting much like humans—engaging in unthinking acts of violence (the Gilgamesh and Atrahasis flood stories) or tricking humans out of a potential reward (Adapa)—but they still have superhuman powers and must be treated with official respect. The psalmist and wisdom writers raise Yahweh above the level of any other god to an ideal of moral and just behavior far beyond anything attainable by god or human (see Job 42:2-6).

51:1-2. mechanism for removing sins. In the ancient Near East it was not sins that were removed but the deity who was appeased. The individual only became aware of sin when he or she experienced circumstances considered the punishment of deity. The goal then became to relieve the anger of the deity (whether such anger was believed to be justified or not). When they asked for sins to be removed ("strip off my misdeeds like a garment"), they meant that the deity should be willing to overlook their sin, put away wrath and restore his favor. The rituals that accompanied this sort of approach to deity were meant to purify the individual and pacify the deity. The ritual did not remove sin; it only enabled the individual to hope that the deity would offer absolution from the sin. In Israel we should think in terms not of sins being eternally removed but of the sacrifices cleansing away the desecration of God's presence caused by sin (see comment on Lev 1:4, "atonement"). The rituals paved the way for forgiveness (see comment on Lev 4:13-32). This psalm is not talking about that process (v. 16). Only God's gracious act would remove a sin from the record books. It is understood that the penitent can only ask, not demand, absolution of sins (see Ps 32:10). What is asked for is a display of God's compassionate mercy based on the supplicant's trust and the covenantal promise to Israel. God's favor may then "blot out" sin in much the same way that a parchment scroll is scraped clean or a clay tablet is either washed clean (see Num 5:23) or broken. This metaphor is mentioned in a Babylonian ritual text, where it states that a king may order that "the tablet of my sins be broken," thereby canceling or commuting debt or criminal charges. Similarly, in Hammurabi's Code an illegal contract for the purchase of a soldier's land may be cancelled by breaking the cuneiform tablet. Mesopotamian literature contains references both to tablets recording evil deeds (in

the *Shurpu* texts) and those recording good deeds.

51:3. knowledge of offense. In the ancient Near East individuals typically claimed that they were mystified concerning what they could possibly have done to offend deity. There were several factors that contributed to this ignorance. First, the gods of the ancient Near East had offered no permanent revelation of themselves that might be used as a guide. Second, polytheism posed a problem in that a deed that pleased one god might potentially offend another. Third, the gods were not characterized as acting consistently from one day to the next, thus making it difficult to assess one's standing. Finally, offenses often took the form of neglecting rituals that the individual was not even aware of. As a result, in Babylonian penitential literature *(shigus)* for instance, the offender sometimes simply accepts blame for all sorts of sin, hoping in the process to confess to whatever has offended the deity. Yet at other times he lists offenses and asserts that he is well aware of his sins. In the Hittite *Prayers of Mursilis* confession of one's guilt is the step toward reconciliation with his lord. In Israel the Law was clear enough and offenses could be clearly identified.

51:4. against deity only. If David is identifying Yahweh alone as the one sinned against, whom is he ruling out? Certainly he has wronged Bathsheba and Uriah. It is important to notice that in the context the issue concerns who has a right to pass judgment and carry out sentence (second half of v. 4). In Israel the family of the murder victim had a right to blood vengeance, and there were always political enemies who would be happy to stylize themselves as the arm of God's justice against a wayward king. Perhaps by this statement David is limiting his acknowledgment of culpability, so that only Yahweh has the right of punishment.

51:5. conceived and born in sin. As is so often the case when speaking to God, the penitent draws the contrast between divine perfection and inherent human weakness (see Job 4:17; Ps 130:3; Jer 17:9). The same point is made in a nineteenth-dynasty Egyptian prayer to Amon that confesses that it is "normal" for humans to do wrong just as it is "normal" for the god to be merciful. It should be emphasized in this context that the act of conception was not considered sinful. Sexual activity, including intercourse, pregnancy and childbirth, all rendered the participants ritually unclean (see Lev 15:16-33), but within marriage this was never declared to be sinful. Statements such as those in Job 15:14 and Isaiah 6:5 simply define humans as unclean by nature in relation to God's absolute purity. Although this psalm has been used by some commentators to bolster the doctrine of "original sin," it seems a more appropriate interpretation to see it as part of the general confession of the penitent. In Mesopotamian incantations the sentiment is expressed that there is no one who has not sinned—everyone who exists is sinful. An admonition to confess the sinfulness of the human state appears in the Egyptian teachings of Amenemope, "Say not: 'I have no wrongdoing.'" The Israelites would have agreed with that theology in that they would have acknowledged a general inclination to sin that was characteristic of all people. They did not go the next step of Christian theology by seeing Adam's sin imputed to people.

51:6. internalization as divine expectation. Based on the birth image in the previous verse and a similar phrase in Job 38:36, it is likely that E. Dalglish is correct in his interpretation of this verse as referring to obtaining knowledge while still within the womb (the mother's "innermost part"). The penitent is acknowledging that his sin is not to be excused for lack of knowledge. He is aware, even from the womb, of what is right behavior, and he has failed to obey what he knows to be lawful (see v. 3). A similar image of prenatal learning is found in the Egyptian *Hymn to the Aten.* The writer repeatedly praises the god for supplying all that is necessary for human survival, even within the womb. To counter human nature's tendency to disobey, Egyptian religious thought is filled with the need to internalize *ma'at,* "truth." It is described as the bread that sustains humans (as in the royal annals of Queen Hatshepsut).

51:7. hyssop. This dwarf bush, *Origanum syriacum* (majoram), grows wild among the rocks in Palestine. The aromatic fragrance emitted by its blue or reddish flowers and leaves may be the origin of its presumed medicinal value. In the biblical text, however, it is associated with rituals of purification, as in the ceremony associated with the cleansing of a leper in Leviticus 14:4-6. They also are employed in the ritual sacrifice of the red heifer (Num 19:6) and in the marking of Israelite doorframes during the Passover (Ex 12:22).

51:7. white = purity. As noted in Isaiah 1:18,

in the biblical tradition white is identified with purity or joy. Dark colors, especially black, are used to signify mourning or lamentation—both of which are associated with states of impurity (see Ps 35:13; Zech 3:3-5). In an Assyrian prayer the king calls on his god to "whiten" and thus free his heart from his sin of blasphemy. In Akkadian the verb "to brighten" overlaps with the verb "to make white." In one Babylonian magical text the petitioner requests that he might "become as pure as heaven, as cleansed as the earth, and as bright as the center of heaven."

51:10. pure heart. Having acknowledged his sinful condition from his birth, the penitent now asks God, the only power able to grant his request, to purify his "heart" (the seat of the intellect in Hebrew tradition). A Sumerian prayer of repentance also pleads for divine mercy from the gods and transformation of "the sin I have done . . . into goodness." This is similar to the petition in the *Lament over the Destruction of Ur,* which calls on the goddess Inanna to insure that "every evil heart of its people be pure before thee!" The concept of regeneration or redirection is also found in Ezekiel's oracle of a restored nation, in which God promises to "give you a new heart" (Ezek 36:26).

51:11. removing holy spirit. While God's spirit occurs many times in the text, only in Isaiah 63:10-14 is the expression "holy spirit" used synonymously with Yahweh's presence. To have that presence removed or to be excluded from communion with God is the ultimate punishment imaginable. On a national scale it would be the end of the covenant relationship and the total destruction of the people (Jer 23:39; compare Hosea's third child "Not My People" in Hos 1:9). For a reigning monarch, who is God's representative, being cut off from Yahweh's voice or presence would be the signal that his dynasty has been rejected and will come to an end (see the comments concerning Saul's plight in 1 Sam 16:14; 28:6). The petitioner in the Sumerian "Prayer to Every God" also pleads that the god "not cast thy servant down," presumably away from divine favor, because of his transgressions.

51:16. no delight in sacrifice. Like Jeremiah's direct attacks on what he considered a totally corrupt cultic system in Jerusalem (Jer 6:20; 7:4; 31:31-35), the psalmist denies the value of animal sacrifice without an ethical dimension to sustain it. The Egyptian *Instruction of Merikare* contains this same sentiment: "More acceptable is the character of one upright of heart than the ox of the evildoer." They share Samuel's (1 Sam 15:22) and Hosea's (Hos 6:6) argument that God prefers a devout worshipper's heart and prayers, not his or her ritual pantomime (see comments on 1 Sam 15:22; Is 1:16-17; and Jer 7:9). This is also noted in Babylonian wisdom literature, where the pious are encouraged to pay daily homage "with sacrifice, prayer and appropriate incense-offering." But most important is to "feel solicitude of heart" toward their god.

52:2-4. evil tongue. The tongue in this expression is synonymous with the person. Similar examples of this metaphor can be found in the Assyrian *Words of Ahiqar,* where the "tongue of the ruler" is equated with his sovereign power. The charge made in this psalm is that the deceitful choose to speak and do evil (compare Prov 12:17), a complaint also registered in the Middle Egyptian *Dispute over Suicide.*

53:5. scattering bones. One common image of utter defeat and hopelessness is the battlefield covered with the scattered, bleached bones of the slain. The Assyrian annals of Shalmaneser III report the destruction of their foes, with "pillars of skulls" erected and battle sites covered with corpses. Ezekiel 37 uses this as the basis of his oracle of restoration. Jeremiah 8:1-2 prophesies the violation of the tombs of false priests and unfaithful kings, with their bones scattered about "like refuse lying on the ground." See also the comment on 22:14.

54:1. plea for vindication. Based on the premise of the retribution principle (see comment in the sidebar on common concepts in Psalms), a person who was suffering was believed to be receiving punishment from God. Since God was considered to be just, then the punishment would have been deserved. The psalmist's troubles would therefore be taken as evidence of his sinfulness. Vindication of the psalmist would then come when God intervened to turn the tables and punish his enemies. Such action from God would proclaim his innocence and show that he had not lost God's favor. In this sense God is his only hope. The eloquent peasant of Egyptian wisdom literature also calls on his god-king, Pharaoh, as his "last hope" and "only judge."

54:6. freewill offering. See the comment on Numbers 15:1-31 for the general elements of the Israelite sacrificial system. A "freewill" offering is a nonobligatory sacrifice, made in thanks or to fulfill a vow (see the comment on Lev 22:17-30). It may be offered at the altar with the intention of partaking in a communal meal with God or as a whole burnt offering. For the role of this offering in Psalms see comment on 50:8-15.

55:14. throng at house of God. Israelites were

instructed to attend the annual pilgrimage festivals and bring their sacrifices to the temple in Jerusalem (see the comments on Ex 23:17 and Deut 16:16). A sense of fellowship was created as large groups of people and close friends joined in this unified (LXX uses *en homonoia,* "in unity," in translating this verse) religious journey, physically demonstrating their commitment to the covenant. The psalmist here seems extremely distressed that someone who had shared this pilgrimage could betray him.

55:15. alive to the grave. The judgment sought by the psalmist on his enemies is an untimely death. Like the rebellious Levite Korah and his followers (Num 16:31-35), they are to be swallowed up by the earth without any further opportunity to commit mischief. The parallel here to "by surprise" clarifies that going alive to the grave does not mean they will not die. Rather a sudden death is requested. The image of death as an open mouth swallowing the unaware is found in the Ugaritic Baal epic, where the god of the underworld, Mot, is described as a "pool luring the wild oxen," which "eats whatever it wants with both hands."

55:21. speech/heart. An Akkadian proverb draws the same distinction, observing that a man may speak friendly words with his lips but have a heart full of murder. The incantation series *Shurpu* speaks of one whose speech is straightforward but whose heart is devious.

56:8. scroll/record. Like the journal of remembrance kept for future justice's sake in Daniel 7:10 and Malachi 3:16 (see comments on both), the psalmist refers to a record that God has kept of his misery during his life's wanderings. This written repository is compared to saving the sufferer's tears in a bottle or skin bag. In both cases the imperative form is used to show how important this record is so that only the deserving remain in God's "book of life" (see Ps 69:28).

57:1. shadow of your wings. It is possible that the psalmist is playing off the metaphor of God as a protective eagle sheltering its young with outstretched wings found in the "Song of Moses" in Deuteronomy 32:10-11. This image of eagles' wings is a common metaphor for God's covenantal saving acts (see Ex 19:4). This reference may also be a reflection of the wings of the cherubim on the ark of the covenant (1 Sam 4:4; 1 Kings 6:23-28) or the winged seraphs said to surround Yahweh in Isaiah's call narrative (Is 6:2). The metaphor of taking refuge under the wings of deity is found also in other psalms (36:7; 61:4; 91:4) and is consistently related to issues of care and protection connected to the covenant. The metaphor is also known from other ancient Near Eastern cultures, particularly Egyptian, where even disembodied wings represent protection. Deities with wings are often portrayed overshadowing the king. Likewise an ivory from Arslan Tash dated to the eighth century shows characters in human form with wings protecting a figure in the center.

57:4. enemies as lions. Though in seventh-century Assyrian literature the lions' pit occurs as a metaphor for vicious and antagonistic courtiers of the king, the combination with weapons here opens up another possibility. Ugaritic sources refer to an archery division that marches under the standard of the lion-goddess. The psalmist could also be alluding to a group of mercenaries going by that standard.

57:8. harp and lyre. Praise accompanied by both harp and "ten-stringed lyre" is also found in Psalm 33:2 (see comment there). In Psalm 98:5-6 the harp is paired with trumpets and the ram's horn to sharpen the enthusiasm of the psalmist's celebration and possibly to engender a prophetic utterance (see Elisha in 2 Kings 3:15). A similar joyous anticipation of the dawn is found in the Egyptian *Hymn to the Aten,* in which "the two lands of Egypt rejoice" at daybreak when the sun disk rises over the horizon.

58:4. cobra with stopped ears. The metaphor is an attempt to equate the fool/wicked, who will not listen, with a cobra (a term found in both Egyptian and Ugaritic) who pays no attention to the snake charmer. Both cause pain and suffering by their unreasonable behavior. Although snakes do not have hands to cover their ears (an internal organ), the issue here has to do with unnatural, perverse actions. Along this line, the Egyptian *Instruction of Ankhsheshonqy* notes that there is no point in trying to instruct a fool, who will not listen and will hate you for attempting to teach him something. Similarly, the *Instruction of Amenemope* cautions that the words of fools are more dangerous than storm winds.

58:5. snake charmer. The profession of snake charmer must have involved an intimate knowledge of the serpent's behavior pattern. One admonition that could well have come from this stock in trade is found in the *Instruc-*

tion of Ankhsheshonqy, stating that a well-fed snake will not strike. The charmer may have also used magical incantations in addition to music or some physical props to control the serpents in their act. Snakes were greatly feared in the ancient world as magical beings as well as for their venom. Both Egyptian and Mesopotamian literatures contain examples of incantations against serpents and their bites. The word translated "charmed" here should not evoke cartoonlike images of swaying serpents hypnotized by pipe-playing swamis. Alternatively it may refer to snakes against which the incantations are ineffective. Akkadian texts also speak of snakes that are "unconjurable."

58:6-11. imprecations compared to incantations. This psalm is known as an "imprecatory" psalm because it calls down curses (imprecations) on the enemy. In the ancient Near East such curses were enhanced or activated by magical rituals and spells, but this sort of practice would have been unacceptable in the biblical system. Imprecatory psalms can be best understood against the background of the retribution principle (see discussion in the sidebar on common concepts in Psalms). Since God's justice was seen as requiring punishment proportional to the seriousness of the sin, the psalmist is calling down the curses that would be appropriate if justice were to be maintained. These are the same magnitude of curses that God pronounces on his enemies (see Is 13:15-16). The forceful language of this passage contains aspects of an East Semitic curse formula that relies on the deity to carry out vengeance on the enemy nations. An example of this type of indirect curse is found in the vassal treaties of the Assyrian king Esarhaddon as he calls on a host of gods to do the treaty-breaker harm. It is also employed, with the addition of ritual acts of execration, in the Aramaic Sefire inscription: "Just as this bow and these arrows are broken, so may Inurta and Hadad break the bow of Mati'el and the bow of his nobles." The psalmist indirectly curses by imprecation, calling on God to "laugh at them" in their puny efforts to menace Israel. He does not employ magical incantations or execration rituals against them but instead relies on God to render these peoples impotent—breaking their power and their weapons of destruction (see Jer 49:35; 51:56; Ezek 39:3).

59:title. incident. It seems most likely that the event mentioned in the superscription comes from the time prior to David's accession to the throne, when he was an outlaw and continually harassed by Saul's men. For examples of this type of continuous surveillance and pursuit see 1 Samuel 19:11 and the narrative in 1 Samuel 24.

60:title. incident. The editors of the book of Psalms sometimes attempt to link historical events from the life of David with the subject of a psalm. In this case the reference is to David's campaign against the Arameans and Edomites (see the comments on 2 Sam 8:3-14).

60:3. wine that makes one stagger. The power of God's wrath against the people is compared to a potent cup of wine, which makes them stagger in a drunken/impotent manner (see Is 51:17, 22 and the comment on Is 28:7). This cup may be compared with the cup of bitterness drunk by the suspected adulteress in Numbers 5:16-22 and with the cup of salvation in Psalm 116:13. See comment on 75:8.

60:4. banner. Battle flags and standards were used by the military as signaling devices and rallying points for the army or were hung from city walls (see Jer 4:6). Their colors and insignia designated their allegiance and would in many cases have included a symbol of the god(s) who were expected to participate in the battle along with the human forces (see Jer 50:2). The Assyrian army of Shalmaneser III traveled with its "standards" attached to the royal chariot. When camp was made, they were erected near the royal pavilion and became the focal point for sacrifice and acts of devotion to the gods.

60:6. parceling Shechem. Since the covenant promise had always included God's grant of land to the Israelites, it would be within Yahweh's right to parcel out Shechem (Tell Balata, forty miles north of Jerusalem) as a prize of war to those who were true to the covenant. Perhaps because of its proximity to two nearby peaks, Mount Gerizim and Mount Ebal, it has had a long history as a sacred site. Shechem is known from many ancient sources, including the Egyptian records of Sen-Usert III (nineteenth century B.C.) and the El Amarna tablets (fourteenth century B.C.). Nearly continuous occupation is evidenced through the second and first millennia, demonstrating the importance of this strategic city on the highway network running north from Egypt through Beersheba and Jerusalem and on to Damascus. It was Abram's first stop in Canaan. Jacob purchased land near the city in Genesis 33:18-20, and thus it is connected to the origins of granting the Promised Land to the Israelites. The fertile soil in this area promoted agriculture as well as good grazing.

60:6. Valley of Succoth. The city of Succoth is located east of the Jordan River near the point where it connects with the Jabbok River, an

area known as the Ghor Abu Obeideh. This is a fertile region which like Shechem has a connection with the Jacob narrative (Gen 33:17) and could thus represent the total area of the Promised Land within the covenant agreement. A number of archaeologists have identified it with the site of Tell Deir 'Alla, based on Egyptian records (the Stele of Shishak) and cultural remains dating from the Chalcolithic to Iron Age II. The name, which means "booths," would be appropriate for the temporary housing of this region's mixed population of pastoral nomads and miners (evidence of smelting has been found in Iron I levels). It is located in the valley just west of the highlands of Gilead as the land comes down to the Jordan.

60:7. Gilead, Manasseh. The Transjordanian region of Gilead, roughly lying between the Yarmuk River in the north and the Arnon River in the south, was given in the distribution after the conquest to the tribes of Gad (see the comment on Josh 13:24-29) and to Manasseh (see the comment on Josh 13:30-31). For the general distribution of the tribal settlements in this region, see the comment on Numbers 32:34-42.

60:7. Ephraim, Judah as helmet and scepter. In this metaphorical portrayal of Yahweh as the divine warrior, the two kingdoms of Israel (Ephraim) and Judah serve as helmet and staff of office respectively. A similar image is found in Zechariah 9:13, where Judah is God's bow and Ephraim his arrow. The term translated "helmet" is not used elsewhere as a reference to armor or headgear. The Hebrew text refers to "a fortress for my head" or perhaps "my chief fortress." The scepter is now often identified as a ceremonial engraved mace, which kings are sometimes portrayed holding in their hands as a symbol of office. It is referred to elsewhere in Genesis 49:10 and Numbers 21:18.

60:8. Moab as washbasin. This may be a reference to Moab's proximity to the Dead Sea, but it certainly denotes the subjugation of that nation by Yahweh (repeated in Ps 108:9). They are forced into servanthood, being placed in a position where they must wash the feet of their master (compare Jn 13:5). The container referred to here is usually used for cooking but is a multipurpose pot/basin that comes in various sizes. Washbasins were typically used for ritual washing or ritual bathing, and occur in lists of fine gifts in the Amarna tablets. The imagery here is obscure.

60:8. sandal to Edom. Sandals were the ordinary footwear in the ancient Near East, but they were also a symbolic item of clothing. This may have been due to the fact that land was purchased based on whatever size triangle of land the buyer could walk off in an hour, a day, a week or a month (1 Kings 21:16-17). Land was surveyed in triangles, and a benchmark was constructed of fieldstones to serve as a boundary marker (Deut 19:14). Since they walked off the land in sandals, the sandals became the moveable title to that land. Casting a sandal was a symbolic, legal gesture employed in those situations where a levir refused to accept his responsibility to a widow. She in turn then removed his sandal, the symbol of ownership and inheritance, and cast it at him. This signified his loss of inheritance rights to the lands of his relative (see Deut 25:9 and Ruth 4:7-8). Land transfers in the Nuzi texts also involved replacing the old owner's foot on the land with that of the new owner. In this verse God aggressively casts a sandal onto Edom as a gesture of conquest or the assumption of ownership of that nation's lands.

60:9. fortified city/Edom. Since the "fortified city" is parallel to Edom, one is inclined to think of the major fortified city in Edom. This would be Bozrah, whose name is built from the same root as the word used here for fortified city. Bozrah was the capital of ancient Edom and is to be identified with Buseirah in the northern region of the country. It guards a portion of the king's highway and is fairly close to the copper mines found five miles to the southwest at Wadi Dana. Excavations demonstrate seventh- or sixth-century levels from the most heavily fortified and largest settlement in the area.

61:4. shelter in wings. See comment on 57:1.

61:8. king fulfilling vows. Kings in the ancient Near East owed obligations to the god(s) who were the source of their power. For instance, at Mari the kings were required to make annual sacrifices to gods all over their kingdom, to rebuild their temples and to insure that the priestly community was receiving its due income. In addition, special vows were taken to insure good crops, a victory in war (see Judg 11:30-31; 1 Sam 14:24) or to obtain an heir. An example of this latter effort is found in the Ugaritic epic of Keret, in which the king goes to the sanctuary of Asherah and makes a vow to give the goddess "double the bride price in silver" of a royal wife if he is al-

lowed to marry the princess Hurriya.

62:9. highborn. As in Psalm 4:2, this term, *benê 'ish,* functions as both a euphemism for the wealthy and powerful as well as a generic term for all men of influence. Both Egyptian and Babylonian contain similar expressions for this class of individuals. For example, Babylonian texts regularly make the distinction between "a gentleman" and an "ungentlemanly person."

63:1. soul/body and ancient anthropology. As noted in the comment on Psalm 42:2 on the concept of "soul" in the ancient Near East, the cultures of the Mesopotamians and Israelites did not differentiate between soul and body. Both represented the individual being, not a separate spirit or entity. In Egypt, however, the life force, *ka,* contained the essence of animated life as well as the sustenance to maintain living beings. After death the Egyptian's "soul" or *ba* manifested that life essence and was often depicted in tomb paintings as birds with human faces. The ability to differentiate between the living being and his soul is found in the Middle Egyptian wisdom piece titled *The Dispute Between a Man and His Ba.* In this document a man argues with his soul. In his despair the man states that the troubles of life demand that he commit suicide. This angers the *ba* and it threatens to leave him, a threat that the man takes very seriously since it would mean that he would not be resurrected into the afterlife.

63:7. shadow of wings. See comment on 57:1.

65:4. living in the temple courts. While the temple complex was primarily the realm of the priestly order, it was the desire of every member of the covenant community to "dwell" in God's presence (see Ps 84:2 and 96:8). The importance of the temple precinct as the place where God dwelt can be found in its use for prayer and in judicial proceedings when someone comes to take an oath "before a god" (see Hammurabi's Code). In this psalm the concept of being the "chosen" is emphasized, along with the closeness of Yahweh's promise and power. For more information see comment on 23:6.

65:7. stilling the seas. This phrase relates to Yahweh's creative power over watery chaos (as in Gen 1:2-10 and Ps 93:3). It is quite likely that the Israelite psalmist is also drawing on the terminology of the religious epics of Mesopotamia (the *Enuma Elish* creation story in which Marduk defeats Tiamat, the goddess of the primeval waters) and of Ugarit. In the latter, Baal has a monumental struggle with Yamm, the god of the sea. The use of this cosmic battle motif in other psalms (73:14; 89:9-10) is another indication of how the Israelite writers employed the religious drama of other cultures but used it as a way of demonstrating the supremacy of Yahweh over all other gods. See comment on 107:29.

65:12. grasslands of the desert. In this image of fertility even in the wilderness, the psalmist describes grasslands flourishing in the desert. During the rainy season the desert does support a growth of annuals and wild flowers in addition to the stunted scrubs, such as the white saxaul *(Haloxylon persicum).* These cling to the salty and sandy soils along the wadi beds and upper slopes where more moisture falls or collects.

66:10. refined like silver. See the comments on Proverbs 17:3 and 25:4.

67:1. make his face shine. The appearance of the deity in Israelite and Mesopotamian traditions is a shining light that in many cases is a physical danger to humans (see the comments on Ex 16:10-11 and 33:18-23). In this case the image is benevolent, with God's manifest power providing comfort and reassurance. Similarly in the Ur III coronation hymn of Ur-Nammu (c. 2000 B.C.) the monarch receives his right to rule when Enlil looks upon him "with his shining forehead." See comment on 80:3.

68:4. rides on the clouds. In Ugaritic epic literature the storm god Baal is regularly referred to as the "rider of the clouds." References can be found in both the Baal and Anat cycle and in the story of the hero Aqhat. This image of power over the winds and weather comes into the Psalms as another example of how the stories from other cultures have been restructured to demonstrate Yahweh's universal control over nature and nations (see Ps 104:3; Jer 4:13). It also serves as a polemic against belief in any other god who might be thought to provide the fertility God promises in the covenant.

68:6. lonely in families. The Egyptian *Tale of the Eloquent Peasant* provides a model for this set of responsibilities to the weak. The king in this Middle Kingdom wisdom piece is called the father to the orphan and the "mother to the motherless." In this psalm Yahweh is the compassionate lawgiver who insures that orphans, widows and the stranger (translated here "the lonely" or "the desolate") are cared for as if they were members of an Israelite clan (see the comments on Deut 24:17-18 and 24:19-22 for laws dealing with justice for the vulnerable). Ecclesiastes 4:8-9 also examines the plight of the one who is isolated, lonely and neglected.

68:6. freeing prisoners. In the ancient Near

East the freeing of prisoners (from debtors' prison) as an act of justice often occurred in the first or second year of a new king's reign (and then periodically after that). For example, the Old Babylonian period king Ammisaduqa (seventeenth century B.C.) cancelled economic debts on behalf of Shamash. Thus the "jubilee" in this case was primarily concerning those in debt (for either financial or legal reasons) and for the freeing of debt-slaves. Unlike the case in Israel, this Babylonian edict was entirely at the whim of the monarch and there is no evidence that it was divinely sanctioned. For an example of this as being accomplished by an ideal king see comment on 11:1. Historically, a proclamation of freedom is recorded by the last king of Judah, Zedekiah (Jer 34:8-10). For these and other characteristics of a just king's reign, see comment on 49:9-10.

68:13. gilded dove. There is no clear consensus on the meaning attached to dove "sheathed with silver" and gold. Some consider it a reference to the battle standards of the fleeing kings, which were topped by a dove, the symbol of the Canaanite goddess Astarte. Others see it as a reference to Israel (see other bird images in Ps 74:19; Hos 7:11). Tate's suggestion of doves, perhaps adorned with colored cloth, being used as a signal of victory seems plausible.

68:14. Zalmon. Because of the parallel in verse 15 with Bashan, it is unlikely that Mount Zalmon in this psalm is the same as the mountain mentioned in Judges 9:48 near Shechem. The name means "dark" or "black" and could refer to a peak shrouded in clouds. It would also require more elevation in order to serve as a snow-covered eminence.

68:15. mountains of Bashan. The Bashan region, northeast of the Galilee, is a fertile plateau about two thousand feet in elevation. It is surrounded by extinct volcanic peaks and rolling hills with sufficient forestland to complement its cattle-raising economy (see Is 3:13 and Amos 4:1-3). The rugged mountains mentioned here probably refer to the hard-to-climb basaltic hills in this area.

68:18. ascending leading captives. Like the victorious Saul in 1 Samuel 15:7-15, the triumphant Yahweh is accompanied by a procession of prisoners, loot and tribute payments. A similar image can be found in the Assyrian annals of Sennacherib, who claims to have taken over two hundred thousand prisoners from Judah, along with their animals and other booty. The major deities of the ancient Near East were associated with high places, so for Yahweh to "ascend" would be to return to his holy mountain (see Jer 31:12), just as Baal uses Mount Zaphon as his divine base of operations in the Ugaritic and Canaanite traditions.

68:23. feet washed in the blood of enemies. The poetic language attached to battle reports can at times be rather grisly. This is certainly the case with this phrase (also used in Ps 58:10). The similar image of wading through the blood of one's enemies is also found in the Ugaritic epic of Baal and Anath. There the goddess gleefully slaughtered whole armies and "waded knee-deep in the warriors' blood."

68:24. procession into the sanctuary. The New Year's festival (Akitu) in ancient Babylon included a procession in which the image of the god Marduk was paraded along a "sacred highway" through the streets of the city. The god was guided by the king ("taken by the hand") up to the Esagila temple, where the image resided during the year. It was not the normal practice for this sort of procession to take place in Jerusalem, since Yahweh could not be represented by an image. However, the ark of the covenant, which functioned as an icon of God's power and presence, was brought into the city by King David and placed within the tabernacle (see 2 Sam 6), and this may be celebrated in this psalm.

68:25. musicians in procession. The appointment of temple musicians is found in 1 Chronicles 15:16-22. It was their task to accompany the singing of hymns of thanksgiving with stringed instruments and cymbals (see Ps 42:4). Egyptian tomb paintings contain images of singers, dancers and musicians in procession, much as they are described in this text.

68:30. beast among the reeds imagery. The most likely choices for this beast are the hippopotamus and the crocodile. Both were major hazards along the shores of the Nile River in Egypt. The tomb paintings from Beni Hasan include a number of scenes in which fishermen work while a crocodile lurks in the reeds nearby or papyrus boats are being used to hunt this dangerous amphibian. Politically, the reference is most likely to Egypt.

68:31. Egypt and Cush. Since there have been Cushite dynasties that have ruled Egypt, it is not unusual to find Egypt and Cush used in parallel here. It is possible that the bringing of tribute from this southern region of Ethiopia is keyed to God's power, which can command

homage from the ends of the earth (cf. Is 18:7).

68:33. rides the ancient skies. See comment on 68:4.

69:10. fasting. See comment on Judges 20:26.

69:11. sackcloth. See comment on 1 Kings 20:31.

69:19. scorn for the sufferer. The Israelites believed that if God is to be considered just, rewards and punishments in this life must be proportional to the righteousness or wickedness of the individual. These beliefs had also led them to believe that if someone was prospering, it must be a reward for righteousness, and if someone was suffering, it must be a punishment for wickedness. The greater the suffering, the greater the wickedness must be. Because of the retribution principle (see comment in the sidebar on common concepts in Psalms), suffering had become a source of shame. Since the supplicant is without friends or comforters, he turns to God, who "knows" his suffering and will not scorn his pleas for help (cf. Lam 1:2, 7, 9). This feeling of despair is echoed in the "Babylonian Theodicy" (c. 1000 B.C.) that pictures a world turned upside down in which the sufferer states he must "bow down before the dregs of society, who treat me with contempt."

69:21. gall in food. In some contexts this word refers to poison (e.g., snake venom in Deut 32:33), whereas on other occasions it refers to something bitter. This would match the parallel with vinegar. In the former it could lead to almost certain death, while in the latter it may be understood as some kind of sedative. Presumably the fast of mourning would be broken with food brought to the sufferer by comforters (2 Sam 3:35). In this case, however, instead of comfort and nourishment the mourner receives just the opposite—poison (compare Amos's charge that justice has been transformed into poison in Amos 6:12).

69:21. vinegar. The bitter, worthless vintage offered to the sufferer is like that described in Isaiah's "song of the vineyard" (Is 5:2). Equally repugnant is the metaphor for a "nation without sense" in Deuteronomy 32:28-33, in which the people are compared to "grapes filled with poison" and bitterness, whose wine has become "the venom of serpents."

69:28. blotted out of book of life. In a Sumerian hymn to Nungal the goddess discusses her justice as she punishes the wicked and brings mercy to those who deserve it. She claims to hold the tablets of life in her hands, on which she writes the names of the just. See comment on Malachi 3:16.

69:31. horns and hoofs. Devout worship and praise of Yahweh please God much more than rituals and sacrifices (compare similar statements in 1 Sam 15:22 and Hos 6:6). Reference to horns and hoofs indicates a full-grown bull (compare Micah 6:6), an expensive sacrificial animal, which is ritually pure according to the holiness code (see Lev 11:3-8).

71:7. portent. The use of the Hebrew term *mopet* is indicative of an extraordinary event that serves as a sign of God's power, and in this case judgment or punishment (compare the curses in Deut 28:45-46). This technical term appears often in the narrative of the plagues in Egypt (Ex 7:3; 11:9) and is used to signal a coming event (1 Kings 13:3, 5).

72:1. coronation hymns in ancient Near East. There is a good deal of evidence to indicate that in the civilizations of ancient Mesopotamia the kingship was viewed as a gift from the gods. The prologue to Hammurabi's Code contains a statement that the king has been proclaimed "the shepherd" by the god Enlil, and that it is his task to "cause justice to prevail in the land." During the *Akitu* New Year's festival, the king was reinvested with his powers of office. This would have included a great procession and mass celebration. The Ur III texts from about 2000 B.C. contain hymns composed for these occasions, celebrating the coronation of King Ur-Nammu. These compositions contain a set of statements that chronicle the stages of the investiture ritual, including the "pressing of the holy scepter" into the king's hand. These verses are to be sung by or for the king proclaiming his god-given duties as lawgiver and the constructor of canals that bring fertility to the land. There is an answering litany by the priests containing the king's titles and affirming him as "king of Ur."

72:8. extent of reign. In order to indicate that God has granted this king universal rule, the psalmist employs images that are also used in the Karatepe inscription of the Luwian king Azitiwada (730-710 B.C.). Just as the psalmist refers to "rule from sea to sea," these annals proclaim that the king has extended his rule "from sunrise to sunset." Akkadian texts also feature a king boasting that all of the human race submitted to him, from the Upper Sea to the Lower Sea.

72:9. desert tribes. This text is generally emended from the Hebrew *ṣiyyim,* "desert dweller" to *ṣarayw,* "his foes." If the original reading is retained, then it could relate back to the use of Cush (the desert region of Ethiopia) in Psalm 68:31 as a geographic term for the "ends of the earth" and thus follow the coronation promise in 72:8.

72:10. Tarshish, Sheba, Seba. In order to indicate the extent of the king's power rulers from throughout the world are said to come to him with gifts. Thus Tarshish, associated with the islands and nations in the western Mediterranean, represents all points to the west (see the comment on Is 23:1). Sheba is identified with southern Arabia (Yemen) and the Sabaean kingdom (see the comment on Is 60:6). Seba's location is still disputed, although some place it in Ethiopia or along the northwest Arabian incense road (see Is 43:3).

72:12-14. king's job. It is standard in ancient Near Eastern literature to portray the king as lawgiver (Prov 29:14) and defender of the weak (an attribute of God in Ps 35:10). The Egyptian *Tale of the Eloquent Peasant* states that the king's duty is to "father the orphan." The coronation hymn of the Ur III king Ur-Nammu is described as the "sustainer of Ur." The prologue of his law code tells how the gods gave Hammurabi of Babylon the task of "promot[ing] the welfare of the people" and "caus[ing] justice to prevail in the land" so that "the strong might not oppress the weak."

Psalms 73—89

Book Three

73:24. take me into glory. The NIV's inclusion of the word "into" is totally interpretive, not being found in the Hebrew text. The concept of God "taking" a person as a reference to saving his life can be seen clearly in Psalm 18:16-17, where the NIV translates the same phrase as "took hold of me." The word "glory" is never used in Hebrew as a synonym for heaven and here refers to an "honorable" resolution to the psalmist's crisis. His difficulties have brought him shame because suffering was considered a sign of sin and God's displeasure (see comments on retribution principle and on afterlife in the sidebar on common concepts in Psalms).

74:4. standards. Standards or statues of the deity were usually carried to symbolize the presence of the gods. Assyrian kings of the ninth and eighth centuries regularly refer to the divine standard that goes before them. Banners were used by the Israelites and others, including the Assyrians, as standards of warfare. In the Egyptian army the divisions were named for various gods (e.g., the division of Amun, division of Seth), and the standards would identify the division by means of some representation of the god. Battle flags and standards were used by the military as signaling devices and rallying points for the army or were hung from city walls (see Jer 4:6). Their colors and insignia designated their allegiance and would in many cases have included a symbol of the god(s) who were expected to participate in the battle along with the human forces (see Jer 50:2). The Assyrian army of Shalmaneser III traveled with its "standards" attached to the royal chariot. When camp was made, they were erected near the royal pavilion and became the focal point for sacrifice and acts of devotion to the gods.

74:6. carved paneling. It is difficult to determine whether this refers to carved panels in the temple or to engravings on some of the bronze or gold pieces connected to the temple. What is clear is that the intricate artwork that embellished this temple (like many others in the ancient world) was being ruthlessly destroyed.

74:13. split sea. There is nothing in this psalm to suggest that reference is being made to the dividing of the Red Sea. The context concerns instead the cosmic battle with the sea that is referred to many times in Psalms. The verb used here is used only here in this form, making precision somewhat difficult. If splitting is intended, it may be parallel to Marduk's splitting of Tiamat ("sea") that is recounted in *Enuma Elish.* Others have translated it as a reference to the churning of the sea that sometimes precedes such battles (see comments on Dan 7:2, 3).

74:14. Leviathan. Leviathan has often been identified as a crocodile, which were found mostly in Egypt (where it symbolized kingly power and greatness), but also sparsely in Palestine. However, the multiple heads here and the fiery breath in Job 41:19-21 make the crocodile identification difficult. Alternatively, Leviathan has been depicted as a sea monster (see Is 27:1). Support for this is found in Ugaritic texts, which contain detailed descriptions of a chaos beast, representing the seas or watery anarchy, in the form of a many-headed, twisting sea serpent who is defeated by Baal. There is a close affinity between the description of Leviathan in Isaiah as a "coiling serpent" and the Ugaritic Baal epic, which speaks of how the storm god "smote Litan the twisting serpent," which is described as having seven heads. In both cases there is a sense of the god of order and fertility vanquishing a chaos monster. In Akkadian literature there is

a creature named *bashmu* that is described as having six tongues and seven mouths. In one text *bashmu* is named alongside other fabulous creatures including one with two heads and one with seven heads. The latter is also pictured on a cylinder seal. This seal shows four of the heads hanging limp while the battle continues with the remaining three. Several other passages in the Old Testament mention Leviathan, but most of them speak in terms of God's creative act that establishes control over watery chaos (personified by the sea serpent). In Isaiah 27:1, however, that struggle between order and chaos occurs at the end of time. It may be that the fall of Satan, portrayed as a seven-headed dragon in Revelation 12:3-9, also echoes the Ugaritic image of Litan as "the tyrant with seven heads." Biblically, Leviathan would therefore most easily fit into the category of "supernatural" creature (like cherubim) as opposed to natural or purely mythological. As such it may appear in extrabiblical mythology, as well as being symbolized by something like a crocodile (as in Ezek 29:3, though Leviathan is not specifically referred to in that context).

75:3. pillars of the earth. Pillars typically represent boundaries. Solomon's temple featured two free-standing pillars on the portico, serving as a boundary to the holy place. The tabernacle used pillars from which the partitions were hung to create a boundary for the courtyard. Even when the pillars supported something (as in the Philistine temple that Samson tumbled), archaeological information suggests they stood as boundaries to porticos or courtyards. In Babylon boundary markers known as *kudurru*s were pillar shaped. Ancient Near Eastern literature has no parallel for the earth being supported by pillars. In Job 26:11 the heavens have pillars, but this comment also occurs in the discussion of boundaries (v. 10). It is more likely that cosmic boundaries of the earth would be those between the living and the dead. The word translated "earth" in this verse sometimes refers to the netherworld. In Akkadian literature the boundaries of the netherworld are represented by gates.

75:8. cup of judgment, spiced wine. The image of wine as a cup of punishment is found often in the Old Testament (Jer 49:12; 51:17; Hab 2:15-16). It is especially clear from Isaiah 51:17 that the cup results in drunkenness (staggering), not death. Those forced to drink this cup lose all control of themselves and all ability to defend themselves (vv. 22-23). They become senseless. During the Hellenistic period wine was often mixed with water so that a greater quantity could be consumed and conversation could continue throughout the meal. However, in earlier periods blended or mixed wine, a more potent intoxicant, was common; it had to be consumed with more moderation (see Judg 9:13; Prov 9:2). In Mesopotamia, where wine was less common until the time of the Assyrian empire, wine was served on special occasions. Sometimes only grape syrup would be available, mixed with honey to create a liqueur.

75:10. horns of the righteous and wicked. See the comment on "horn" in the sidebar on common metaphors in Psalms.

78:2. parables. The term translated here as "parable" is *mashal*. It has a wide range of meanings: "allegory" (Ezek 17:2), "poem" (Num 21:27), "oracle" (Num 23:7). In this case, as in Proverbs 10:1, it refers to an "instruction" from God to the people warning the Israelites specifically but relying on the universality of a wisdom theme so that "all peoples" can be addressed, not just the Israelites. It may also be compared to the dark saying in Habakkuk 2:6 in which the Chaldean aggressors are taunted with the loss of their ill-gotten wealth.

78:9. defeat of Ephraim. There are not enough details given to identify the battle that is being referred to here. Ephraim is often used as a title for the entire northern kingdom of Israel. This could refer to something fairly early in Israelite history such as the defeat to the Philistines that brought about the loss of the ark. This would be supported by the fact that the listing of problems ends with that incident (vv. 60-64). Alternatively, others would go as far into history as the fall of the northern kingdom to the Assyrians in 722.

78:12. Zoan. Zoan refers to the Egyptian city of Dja'net, which the Greeks called Tanis. It became the capital city of the delta region in the Twenty-First Dynasty (twelfth century). It is in the area where the Israelites were settled in Egypt at the time of Moses.

78:14. fire and cloud. This is a reference to the pillar of cloud and fire that accompanied the Israelites in the wilderness. For more information see comment on Exodus 13:21-22.

78:15. water from rock. For information about this incident see comments on Exodus 17 and Numbers 20.

78:24. manna. For information about manna see comment on Exodus 16:4-9.

78:27. quail. For information about quail see comments on Exodus 16.

78:44-51. plagues. For discussion of the plagues see comments on Exodus 7—11.

78:60. abandoned Shiloh. Shiloh (modern Khirbit Seilun), in the heart of the Ephraimite

hills, was the site where Israel convened sacred assemblies before using Jerusalem. Excavations have exposed extensive architecture by the eleventh century B.C. The site lasted throughout the Iron Age, but the sacred structures served as an example of a sanctuary that had come under God's judgment. It is thought to have been overrun by the Philistines in the aftermath of the victory at the Battle of Aphek (1 Sam 4).

78:61. Ark into captivity. For more information in this incident see 1 Sam 4—6 and the comments there.

79:1. historical context. The only time in the Old Testament period in which the temple was defiled and the city of Jerusalem destroyed was in the fall of the city to Babylon in 587 B.C.

79:2. dead as food to birds and beasts. In the Gilgamesh Epic the guardian of the cedar forest, Huwawa, tells Gilgamesh that he should have given his flesh to be eaten by birds of prey and scavengers. For more information see comment on exposure of the corpse in 1 Kings 16:4.

79:5. how long? This question occurs nearly twenty times in Psalms, usually in connection with a lament psalm. It is found also in Mesopotamia as the Sumerian *Lament over the Destruction of Sumer and Ur* asks, "How long will the enemy eye be cast upon my account?"

80:1. enthroned between cherubim. The cherubim are associated with the ark of the covenant, which they were either mounted on or flanked. They appear in ancient art with some regularity, flanking the thrones of kings and deities. The combination of cherubim as throne guardians, chests as footstools and statements in contexts like this one concerning Yahweh being enthroned on the cherubim supports the concept of the ark as representing the invisible throne of Yahweh. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest that the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal bodies with wings.

80:3. face shine upon us. The metaphor "light of God's face" is found in royal letters from the Egyptian city of Amarna and in Ugaritic correspondence. For example, "and the face of the Sun (i.e., Pharaoh) shone brightly upon me" is a statement made by one of the Egyptian king's subordinates. Two small silver scrolls (about one inch long) have been found in the area known as Keteph Hinnom in Jerusalem. They were amulets in a burial cave from the sixth or seventh century B.C., and they contained the benediction from Numbers 6:25, which includes the request that the Lord "make his face shine upon you." At present they represent the oldest example of any text of Scripture. The concept of the shining face of the deity resulting in mercy is found in Mesopotamian documents and inscriptions from as early as the twelfth century B.C.

80:5. bread of tears. The word translated "bread" here can also be used more generally to refer to food. Akkadian texts use the same metaphor, as they contain statements like "for bread I ate bitter tears" or "weeping is my nourishment."

80:11. Sea, River. Given the geographical description it is likely that these are references to the Mediterranean Sea and the Euphrates River.

80:13. boars. Pigs were domesticated very early, but the wild variety continued to thrive in the Near East and are represented in Egyptian and Mesopotamian art.

81:2. tambourine, harp, lyre. See comment on 150:3-5.

81:3. ram's horn at New Moon. Keyed to their use of a lunar calendar, ancient Israel marked the first day of the month, with its "new moon" phase, as a festival day (every twenty-nine or thirty days). As on the Sabbath, all work was to cease (see Amos 8:5), and there were sacrifices to be made (Num 28:11-15). In the monarchy period the king became a prominent figure in these celebrations (see Ezek 45:17). The festival continued to be observed in the postexilic period as well (Ezra 3:5; Neh 10:33). New Moon festivals were also prominent in Mesopotamia from late in the third millennium down to the Neo-Babylonian period in the middle of the first millennium B.C. In light of the parallel with the full moon, however, it is likely that this line refers not to any New Moon celebration but to the Feast of Tabernacles (see next comment).

81:3. feast day at Full Moon. The only pilgrimage feast that potentially spans the New Moon and Full Moon is the Feast of Taber-

nacles. The description in Numbers 29 includes instructions for both days, including the sounding of horns.

81:7. thundercloud, Meribah. There was thunder at Sinai, but it is hard to see how that was an act of rescue, and Meribah preceded it. It is therefore more likely that the thundercloud is seen as the weapon of the divine warrior, Yahweh, who delivered Israel from Egypt (same term used as in Is 29:6). Meribah is where Yahweh gave water from the rock (see comments on Ex 17).

81:16. honey from rock. While most honey spoken of in the Old Testament is the syrup from the date palm, mention of the rock here suggests bees' honey from honeycombs in the rocks.

82:1. assembly judging among gods. In the ancient Near East the major decisions were all made in the divine council. There the gods would consult with one another and share their information and opinions. The familiar picture of a heavenly throne surrounded by the divine assembly is well known from the Ugaritic texts (most notably the epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth-century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly, with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host.

82:5. foundations of the earth. In the Babylonian perception of the cosmos, the earth's foundation is on what is called the *apsu.* This is a primordial watery region under the jurisdiction of the very important deity Enki/Ea. From the standpoint of physical geography, it represents the water table that surfaces, for example, in marshes and springs, as well as being associated with the sweet water cosmic seas and rivers. In *Enuma Elish* one of Marduk's names, Agilima, identifies him as the one who built the earth above the water and established the upper regions. For further information see the comments on Job 38:4-6 and on creation in the sidebar on common concepts in Psalms.

82:6. gods/sons of the Most High. See comment on 82:1.

83:6-8. members of the alliance. The first seven peoples/nations mentioned are all located just to the east and south of Judah. The most uncertain is Gebal, which is the name usually used for Byblos on the far northern Mediterranean coast. An alternative location, however, is found near Petra, which suits this context better. Philistia and Tyre are traditional enemies to the west and north respectively. The mention of Assyria as the formidable member of the alliance suggests a situation somewhere between the mid-ninth century and the end of the eighth century. The mid-ninth century presence in the west was focused in the north, so the eighth-century conflicts are more likely. Judah took the brunt of Assyrian invasions during the times of Sargon and his son, Sennacherib. In the context of Sennacherib's siege of Jerusalem, the Assyrian inscriptions report that the kings of Tyre, Byblos, Ashdod (Philistia), Ammon, Moab and Edom had already submitted before Sennacherib came against Jerusalem. This may have been enough to identify them as co-conspirators. In contrast to attempting to identify a historical situation behind the psalm, the alternative is that this is simply a list of Israel's traditional enemies.

83:9. Midian, Sisera/Jabin. This is a reference to two battles during the Judges period when there was divine intervention on behalf of Israel. For the defeat of Midian at the hands of Gideon, see the comments on Judges 6—8. For Deborah and Barak's victory over King Jabin and his commander, Sisera, see the comments on Judges 4.

83:10. Endor. Endor is not mentioned in the account of these battles in Judges, but it is in the vicinity of both of them. The eastern end of the Valley of Jezreel is about ten miles wide from north to south. The north end is blocked off by Mount Tabor, while the south end is blocked off by Mount Gilboa. The ten-mile stretch between the two is broken into two passes by the smaller Hill of Moreh. Endor is located in the middle of the northern pass, between the Hill of Moreh, where the Battle of Midian took place, and Mount Tabor, where Deborah and Barak mustered their troops.

83:11. kings. The four kings mentioned here are the ones who led the forces of the Midianites against Gideon and the Israelites. Their defeat and execution are recorded in Judges 8.

84:title. sons of Korah. See comment on 42:title.

84:1-2. yearning for dwelling place. The temple, the dwelling place of deity, was a place where one enjoyed favor and blessing. The verb used here is similar to the English idiom of "missing" someone or something. It carries a bit of nostalgia; one longs for the return of a fondly remembered circumstance or situation. Here the pilgrim misses being around the temple.

84:4. dwelling in the Lord's house. In Israel

the priests were the only ones who dwelt within the temple precinct. Throughout the ancient Near East it was considered a privilege to be constantly in the deity's presence. The Babylonian king Neriglissar expressed to his god that he longed to be where he was forever. Another text requests, "May I stand before you forever in worship and devotion." A hymn to Marduk requests that the worshiper may stand before the deity forever in prayer, supplication and entreaty. In the third millennium B.C. Sumerian worshipers tried to accomplish this objective by placing statuettes of themselves in the posture of prayer in the temple. In this way they would be continuously represented in the temple.

84:6. Valley of Baca. If this is a reference to a geographical location, it is obscure. The word *Baca* means "weeping," but this would likewise be difficult to understand. The alternative suggestion is that the word describes a tree, specifically the balsam (see comment on 2 Sam 5:24). None of these help locate the valley or identify its significance.

84:10. doorkeeper in temple. One of the most important tasks assigned to priestly personnel was controlling access to the temple precinct, the inner circle of the "sacred compass" (on this concept see comments on Lev 16:2 and Num 18:1-7). Defiling the sanctuary with impurity required a purification offering ("sin" offering, see comment on Lev 4:1-3) and could bring punishment on the individual as well as the people. The gatekeepers had to prevent unqualified intrusion. There were also many valuable items in the temple precinct. Gold and silver were plentiful and a temptation to the unscrupulous individual who may not have feared divine retribution for trespass or theft of temple property. These valuables also had to be guarded. Misappropriation of that which was sacred required a reparation offering ("guilt" offering, see comment on Lev 5:14-16). The gatekeepers were charged with guarding against these offenses. For the psalmist, however, the gatekeeper was one of those privileged people who had the opportunity to be continuously in proximity to God's presence.

84:11. sun connection. The relationship between sun and shield is that they both offer protection. For the shield that is obvious, but we would not necessarily think of the sun in those terms. Nonetheless Assyrian kings use the metaphor of their protection spreading over the land like the rays of the sun.

85:title. sons of Korah. See comment on 42:title.

87:4. Rahab. Rahab is described as one of the sea monsters slain by God (see Job 26:12; Ps 89:10; Is 51:9). In both the Babylonian and the Ugaritic creation myths the champion deity (Marduk in Babylon and Baal in Ugarit) fights and slays a sea monster and its cohorts in a manner similar to that of Yahweh. In other contexts, as here, Rahab is symbolically used as a designation for Egypt (Is 30:7). The name Rahab has not yet been found in extrabiblical sources.

87:4. list of nations. No historical situation needs to be sought here, because the text is simply listing some of the nations that will be counted among those who acknowledge Yahweh. This list includes the great powers, Egypt (Rahab) and Babylon, the near neighbors, Philistia (southwest) and Tyre (northwest), and the distant nation (Cush or Nubia, south of Egypt).

87:6. register of peoples. In the ancient world royal estate cities typically housed the administration (composed largely of relatives of the king), and their citizens enjoyed certain privileges, including exemption from taxation, corvée labor, military duty and imprisonment, as well as being beneficiaries of the most beautiful and elaborate building projects. Such privileges *(kidinnutu)* were enjoyed by Babylonian cities such as Nippur, Sippar and Borsippa, based on their status as religious centers rather than as political capitals. Political capitals such as Nineveh and Babylon also were endowed with similar status. It is presumed that records would be kept to identify those who enjoyed such privileges. In this verse the psalmist alludes to the privileged status of those born in Zion.

88:title. sons of Korah. See comment on 42:title.

88:title. Heman the Ezrahite. Along with Ethan (in Ps 89), Heman is listed as one of the famous wise men of Solomon's time (1 Kings 4:31) and was appointed one of the Levitical musicians during the time of David (1 Chron 15:17, 19).

88:3. dread of death. This psalm is full of the dread of death as the psalmist laments his condition as one who is doomed to die. This is reminiscent of Gilgamesh in the Gilgamesh Epic, who responds to his own dread of death by going on a quest for immortality. Gilgamesh's actions are motivated by the death of his close friend Enkidu in the same way

that the psalmist despairs over the loss of his close friend (vv. 8, 18).

89:title. Ethan the Ezrahite. This name occurs among the sages of the time of Solomon (1 Kings 4:31) and perhaps among the Levitical musicians during the time of David (1 Chron 15:17, 19). Nothing else is known about him.

89:7. council of the holy ones. In the ancient Near East the major decisions were all made in the divine council. There the gods would consult with one another and share their information and opinions. The familiar picture of a heavenly throne surrounded by the divine assembly is well known from the Ugaritic texts (most notably the epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth-century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host.

89:9. rule over the surging sea. In the Bible as well as in the ancient Near East the sea represents chaos and disorder, as do the sea monsters that live there. The obvious physical struggle between the sea and the land as well as the fierce, seemingly unstoppable energy displayed by the savage sea gave rise to cosmic myths in the ancient Near East. The *Enuma Elish* creation epic from Babylon describes how Marduk vanquishes Tiamat while this goddess of watery chaos is in the form of a dragon. Much of the cycle of stories about Baal in Ugaritic legend involves Baal's struggle against his rival Yamm, the god of the sea. Similarly, the Ugaritic epic has both Anat and Baal claim to have conquered Litan, the seven-headed dragon, and thus gained mastery over the seas. Rule over the sea then concerns Yahweh's sovereign control over the chaotic forces that were thought to constantly threaten the cosmos. That rule is expressed by the calming of the sea (see comments on 65:7 and 107:29).

89:10. Rahab. Rahab is described as one of the sea monsters slain by God (see Job 26:12 and Is 51:9). In both the Babylonian and the Ugaritic myths of creation the champion deity (Marduk in Babylon and Baal in Ugarit) fights and slays a sea monster and its cohorts in a manner similar to that of Yahweh. In other contexts, Rahab is symbolically used as a designation for Egypt (Is 30:7 and Ps 87:4). The name Rahab has not yet been found in extrabiblical sources.

89:12. created north and south. The determination of directions in the ancient world was an uncertain science. The North Star was about twelve degrees south of true north during this period, so paths of stars and constellations were used. In everyday determinations fixed topographical points were used as indicators. In Mesopotamia the east wind was known as the mountain wind because of the mountains to the east. In Israelite terminology north was sometimes, as here, referred to as Zaphon, the name of a mountain in Syria (see comment on Ps 48:2).

89:12. Tabor and Hermon. These are the two most prominent mountains in Israel. Mount Hermon (elev. 9,232 feet in the Anti-Lebanon Range) is at the northern boundary of the land and is often snowcapped. Mount Tabor is at the northeastern end of the Valley of Jezreel. Even though at 1,929 feet it has a much lower elevation than Hermon, it stands in stark isolation as it rises out of the plain. If these two mountains are supposed to be parallel to the north and south of the first line, the author must be located in the Galilee region.

89:14. righteousness and justice as foundation of throne. The idea of righteousness and justice as the most fundamental obligation of the king is expressed throughout the ancient Near East. It is graphically portrayed in Egyptian art, where the symbol of Maat (the deity associated with justice and truth) is the pedestal on which the throne sits.

89:18. king as shield. See comment on "shield" in the sidebar on common metaphors for God.

89:20. anointed with sacred oil. Anointing a king was common practice in some parts of the ancient Near East. Among the Egyptians and Hittites, anointing was believed to protect a person from the power of netherworld deities. Much of the evidence comes from Hittite sources describing enthronement ceremonies. There is no evidence of kings being anointed in Mesopotamia. In Egypt the pharaoh was not anointed, but he anointed his officials and his vassals. His anointing of them established their subordinate relationship to him and indicated the pharaoh's protection on that individual. In the Amarna texts there is reference to a king of Nuhasse (in modern Syria) being anointed by the pharaoh. This model would fit the idea of David being anointed as a vassal to God. In 2 Samuel 2:4 it is the people who anoint David. This anointing suggests some sort of contractual agreement between David and the people he will govern. In Nuzi individuals entering a business agreement anointed one another with oil, and in Egypt oil anointment was used in

wedding ceremonies. For information on royal coronations see comment on 1 Samuel 11:15. The spices which were to be used for anointing purposes were myrrh, cinnamon, cane and cassia (see recipe in Ex 30:23-25). Oil symbolizes the gifts of God to the people and the responsibilities now laid on their leaders through this ceremony. In Israelite practice anointing was a sign of election and often closely related to endowment by the Spirit. Additionally, throughout the ancient world anointing symbolized an advance of a person's legal status. Both concepts of protection and change of status may correlate to the king's anointing, for it would offer him protection on the throne and identify him with the divine realm.

89:24. horn. See the comment on "horn" in the sidebar on common metaphors for God.

89:35-37. royal line lasting forever like sun and moon. In a blessing on the Assyrian king Ashurbanipal one of his courtiers prays that his kingship may be as firmly established as the moon and the sun in the sky. In the Levant the inscription of Azitawadda claims that the name of this king will endure forever like the names of the sun and moon. Another blessing on an Assyrian king says, "Just as heaven and earth last forever, may the name of the king, my lord, last forever in Assyria" (CAD Q:123). This thought is echoed in a hymn to the god Sin, where the deity is petitioned to make the reign of Sargon (eighth-century Assyrian king) last as long as heaven and earth, and his throne firm over the four quarters of the earth. Finally, Ashurbanipal requests of the god Ea that he grant him long life, good health and happiness, and that he make the foundation of his throne secure and as firm as the heaven and netherworld.

Psalms 90—106

Book Four

90:10. life expectancy. Joseph died at the age of 110, considered the ideal age for an Egyptian. Examination of mummies has demonstrated that the average life expectancy in Egypt was between forty and fifty. The Egyptian *Papyrus Insinger* details that ten years are spent in childhood and ten more learning a trade. The writer accounts for ten more in storing up possessions and another ten in gaining wisdom. He thus concludes that two-thirds of one's years are lost to him (suggesting a normal life expectancy of sixty) yet contends that the godly man will still have sixty years remaining of the days assigned by Thoth, making a round one hundred. See comments on Deuteronomy 31:2 and Isaiah 40:6-7.

91:1. rest in shadow. The shadow offers protection and is usually referred to as the shadow of his wings. See comment on 17:8.

91:3. fowler's snare. The very familiar image of fowlers trapping birds in nets and snares may be the origin of this common metaphor (see Josh 23:13; Ps 69:22; Is 8:14). There are numerous examples of this activity from Egyptian tomb paintings, and it also provides the basis for the Sumerian *Stele of the Vultures* (see the comment on Ezek 12:13). There were a number of different techniques used to snare birds. Although hunters might simply use a sling, throwing stick (as in the Beni Hasan tomb painting) or a bow to take down individual fowl, the majority of instances in the biblical text and in ancient art depict large flocks of birds being captured in nets or cages. For instance, the tomb of Ka-Gemmi at Saqqarah (Sixth-Dynasty Egypt) portrays the fowler using a net. Apparently some fowlers also used decoys in their snares to attract the birds along with bait food (attested in Ecclus 11:30).

91:11. guardian angels. In the ancient Near East it was deities rather than angels who served as guardians. Mesopotamians believed that personal gods or family gods offered special care and protection that the great cosmic or national deities would not be bothered with. The Akkadian texts also speak of guardians of well-being and health, as well as guardian spirits. These spirits were assigned to an individual by the deity, just as here. The protection that was expected in the ancient Near East was against demonic powers, who were believed to be the cause of illness and trouble. Related to that was the danger of magical spells and hexes that could be pronounced against someone. The Israelites certainly believed in the reality of the demon world, and many Israelites would not have successfully divorced their thinking from the magical perspectives of their neighbors. Nevertheless, the psalmist does not typically understand the problems he faces in those terms. This is the only place in the Old Testament where there is any reference to guardian angels.

92:title. Sabbath liturgy. This is the only psalm that is designated for the Sabbath. There is little indication in the Old Testament of any special worship ceremonies on the Sabbath. It has been suggested that this psalm ac-

companied the daily offerings on the Sabbath.

92:3. ten-stringed lyre. This is a typical musical instrument of the time and is attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. The lyre is differentiated from the harp by the number of strings. Both are hand-held with frames made of wood. A musical text has been discovered at Ugarit that sheds light on Late Bronze Age music. This text has the chords to be played on a lyre accompanying a Hurrian cult hymn.

92:10. exalting the horn. See the comment on "horn" in the sidebar on common metaphors for God.

92:10. fine oils. Banquet guests in the ancient world were often treated by a generous host to fine oils to anoint their foreheads. This provided not only a glistening sheen to their countenance but also would have added a fragrance to their persons and the room. For example, an Assyrian text from Esarhaddon's reign describes how he "drenched the foreheads" of his guests at a royal banquet with "choicest oils." Oil preserved the complexion in the hot Middle Eastern climate. Both the Egyptian S*ong of the Harper* and the Mesopotamian Gilgamesh Epic describe individuals clothed in fine linen and with myrrh on their head.

93:3-4. comparison to seas. In the Bible as well as in the ancient Near East, the sea represents chaos and disorder, as do the sea monsters that live there. The obvious physical struggle between the sea and the land as well as the fierce, seemingly unstoppable energy displayed by the savage sea gave rise to cosmic myths in the ancient Near East. The *Enuma Elish* creation epic from Babylon describes how Marduk vanquished Tiamat while this goddess of watery chaos was in the form of a dragon. Much of the cycle of stories about Baal in Ugaritic legend involve Baal's struggle against his rival Yamm, the god of the sea. Similarly, the Ugaritic epic has both Anat and Baal claim to have conquered Litan, the seven-headed dragon, and thus gained mastery over the seas.

95:8. Meribah/Massah. These are the terms applied to Rephidim near Sinai to describe the quarrelsome nature of the people. God responded by bringing water from the rock. For more information on the incident see the comments on Exodus 16—17.

97:2. surrounded by clouds. The image of a rampant God storming through the heavens in a cloud chariot is a common one (Ps 68:4; 104:3; Jer 4:13). Such descriptions of storm theophany may be found in the texts that speak of the Ugaritic god Baal. In both the Aqhat epic and in the Baal and Anat cycle of stories, Baal is referred to as the "rider of the clouds." Baal's attributes, commanding the storms, unleashing the lightning and rushing to war as a divine warrior, even appear in the Egyptian El Amarna texts. The characteristics of Yahweh as Creator, giver of fertility and divine warrior share a great deal in common with these earlier epics. One of the ways that Yahweh presents himself to the Israelites as the sole divine power is by assuming the titles and powers of the other ancient Near Eastern gods.

98:1. holy arm. The image of an outstretched or mighty hand or arm is common in Egyptian inscriptions to describe the power of pharaoh. It is used throughout the exodus narratives to describe God's power over pharaoh. In the fourteenth-century B.C. Amarna letters, Abdi-Heba, the governor of Jerusalem, refers to "the strong arm of the king" as the basis for his government appointment. Similarly, the Eighteenth-Dynasty hymn to Osiris equates his growing to majority with the phrase "when his arm was strong," and Haremhab's hymn to Thoth describes the moon god as guiding the divine bark through the sky with "arms outstretched."

98:5-6. worship with instruments. See comment on 150:3-5.

98:8. personification of nature. It is not unusual for the Bible to personify the forces of nature, but they do not embody them with personality as was done in the rest of the ancient Near East. In Mesopotamia, Canaan and Egypt the forces of nature were manifestations of individual deities, who had jurisdiction over that realm of nature and were integrated into it.

98:9. equity. The term here is comparable to that used in Mesopotamia for the declaration of release from debts. In the ancient Near East the freeing of prisoners (from debtors' prison) as an act of justice often occurred in the first or second year of a new king's reign (and then periodically after that). For example, the Old Babylonian king Ammisaduqa (seventeenth century B.C.) cancelled economic debts on behalf of Shamash. One of the ways to bring justice was to bring relief to those who were suffering under debt (usually of no fault of their own).

99:1. enthroned between the cherubim. The cherubim are associated with the ark of the covenant, which they were either mounted on or flanked. They appear in ancient art with some regularity, flanking the thrones of kings and deities. The combination of cherubim as

throne guardians, chests as footstools and statements in contexts like this one concerning Yahweh being enthroned on the cherubim supports the concept of the ark as representing the invisible throne of Yahweh. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal bodies with wings.

99:5. worship at footstool. First of all, it must be recognized that the ark of the covenant was considered the footstool of God's invisible throne (see comment on Ex 25:10-22). Second, the footstool must be understood to be an integral part of the throne, representing the closest accessibility to the king. Third, the imagery of the footstool has significance because it is used to express the king's subordination of his foes (see comment on Ps 110:1). Finally, worshiping at the footstool is another way of expressing the reverence that is shown by prostrating oneself at the feet of God or king. On the black stela of Shalmaneser III, the Israelite king Jehu is portrayed kissing the ground before the Assyrian king. In *Enuma Elish* the tribunal of gods kisses the feet of Marduk after he has put down the rebellion and established himself as head of the pantheon. This was the common act of submission offered to kings and gods. Taking hold of the feet was a gesture of self-abasement and entreaty. This gesture occurs in a wide range of Akkadian literature as fugitives or supplicants take hold of the king's feet to demonstrate their submission or surrender and make their petitions.

103:12. east and west. In an Egyptian hymn to Amun-Re the deity is praised for his judgment of the guilty. As a result of the god's discernment the guilty are assigned to the east and the righteous to the west.

103:20-21. mighty ones, heavenly hosts. The "host of heaven" in the ancient Near East referred to the assembly of the gods, many of whom were represented by celestial bodies (whether planets or stars). The Bible sometimes uses the phrase to refer to the illegitimate worship of these deities (see comment on Deut 4:19). On other occasions, the phrase is used for Yahweh's angelic council (see comment on 2 Chron 18:18). A third type of usage treats the term as a reference to rebel angels (perhaps in Is 24:21; commonly in the intertestamental literature). Finally, it can refer simply to the stars, with no personalities behind them (Is 40:26). In the ancient Near East the major decisions were all made in the divine council. There the gods would consult with one another and share their information and opinions. The familiar picture of a heavenly throne surrounded by the divine assembly is well known from the Ugaritic texts (most notably the epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth-century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host. Yahweh is often portrayed as the "Lord of Hosts"—the commander of the heavenly armies.

104:1-35. comparison to *Hymn to the Aten*. There is a famous composition of the Egyptian king Akhenaten dating to the fourteenth century B.C. that has a number of similarities to Psalm 104, mostly in wording and content. The hymn praises the god Aten, a sun god, for all of his care over creation. One could find some of the same motifs and analogies in other hymns to other sun gods. Once the psalmist determined to use solar motifs in a hymn to Yahweh, it was inevitable that parallels would occur. Sun worship was one of the syncretistic deviations that characterized preexilic Israel (see comments on 2 Kings 23:11 and Ezek 8:16), and adoption of sun motifs (both literary and iconographic) has been attested (in Old Testament see also Ps 84:11; Hab 3:4; Mal 4:2). Nevertheless, there is nothing syncretistic in the beliefs expressed by this psalm. It is only the imagining of Yahweh in solar terms that brings out the similarities.

104:2. garment of light. In Egyptian worship of Aten the sun disk itself was considered to be the deity. As a result the imagery of wrapping oneself in light would have been particularly appropriate to Atenism but not to the worship of other sun deities. Nevertheless, this phrase is not used in the Aten hymn. Akkadian literature speaks of celestial gods wearing the garment of heaven, but this refers

to clouds. Another passage may be more relevant in which Marduk is clothed by another deity with radiance.

104:3. beams of upper chambers. In the ancient world there were several levels of heavens, and they were understood as having floors, walls and roofs (see comment on Ex 24:10). In Mesopotamian texts *(Enuma Elish)* the waters of the heavens were made from one half of Tiamat's body when Marduk defeated her and set up the cosmos. These waters are identified with the highest level of the heavens, Anu's heaven (Anu was the ancient chief deity, before Enlil or Marduk). If this imagery is being used, Yahweh is seen as inhabiting the highest heavens, the beams being the roof beams of the upper story of his cella. In the Mesopotamian texts the cella of the chief god (Marduk) is in the middle heavens, but the description of Anu's abode in the highest heavens likewise presupposes a cella.

104:3. cosmos as temple. The psalmist's attempt to express God's complete control over all creation includes a multistoried or many-chambered sanctuary or palace in the heavens (cf. Ps 78:69; Is 66:1). In the biblical and ancient Near Eastern view the cosmos was a temple and the temple was a microcosmos. The cosmos can therefore be described in architectural terms as a temple would be.

104:3. riding the clouds. The image of a rampant God storming through the heavens in a cloud chariot is a common one (Ps 68:4; Jer 4:13). Such descriptions of storm theophany may be found in the texts that speak of the Ugaritic god Baal. In both the Aqhat epic and in the Baal and Anat cycle of stories, Baal is referred to as the "rider of the clouds." Baal's attributes, commanding the storms, unleashing the lightning and rushing to war as a divine warrior, even appear in the Egyptian El Amarna texts. The characteristics of Yahweh as Creator, giver of fertility and divine warrior share a great deal in common with these earlier epics. One of the ways that Yahweh presents himself to the Israelites as the sole divine power is by assuming the titles and powers of the other ancient Near Eastern gods.

104:4. winds, flames as messengers. In both *Enuma Elish* and the *Tale of Anzu* the winds carry the news of the victory by the hero deity over the chaos monster. In the former, the north wind carries the blood of Tiamat as tidings of her demise; in the latter, the feathers of the defeated Anzu are carried on the wind to Enlil. Flames of fire can refer to the destructiveness of God's wrath (as can winds for that matter).

104:6-9. watery chaos. This does not refer to the flood but to the initial creation narrative where the dry land emerged as all of the waters were assigned their places. The defeat of the forces of chaos, personified in the primordial sea, was one of the most common elements of ancient Near Eastern cosmology (Baal defeating Yamm in Ugaritic texts; Marduk defeating Tiamat in *Enuma Elish).*

104:9. boundary for waters. Marduk, after having defeated Tiamat, created the seas and placed guards to keep back the waters. The Babylonian *Atrahasis Epic* refers to a bolt of the sea in the possession of the god Ea (Enki). Other texts speak of locks of the sea. One of the main tasks of the head of the pantheon was to keep the sea in check so that chaos would be restrained and order would prevail. One of the earliest reflections of this motif is found in the *Myth of Ninurta and Azag*, where Ninurta builds a stone wall to contain the waters.

104:19. moon marking seasons. In contrast to the sun, which marks days by its rising and setting, the phases of the moon marked the months, which are linked to the seasons. By early in the first millennium the ancients were well aware of the difference between the solar cycle (365+ days) and the lunar cycle (354+ days). They also had a growing awareness of calendrical reckoning by the sequence of stars and constellations rising and setting. The moon remained the main determiner of months and seasons, though supplementary months were added every three years to readjust the months to the solar cycle. If only lunar calculations were used, the months would gradually drift away from their festivals that marked the planting and harvest times (which, of course, were determined by the sun).

104:26. Leviathan. See comment on 74:14.

104:28. open hand. In the Egyptian reliefs showing the worship of Aten, the deified sun disk is portrayed with numerous arms reaching from it, each one with a hand at the end of it symbolizing the giving of blessings and favor.

104:32. volcanic activity in the Near East. People in the ancient Near East were aware of the phenomenon of volcanoes but had little chance to observe them. Both Mesopotamia and Egypt are river cultures, with few mountains nearby, let alone active volcanoes. Ararat is one of the active volcanoes in the Fertile Crescent (but it has not had an eruption in historic time). Additionally there are several in Syria and quite a few along the southern rim

of Turkey. Most significantly, the Aegean features half a dozen volcano sites, including at least one that had an eruption during the Old Testament period (Santorini, 1650 B.C.).

105:13-15. patriarchal wanderings. Abraham left Ur of the Chaldees in either northern or southern Mesopotamia (see comment on Gen 11:28) and traveled to Canaan. He had incidents in Gerar and Egypt. Jacob traveled to Paddan Aram in northern Mesopotamia and back again to Canaan. Joseph and his whole family journeyed to Egypt and sojourned there. God's care for them was evident in each of their lives.

105:18. shackles and irons. The shackles around the ankles chaining the feet together are clear enough. Since the other instrument goes around the neck, it must be an iron collar. These were at times used to link prisoners together. Assyrian inscriptions from the ninth and eighth centuries depict captives being transported or laboring with wooden yokes around their necks.

105:23. land of Ham. This is an alternate name for Egypt, where some of the descendants of Ham, the son of Noah, settled.

105:29-36. plagues. For discussion of the plagues see comments on Exodus 7—11.

105:39. cloud. This is a reference to the pillar of cloud and fire that accompanied the Israelites in the wilderness. For more information see comment on Exodus 13:21-22.

105:40-41. quail, manna, water. For information concerning these miraculous acts of provision see comments on Exodus 16—17.

106:7. Red Sea. For more information see comments on Exodus 14—15.

106:15. wasting disease. See Numbers 11:33. There is no information available on the nature of this disease. See comment on Numbers 25:8.

106:17. Dathan and Abiram. See comments on latter part of Numbers 16.

106:19. Horeb. Horeb is another name for Mount Sinai and is most likely located in the southern section of the Sinai peninsula. For more detailed discussion see comment on Exodus 19:1-2.

106:19-20. calf/bull. See comments on Exodus 32.

106:28. Baal of Peor. This is a reference to the incident in which the Israelites got involved with the women of Moab. See Numbers 25 and the comments there.

106:33. Moses' rash words. Moses' offense took place during the second incident where water came forth from the rock. See Numbers 20 and the comments there.

106:37. sacrificed to demons. This word for demon is used elsewhere in the Old Testament only in Deuteronomy 32:17, but it is a well-known type of spirit/demon in Mesopotamia, where the term *(shedu)* describes a protective guardian mostly concerned with the individual's health and welfare. It is not the name of a deity but a category of being (like cherub would be in the Old Testament). A *shedu* could destroy one's health just as easily as it could protect it, so sacrifices to keep it placated were advisable. They are depicted as winged creatures (similar to the cherub, see comments on Gen 3:24 and Ex 25:18-20), but they do not have idols (as the gods have idols) by which they are worshiped (see comment on Deut 4 for how this worked). For information concerning child sacrifice see comments on Genesis 22:1 and Leviticus 18:21.

106:38. idols of Canaan. Gods of the Canaanites included El, Baal (Hadad), Dagon and Anat.

Psalms 107—150

Book Five

107:10. exiles in prisons. While most of those who had been deported to Babylon would not have been imprisoned, there would have been some political prisoners. Pits were used as prisons in most of the ancient Near East. The modern idea of a prison where prisoners were to be reformed into good citizens was foreign to the ancient world. Those in debt, criminals awaiting trial and political prisoners were held in confinement of one sort or another.

107:16. gates of bronze, bars of iron. The Greek historian Herodotus described Babylon as having "one hundred gates in the circuit of the wall, all of bronze with bronze uprights and lintels." Large bronze gates have been excavated at the Assyrian period site of Balawat, giving a glimpse of what the Babylonian walls may have been like. Gates were locked by means of a bar slid across the gateway, and iron would obviously be the most difficult to break (see comment on Deut 33:25).

107:18. gates of death. Sheol was believed to be like an earthly city in that it contained houses and even a city wall (primarily to keep in its inhabitants). In the *Descent of Ishtar* the netherworld has a gate complex with seven gates and gatekeepers at each one to control access.

107:23-30. storms on the sea. The Babylonian

hymn to Shamash also has a section in which Shamash is seen as rescuing merchants (and their goods) from storms at sea. But it does not speak of Shamash either sending the waves or stilling the storm, only of watching over the traveler and saving his life.

107:29. stilling the storm. The sea was the most powerful image of uncontrolled chaos known to the ancient world. In the chaos combat motif featured in the mythologies as well as in the Old Testament, the forces of cosmic chaos were most frequently represented in the sea. Creation is sometimes spoken of as overcoming those forces and bringing order and control to the cosmos. In this context it is not the primordial past that is under discussion but Yahweh's ability to (again) bring the sea under control and restore order for these merchants. This idea of transforming cosmic acts into the historical realm occurs also in incidents like the Israelite crossing of the Red Sea, when the sea was harnessed and controlled by Yahweh to do his bidding. It should not be missed that this was a significant element in Jesus' calming of the sea as well.

107:33-35. world upside down. In the world-upside-down motif, all that is considered most consistent and reliable is jeopardized. The concept can be applied to the cosmic realm (sun growing dark), the natural realm (mountains being leveled), the political realm (empires overthrown), the social realm (poor becoming rich) and the animal realm (lion and lamb together). It is often used in prophetic literature in connection with the Day of the Lord and coming judgment. The Babylonian epic of Irra is roughly similar in that it describes a reversal of Marduk's creation of order out of the original primeval chaos.

108:2. awaken the dawn. Dawn *(šaḥar)* was often personified in the Old Testament and is known from Phoenician and Ugaritic inscriptions, as well as being referred to at Emar. In Akkadian dawn is personified under the name Sheru. There are no references to any of these roles in the mythology nor to rituals intended to awaken the dawn.

108:7. Shechem, Valley of Succoth. The site of Shechem has been identified with Tell Balatah, east of modern Nablus and thirty-five miles north of Jerusalem. Perhaps because of its proximity to two nearby peaks, Mount Gerizim and Mount Ebal, it has had a long history as a sacred site. Shechem is known from many ancient sources, including the Egyptian records of Sen-Usert III (nineteenth century B.C.) and the El Amarna tablets (fourteenth century B.C.). Nearly continuous occupation is evidenced through the second and first millennia, demonstrating the importance of this strategic city on the highway network running north from Egypt through Beersheba, Jerusalem and on to Damascus. It was Abram's first stop in Canaan. The fertile soil in this area promoted agriculture as well as good grazing. Succoth is situated east of the Jordan River near its confluence with the Jabbok River (Judg 8:5). A number of archaeologists have identified it with the site of Tell Deir 'Alla, based on Egyptian records (the stele of Shishak) and cultural remains dating from the Chalcolithic to Iron Age II. The name, which means "booths," would be appropriate for the temporary housing of this region's mixed population of pastoral nomads and miners (evidence of smelting has been found in Iron I levels). It is located in the valley just west of the highlands of Gilead as the land comes down to the Jordan.

108:8. helmet, scepter. The term translated "helmet" is not used elsewhere as a reference to armor or headgear. It only occurs in the parallel Psalm 60:7. The Hebrew text refers to "a fortress for my head" or perhaps "my chief fortress." The scepter is now often identified as a ceremonial engraved mace that kings are sometimes portrayed holding in their hands as a symbol of office. It is referred to elsewhere in Genesis 49:10 and Numbers 21:18.

108:9. Moab as washbasin. The container referred to here is usually used for cooking but is a multipurpose pot/basin that comes in various sizes. Washbasins were typically used for ritual washing or ritual bathing and occur in lists of fine gifts in the Amarna tablets. The imagery here is obscure.

108:9. sandal tossed on Edom. Sandals were the ordinary footwear in the ancient Near East, but they were also a symbolic item of clothing. This may have been due to the fact that land was purchased based on whatever size triangle of land one could walk off in an hour, a day, a week or a month (1 Kings 21:16-17). Land was surveyed in triangles, and a benchmark was constructed of fieldstones to serve as a boundary marker (Deut 19:14). Since they walked off the land in sandals, the sandals became the moveable title to that land. By removing the sandals of her guardian a widow removed his authorization to administer the land of her household. Land transfers in the Nuzi texts also involved replacing the old owner's foot on the land with that of the new owner.

108:10. fortified city. Since the "fortified city" is parallel to Edom, one is inclined to think of the major fortified city in Edom. This would be Bozrah, which name is built from the same

root as the word used here for fortified city. Bozrah was the capital of ancient Edom and is to be identified with Buseirah in the northern region of the country. It guards a portion of the king's highway and is fairly close to the copper mines found five miles to the southwest at Wadi Dana. Excavations demonstrate seventh- and sixth-century levels from the most heavily fortified and largest settlement in the area.

108:11. God going out with armies. In the divine warrior motif, the deity fights the battles and defeats the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed also as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. In most situations prayers would be made and omens asked to assure the god's presence. Standards or statues of the deity were usually carried to symbolize their presence. Assyrian kings of the ninth and eighth centuries regularly referred to the divine standard that went before them. The ark, as Yahweh's standard, represented the Lord as clearing the way before the Israelites and leading the armies into Canaan. This concept is not very different from the Assyrian belief that the gods empowered the weapons of the king and fought before him or at his side. Nearly every army in the ancient Near East included priests and diviners (as seen in the Mari texts), prophets (2 Kings 3) and portable sacred objects (Assyrian annals of Shalmaneser III [858-824 B.C.]). In this way the god(s) could be consulted on the battlefield or invoked to lead the soldiers to victory. The psalmist here is invoking God's aid against their enemies in battle.

108:13. trampling enemies. Egyptian kings in the early third millennium B.C. are depicted as trampling over the corpses of defeated enemies. For instance, Narmer, possibly the one who unified Egypt, is seen with a mace smashing enemies and stepping over them. Likewise, the Sumerian kings from Lagash are depicted as marching over the dead bodies of their enemies. The tradition of trampling on one's enemies continued on into the first millennium in Assyria and Babylonia.

109:6-15. relationship between imprecations and hex/spell. This psalm is known as an "imprecatory" psalm because it calls down curses (imprecations) on the enemy. In the ancient Near East such curses were enhanced or activated by magical rituals and spells, but this sort of practice would have been unacceptable in the biblical system. Imprecatory psalms can be best understood against the background of the retribution principle (see discussion in the sidebar on common concepts). Since God's justice was seen as requiring punishment proportional to the seriousness of the sin, the psalmist is calling down the curses that would be appropriate if justice were to be maintained. These are the same magnitude of curses that God pronounces on his enemies (see Is 13:15-16). The forceful language of this passage contains aspects of an East Semitic curse formula that relies on the deity to carry out vengeance on the enemy nations. An example of this type of indirect curse is found in the vassal treaties of the Assyrian king Esarhaddon as he calls on a host of gods to do the treaty breaker harm. It is also employed, with the addition of ritual acts of execration, in the Aramaic Sefire inscription: "Just as this bow and these arrows are broken, so may Inurta and Hadad break the bow of Mati'el and the bow of his nobles." The psalmist indirectly curses by imprecation, calling on God to "laugh at them" in their puny efforts to menace Israel. He does not employ magical incantations or execration rituals against them but instead relies on God to render these peoples impotent—breaking their power and their weapons of destruction (see Jer 49:35; 51:56; Ezek 39:3).

109:7. prayers condemning. From the context it could be concluded that this refers to a petitionary prayer in a courtroom situation. Such prayers could be accompanied by oaths of innocence (such as Job's in Job 31). If the party were not truly innocent, such an oath would be a basis for divine punishment.

109:24. fasting. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. Presumably the principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and the humbling of oneself before God (Ps 69:10).

110:1. seat at the right hand. A fully armed warrior would hold his weapon in his right hand and his shield in his left. The person to the right of a king would have the privilege of defending him. For a king to put someone

there would be an affirmation of trust and therefore an honor. In contrast, when the Lord takes up his position at someone's right hand, as in Psalm 109:31, he is in a position to offer defense with his shield. A statue of Pharaoh Horemhab (fourteenth century B.C.) portrays him seated at the right hand of the god Horus.

110:1. enemies a footstool. The Assyrian king Tukulti-Ninurta I (thirteenth century) "puts his foot on the neck of" individual conquered kings as well as (symbolically) on that of conquered lands, clarifying that they have thus become his footstool. This is graphically depicted in a tomb painting from the fifteenth century B.C. showing Thutmose IV seated on the lap of his mother (?) with his feet resting on a box that is filled with enemies laid out in a pile. For further information see comment on 108:13.

110:4. priestly order of Melchizedek. Melchizedek was the priest-king of Jerusalem in the time of Abraham (see comments in Gen 14). As a result Jerusalem had a history of a king exercising some of the prerogatives of priestly office. For evidence of this being practiced in David's family see comment on 2 Samuel 8:18. It was not unusual in the ancient world for the king to hold office as the highest ranking priest as well (compare the American president as the commander in chief of the armed forces; or the sovereign of England as the titular head of the Church of England).

114:2. Judah as sanctuary. This reflects a temple-as-state imagery. God's throne was in the temple just as the king's throne was in his palace. God and king reigned over the country from their respective thrones. This concept goes all the way back into earliest recorded history, as the temples served as the earliest administrative centers for the state. In this way it can be seen that the two lines of this verse are parallel in that the sanctuary is the central feature in the "dominion" (kingdom).

114:4. mountains skipping. In the Ugaritic tale concerning the building of Baal's palace, his enthronement is preceded by his voice thundering forth, with the result that the high places of the earth leap or quake. Similarly in a hymn to Marduk his thundering voice makes the earth quake. The Hebrew verb translated "skip" is often thought to describe a frolicking or gamboling type of motion but is more likely the undulating appearance of a flock of sheep or goats moving along a path (see comment on 2 Sam 6:14-21). This would be an appropriate image to describe the heaving of the earth in an earthquake.

115:4-7. idol ideology. Idols came in a variety of shapes and sizes in the ancient Near East. They were typically carved of wood and overlaid with hammered out sheets of silver or gold. Basically human in appearance (except those from Egypt which combined human and animal characteristics), they had distinctive, even formalized, poses, clothing and hairstyles. Images of deity in the ancient Near East were where the deity became present in a special way, to the extent that the cult statue became the god (when the god so favored his worshipers), even though it was not the only manifestation of the god. Rituals were performed to bring the god to life in its idol. As a result of this linkage, spells, incantations and other magical acts could be performed on the image in order to threaten, bind or compel the deity. In contrast, other rites related to the image were intended to aid the deity or care for the deity. The idols then represented a worldview and concept of deity that was not consistent with how Yahweh had revealed himself. The idol was not the deity, but the deity was thought to inhabit the image and manifest its presence and will through the image. Archaeologists have found very few of the life-sized images that the texts describe, but there are renderings of them that allow accurate knowledge of details. The images of deities in Mesopotamia were fed, dressed and even washed daily. Food sacrifices were brought to the deity on a daily basis (which were no doubt eaten by the temple technicians). Other attendants were required to dress and undress the statue, and still others were employed to wash the statue and transport it in times of celebration.

116:13. cup of salvation. The connection in this context to the payment of vows in the temple suggests that a libation is being poured out as testimony is given of God's goodness and protection. Libations were a common form of thanksgiving in the ancient world, as depicted on Egyptian, Phoenician and Mesopotamian reliefs. The libation represents the deliverance (salvation) afforded by deity and also accomplishes deliverance from the vow.

116:14. fulfilling vows. Vows are voluntary, conditional agreements that were common in most of the cultures of the ancient Near East, including the Hittite, Ugaritic, Mesopotamian and, less often, Egyptian. In the ancient world the most common context for a vow was when a request was being made to deity. The condition would typically involve God's provision or protection, while that which was vowed was usually a gift to deity. The gift would most frequently take the form of a sacrifice, but other types of gifts to the sanctuary or priests would be options. Fulfillment of a

vow could usually be accomplished at the sanctuary and was a public act. In Ugaritic literature King Keret makes a vow in requesting a wife who could produce offspring. In return he offered gold and silver corresponding to his bride's weight.

118:22. stone rejected by builders. Israelite Iron Age architectural design made increasing use of cut-stone masonry over the rough boulders and rubble construction of earlier periods. In order to provide stability and to bind two adjoining walls together, a finely shaped block of stone was inserted that became the cornerstone. It would have been a larger stone than those normally used, and its insertion often required special effort or rituals. Its large, smooth surface was a natural place for inscribing religious slogans, the name of the architect or king responsible and the date of construction. It is possible that the cornerstone could also serve as the foundation stone. For information on the latter see the next entry and comments on Ezra 3:3 and 3:10.

118:22. capstone. The cornerstone or, better, the foundation brick is always significant in temple building and restoration. One of the most detailed temple-building accounts in ancient Near Eastern literature describes Gudea's construction of a temple for Ningirsu around 2000 B.C. The ceremony concerning the premier brick shows its centrality to the building procedure.

118:27. festal procession. To represent the abundance and lushness of the land, Israelites were instructed to celebrate the Feast of Tabernacles, waving branches and decorating their booths with fruit (citron) as well as leaves and branches from willow and palm trees. The festal occasion probably included dancing and processions carrying bundles of the leafy branches. In this way the people acknowledged the abundance provided by God and communally celebrated the visible fulfillment of the covenant. Ancient Near Eastern texts also describe the itineraries of priestly processions. These differed in that they took the images of gods, along with their various divine accoutrements, from one town to another within a kingdom. This allowed the god to visit shrines, make inspection tours of facilities owned by the principal temple community and participate in annual festivals outside the capital. These sacred processions paraded the images and symbols of the gods through the city streets to their shrines, where sacrifices, sacred dancing and other cultic activities would take place.

119:1. acrostic. The divisions every eight verses that are marked in most translations represent the consecutive letters of the Hebrew alphabet. Each verse in the set of eight begins with the same Hebrew letter. This is known as an acrostic. For more information on acrostics see the sidebar on common concepts.

119:72. thousands of pieces of silver and gold. This is a way for the psalmist to express a fortune. A common wage would have been about ten shekels of silver a year.

119:83. wineskin in the smoke. Though the skin bag referred to here once carried wine (1 Sam 16:20), it is not the vessel used for fermenting the wine but that used for carrying various liquids (for example, milk in Judg 4:19). The Akkadian cognate *(nadu)* is used for a waterskin (often of sheep hide), and the Gibeonites may well have used these bags for that purpose (Josh 9:4, 13). The word translated "smoke" is also unusual and could possibly refer to ash rather than smoke. In Genesis 19:28 it fills the air after the destruction of Sodom and Gomorrah and is said to come out of a furnace. In Psalm 148:8 it is paired with snow in a series of destructive forces of nature (in which case it would refer to the ash from a volcano, see 104:32). Snow and ash (different word) are also compared in Psalm 147:16. Here in Psalm 119 the metaphor that would fit the context is one of waiting with no apparent response. Placing a skin sack in ash would reflect a situation where low-level heat was required over a sustained period of time, such as in the production of yogurt. Though ghee was the more common dairy product (see comment on Is 7:15), yogurt was known in antiquity.

120:4. burning coals of the broom tree. The trunk of the broom tree provided hard wood that made excellent charcoal.

120:5. Meshech, Kedar. Meshech, a central Anatolian kingdom, was conquered by Sargon II of Assyria and invaded by the Cimmerians from southern Russia. It is thought that they were incorporated under Lydian control after the conclusion of the Cimmerian wars. They were known to the Assyrians as Mushku and to Herodotus as the Moschi. At the end of the eighth century the king of Mushku was Mita, known to the Greeks as Midas, the king with the golden touch. His tomb has been identified at Gordion and excavated. Kedar, the second son of Ishmael (Gen 25:13), was the

name of a tribe that flourished from the eighth to the fourth centuries B.C. The tribe is known from Assyrian and Late Babylonian texts as Qadar. The personal names of the Kedarites appear to have been related to the southern branch of the Semitic languages. These tribal peoples were based in the Arabian peninsula and often made their way into the Levant via the Sinai. They worked as sheep breeders and caravaneers at least as late as the Hellenistic period. Since these places are in opposite directions from Israel, they are probably paired as representatives of remote and barbaric places.

121:1. help in hills. The NIV properly captures the idiom that sees the hills (mountains) as a place where one would need help. As a pilgrim the psalmist is intimidated by the mountains (because of the rigor of the treacherous walk and the dangers that may lurk there in the form of robbers or wild beasts) and seeks divine protection on his journey.

121:3-4. sleeping. In Mesopotamian literature a sleeping god is one who is unresponsive to the prayers of the person who is calling out for help. Enlil is said to be awake even when he appears to be asleep. In a Babylonian prayer the worshiper wonders how long the deity is going to sleep.

121:6. harm from sun and moon. Anyone who has traveled in the Middle East knows the threat of dehydration and sunstroke. Many of the roads to Jerusalem exposed the traveler to oppressive heat. Just as too much exposure to the sun could be dangerous, it was believed in the ancient world that too much exposure to the moon could pose a health threat. Medical diagnostic texts from first-millennium Babylonia and Assyria identify several conditions as a result of the "hand of Sin" (Sin was the moon god), including one in which the patient grinds his teeth and his hands and feet tremble, and another that has all the symptoms of epilepsy. English words like "moonstruck" and "lunatic" show that such belief persisted into relatively recent times.

122:5. thrones for judgment. As the highest judicial authority in the land, the king periodically held audience to hear cases that were being appealed. A throne was set up precisely for this purpose, either in an audience hall in the palace complex or at the main gate of the city. In the excavations at Dan just such an area has been uncovered at the entrance to the gate, where the king would have sat on a canopied throne in order to pass judgment.

124:7. fowler's snare. The very familiar image of fowlers trapping birds in nets and snares may be the origin of this common metaphor (see Josh 23:13; Ps 69:22; Is 8:14). There are numerous examples of this activity from Egyptian tomb paintings, and it also provides the basis for the Sumerian *Stele of the Vultures* (see the comment on Ezek 12:13). There were a number of different techniques used to snare birds. Although hunters might simply use a sling, throwing stick (as in the Beni Hasan tomb painting) or a bow to take down individual fowl, the majority of instances in the biblical text and in ancient art depict large flocks of birds being captured in nets or cages. For instance, the tomb of Ka-Gemmi at Saqqarah (Sixth-Dynasty Egypt) portrays the fowler using a net. Apparently some fowlers also used decoys in their snares to attract the birds along with bait food (attested in Ecclus 11:30).

126:4. streams in the Negev. The wadis of Palestine are similar to overflowing rivers in the rainy season. However, they have little or no water during the summer season, precisely the time when water is most needed. In the arid desert region south of Jerusalem the periodic flooding of these wadis brought relief and life.

129:6. grass on the roof. The uppermost roof on the common dwelling places in Israel would have been constructed of beams laid across the walls intertwined with reeds and grasses. The whole roof would then be plastered with mud to fill in the gaps and make them somewhat watertight. Any lingering seeds in the grass or mud might briefly sprout but would quickly die for lack of roots.

132:6. Ephrathah, Jaar. Ephrathah is identified in several passages as the home territory of David (Ruth 4:11; Mic 5:2). The "fields of Jaar" are generally considered to be Kiriath Jearim, where the ark stayed for twenty years. See comment on 1 Samuel 6:21.

132:7. worship at footstool. First of all, it must be recognized that the ark of the covenant was considered the footstool of God's invisible throne (see comment on Ex 25:10-22). Second, the footstool must be understood to be an integral part of the throne, representing the closest accessibility to the king. Third, the imagery of the footstool has significance because it is used to express the king's subordination of his foes (see comment on Ps 110:1). Finally, worshiping at the footstool is another way of expressing the reverence that is shown by prostrating oneself at the feet of God or king. On the black stela of Shalmaneser III the Israelite king Jehu is portrayed kissing the ground before the Assyrian king. In *Enuma Elish* the tribunal of gods kisses the feet of Marduk after he has put down the rebellion and estab-

lished himself as head of the pantheon. This was the common act of submission offered to kings and gods. Taking hold of the feet was a gesture of self-abasement and entreaty. This gesture occurs in a wide range of Akkadian literature as fugitives or supplicants take hold of the king's feet to demonstrate their submission or surrender and make their petitions.

132:17. horn for David. See comment on "horn" in the sidebar on common metaphors.

132:17. lamp for anointed one. See comment on 18:28.

133:2. oil on the head. Banquet guests in the ancient world were often treated by a generous host to fine oils for anointing their foreheads. This provided not only a glistening sheen to their countenance but also would have added a fragrance to their persons and the room. For example, an Assyrian text from Esarhaddon's reign describes how he "drenched the foreheads" of his guests at a royal banquet with "choicest oils." Oil preserved the complexion in the hot Middle Eastern climate. Both the Egyptian *Song of the Harper* and the Mesopotamian Gilgamesh Epic describe individuals clothed in fine linen and with myrrh on their head. Anointment of priests used the finest oil and would symbolize the gifts of God to the people and the responsibilities now laid on their leaders through this ceremony. In Israelite practice anointing was a sign of election and often closely related to endowment by the Spirit. See the comment on Leviticus 8:1-9.

133:3. dew of Hermon. The word translated "dew" is also used of light rain or drizzle. Hermon obviously got plenty of moisture because of the streams that flowed from it, a symbol of its life and prosperity. Zion is here seen as the beneficiary of the same abundance.

134:1. night service in the temple. The verb that the NIV translates "minister" has to do with taking up one's post or station. This need not refer to a ritual service of some sort but simply to those priestly personnel who were assigned guard duty at night. The temple was guarded twenty-four hours a day so that neither its sanctity would be violated nor its valuables stolen. Even such "mundane" duty gave one the opportunity of worship. On the other hand, night rituals cannot be entirely ruled out. Night rituals would have been common in the ancient Near East, but there the worship of the moon god and astral deities was of central significance. In one Assyrian prayer to the moon god that was recited in conjunction with the New Moon celebration, the worshiper speaks of spreading out a pure incense offering of the night. Interestingly, the Assyrian hymn is a *shuilla,* a "lifting of the hand" composition.

135:7. clouds from ends of earth. In the Sumerian composition titled *Enki and the World Order,* Ishkur, the weather god, opens the gates of heaven. This was the way Mesopotamians understood where clouds came from. In Mesopotamian cosmology the "ends of the earth" refers to the horizon. This is where the gates of heaven are located because the sun is seen as setting there as it goes through the gates of heaven.

135:7. wind storehouses. The Canaanites and Babylonians attributed manifestations of storms to Adad, the storm and wind god. However, Jeremiah claimed that Yahweh was solely responsible for atmospheric phenomena. He used the imagery of Yahweh having storehouses of rain, hail and snow, which are set in motion by the wind, presumably instigated by his breath (also see Deut 28:12; Ps 33:7; Job 38:22). The word translated "storehouses" can be used to refer to treasuries that would store precious objects, as well as royal weapons. Hail, snow, wind, thunder and lightning are often seen as the weapons that God uses to defeat his enemies. Likewise storehouses could serve for the storage of raw materials such as barley, dates, grain or tithes in general. In the same way God rations out the products from his storehouses as necessary. Cosmic storehouses are not common imagery in the ancient Near East.

135:11. Sihon and Og. These battles are initially recorded in Numbers 21. Sihon is only known from the biblical records, and archaeology has little to offer regarding his capital city or his kingdom. There is also no extrabiblical information from historical sources or archaeology to shed light on Og.

135:15-17. idol ideology. See comment on 115:4-7.

136:6. earth spread on waters. In the Babylonian perception of the cosmos, the earth's foundation is on what is called the *apsu.* This is a primordial watery region that is under the jurisdiction of the very important deity Enki/Ea. From the standpoint of physical geography it represents the water table that surfaces, for example, in marshes and springs as well as being associated with the sweet water cosmic seas and rivers. In *Enuma Elish* one of Mar-

duk's names, Agilima, identifies him as the one who built the earth above the water and established the upper regions. For further information see the comment on creation in Psalms in the sidebar on common concepts.

136:19-20. Sihon and Og. See comment on 135:11.

137:2. poplars. A poplar is a willow-type tree that grows best by streams or rivers (such as the Tigris or Euphrates in Babylon). The Euphrates poplar was native to the region and had low-hanging branches and limbs. For information on harps see comment on 33:2.

137:7. Edomites' action. The principal theme of the book of Obadiah is an indictment of Edom for its crimes against Judah. This nation, located south and east of the Dead Sea, has a mixed tradition among the Israelites. Much like the relationship between Jacob and Esau, the traditional founders of each nation, Edom is at times seen as a friend and ally (Deut 2:2-6; 2 Kings 3:9) and on other occasions as a deadly enemy (Num 20:14-21; Amos 1:11-15). During the period of the Neo-Assyrian empire and the Neo-Babylonian empire (734-586), Edom had been a vassal state. Most likely Obadiah's complaint against Edom, as well as that of the psalmist, relates to the participation of that nation in the final destruction of Jerusalem and the exile of its people by Nebuchadnezzar of Babylon in 587/6 B.C. Unfortunately, however, records are unclear concerning the precise role that Edom played.

139:2-4. divine omniscience in the ancient Near East. It is not unusual in the ancient world for it to be implied that gods or kings know everything or that there are no limits to their knowledge. So Nabonidus claims to be wise, knowing everything and seeing hidden things (see even 2 Sam 14:19). But in most cases this is little more than patronization. While there is no reason to see this psalm in that light, it should be recognized that the context is judicial rather than dealing in theological abstraction. Yahweh is being addressed as the judge who is in possession of all the information for judging the psalmist's case wisely and fairly. In a hymn to Gula her spouse is praised as one who "examines the heights of heaven, who investigates the bottom of the netherworld" (Foster). Shamash is praised as one who (as the sun god) sees all the lands, but it goes further as he is said to know their intentions and see their footprints. It is more common for the gods to be attributed boundless wisdom.

139:8-12. divine omnipresence in the ancient Near East. It is difficult to distinguish "having access to every place" from "being simultaneously in all places." The former is all that is demanded from the words of the psalmist and is likewise the norm in the ancient Near East. Since the sun god is usually the god of justice, and there is nowhere his light does not shine, he sees all. Even the netherworld was known because the sun was believed to traverse the netherworld during the night as he moved from the western horizon to the east to rise again. As a result the divine judge would again have all the information needed. Nothing could have been done secretly. There is no concept in the ancient Near East of deity being in every place simultaneously in the way that omnipresence is construed in Christian theology.

139:8. heights and depths. This contrast expresses the extent of God's jurisdiction. In one of the Amarna letters Tagi, a local ruler, acknowledges the pharaoh's control by stating: "Should we go up into the sky, or should we go down into the netherworld, our head is in your hand" (Moran). Similarly a hymn to Shamash affirms that no one "goes down into the depths" without Shamash.

139:9. wings of the dawn. This verse may be adopting solar terminology (rising with the dawn = east, setting in the far side of the sea = west), but "dawn" is more often equated with the "morning star." It is not unusual for the heavenly bodies (or the gods that are associated with them) to be portrayed with wings, but the phrase "wings of the dawn" does not occur in Akkadian.

139:13. deity making in the womb. There is an Egyptian parallel to the idea of the deity knowing an individual before birth. The god Amun knew Pianki (an Egyptian monarch of the Twenty-Fifth Dynasty in the eighth century B.C.) while he "was in the belly of his mother," where he knew he was to be the ruler of Egypt. In the Gilgamesh Epic, Gilgamesh's role as king was said to be destined for him "when his umbilical cord was severed." Personal gods are praised as the "producer of my progeny." Nebuchadnezzar praises Marduk as the one who created him. In the *Atrahasis Epic* the goddess Mami is identified as the womb, the creatrix of humankind. In Sumerian literature the goddess Ninhursag (Nintur) is responsible for the birth process from conception through gestation and delivery, and even serves as midwife. In Egypt Khnum (a creator god portrayed as a potter) is described in his fashioning of people. He knots the flow of blood to the bones and is said to knit the bones from the start. It is clear then that the psalmist is not introducing new theological

concepts but using stock phrases familiar in the ancient world.

139:16. written in book. In a *Hymn to Nabu* the sufferer laments, "My life is spent, O account-keeper of the universe" (Foster). An Old Babylonian letter says that a favorable destiny was decreed for the writer of the letter ever since he was in his mother's womb. In contrast, the Hittite prayer of Kantuzilis wonders how the god could have ordained his sickness (and impending death?) from his mother's womb. For information on the similar book of life, see comments on Jeremiah 17:13 and Malachi 3:16.

140:10. burning coals punishment. Calling down burning coals onto someone is found in Esarhaddon's vassal treaties as a punishment for breaking the treaty. Other texts describe deities raining down fire or fiery stones on their enemies. This is a punishment from God, not from other people.

140:10. thrown into fire punishment. Burning was used as a form of execution as early as the Hammurabi laws. In fifth-century Persia (during the reign of Darius II, son of Artaxerxes), and in the second century (2 Macc 13:4-8), there are examples of execution by pushing into a bin of ashes.

141:7. bones scattered at mouth of grave. Some of the cultures of the ancient Near East practiced secondary burial: the body would be laid out (in a cave, for instance) until the flesh decomposed, then the bones would be buried in the final resting place. Even if a body was devoured, proper burial could be carried out if the bones could be retrieved. So Ashurbanipal speaks of punishment of his enemies by taking their bones out of Babylon and scattering them around outside the city. He also boasts of opening the graves of past kings of his enemies and carting off their bones "to inflict unrest upon their ghosts."

142:title. in cave. During the time that David was fleeing from Saul, he spent a lot of time in caves (1 Sam 22—26). The Judean wilderness, where David spent his fugitive years, has abundant caves scattered throughout the region.

143:10. leading on level ground. The roads of the ancient Near East were for the most part unpaved (except for a few roads in the Late Assyrian period). Although unpaved, those which were intended for wheeled transport (called "wagon roads" in the Nuzi texts) had to be staked out, leveled and consistently maintained. However, very few texts describe the construction and maintenance of these roads. Roads for heavy transport were somewhat rare and were primarily along the trade routes. Thus, a vassal king complained to the king of Mari that he had to arrive at the Syrian capital by a roundabout route along a major highway. Assyrian kings rarely boasted of their road constructions, as it appeared to be the duty of the local populations. In a treaty text Esarhaddon commands that when his son succeeds him the vassal must submit to him and "smooth his way in every respect." In a hymn to the goddess Gula the deity says that she makes straight the path of one who seeks her ways.

144:6-7. rescued from waters. See comments on 18:16 and 30:3.

144:9. ten-stringed lyre. This is a typical musical instrument of the time and is attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. The lyre is differentiated from the harp by the number of strings. Both are hand-held with frames made of wood. A musical text has been discovered at Ugarit that sheds light on Late Bronze Age music. This text has the chords to be played on a lyre accompanying a Hurrian cult hymn.

144:12. pillars carved for palace. Palaces in the ancient world featured open courtyards, audience halls and garden pavilions that all used pillars, both structurally and decoratively. Caryatids (pillars in the shape of human statues) are unattested in Israel, which would have had little statuary due to the ban on images. Caryatids of a sort are evidenced in Egypt, where, for instance, mortuary temples featured pillars that had half-figures attached to them. The word used here, however, appears to have something to do with corners (used elsewhere only in Zech 9:15). In Israel pillars would have featured the fine, detailed sculpture that represented the height of their skills.

147:4. names of the stars. Mesopotamian constellations included animal figures such as a goat (Lyra) and snake (Hydra); objects such as an arrow (Sirius) and a wagon (Big Dipper); and characters such as Anu (Orion). The most popular of the constellations was Pleiades, often portrayed on seals even in Palestine and Syria. Neo-Assyrian texts preserve sketches of stars in constellations. For further information see the comment on 8:3.

148:7. great creatures of the ocean. In the Babylonian *Hymn to Shamash,* the sun god is

said to receive praise and reverence even from the worst groups. Included in the list are the fearsome monsters of the sea. The hymn thus suggests that there is a total submission of all creatures to Shamash, just as the Genesis creation texts shows all creatures created by, and therefore submitted to, Yahweh. The *Labbu Myth* records the creation of the sea viper, whose length was sixty leagues.

148:14. raised up a horn. See the comment on "horn" in the sidebar on common metaphors for God.

149:3. dancing. Much of the dancing that is attested in the ancient world takes place in cultic contexts, though both Mesopotamian and Egyptian sources frequently depict dancers involved in entertainment. The dancing connected to festivals would probably resemble folk dancing of today, featuring the coordinated movements of a group of dancers. At other times the dances could more resemble ballet, where a scene or a drama is acted out. Single dancers usually performed either whirling, squatting, leaping, hopping type dances, or acrobatics approximating a modern gymnast's routine. Dancers sometimes performed scantily clad or in the nude. In cultic contexts the participating officials (i.e., priests and administration) at times danced, not just the professionals. In one Hittite ritual this specifically included the queen.

149:3. tambourine and harp. See comment on 150:3-5.

149:6. double-edged sword. This is literally a sword of two mouths. In the Late Bronze Age (Joshua's time), the standard sword was curved like a sickle with the sharp edge on the outside of the curve. This shape is considered responsible for the development of the idiom "the mouth of the sword" (for instance in Josh 6:21). It is possible that the idiom was retained even when the shape of the sword evolved, and a two-edged sword could be referred to as "two-mouthed" despite the loss of the shape that determined the idiom. Others, trying to retain the association between language and physical shape, have suggested a double-sided axe, though in that case the word translated "sword" here would have to be understood more broadly as blade, a difficult (though not impossible) extension.

149:8. fetters and shackles. Though the terms used here are not the typical ones, it is likely that the former were wrist cuffs chaining the hands together, while the latter went around the ankles chaining the feet together (as is clear in 105:18). Iron was used for these as early as the eighth-century Assyrians.

150:3-5. musical instruments. Musical instruments were among the first inventions of early humans. In Egypt the earliest end-blown flutes date to the fourth millennium B.C. A number of harps and lyres as well as a pair of silver flutes were found in the royal cemetery at Ur dating to the mid-third millennium. Flutes made of bone or pottery date back at least to the fourth millennium. Musical instruments provide entertainment as well as background rhythm for dances and ritual performances, such as processions or cultic dramas. Other than simple percussion instruments (drums and rattles), the most common instruments used in the ancient Near East were harps and lyres. Examples have been found in excavated tombs and painted on the walls of temples and palaces. They are described in literature as a means of soothing the spirit, invoking the gods to speak, or providing the cadence for a marching army. Musicians had their own guilds and were highly respected. These are all typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which one as "lyre." The one the NIV translates "lyre" is a ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. The tambourine has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines. The instrument translated as flute is likely a double pipe made of either bronze or reed. Cymbals are made of bronze and are in the percussion group, so the only remaining question concerns their size.

PROVERBS

1:1—9:18

Wisdom Exhortations

1:1. sages in the ancient Near East. The tradition of sages who expound on the wisdom of ancient cultures is a longstanding one in the ancient Near East. The manner employed in such wisdom pieces as the *Teaching of Ptah-Hotep* and the *Instruction of Amenemope* suggests that there were wisdom schools in ancient Egypt and Mesopotamia. The "sage" functioned as the students' "father," conveying the substance of the culture's store of wisdom and standing as a source upon which to draw precedents. The *Words of Ahiqar* from eighth-century Assyria may indicate that some of these sages also were attached in some way to the palace bureaucracy, perhaps as members of the scribal class. The "words" of the sages included essays on personal deportment and etiquette in a variety of social situations. Their sayings also include short statements giving advice on political and diplomatic affairs. In this way they transmitted a form of cultural memory as well as a sense of their society's basic values.

1:1. Solomon as a sage. According to 1 Kings 3:7-12 Solomon asked for and received a "wise and discerning heart" to better rule his people. The tradition of Solomon as a wise king thus carries over in the superscription to the book of Proverbs. The many areas of his wisdom are detailed in 1 Kings 4:30-33 (see comments on those verses).

1:6. wisdom categories. This verse lists three of the many types of wisdom writings. The proverb or *mashal* is an aphorism, a short statement often consisting of contrasting parallel lines. It is generally moral-laden and always didactic in character. Parables are extended contrast pieces that in narrative form both tell a story and require the audience to see a double or hidden meaning (see the first two comments in 2 Sam 12:1-10). Although there are no riddles in the book of Proverbs, they were apparently common enough as a form of intellectual game (see comment on Samson's riddle in Judg 14:12-14). The term used for riddle in Proverbs 1:6 only appears in Proverbs and comes from a root that is usually translated as "scornful" or "cynical." This may be an attempt to downgrade riddles as true wisdom sayings. A longer form of wisdom literature is found in Ecclesiastes, which includes both

PROVERBS ECHOED IN ANCIENT NEAR EAST

Several pieces of Egyptian and Mesopotamian wisdom literature contain parallels (linguistic, stylistic and content) with the book of Proverbs. From ancient Egypt this includes (in chronological order) the *Teaching of Ptah-Hotep* (c. 2500 B.C.), the *Tale of the Eloquent Peasant* (c. 2000 B.C.), the *Instruction of Amenemope* (c. 1200 B.C.) and the *Instruction of Ankhsheshonqy* (c. 200 B.C.). There are also some echoes in the *Memphite Theology of Creation* (c. 2200 B.C.) and the *Dispute over Suicide* (c. 2000 B.C.). Similar proverbial sayings may also be found in the Assyrian *Words of Ahiqar* (c. 700 B.C.) and in the Ugaritic epics of *Baal and Anat* and of *Aqhat* (c. 1400 B.C.). Most of the similarities between these pieces of wisdom literature can be attributed to the universality of wisdom sayings and the very common practice of borrowing phrases, imagery, proverbs or even entire parables or stories. Here are some examples:

☐ Proverbs 1:12 describes the grave as a mouth that swallows its victims, and this same imagery is echoed in the epic of Baal and Anath, where the god of death, Mot, is said to "devour its prey," eating them "with both hands."

☐ Proverbs 6:23-29 and 7:24-27 both admonish the wise son to conquer his lust for women who will bring him to disaster in much the same way that Ptah-Hotep cautions that one should "stay away from the women of the house" and "keep your mind on business."

☐ Proverbs 16:8 and 21:9 provide examples of the "better than" saying that is also found in the *Instruction of Ankhsheshonqy*, "Better to dwell in your own house than in someone else's mansion," and in the *Instruction of Amenemope*, "Better is a single loaf and a happy heart than all the riches in the world and sorrow."

☐ The progression pattern found in Proverbs 6:16-19, "There are six things the LORD hates, seven that are detestable to him," is also used by Ahiqar, "two kinds of people are a delight, a third pleases Shamash."

☐ The model wife described in Proverbs 31:27-31 is also extolled by Ptah-Hotep, as is the son who is willing to listen carefully to his father (see Prov 2:1-5).

☐ The "Sayings of the Wise" that appear in Proverbs 22:17—24:22 find a structural model in the *Instruction of Amenemope*. Both contain a general introduction followed by thirty chapters of very similar advice on a variety of topics. For instance, both *Amenemope* and Proverbs 22:22 forbid the exploitation of the poor and weak, and both the Egyptian sage and Proverbs 23:10 counsel not to move or topple a field's boundary stone lest "your conscience destroy you."

a group of sayings as well as a set of reflections on the ironies of life. The largest category of all in the Hebrew Bible is the philosophical discourses of the book of Job. Using the common theme of suffering, Job and his friends examine and even test their understanding of why pain and suffering comes to the righteous.

1:8. instruction of the son. The call to listen to the instructions of one's parents stands as a corollary to the law requiring children to honor their father and mother (Ex 20:12). Thus the wisdom of mothers, who generally served as a child's first teacher, is equated with that of fathers. The saying also contrasts with similar statements in the *Teaching of Ptah-Hotep* and the *Words of Ahiqar* that only mention a son attending to the words of his "father." "Son" may also be understand in each of these cases as the one who receives the saying and does not always require blood relation. Students would have memorized the sayings and analogies of their teachers, but the wise would have been those who learned to apply what they had learned (see Hos 14:9). The omission of daughters reflects the reality that royal sons were generally educated, while royal daughters typically were not.

1:9. garland and chain. The words of the father and mother, which embody the wisdom of the society, can become a decorative wreath for the son's head and a chain or necklace of office. Just as a champion is adorned with a garland of victory and a newly appointed official is given the chain and vestments of his office, so too is the attentive son assured of prosperity and a stable life (see Prov 4:1-6). As Ptah-Hotep says, "The wise follow their teacher's advice [and] consequently their projects do not fail." In Egyptian literature Maat, the goddess associated with wisdom, truth and justice, provides a garland of victory to the gods and is depicted as being worn as a chain around the neck of various officials.

2:18. paths to the spirits of the dead. Ancient Near Eastern literature has several examples of the types of offers reflected here. In the Gilgamesh Epic the goddess Ishtar, impressed with the prowess displayed by Gilgamesh when he defeated the dread Huwawa, offers to make him her husband. Despite the many benefits she cites, Gilgamesh details the life in the netherworld that is the inevitable result of her seduction. Likewise, in the Ugaritic *Tale of Aqhat,* the goddess Anat offers Aqhat gold, silver and eternal life in exchange for his marvelous bow. Like Gilgamesh, Aqhat sees the lie and expounds on the inevitability of death. An affair with an adulteress is mentioned in several wisdom pieces as one of the surest ways to an early death (*Ankhsheshonqy* says, "A man who makes love to a married woman will be executed on her threshold"; see also Prov 6:25-26). The dangers involved are also reminiscent of the fate of the Sumerian goddess Ishtar's consort, Tammuz, who was forced to live half the year in the underworld as ransom for her release from the nether regions. The shadowy world where the spirits dwelt was an extremely undesirable place.

HOW PROVERBS WERE USED

As is the case in modern conversations, proverbs in ancient times functioned as a colloquial means of getting a point across. Then as now they were considered ancient wisdom that must be considered seriously (see 1 Sam 24:13). So when the proverb "A penny saved is a penny earned" is quoted today, the speaker is advocating the wisdom of personal thrift. In the same way, when Ezekiel quotes the proverb "Like mother, like daughter" (Ezek 16:44), he is condemning Jerusalem for following in the evil footsteps of her "mother" Samaria (compare Jer 3:6-11 for this theme, but using "sisters" as the kinship term). Ezekiel also used proverbs to signal a change in policy or fortunes. For example in Ezekiel 18:2-3, the prophet quotes a proverb that on its surface simply acknowledges the well-known fact that a person who sees another person eat something sour will experience a similar reaction. In Israel, however, the proverb had been used to indicate the legal idea of corporate responsibility in which a son was held responsible for the sins of his father (see Ex 20:5). Now, however, Ezekiel states no person will be punished for anyone's sins but his or her own, and thus the proverb "shall no more be used by you in Israel."

Naturally, a proverb is only as useful as the context in which it is spoken. Thus the writer of Proverbs notes that "like a lame man's legs that hang limp is a proverb in the mouth of a fool" (Prov 26:7). This is a common saying in other wisdom literature. For instance, the *Instruction of Ankhsheshonqy* warns that "fools cannot tell teaching from insult," and the *Instruction of Amenemope* states that one should not "take counsel with fools," since their words "blow like a storm" and are without substance. It is clear then that proverbs were not simply phrases to be memorized that anyone could understand. Their instruction needed to be unpacked and expounded by a wise teacher. It is like a curriculum that assumes the presence of a teacher to accomplish its aims.

According to the Gilgamesh Epic, the "House of Dust" contained no light, the dead were "clothed like birds," and "dust [was] their fare and clay their food." Still, it seems that the spirits could be consulted by the living (see 1 Sam 28:11-15).

3:3. bound around neck. See the comment on Deuteronomy 6:8 for the use of amulets to serve as a reminder of the Law and a form of protection against evil. The use of the covenantal term *ḥesed* for "love" in this verse may also be compared to its use in Jeremiah 31:3, in which God "draws" the nation to him with "loving-kindness."

3:3. tablet of the heart. It is conceivable that the writer is referring to a practice of wearing a small clay tablet as an amulet (compare Judah's cord and seal in Gen 38:18). However, the parallel with Jeremiah 31:33 makes it more likely that the writer is referring to an internalization of God's law with God writing "it on their hearts."

3:6. make paths straight. In a treaty text Esarhaddon commands that when his son succeeds him, the vassal must submit to him and "smooth his way in every respect." In a hymn to the goddess Gula the deity says that she makes straight the path of one who seeks her ways.

3:15. rubies as most precious gem. While both rubies and sapphires are forms of the mineral corundum, which consists primarily of aluminum oxide, rubies are much rarer and therefore considered that much more precious. The Egyptian sage Ptah-Hotep also compares true wisdom with rare gems (emeralds), adding weight to such analogies. Diamonds were not known in the ancient world.

3:18. tree of life. The theme of the tree of life is common in ancient Near Eastern epic and art. In the Gilgamesh Epic there is a plant called "old man becomes young" that grows at the bottom of the cosmic river. Stylized trees often figure prominently in ancient Near Eastern art and on seals from both Mesopotamia and Canaan. These have often been interpreted as depicting a tree of life, but more support from the literature would be necessary to confirm such interpretations. The tree is transformed in Proverbs into an image of wisdom. As in Proverbs 11:30, wisdom, embodied in the metaphor of the "tree of life," provides the key to a fuller and more enriching life. The idea of "embracing" wisdom holds sexual connotations found in several places in Proverbs (8:17; 18:22) and may be compared to the woman of worth in 31:10 and contrasted with "Dame Folly" or the "strange woman" (9:13-18 and 5:3-14, respectively). The sense of fertility and contentment inherent to both a good marriage and a flowering tree is thus promoted as a desirable goal.

3:19-20. language of old world cosmology. As in Psalm 104:2-9, Proverbs details Yahweh as the lord of creation, a sort of "divine architect," who shapes the cosmos like a well-ordered building (compare Job 38:4-7). The extra dimension is added in these verses of God personified as "Wisdom" (see Ps 104:24 and Jer 10:12). If a deity's "desire" may be equated with wisdom, then the Egyptian *Hymn to the Aten* expresses a similar concept, saying, "You have created the world according to your desire, while you were yet alone!" According the sages, the creative act, in order to fully demonstrate God's presence and concern, is followed by an ongoing and sustaining of the structures of the heavens and the earth. The "deeps" is the Hebrew word *tehom,* which refers to the primordial cosmic ocean. In the Babylonian creation epic, *Enuma Elish*, the goddess representing this cosmic ocean, Tiamat, is divided in half by Marduk to make the waters above and the waters below.

4:9. garland/crown. The image of a marriage feast is given substance with the bestowing of the tradition symbols of union by the bride (wisdom) on her protégé (groom). In this case the marriage symbolism of the crown of splendor (see Is 61:10) could be compared with the fragrant bridal garments in Song of Songs 4:11. In the metaphorical sense it could also be paralleled with Isaiah 28:5, where God becomes a "glorious crown, a beautiful wreath" for the Israelites.

4:23. heart as wellspring of life. It is a common tradition in the ancient Near East for the heart to be the seat of the intellect (see Prov 14:33) and the source of stability for one who would adhere to a just and wise life (see Solomon's request in 1 Kings 3:5-9). In Egyptian religious thought the heart *(ib)* is distinguished from the soul *(ba)* and is considered the very essence of a person's being. It is the heart that is weighed in the balance of truth when a deceased individual is examined by the gods Anubis and Thoth. The Book of the Dead provides spells to protect and strengthen the heart as preparation for this ordeal.

5:3. adultery in the ancient Near East. Having sexual relations with another man's wife was punishable by death in both the biblical and the ancient Near Eastern codes. The Egyptian *Tale of Two Brothers* calls it a "great crime" that is not to be considered by an honest man or woman. This was an attack

on a man's household, stealing his rights to procreate and endangering the orderly transmission of his estate to his heirs (see comment on Ex 20:14). The act itself defiles both participants (Lev 18:20). Since it is not only an attack on the sanctity of the household but also a source of general contamination, adultery serves as a reason for God to expel the people from the land (Lev 18:24-25). The Egyptian *Instruction of Any* (mid-second millennium) has a paragraph that advises to beware of the strange woman away from her husband who is seeking to ensnare.

6:1. securities and pledges. The expression used here and paralleled in 11:15 and 17:18 shows an aversion to some common business practices, including charging interest on loans and standing surety for debts. The Laws of Eshnunna and Hammurabi's Code both describe in great detail the rules applied to these business transactions and the consequences of forfeiture. The weight that debt bears on an individual is graphically portrayed in the Assyrian sage Ahiqar's statement, "I have hauled sand, and carried salt, but nothing is heavier than debt." Proverbs thus provides the admonition to pay one's own debts, not burden others with interest on loans, and not become a creditor who may in turn lose everything based on bad loans (see Prov 22:26-27).

6:6. ant behavior. Examination of the creatures of nature provides both good and bad examples of behavior. The ant is proclaimed the paragon of hard work and foresightedness (compare Prov 30:25), storing food against the future. Yet another aspect of their character is noted in a letter from the El Amarna archive, stating that the ant, despite its small size, is willing to defend itself when provoked.

6:21. bound on the heart, fastened around the neck. This introductory statement, like that in 3:1-3 and 7:1-3, combines the importance of the wisdom statements with a physical object as a perpetual reminder. Thus the "Shema" statement of Deuteronomy 6:6-9 is to be tied "as symbols on your hands" and bound "on your foreheads." See the comment on Deuteronomy 6:8 for the use of a warding amulet, worn around the neck, near the heart, to protect the bearer from evil.

7:3. bind on fingers. See comments on 3:3 and 6:21.

7:8, 12. corner. Babylonian texts speak of small open-air shrines or niches on street corners or courtyards. One text says that there were 180 of them in the city of Babylon to the goddess Ishtar. These shrines featured a raised structure with an altar on the top and seem to have been frequented primarily by women. In this sense, the word "corner" may refer to what is basically a cultic niche.

7:13. brazen face. Compare the stance and attitude of the "brazen prostitute" in Ezekiel 16:30. The Hebrew term translated here as "brazen" is more often rendered as "strong" or "fierce" (see Dan 8:23), but it can also take on the connotation of "impudent" as in Ecclesiastes 8:1. This latter translation fits the context of the adulteress who lies in wait for her victims and confidently invites them into her perfumed chambers. It also can be compared to the wife in Hammurabi's Code who is "not circumspect" and "disparages her husband."

7:16. colored linens from Egypt. One of the most important trade items produced in Egypt was linen (see Ezek 27:7). Royal and personal texts contain mention of its production from flax thread and its use as a medium of exchange or barter. One Eleventh Dynasty text (First Intermediate Period) describes how a farmer used cloth woven from flax harvested on his land to pay rent. Colored cloth, adding an additional step to the manufacturing process, would have been costly and in the case of the adulteress was used as both a sign of wealth and a brightly colored enticement to enter her chamber.

7:17. perfumed bed. Like her linen coverings the adulteress uses foreign fragrances to transform her bedchamber into an exotic and desirable trap. Perfumes (like myrrh, frankincense and aloes—see Song 3:6; 4:14) traveled to Palestine by caravan from India and the Arabian desert and up the Red Sea coast. Perfume jars have been excavated at many sites in the Near East. Manufacture and rendering of spices and perfumes are depicted on Egyptian tomb paintings, but much of the details of these ancient processes have been lost.

7:23. arrow piercing liver. Egyptian tomb paintings often depict the noble deceased hunting in the marshlands. Beaters frighten the fowl to break from cover, and in their terror a hail of arrows from the hunters unexpectedly meets them. The unsuspecting character of the adulteress's victim suggests this same attitude of preoccupation or obliviousness to the real danger he faces. The liver was considered among the most vital organs, so is mentioned as the target here.

8:11. rubies as most precious gem. See comment on 3:15.

8:22-29. wisdom as preceding cosmos. Just as the Gospel of John begins with the statement "In the beginning was the Word," here the author(s) of Proverbs makes the claim that wisdom was the first of God's creations, existing alongside God from the dawn of time. Throughout the creation of everything else in the universe, wisdom is present. Like the Egyptian *Maat,* which is described as escorting the creator sun god Re, wisdom appears to be Yahweh's messenger, the oldest of created beings. It is possible that there are also some connections between this view of wisdom and the Babylonian creation myth or the Ugaritic depiction of El, but they cannot be clearly established.

8:30. wisdom as craftsman. R. Murphy has correctly connected this verse with the use of "I am" in Exodus 3:14 as a reference to God the Creator. If the role of wisdom is to serve with God as a "master craftsman" or the spirit of creativity, then this is an apt parallel with the image found in Proverbs 3:19. If, on the other hand, wisdom is "a little child" (some translations prefer this to "craftsman") playing at God's feet, there is still a sense of "delight" in being in God's presence and sharing in the thrill of emergent creation at a time when there are no other cares. Maat in Egyptian texts is also referred to as a "child of the gods," whose play delights them. There are also numerous examples of craftsmanlike creative acts, such as Marduk's shaping of humans in the Babylonian epic *Enuma Elish* and the depiction of the contest between Nintu-Mami and Ea-Enki to create humans from clay in the Babylonian *Atrahasis Epic*. In Egyptian creation texts from Memphis, the creator deity, Ptah, is portrayed as the craftsman engaged in the creative work. Beyond this, Akkadian literature speaks of the seven great "craftsmen" who are the ancient sages who came just after the flood and brought wisdom to the early kings.

9:1. seven pillars of wisdom's house. There have been many theories suggested for wisdom's seven-pillared dwelling. They include the firmaments of heaven, the planets, the days of creation, the books of the law and the seven sages of ancient Mesopotamia. In addition, the Ugaritic epic of Baal and Anat contains a reference to the dwelling place of the high god El. He is said to abide in "the seven chambers of wisdom, the eight halls of judgment." Murphy's suggestion that the book of Proverbs and its chapters comprise Dame Wisdom's house is also attractive. In the Sumerian lament over Eridu, Eanna the temple of Enki (the god of wisdom) is described as having seven niches and seven fires.

9:3. significance of highest point in the city. Wisdom calls at the city gate in 8:3 as the place for making public proclamations. But the "highest point" is usually equated with the temple or the palace that typically occupies the acropolis of a site. The sense of a call to study, wisdom and righteousness is also found in Isaiah 2:2, where the Lord's temple in Jerusalem serves as the high point that draws worshipers and "all nations" to that place (see also Mic 4:1). The good tidings that are to be proclaimed to the returning exiles in Isaiah 40:9 are also to be shouted from a "high mountain."

PROVERBS AS GENERALIZED TRUTH

While there is a universality to wisdom in the book of Proverbs, many of these sayings represent the collective common sense of the ancient Near East and its cultures during that time period. However, it should also be understood that statements like "keep my commands and you will live" (Prov 7:2) and "the LORD does not let the righteous go hungry" (10:3) are not explicit promises or universal truths. The values expressed in the biblical world do not necessarily translate perfectly into our modern age. In addition, there is the physical reality of poverty, need and want that is not an indicator of a lack of righteousness but merely an expression of economic problems, mental defect and social ills.

So what is recognized as true of modern proverbs should also be understood as characteristic of ancient proverbs (biblical or otherwise). They do not represent absolute truth but true perspectives on life's circumstances. "April showers bring May flowers" is not a promise or a guarantee. Crime sometimes *does* pay. This quality of proverbs is demonstrated for biblical proverbs in the fact that opposite solutions can be offered to the same problem. Proverbs 26:4 advises not to answer a fool according to his folly, while the very next verse urges answering a fool according to his folly. The fact is that there are situations in which verse 4 would be appropriate as well as situations in which verse 5 would be appropriate. The advice to be followed is often dependent on the situation, and a wise person will know which course to choose. Our own modern proverbs show a similar tendency in "contradictory" proverbs, such as "He who hesitates is lost" but "Look before you leap." Or "Birds of a feather flock together" but "Opposites attract."

10:1—22:16

Proverbs of Solomon

10:6. retribution principle. The comparison between the wise person and the fool is a common theme in the wisdom literature of the ancient Near East. One task of wisdom is to reassure the people that evil or foolish behavior will not be rewarded. Thus in the Egyptian teachings of Ptah-Hotep (c. twenty-fifth century B.C.) the sage expresses the proper attitude about work: "The wise rise early to start to work, but fools rise early to worry about all there is to do." The ability to make one's way in society without causing undue harm or distress is described in a saying by the Egyptian sage Amenemope (c. eleventh century B.C.): "More dangerous are the words of fools than storm winds on open water." Another Egyptian teacher, Ankhsheshonqy (c. eighth century B.C.), notes that "a wise man seeks friends, and a fool seeks enemies." In each of these statements the wisdom tradition makes it clear that there is a retribution principle operating in the universe that balances the harm caused by unthinking words and actions with the healing words and actions of the wise or righteous person. For general discussion of the retribution principle see the sidebars in Job 4 and on common concepts in Psalms, and the introduction to the poetic and wisdom literature.

10:10. winks maliciously. The word "maliciously" is interpretive here, and the other occurrences of this phrase include both eyes, so winking is unlikely. An alternative is suggested by the Akkadian omen-wisdom that contains a series of omens related to the eyes. One of them asserts that if a person closes his eyes, he will speak falsehood. It is uncertain whether this refers to frequent blinking or to squinting the eyes shut while talking. This same concept is expressed in 16:30.

10:11. fountain of life. As the Egyptian sage Amenemope states, abundant life is to be found in wise action and speech, but "fools who talk publicly in the temple are like a tree planted indoors" that withers and dies for lack of light and is burned or cast away as trash. On the other hand, "the wise who are reserved are like a tree planted in a garden," which bears sweet fruit, provides shade and flourishes "in the garden forever."

11:1. cheating in the marketplace. The practice of using "dishonest scales" was a temptation for shopkeepers and bankers. Within the civil authority of the state, the Babylonian Law Code of Hammurabi attempted to curtail this illegal practice by threatening forfeiture of an investment by a corrupt banker. In the realm of wisdom admonition, however, people are encouraged to strive for proper behavior. Thus the "eloquent peasant" of Egyptian wisdom literature advises the king and his officials of a dangerous situation in which "those authorized to give full measures short their people." The assumption is that the king will see the wisdom of eliminating such harmful practices. See the comments on Amos 8:5-6 for discussion of dishonest business practices in eighth century Israel.

11:15. securities and pledges. See comment on 6:1.

11:30. tree of life. See comment on 3:18.

13:12. tree of life. See comment on 3:18.

13:24. child discipline in the ancient world. There was a real concern in ancient legal (see Sumerian law code and Ex 20:12) and wisdom writings to teach children to honor and obey their parents. For instance, the Assyrian sage Ahiqar makes the familiar statement that to "spare the rod is to spoil the child." He also notes the persons "who do not honor their parents' name are cursed for their evil by Shamash, the god of justice." The parents' responsibility for their children is also a concern. It is clearly pointed out in the Egyptian *Instruction of Ankhsheshonqy:* "The children of fools wander in the streets, but the children of the wise are at their parents' sides" (compare the legal injunction regarding the prodigal son in Deut 21:18-21).

14:19. bowing down at the gates. In this instance "gates" refers to the household gates of the righteous, not the city gates (compare the obeisance of the king's servants at the king's gate in Esther 3:2). In that sense, therefore, the parallelism of the verse indicates that the evildoers will be forced to show subservience to the righteous, becoming their servants. A similar case in which due respect is granted by those who had previously taken no notice of their "new masters" is found in Moses' prediction in Exodus 11:8 that the Egyptian officials would "bow down before me."

15:4. tree of life. See comment on Proverbs 3:18.

15:25. widow's boundaries. Removal of a boundary marker was considered a covenant violation since the land was part of the people's inheritance (see Deut 19:14). In Babylonian ritual texts one explanation given for an illness is violation of the taboo against setting up a false boundary stone. The Egyptian Book of the Dead includes a disclaimer by

the petitioner of moving a neighbor's boundary marker. To add to the nature of the crime, the widow lived without the normal legal protection of her husband and could have been easily preyed on. Thus the proverb speaks against infringing her rights. A parallel to this injunction is found in the teachings of Amenemope: "Do not poach on the widow's field."

16:10. king as oracle. The words of a king carry more weight than those of an average citizen. This becomes a major responsibility for monarchs, for as Ahiqar notes, the words of rulers "are two-edged swords." Few if any may challenge the words of a king, and thus as the spokesman for the nation and the god(s), the ruler must not infringe of the rights of the people or allow injustice to occur. As the eloquent peasant says to his pharaoh: "You are my lord, my last hope, my only judge."

16:11. weights and measures. See comment on 11:1. Note also the statement in the Egyptian Book of the Dead where the soul about to be judged by the gods of the afterlife includes in his "oath of clearance" that he has "not used false weights for scales."

16:33. lots. See the comment on 1 Samuel 14:40-43 for the use of lot casting as a means of decision-making. It is a form of divination in which the assumption is that God will determine the cast and thus provide the answer (usually yes or no) to the question that is posed.

17:3. refining precious metals. Gold and silver may be refined in a graphite crucible. Gold melts at a temperature of 1,945.4 degrees Fahrenheit and sterling silver at 1,640 degrees Fahrenheit. An additional 338 degrees is necessary to allow the metal to be poured without freezing and not so hot that a destructive crystalline structure forms or alloys are dissipated before the metal cools. It is also important to avoid oxygen infiltration as much as possible during the melting process so that the structure of the metal will not become porous. The refining process requires expertise and an intimate knowledge of the tools and metals involved. As such it is an apt metaphor for God's testing of the heart (compare the "weighing of the heart" in the judgment of the soul in Egyptian religious tradition).

17:18. securities and pledges. See comment on 6:1.

18:18. casting lots to settle disputes. See comments on 1 Samuel 14:40-43 and Joshua 7:14-18 for the use of lots to determine the truth of a situation. On the one hand lots were used when a random decision was needed (as we might draw straws or flip a coin). On the other hand, despite that, it was believed that God controlled the cast (see 16:33).

19:12. king as lion. Akkadian literature as early as the third millennium B.C. described a king (Sargon) as roaring like a lion.

20:8. role of the king. The traditional role of the king was to dispense justice from his throne of office (compare comment on 2 Sam 15:2-6, where problems are created when King David fails in this responsibility, with comment on Solomon's role as a wise king in 1 Kings 3:16-28). Although the statement is made repeatedly in the teachings of Amenemope that justice "is a gift of the gods," the assumption is made that the king, as the gods' representative, voices their wishes on earth. Thus Ahiqar, the Assyrian sage, can state that "the tongue of the ruler is gentle, but it can break a dragon's bones."

20:16. security for wayward woman. The law regarding taking a garment in pledge for a debt is found in Exodus 22:26-27 and Deuteronomy 24:10-13 (see comments there). Its abuse is mentioned in Amos 2:8 and the Yavneh Yam inscription. Both of those are directed toward how one is to treat his neighbor. This proverb deals with those whose reputation is either unknown or questionable. It stands as an admonition to the creditor not to be foolishly lenient and thus risk losing the investment (compare Prov 27:13).

20:23. weights and scales. See comment on 11:1.

20:26. threshing wheel. See comment on Isaiah 28:28 for a description of the threshing sledge with attached wheels (or rollers). This type of sledge *('ôpan 'agalah)*, minus the stones and metal teeth found on the *morag* (platform sledge), would not have damaged the grain so severely and thus would have left the job of separating the chaff from the grain to the winnowing process.

21:2. weighing the heart. In Egyptian religious tradition the dead had to face a final judgment before the gods. Thoth, the scribal god, recorded the responses of the examined, while the dead person's heart was weighed in a scale against a feather symbolizing Truth. If the answers were correct, and the heart did not overbalance the feather, then the soul could enter the realm of Osiris and live forever. Failure meant extinction, since a demon-like god, Sebek, in the shape of a crocodile consumed the soul. The Pyramid Texts and the Book of the Dead contained spells and a list of the proper responses to be given during this "final examination." Israelite thought took over the imagery of this idea, portraying

God as weighing the "heart," the seat of the intellect and thus the decision-maker, to determine a person's capacity for good or evil (see Eccles 3:17; Jer 20:12).

21:9. corner of a roof. The "better" sayings provide a contrast or extreme that is preferable to contact with evil or with the disagreeable. The corner of a roof or a cramped attic chamber (see 1 Kings 17:19) would be an uncomfortable perch, but its dangers or inaccessibility might protect the sufferer from an even more unpleasant contact with a nagging wife (see Prov 21:19; 25:24). The teachings of Amenemope also use this type of saying: "Better is a single loaf and a happy heart than all the riches in the world and sorrow."

22:16—24:34
Sayings of the Wise

22:20. thirty sayings. A portion of the book of Proverbs (22:17—24:22) seems to imitate, at least in part, the literary structure of the Egyptian *Instruction of Amenemope.* Both contain a general introduction that is followed by thirty chapters or units of very similar advice on proper behavior. There is some dispute among scholars on the identification of the thirty units within the biblical text, since there are breaks in the sections that may indicate unrelated segments (see "my son" diversions at 23:15, 19 and 26). Also arguing against the connection is the fact that the NIV had to slightly emend the text to arrive at thirty units and had to provide the noun sayings so that there would be something that there were thirty of. Beyond this difficulty is the fact that the thirty sections in Proverbs would each be only a few verses long (four to six lines), while the thirty chapters in Amenemope average twelve to sixteen lines in length. The closest parallels between Amenemope and Proverbs come to an end at 23:11, and the remaining units have close ties to other pieces of wisdom literature, including the teachings of Ahiqar. This may indicate that the biblical writer or wisdom school had a general familiarity with Amenemope and other wisdom literature, but also a measure of literary independence.

22:26. pledge and securities. See comment on 6:1.

22:28. boundary stone. Plots of land in the ancient Near East were marked with boundary stones at each corner. It was common in Mesopotamia for these stones or *kudurrus* to contain an inscription cursing anyone who dared to remove or shift the marker. God symbols were also carved into the stones as a sign of the landowner's divine patron. Several pieces of ancient wisdom and legal materials contain injunctions against tampering with boundary stones, including the Egyptian Book of the Dead, the teachings of Amenemope, and Deuteronomy 19:14 (see the comment on Prov 15:25).

23:10. fields of the fatherless. There is a general admonition in Israelite law not to take advantage of the poor and powerless, such as widows and orphans (Ex 22:22; Deut 27:19). However, such abuse did occur. For instance, Micah 2:2 charges evildoers with seizing fields and defrauding their fellow Israelites of their inheritance. Concern for dependents of prisoners of war or their widows can also be found in the Middle Assyrian Laws, where the government can be petitioned to provide for the needs of these people.

23:13-14. child discipline. The discipline of children, including corporal punishment, was considered wise and essential to the child's welfare. The Aramaic proverbs of Ahiqar include almost identical lines to those found here: "Do not withhold your son from the rod, or you will not be able to save him. If I strike you, my son, you will not die, but if I allow you to follow your heart [you will not live]."

23:21. gluttony. Gluttony was often condemned in Egyptian wisdom literature. Closest to this verse is the instruction found in *Papyrus Insinger:* "Do not be a glutton lest you become the companion of poverty."

23:30. bowls of mixed wine. The alcoholic potency of the wine, normally mixed with water, is enhanced with the addition of honey or pepper to create a type of "spiced wine." As in Proverbs 20:1 the fool is the one who overindulges in wine. Drunkenness runs counter to the wisdom tradition. For instance, the Greek custom of the "symposium," or drinking party, regulated the amount of wine consumed so that rational discourse was possible and a general atmosphere was maintained in which the celebrants could freely release their cares and display their talents in song and poetry. See comment on Ecclesiastes 9:7.

23:31. wine when it is red. It is not clear whether there is some fascination with the color red that is a further inducement to overindulge in strong drink (as is suggested by the Septuagint reading here) or whether there is a translation problem at this point. The sparkling nature of wine may indicate a particularly potent vintage that is smooth to the palate (see Song 7:9) or may be related to a term for wine in the Ugaritic Baal epic. The Egyptian *Instruction of Any* likewise includes warnings against drunkenness as leading to careless speech, bodily harm, rejection by

friends and loss of senses.

24:13. honey and honey from the comb. The wisdom writer here follows a tradition found in both Psalm 19:10 and Ezekiel 3:3 in which God's words/laws are equated with wisdom and are therefore to be desired. In most Old Testament texts honey represents a natural resource, probably the syrup of the date rather than bees' honey. There is no evidence of bee domestication in Israel, though the Hittites had accomplished that and used bee honey in their sacrifices (as did the Canaanites). In the Bible honey occurs in lists with other agricultural products (see 2 Chron 31:5). Here the reference to the honeycomb differentiates the product as bees' honey. Note also that honey from the comb would be the freshest and tastiest kind. Akkadian texts also use honey figuratively as they speak of praise being sweeter than honey or wine.

25:1—29:27
Proverbs of Solomon Gathered by Hezekiah's Men

25:1. Hezekiah's men. Who these councilors or scribal officials might be is uncertain. Several advisers to King Hezekiah of Judah are mentioned in 2 Kings 18:18, but there is no way to equate them with the recorders of the "proverbs of Solomon." National crisis, however, is a time for reflection, and perhaps Hezekiah attempted to gain God's favor by having traditional wisdom sayings recorded and disseminated (compare the teachings of Ahiqar, a guide to proper behavior, which were presented to the king of Assyria as a means of his returning to royal favor). Certainly the text suggests that Hezekiah had court-sponsored sages who gathered and compiled wisdom sayings.

25:4. refinement of silver. For silver to be shaped into jewelry or decorative design it must be purified of the iron oxide that naturally occurs within the ore, or it will corrode or become too brittle when cool. Care must also be taken that no foreign matter be alloyed with the silver during the smelting process. This requires a temperature of 1,640 degrees Fahrenheit for sterling silver (containing 7.5 parts of copper alloy) and a graphite crucible. Proper refining of the metal thus forms a parallel with a king who attempts to purge his court of evil by removing disloyal and foolish advisers. The eloquent peasant of Egyptian wisdom also admonishes the pharaoh to be just, "a ruler without greed" and "a destroyer of lies."

25:11. apples of gold in silver settings. As in 15:23 a well-turned phrase or a wisdom statement is said to be of great value. The writer here uses the metaphor of a finely worked piece of jewelry whose craftsman has been able to balance a golden piece of fruit amidst an intricately designed silver setting. The delicacy of this decorative device draws the eye, just as a clever saying touches the mind. Some have suggested that the fruit named here is an apricot rather than an apple, but it makes no difference to the imagery.

25:13. snow at harvest. According to the work calendar outlined in the Gezer Almanac (late tenth-century Hebrew inscription), harvest activity occurred in the spring and in the mid and late summer months. Thus the dream of a cool breeze or even snow may well have been on the mind of workers laboring in the hot sun. An alternate interprets "snow" as water melted from snow and therefore cool and refreshing. Others have seen a reference to carefully packaged ice and snow being brought from the mountains. Either way this serves as an apt metaphor for the relief brought by a long-awaited messenger whose news refreshes and soothes the mind (the teachings of Ptah-Hotep likewise express the value of a messenger's words).

25:20. vinegar on soda. This verse has textual problems too numerous and complex to discuss here, and there is a disagreement in the ancient translations (LXX, Syriac) over its details. Vinegar is an acidic product, while soda is a base. Combining them would immediately produce a very noticeable chemical reaction. Taking away a coat on a cold day would likewise bring an extreme reaction (shivering with cold). Historically, singing to someone who was depressed also brought an extreme reaction when Saul tried to kill David.

25:22. heap burning coals on his head. The *Instruction of Amenemope* also advises the wise person to shame fools or their enemies by pulling them out of deep water and by feeding them one's bread until they are so full that they are ashamed. Similarly, the precepts and admonitions in Babylonian wisdom literature states that the wise man should not "return evil to the man who disputes with you" and should in fact "smile on your adversary." This is surely the direction this proverb goes, but the metaphor of heaping burning coals on the head remains elusive. Suggestions offering cultural explanations have included the following: (1) there is an Egyptian ritual (mentioned in a late demotic text from the third century B.C.) in which a man apparently gave public evidence of his penitence by carrying a pan of burning charcoal on his head when he

went to ask forgiveness of the one he had offended; (2) in the Middle Assyrian laws there is an example of a punishment in which hot asphalt was poured on the offender's head. Both of these have difficulties. The first is in a late text and the action referred to has been variously interpreted. The second is hot tar, not coals, and is a punishment much like tarring (and feathering) in more recent history. Paul quotes this proverb in Romans 12:20.

25:23. north wind. In Israel a north wind does not bring rain but fair weather. It is therefore suggested that this proverb had its origin in Egypt where the north wind does bring the rain off the Mediterranean (five to ten inches per year in the delta).

25:24. corner of a roof. See comment on 21:9.

26:1. weather cycles in Palestine. Snow never occurs in the summer in Palestine, and rain is an extremely rare event during the harvests of spring and summer. The Mediterranean climate of Syro-Palestine brings rain and cooler temperature (below freezing in the higher elevations as at Jerusalem) during the winter months (October to February), and the remainder of the year is dry, with only an occasional freak shower. Thus this statement is like many in ancient wisdom literature (*Amenemope* and *Ankhsheshonqy*) in which the fool is described as "unteachable" and dishonorable. As Ahiqar notes, there is no point is sending the bedouin to sea, for it is not his natural habitat.

26:16. seven. R. Clifford has suggested that this is a reference to the famed seven sages who brought civilization and wisdom to the world in Mesopotamian lore. The seven *apkallu* came before the flood, and their counterparts, the seven *ummanu*, came after the flood. This is possible, but one would expect a definite article (*the* seven) if it were the case.

26:23. pottery and glaze. While a glaze may be applied to pottery as decoration, it may also hide flaws and thus cheat the one who purchases the pot. Similarly, a silver dross or covering made of adulterated, oxidized metal may initially look good but will quickly tarnish or flake off. Thus the fervent or "burning" lips (see 16:27) of a scoundrel may attempt to cover his hatred and malice with deceitful words.

26:24. lips/heart. An Akkadian proverb draws the same distinction, observing that a man may speak friendly words with his lips but have a heart full of murder. The incantation series *Shurpu* speaks of one whose speech is straightforward but whose heart is devious.

27:9. perfume and incense. Various pungent scents were part of the Israelite's everyday life. To cover some of the more offensive smells, to enhance one's sexual attractiveness (Esther 2:12; Song 1:13; see the thirteenth-century B.C. Egyptian love songs) and to serve as an offering to God (see comment on Ex 30:34-38), perfumes were concocted and incense burnt. Among the most common were frankincense, myrrh, saffron and mixtures of cinnamon, cassia and olive oil. Such a pleasant fragrance is an apt parallel with a friend's wise advice.

27:13. securities and pledges. See comment on 6:1.

27:21. refining precious metals. See comment on 17:3.

28:8. exorbitant interest rates. The law forbade charging interest on money or commodities loaned to fellow Israelites (see comment on Ex 22:25). It was lawful to charge interest in transactions with non-Israelites (Deut 23:20), and there is ample evidence of interest rates as high as 20 percent in Hammurabi's Code (see the comment on Ex 22:25). Usury as a means of building one's own fortune was considered inappropriate for Israelites, since loans were designed to aid one's fellow, not to take advantage of his financial difficulties (see comment on Neh 5:7).

30:1—31:9
Sayings of Agur and Lemuel's Mother

30:25. ants. See comment on 6:6.

30:26. coneys. The Syrian hyrax or rock badger is an ungulate mammal that lives in rocky cliff faces and inaccessible rocky climes. As a result it finds its protection in its isolated existence (see Ps 104:18). In addition, the ingenuity it takes to live in seemingly uninhabitable places points up the adaptability and resourcefulness of this creature.

30:27. locusts. See comments on Amos 4:9 and Joel 1:4-7 for the destructive power of the locust. The fact that their swarms move en masse without a clear leader makes their strength even more ominous to behold.

30:28. lizard. The ability of lizards to scurry along the ground (Lev 11:29) into the most secure places, including the royal palace, may make them the envy of some humans who wish for such exalted residences. There is also a sense here that despite the fact that they lack natural defenses and can be captured by hand, lizards make the most of what abilities they do have to succeed.

31:4-7. drunkenness in ancient world. The brewing of various types of beer and the fermenting of wine from dates and grapes is known in Mesopotamia and Egypt from protoliterate times (c. 4000 B.C.). Banqueting scenes are common in Assyrian art and depict parties

of men and women eating from tables stacked high with food and drinking from cups and through straws. The Babylonian creation epic, *Enuma Elish,* describes how the gods banqueted, making "the sweet liquor flow through their drinking tubes" (a necessity since the lees of the beverage were so thick). A Sumerian hymn to the goddess Ninkasi celebrates the brewing process and gives thanks for the beverage that slakes the thirst and gushes forth in abundance like the Tigris and Euphrates. The ills of drunkenness are found in Psalm 69:12 and Proverbs 20:1 and in the drunken parties portrayed in Daniel 5:1-4 and Esther 1:3-8, and were also well recognized across the ancient Near East. Egyptian wisdom literature warns against intoxication with its accompanying lack of control and the resulting social rejection. There is evidence from the Mari texts of intoxication being viewed as a favorable condition for receiving divine oracles.

31:10-31

Noble Wife

31:10. rubies as most precious gem. See comment on 3:15.

31:13. selection of wool and flax. The idealized wife in this extended proverb has the ability to wisely choose the best grades of wool and flax for her weaving (note the prohibition against weaving wool and linen together in Deut 22:11). Flax was grown for its seeds and its fibers, and could be used to make clothing, belts and lamp wicks. Wool and flax are also paired in Hosea 2:9, along with grain and wine, as the gifts that God, Israel's husband, gives as part of the covenantal promise (also listed in Hammurabi's Code and the Middle Assyrian laws as part of a husband's responsibility to his wife).

31:16-24. business enterprises for women. Hammurabi's Code contains several laws regulating the activities of Babylonian women who operate inns or taverns. However, this may not be construed in the same light as having the ability to buy a field or sell finely dyed and woven garments as a professional seamstress. The idealized picture of the "perfect wife" in this proverb goes beyond anything that the biblical text elsewhere suggests was open to women. Ordinarily they did not have the legal standing to purchase land, although they certainly worked hard with their families to cultivate it and deal with its produce. The one industry mentioned in ancient Near Eastern texts that was open to female enterprise was weaving, and this may be the model for all the other activities.

31:19. distaff and spindle. The terms translated as distaff and spindle only appear here. However, the context suggests that the translation is appropriate and that these are simply technical terms related to the task of spinning and weaving. There is a sense of intense activity performed by a determined woman willing to "gird up her loins" (i.e., pull up her sleeves) and produce large quantities of woven goods for both her family and for merchants to sell for her.

31:21. scarlet. See the comments on Exodus 25:4 and 25:5 for discussion of the various dyes used to color fabrics, especially linen. A red or purple dye would have been expensive and reserved for the wealthy.

31:22. fine linen and purple. A sheet of fine linen would have been a valuable and desirable commodity, to be used as a bed covering or cut into smaller pieces for garments (see Judg 14:12-13 and Is 3:23). A purple dye made from the glandular fluid of sea mollusks would have been quite expensive and in this context is a symbol of how prosperous the ideal wife makes her household.

31:23. elders at the city gate. The traditional place for the city elders to gather to do business (see Lot in Sodom's gate in Gen 19:1) and to hear legal arguments was at the city gate (see Ruth 4:1-4). Old Babylonian records note the legal role of the elders in judging land disputes, hearing the taking of oaths and serving as witnesses to various transactions (see Jer 32:12).

ECCLESIASTES

1:1. "son" of David. The term "son" can signify either a political relationship or kinship (any male descendant can be called a son). In this context it associates the Teacher with one of David's royal descendants, Solomon being the most obvious candidate that comes to mind.

1:2. meaningless. As early as Sumerian literature and throughout the traditions of the ancient Near East the meaninglessness of existence, and particularly of the human plight, had been recognized: from the days of old there has been vanity (wind).

1:9. nothing new under the sun. From Assyrian royal inscriptions it appears that the kings were constantly seeking out accomplishments so they could boast they had done something that had never been done or achieved before. The king could thereby include himself among the "creators" or "founders"—ones who had established precedents. Such accomplishments included quest or conquest; building of a road, palace, temple or city; or the introduction of a new technique or celebration.

1:13. role of the sage. Sages seem to have comprised a different guild from the scribes, though their exact function and nature is obscure. They were certainly teachers, but whether they had formal training or taught formally is unknown. Sages were known in other ancient Near Eastern cultures and were sometimes counselors to royalty. For more information see comment on Proverbs 1:1.

2:5. gardens and parks. Palaces were often surrounded by a private garden planted with fruit trees and shade trees, with watercourses, pools and paths—more like a park. The arboretum often contained many exotic trees and plants. Such gardens have been excavated at Pasargadae, Cyrus the Great's capital city.

2:6. irrigation systems. Mesha of Moab (ninth century B.C.) also claims in his list of achievements to have built reservoirs for water in the king's house. The Jewish historian Josephus claims in his *Jewish War* that the King's Pool in Jerusalem was built by Solomon.

2:7. slavery in Israel. There were individuals in Israel who were deprived of at least part of their freedom and who could be bought and sold. The most common term for slave in Torah was *'ebed.* This term, however, was vague (similar to its Akkadian counterpart, *wardu),* since it was used for anyone in a subordinate position to someone of a higher rank; it was thus a term for general dependence. It has often been translated as "servant." Even patriarchs and monarchs were servants of God, and all the inhabitants of both Israel and Judah were servants or subjects of the king, including the members of the royal family. David was at one time a slave (vassal) of the Philistine king Achish, and Ahaz of Judah was servant to the Assyrian king Tiglath-Pileser III. A chief source of slavery was prisoners of war, who were sold as slaves. However, in the Mosaic Law an Israelite could not be forced to do the work of a slave. The only way an Israelite could be reduced to servitude was because of his or her own poverty or if he or she had been given over as security for a relative's poverty. This slavery ended once the debt was paid. There is very little mentioned about the number of domestic servants and slaves in ancient Israel. For example, a census taken after the exile (fifth century B.C.) recorded over seven thousand slaves, as compared to over forty thousand free persons. A well-off family probably owned one or more domestic servants. Although a slave was considered property, he or she was also considered human and thus had certain rights. The slave was considered a part of the family, as evidenced by the requirement of circumcision. Although there was no predominance of slave labor in agriculture, the artisan trades or any branch of the economy, there appears to have been some employment of state slavery during the period of the monarchy (c. 1000-586 B.C.). David set the population to work making bricks, while Solomon used "slaves" to work in the mines at Arabah, in the factories at Ezion Geber and in the work of the royal palace and temple. Most of these slaves were Canaanites and not Israelites.

2:8. singers. Musicians were usually retained for the ruler's entertainment or for cultic ceremonies. Since both male and female singers are included here, the latter is more likely. Mesopotamia and Egypt had long histories of both popular and religious music that must have been known to the Israelites. Ancient Egyptian tomb paintings demonstrate the postures of dancers as well as a wide variety of musical instruments. Court musicians, both male and female, are attested at many royal courts throughout the ancient Near East. They are attested in texts (including, for instance, Uruk and Mari) in the Tigris-Euphrates Valley, Hittite Anatolia and Egypt. They were included among permanent palace personnel, as rations lists demonstrate.

2:8. harem. The term here is usually considered a designation for concubines, but the word occurs only here and is obscure. Certainly the taking of concubines was a normal pattern of behavior for kings. Others have suggested that the word should be translated "treasure chests."

3:5. scattering and gathering stones. Stones were cleared away from a field so that the farmer could use it for agricultural purposes (see Is 5:2). One threw stones into an enemy's field so that it could not produce yield (2 Kings 3:19, 25; Is 5:2).

3:16. corruption of the judiciary. The writer bemoans the fact that what had previously been justice has become wickedness. In other words, the normal course of the world has been overturned, a common theme in Mesopotamian literature, especially in the literary piece called the Babylonian Job. For more information see comments on Isaiah 5:23.

4:12. cord of three strands. This phrase was evidently well known in the ancient Near East. In the Sumerian story of *Gilgamesh and the Land of the Living* Gilgamesh encourages Enkidu as they anxiously anticipate their battle with the fearsome Huwawa. He suggests that the two of them can defend one another and so they will succeed.

5:1. options in the temple. Ancient Near Eastern literature offers similar cautions. The Egyptian *Instruction for Merikare* commends the character of someone who is upright in heart over the sacrifice of an evil person. An inscription from Ugarit comments on the actions of a fool who rushes to offer prayers to appease his god even though he has no sense of guilt. The options mentioned in the text contrast the direction of communication. The sacrifice of the fool usually accompanies a petition to the deity for favor or the granting of a request. What one listens to in the temple would typically be an oracle in which the deity can express favor or disfavor. The Egyptian *Teaching of Ptah-Hotep* spends nearly fifty lines extolling the virtues of one who hears over the foolishness of one who speaks rashly.

5:2. swearing of oaths. This verse most likely refers to the swearing of oaths, for rash oaths were known to be a problem. The swearing of an oath was considered a very serious matter in ancient Israel. An oath was always sworn in the name of a god. This placed a heavy responsibility on the one who swore such an oath to carry out its stipulations, since he would be liable to divine as well as human retribution if he did not. Oaths were used in legal proceedings and for political treaties and covenants. Client kings and dominant kings alike were required to abide by their oaths to support each other.

5:3. dreams. Dreams in the ancient world were thought to offer information from the divine realm and were therefore taken very seriously. Some dreams given to prophets and kings were considered a means of divine revelation. Most dreams, however, the ordinary dreams of common people, were believed to contain omens that communicated information about what the gods were doing. Those that were revelation usually identified the deity and often involved the deity. The dreams that were omens usually made no reference to deity. Dreams were often filled with symbolism necessitating an interpreter, though at times the symbols were reasonably self-evident. The information that came through dreams was not believed to be irreversible, but a dream could be a cause for concern, if not alarm. This verse would then best be read, "As a dream is accompanied by many worries, so a fool's speech comes with many words."

5:4. vows. Information concerning vows can be found in most of the cultures of the ancient Near East, including the Hittite, Ugaritic, Mesopotamian and, less often, Egyptian. Vows were voluntary agreements made with deity. The vows would typically be conditional and accompany a petition made to deity. They were cultic commitments to God in which the worshiper promised to undertake a certain action if God answered his or her request. Artifacts used as votive offerings have been found at various archaeological sites in the Levant. Moreover, votive stelae from Phoenicia and literature (prayers and thanksgiving texts) from Mesopotamia, Egypt and Anatolia show evidence of vow-making. For more information see comment on 1 Samuel 1:11.

5:6. temple messenger. Scholars are not certain as to who this temple messenger was, as there is no other biblical reference to the office. From this verse we can assume there was a temple official whose job was to make sure that worshipers had fulfilled their vows. Similar functionaries may have been referred to on Phoenician inscriptions.

5:8. corrupt bureaucracy. The king in the ancient Near East was required to protect the legal rights of his people. The royal bureaucracy was thus responsible for justice and righteousness. Too often, however, reality was much harsher. By the time everyone (local officials all the way up to the temple and palace) got their share of the farmer's crop (in the form of produce taxation), bare subsistence was all that was possible.

5:17. eating in darkness. If one works in the fields from sunup till sundown, then both breakfast and supper are eaten in the dark. Thus those who desire wealth will not have fulfillment.

6:3. importance of proper burial. In Mesopotamia those who had not been properly buried were condemned to wander the earth aimlessly as spirits and to bother the living. This idea is implied in the horror observed in biblical texts concerning individuals who died in a violent manner without proper burial. Most ancient peoples believed that proper, timely

burial affected the quality of the afterlife. See the comment on 1 Kings 16:4. In the Gilgamesh Epic Enkidu, having returned from the netherworld, reports to Gilgamesh that the one who died unburied has no rest and that the one who had no living relatives to take care of him could only eat what was thrown into the street. A Babylonian curse relates burial to the uniting of the spirit of the dead with loved ones. We know that even Israelites believed that proper burial affected one's afterlife, because they, like their neighbors, buried their loved ones with the provisions that would serve them in the afterlife most often pottery vessels (filled with food) and jewelry (to ward off evil), with tools and personal items sometimes added.

6:6. all go to the same place. In Israelite understanding (reflected also in many of the surrounding cultures) the choices were not heaven or hell but life or death. This verse is talking about human destiny, and therefore the place where all went was Sheol, the abode of the dead. For more information about afterlife beliefs see the comments on Job 3:13-19 and the sidebar on Isaiah 14.

7:1. fine perfume. Banqueters in the ancient world were often treated by a generous host to fine oils that would be used to anoint their foreheads. This provided not only a glistening sheen to their countenance but also would have added a fragrance to their persons and the room. For example, an Assyrian text from Esarhaddon's reign describes how he "drenched the foreheads" of his guests at a royal banquet with "choicest oils."

7:6. crackling thorns under the pot. The thin wood of thorn bushes produces a lot of noise that draws attention as it bursts quickly into flame. In reality, however, it makes very poor firewood and gives off no lasting heat.

7:7. bribery in Israel. Gift-giving was common in ancient Israel. Sacrifices and other offerings were considered gifts to God. Gift-giving between individuals was also important, although in some cases gifts were considered improper (because of the motive of the giver), causing the gift to be considered a bribe. It is in this context that the Israelites were commanded not to take gifts (i.e., bribes) since they "blind the wise" (see comment on Ex 23:8). As evidenced by the preface to the Code of Hammurabi (c. 1750 B.C.) and the statements made by the eloquent peasant in Egyptian wisdom literature (c. 2100 B.C.), the standard of behavior for those in authority was to protect the rights of the poor and weak in society. An efficiently administered state in the ancient Near East depended on the reliability of the law and its enforcement. To this end every organized state created a bureaucracy of judges and local officials to deal with civil and criminal cases. It was their task to hear testimony, investigate charges, evaluate evidence and execute judgment (detailed in the Middle Assyrian Laws and the Code of Hammurabi). The temptation for judges and government officials to accept bribes is found in every time and place. In the ancient Near East taking bribes became almost institutionally accepted in bureaucratic situations, as competing parties attempted to outmaneuver each other. However, at least on the ideal level, arguments and penalties were imposed to eliminate or at least lessen this problem. Thus Hammurabi's Code 5 placed harsh penalties on any judge who altered one of his decisions (presumably because of a bribe), including stiff fines and permanent removal from the bench.

7:12. money as shelter. The word the NIV translates "shelter" is the word usually rendered "shade." It is a metaphor for the protection and comfort that come with relief from the hot sun. This may have been a well-known proverb, but it has not been found elsewhere. Presumably the shadow of money, like wisdom, is the protection that money affords the individual.

7:13. straighten what is crooked. In the ancient Near East the pious were constantly baffled concerning what the gods were doing and why they were doing it. In a Sumerian hymn to Enlil the poet says, "Your immensely clever deeds are dismaying, their meaning is a twisted thread that cannot be separated" (ANET, 575).

8:2. courtier's conduct. Advice concerning how to conduct oneself as a courtier is expected in wisdom literature, since its primary function was training future palace functionaries. The Egyptian *Teaching of Ptah-Hotep* addresses many of its paragraphs to people in various leadership capacities. The *Instruction of Ankhsheshonqy* advises in much the same way as this section of Ecclesiastes: "Do not make a judgment in which you are wrong" (16:17); "Do not hasten when you speak before your master" (17:10). The advice to the courtier described here is also similar to that in the *Words of Ahiqar,* a counselor at the Assyrian court in the seventh century B.C.

8:11-12. criminal punishment in Israel. Israel shared a common legal tradition with the rest of the ancient Near East concerning criminal punishment. The most common penalties in the Bible were stoning, death by fire and mutilation. Ancient Near Eastern sources (e.g., the

Code of Hammurabi and the Middle Assyrian Laws) occasionally mention the methods of punishment, which included drowning, mutilation and impalement. Imprisonment was not used as a punishment for crime, though there were debtors' prisons and political prisoners. Additionally, prisons would be used to detain those awaiting trial.

9:5, 10. no reward. The term "reward" here probably refers to the benefits of life, in which the dead cannot partake. They cannot enjoy any of those things that are considered blessings in this life. Beyond that, this also indicates the Israelite belief that there was no heavenly reward for a life of faith or good works. They believed that God's justice was carried out in this life rather than in the afterlife.

9:7-10. eat, drink and be merry. The Greek philosopher Epicurus was not the first to commend this approach to life. Even Gilgamesh was advised to let his belly be full, make merry day and night, and let his garments be clean and fresh and his body be bathed. He was urged to take delight in his children and wife. In Egyptian literature the *Harper's Song* from the first half of the second millennium advise a life of rejoicing and pursuing pleasure. This includes anointing the head and dressing in fine clothes.

9:7. wine. There were a number of different types of wine in ancient Israel. The most common form of wine was from the *Vitus vinifera L.* grape. It was typically red (Gen 49:11-12; Prov 23:31; white wine is mentioned only in rabbinic sources). The Old Testament mentions the existence of a "sweet wine," probably produced by exposing the grapes to the sun for at least three days before treading. Vinegar (i.e., sour wine) was used for seasoning and for its medicinal value. The most common mixture was wine diluted with water, although spices were also mixed with this beverage. As in the rest of the Near East wine was not the most common beverage but was used for special occasions, including feasts, coronations and weddings. There were certain biblical restrictions to the drinking of wine that were primarily of a cultic (e.g., Lev 10:9) and dedicatory nature (i.e., Nazirite vow). Wine was also used in the Israelite cult (e.g., drink offerings). Wine was apparently an important commercial item, as Solomon provided wine to Hiram of Tyre in exchange for the building of the temple (2 Chron 2:10, 15).

9:8. clothed in white. Scholars have understood the color white to symbolize purity, festivity or elevated social status. In both Egypt (Story of Sinuhe) and Mesopotamia (Epic of Gilgamesh) clean or bright garments conveyed a sense of well-being. Moreover, the hot Middle Eastern climate favors the wearing of white clothes to reflect the heat.

9:8. anointed head. Oil preserved the complexion in the hot Middle Eastern climate. Both the Egyptian *Song of the Harper* and the Mesopotamian Epic of Gilgamesh describe individuals clothed in fine linen and with myrrh on their head.

9:11. concept of fate. Fate, an impersonal force, controlled the destiny of things. Enki, the god of wisdom, wore a sorcerer's hat, showing that he attempted to control and predict fate, much like a human sorcerer. Fate was written on tablets, and those who controlled them controlled the destiny of the universe. If they were in the wrong hands, there was chaos in the world. In one myth a bird deity (Anzu) stole the tablets of fate, which caused quite a stir within the divine community until he was killed. The Israelite concept of fate or chance was different than in Mesopotamia. Instead of viewing something as a random happening (Fate), they would consider it simply an unexpected event (serendipity). "Time" and "chance" are presented here not as two separate contingencies but as a single factor. A "well-timed coincidence" can occur in any situation and alter what would have been considered an assured outcome.

9:12. hunting/fishing. Although Ishmael and Esau were known as hunters, hunting was not a typical vocation in Israel except in time of hunger or to get rid of the wild animals that caused danger to flocks. In both Assyria and Egypt, however, there are numerous wall reliefs depicting royal hunting scenes. Hunting is also implied for Solomon's court (1 Kings 4:23). This vocation was known well enough in Israel to be the basis for some metaphors. Fishing, like hunting, is not mentioned as a recreational activity in ancient Israel. The book of Job describes fishing by spear or harpoon (41:7) or by hook (41:1-2; Is 19:8). Like hunting, fishing was often the basis of metaphors, primarily as a figure of God's judgment on individuals or nations.

10:1. flies in the perfume. This little phrase is somewhat like the modern "one bad apple ruins the whole barrel." Something as insignificant as flies will ruin even the best perfume by making it so disgusting that the whole container will have to be discarded.

10:2. right and left. While there is no doubt that the right side was considered the place of honor and the most protected position, there is no indication that there was anything nega-

tive or inherently weak or evil connected to the left side, either in the ancient Near East or in Israel. It was secondary in honor and an unexpected direction from which to attack. The fool chose the path of vulnerability and lower status.

10:8-9. dangers of stated activities. (1) Digging a pit was an activity designed to catch a large animal. With that purpose in mind, the pit was disguised, making it possible that one could stumble into it oneself. (2) When a stone wall was dismantled, or when a breach was made in a wall for a gate, a farmer could unwittingly disturb a snake who had taken up residence among the cool stones. (3) The quarrying of rocks referred to here is probably not that done by professionals, because the other activities are all normal agrarian activities. The verb is used for quarrying but is also used in more general contexts that deal with uprooting or taking something out. Alternatively then, this line could refer to a farmer clearing stones from his field. Injury could come from dropped rocks, hernias or scraped arms. (4) Finally, the dangers inherent in splitting logs are easily recognizable. The axhead could fly off the handle or glance off the wood, resulting in serious injury.

10:11. snake charming. Snakes were greatly feared in the ancient world as magical beings as well as for their venom. Snake charming was a skill known throughout the ancient Near East. Snake charmers appear to be represented on Egyptian scarab-amulets (see comment on Ex 7:11-12). Both Egyptian and Mesopotamian literature contains examples of incantations against serpents and their bites. The word translated "charmed" here should not evoke images of swaying serpents hypnotized by pipe-playing swamis. Instead the reference is to snakes against which the incantations are ineffective. Akkadian texts also speak of snakes that are "unconjurable."

10:20. birds as tattlers. Stories of "little birds" who told secrets are found in Aristophanes' *The Birds,* a classical Greek comedy, and in the Hittite tale of Elkuhirsa. The proverbs of Ahiqar assert that a word is like a bird and that one who releases it lacks sense.

11:1. bread on waters. This proverb has been found in the Egyptian source the *Instruction of Ankhsheshonqy* ("do a good deed and throw it in the river; when it dries up you shall find it") and in Arabic proverbs. If Ecclesiastes follows the route of Ankhsheshonqy, it suggests that a spontaneous good deed carries no guarantees of reciprocity but that "what goes around, comes around."

11:2. giving of portions. The giving of portions generally assumes a situation in which goods or assets are being distributed (not just invested). This could be in the context of inheritance or generosity.

12:1-8. effects of old age. One line of interpretation sees a physiological allusion in each of these lines:

verse 2: sight dimmed, depressed
verse 3: trembling hands, stooping posture, losing teeth, cataracts
verse 4: loss of hearing, awakening early
verse 5: increased fears, gray/white hair, slow movements, decreased sexual drive
verse 6: weakened spinal cord, deteriorated mental powers; loss of bladder control; heart failure
verse 7: death

Some of these connections go back to the Targums (Jewish interpretive translations into Aramaic dating to as early as the first century A.D.), but the connections are difficult to substantiate since many of them are not attested elsewhere. So, for instance, to see the "golden bowl" as a reference to the brain would be unlikely, since in the ancient world they were unaware of the function of the brain. Could the silver cord be the aorta and the golden bowl the heart? The fact that no one can say shows the speculative nature of the whole line of interpretation. The Egyptian *Teaching of Ptah-Hotep* from the Middle Kingdom (first half of second millennium B.C.) opens with a dozen lines describing the effects of old age (such as eyes dim, ears go deaf, bones ache, memory and discernment gone), but it speaks in straightforward terms rather than using metaphors.

12:3. keepers of the house. The "keepers of the house" could be male servants, common as house slaves throughout the ancient Near East, who often were people in authority (like Joseph in Potiphar's house).

12:3. grinders. The grinders are female servants or prisoners who perform the daily work of grinding grain to provide bread for the entire estate. Grinding grain into flour was usually done with millstones and was the job of the lowest members of society. One of the basic "appliances" of any ancient household would have been the handmill (called a saddle quern) with two stones for grinding (see comment on Judg 9:53). Larger milling houses often served as prison workhouses in Mesopotamia, but each prisoner still used a handmill for grinding. Grinding houses would include prisoners of war, criminals and those who had defaulted on their debts.

12:3. looking through windows. There is a familiar motif of a woman looking out the window that is beautifully represented in ivory

carvings found at Nimrud, Samaria and Arslan Tash (in which the woman is adorned with an Egyptian wig). In literature the woman is gazing into the distance awaiting news of a husband or son who has gone to war (see comment on Judg 5:28). This is possibly the basis of the metaphor used here.

12:4. sounds of activity. The doors being shut are double doors and therefore must refer to the city gate where all the bustle of activity takes place. Neither the city noise nor the laborers' noise (from the mill) is now heard. These sounds died out at the end of the day.

12:5. almond tree. The white blossoms of the almond tree apparently represent the white hair of old age. The almond tree was the first tree to bloom in late January-early February, rising to a height of fifteen to thirty feet. The almond flower is white with shades of pink, ripening with almonds about ten weeks later. Other ancient metaphors for old age include white gypsum on a black mountain.

12:6. silver cord/golden bowl. The word for bowl here also is found in Zechariah 4:2-3, where it is a bowl that holds the wicks of candles. Some have assumed that the silver cord holds the expensive golden bowl, which, if severed, would cause the bowl to be smashed. This symbolizes the aging process and death. Josephus describes a golden lamp hung on a golden chain at the Jewish temple at Leontopolis in Egypt.

12:6. pitcher at spring/wheel at well. Both items are associated with a well or cistern. The wheel has been thought to represent the pulley, which lifts the jar out of the well, though these devices were not widely used. Alternatively, the word translated "wheel" *(galgal)* may refer to a cooking pot, based on a similar term in Akkadian *(gulgullu,* which, perhaps not coincidentally, also means "skull").

SONG OF SONGS

1:2. kiss. A kiss on the lips was used as a passionate expression throughout the Near East, though Egyptians in the early periods often touched noses instead.

1:3. perfumes. A number of oil- and resin-based perfumes were employed to scent the body and burnt as incense. Among these were myrrh, frankincense and bdellium (see Is 60:6; Jer 6:20). Saffron, calamus and aloes were imported from India, cinnamon from Sri Lanka and nard from Nepal. For other biblical usage see the incense recipe in the comment on Exodus 30:34-38 and the perfumes mentioned in the comments on Proverbs 7:17 and 27:9.

1:5. Kedar. The Kedar were among the most powerful of the northern Arabian bedouin tribal groups in the period between the eighth and fourth centuries B.C. They are mentioned in the Assyrian and Neo-Babylonian annals and are tied to the genealogy of Ishmael in Genesis 25:13 (see the comments on Gen 25:12-16; Is 21:16 and 42:11). Their tents consisted of animal skins or woven fabric stretched over poles to form a three-sided pavilion. The black color would have come from the use of black goat hair (see the comment on Ex 26:7-13).

1:7. veiled woman. Although this reference is uncertain, it may hinge on the differences in costuming required in various social settings. According to the Middle Assyrian Laws, the wives, widows and unmarried daughters of citizens were required to wear a veil when out in public (note how Rebekah veils herself prior to meeting Isaac in Gen 24:65). In the house or in a setting where only family members or servants were present (such as her husband's sheepfold) the veil would be unnecessary. Note also the veil worn by Tamar in Genesis 38:14-15. This may indicate the use of the veil in Canaanite context as a sign of sacred prostitution or possibly by harlots working among the shepherds.

1:9. mare among Pharaoh's chariots. A tactic of battle attested in Egyptian literature was to release a mare in the vicinity of the chariots so that the stallions pulling the chariots would become distracted and confused. The word "harnessed" (NIV) does not occur in the Hebrew text.

1:11. earrings of gold studded with silver. As in Proverbs 25:11 the biblical writer uses the image of a finely crafted piece of precious jewelry to demonstrate devotion and affection. In this case the earrings probably had pendants of silver or studs embedded in the gold setting (see comment on Is 3:18-23).

1:13. sachet of myrrh. Myrrh bushes grow in

the arid region just north of the coastal mountains of Yemen and Oman in the rain shadow of the southwest monsoon. The reddish myrrh resin, extracted by gashing the thorny stems and exposing the inner bark, appears as juicy drupes. It was crushed for use in making perfume or as a medicinal ingredient. Its natural fragrance, somewhat like turpentine, was long-lasting enough to be placed in a sachet to enhance sexual pleasure or serve as an aromatic mask to the odors often present in ancient homes. Pouches worn around the neck containing various elements were worn as amulets in Egypt.

1:14. henna blossoms. Henna is a flowering shrub, *Lawsonia inermis L.*, with fragrant white blossoms. It grows in many areas of the Middle East, and has been discovered in the tomb of the pharaoh Tutankhamen. The leaves and twigs produce a red, yellow or orange dye that can be used to color the hair and other parts of the body. Their fragrance is similar to roses.

1:14. En Gedi. This is an oasis located thirty-five miles southeast of Jerusalem and nestled within a ravine on the western shore of the Dead Sea. The name means "spring of the young goat," and the excavation of the fourth-millennium temple within its precincts attests the antiquity of its refreshing character. In this metaphor the peculiar location of the oasis between the ridges of the surrounding hills makes it an apt parallel to the sachet of myrrh and the bouquet of henna blossoms between the "beloved's" breasts.

1:15. eyes are doves. Doves figure prominently on seals and other iconography as a symbol of lovemaking or seduction. They are sometimes understood as messengers of love. In this case the eyes are seen as having seductive power.

2:1. rose of Sharon. While the exact flower referred to here is unknown, the use of the Hebrew word *shushan* for "lily" in this verse indicates a plant with six petals. A likely choice, therefore, would be the polyanthus narcissus, which grows in the hills and moist valleys of the Sharon Plain. It flowers during the winter and has white petals and an orange cup or corona enhancing the beauty of each cluster. Narcissi have been found as offerings in Hellenistic tombs in Egypt.

2:4. banner over me is love. The translation of *degel* as "banner" is uncertain. Both Murphy and Fox make reference to an Akkadian cognate, *diglu*, "glance" or "intent," and Fox chooses to translate "his intent towards me was love." In either case, setting a standard as a symbol of possession or making an intent to carry out an action arrives at the same conclusion, to make love to the beloved (see Jer 2:33).

2:5. raisins/apples as aphrodisiac. The woman asks for raisins and apples as a cure restorative for her "love sickness" (similar to the lovesick male in Chester Beatty's love songs from Egypt). It can only be cured by the return of her lover. It is possible that the raisins are associated with the raisin cakes mentioned in association with the worship of the goddess Ishtar (see the comment on Jer 7:18). Apples also were understood as aphrodisiacs in Assyrian incantations.

2:7. gazelles and does. Gazelles and does are often portrayed as the companions of the god-

---

SEXUAL METAPHOR

The explicit nature of portions of the Song of Songs may be a bit shocking to some readers. However, metaphorical erotic literature was not uncommon in the ancient Near East, as is seen especially in Egyptian Love Songs. Fertility was a major issue for the people of these cultures, since their lives revolved and relied upon the harvest. Most of their religious festivals and holidays centered on the agricultural calendar, and it was an easy step to employ these images of plowing, seeding, cultivation and harvest to human relations. As a result, the sexual metaphors that appear in the text express the high emotions of a loving couple, who find it difficult to be separated and who in sometimes flamboyant terms describe each other's merits and beauty. It would be impossible in the light of their passion to speak in anything other than sensuous and intimate terms.

There is a celebration of life here, both in the natural world and amongst humans. So when the "beloved" speaks of her lover as being graceful as a gazelle, leaping over hills (2:17) and thus demonstrating his energy and athletic skills, it is easy to enter into her passionate realm. He equates her with all that is beautiful, "a mare among Pharaoh's chariots" (1:19), with eyes like doves (1:15; 4:1) and lips a "scarlet ribbon" (4:3). She in turn describes him as a fragrant sachet of myrrh worn around her neck and close to her heart (1:13-14). Such comparison masks the thorns of everyday life and for a time restores a sense of the idyllic essence of Eden.

Most English translations disguise some of the most blatant erotic imagery with euphemism and metaphor, as is appropriate considering the poetic nature of the literature and the need to preserve a certain propriety for a general audience.

dess of love in ancient Near Eastern art.

2:9. peering through the lattice motif. The finely carved ivories found in excavations of the Iron Age levels at Samaria and Nimrud include the motif of "the woman in the window." Some associate this with the Phoenician goddess Astarte, who was identified with a cult of sacred prostitution (see the adulteress's spying through the lattice in Prov 7:6). In this case, however, it is the impatient man who periodically glances through the screen to see when his lover will be ready to admit him.

2:13. early figs. The word used for fig here, *paggâ,* does not appear elsewhere in the Bible, but there are Aramaic and Arabic cognates which refer to the first unripe fruit to appear on a fig tree. Ordinarily the fig tree has two crops a year. The first ripens in June and the second in August or September (see Jer 24:3; Hos 9:10).

2:15. foxes. In the Egyptian love poetry foxes represent sexually aggressive men, rather like the term "wolf" in American idiom.

2:16. lilies. Some translators consider the lilies mentioned here to be lotus flowers, which were symbols of sensuality and fertility in Egypt and Canaan.

3:2. motif of searching through the city. See the comment on Jeremiah 5:1 comparing Jeremiah to the Greek philosopher Diogenes in his search through a city for an "honest man." The motif of searching a city is also found in Ezekiel's vision of the executioners and the scribe in Ezekiel 9. There is an intensity in this verse that is tied to the desperation and anxiousness of the woman for her lover, which even draws her into a potentially dangerous search. Ordinarily an honorable woman would not be out on the streets alone (compare the adulteress in Prov 7:6-20). Mythological literature also depicts the search of the consort for her lover. In Canaanite mythology Anat goes seeking for Baal; in Egyptian literature Isis goes on a quest for Osiris.

3:4. mother's house. As is the case in Genesis 24:28 in the story of Rebekah and in Ruth 1:8 when Naomi instructs her daughters-in-law to return to their "mother's house," in this instance the term "mother's house" is indicative of both a spatial and a social realm. The *bêt 'em* in each of these texts is to be equated with the *bêt 'ab,* or "father's house." While most texts, perhaps due to the legal issues of inheritance and landownership, employ "father's house" (see Gen 38:11; Lev 22:13), the importance of females within the household with respect to procreation as well as management of its affairs (see Prov 31:10-31) made these terms of equal social value within Israelite culture.

3:6. merchant spices. Merchant caravans brought quantities of incense, both frankincense and myrrh, from the desert regions of southern Arabia and Somalia. These expensive items not only provide a cloud of fragrance for the procession described here but also enhance the sexual desirability of the woman. The Egyptian love songs repeatedly refer to "myrrh-anointed beauty" and other aromas as sexual intoxicants.

3:9. wooden carriage. The lovers compare their bower to the royal canopy of King Solomon, constructed from the finest wood from Lebanon and decorated with gold and silver. The term translated "carriage" here has had many interpretations based on Egyptian, Aramaic and Greek cognates. Ideas range from a litter or sedan chair to a throne room or "magnificent building." Fox's idea of a covered pavilion in a garden (see Esther 1:6) or a garden kiosk such as those in Mesopotamian texts and Egyptian tomb paintings is a likely suggestion.

3:11. crowned by mother at wedding. Wedding garlands were worn by the couple as they processed to their nuptial ceremony (Is 61:10; compare the Persian king placing a crown on Esther's head when he makes her his queen in Esther 2:17). There is no evidence elsewhere in the text of a mother crowning her son as king, although given the theme of Solomon's wise reign it may be a reference to the "crown of splendor" that Dame Wisdom places on the head of her chosen (Prov 4:9). The mother held the position of priority in the family concerning all matters of the heart.

4:1-7. description of lover's body. As Keel points out, for the most part the descriptions focus on dynamic powers rather than shapes. So the eyes are not shaped like doves but act like doves (see comment on 1:15).

4:3. temples as halves of pomegranate. Rather than "halves" of a pomegranate, Keel plausibly suggests slit of the pomegranate revealing the tender red fruit. This would fit well with the parallel of the lips earlier in the verse. If that is the case, the word translated "temples" should be translated as "cheeks."

4:4. tower of David. According to the fashion described in the Egyptian love songs and depicted in art (bust of Nefertiti) a long neck was a characteristic of a beautiful woman. Thus a comparison with a tall, well-built tower is quite apt (see 7:4 and comparison with an "ivory tower"). However, the structure itself is unknown to archaeologists, and it is unclear whether it stood in Jerusalem or some other city. More important than the shape, however, was the fact that a tower represented the pride and glory of a city. This is the imagery also

used for the neck in the Bible (for instance, Ps 75:5).

4:4. shields hung on tower. The metaphor of a woman's adorned neck continues by comparing the shields used to decorate the structure (compare 1 Kings 10:16-17) with the necklaces and strings of jewels worn by wealthy or beloved women (see Prov 1:9; Song 1:10; Ezek 16:11). In his "Lament for Tyre" Ezekiel describes how shields were hung on the city walls to add to its beauty (Ezek 27:10-11).

4:8. crest of Amana. Now the lover calls his beloved to join him from her inaccessible heights and distant lands. This is a metaphor of his desire for her presence rather than her actual geographic location. The Amana is one of the peaks of the Anti-Lebanon Range, near the source of the Amanus River.

4:8. Senir/Hermon. These are alternate names for the same peak, Mount Hermon (see comment on Deut 3:9). Assyrian records mention Senir within the Lebanon range, in northern Transjordan. The song here simply uses this metaphorically inaccessible region as synonymous with the lover's feeling of isolation when separated from his beloved.

4:8. lions and leopards. These wild animals are often the companions of goddesses, particularly Ishtar, the Mesopotamian goddess of love. Keel says that the motif stretches from Neolithic art all the way into the classical Greek and Roman period.

4:12. gardens. Gardens were places of delight and refreshment and therefore served easily as a metaphor for the beloved. Sumerian literature used the metaphor to describe the lover's partner as a well-stocked garden, and Akkadian proverbs describe a woman as a garden of delight. In Egyptian love songs the woman describes herself as a field planted with all sorts of plants.

4:13-14. spices. As is commonly the case in the Egyptian love songs, the beloved woman's beauty and desirability is compared to fragrant fruits, trees and spices (see the comments on Prov 7:17 and 27:9). The exaggeration of the number and variety of exotic plants listed here may simply be a reflection of a "lover's flattery." Nine types of spices are listed, and three actually grow in Israel (balsam, henna, saffron). The crimson saffron crocus produces such minute quantities of spice that over four thousand flowers are needed to produce an ounce. Frankincense, aloes and spikenard were imported from Arabia, India, Nepal and China, and thus were extremely expensive. Spikenard is obtained from camel grass in the deserts of Arabia and North Africa, but is also referred to as "pure nard" (see Mk 14:3). It is made from the flowers of a plant growing on the slopes of the Himalayas (thirteen thousand feet in elevation) and was considered an aphrodisiac. Myrrh, cinnamon and sweet cane/calamus were also imported. Calamus comes from an aromatic grass found in India, which today is used to produce citronella oils.

5:7. treatment by guards. It is possible that the watchmen considered an unaccompanied, young female out at night a harlot. They take away her veil or light scarf (see Is 3:18, 23), perhaps in line with the Middle Assyrian law that permits only "mothers of households, widows and other free women" to wear a veil in public. The woman may have launched into her search so quickly that she is only half dressed, like the lovesick woman in the Egyptian love songs.

5:15. pillars of marble. Now it is the woman's turn to describe her lover in flamboyant terms. Her comparisons of his legs with a pair of finely carved marble pillars set on golden bases is similar to the description Ben Sira uses for a woman's shapely legs and feet (Ecclus 26:18). A similar portrayal of perfect physical symmetry can be found in the description of the Babylonian god Marduk in the *Enuma Elish* creation epic.

6:4. Tirzah. Although the capital of the northern kingdom of Israel was moved from Tirzah (Tell el-Far'ah) during Omri's reign, that does not mean it was totally abandoned. It is possible the writer here wishes to avoid comparisons between Jerusalem and Samaria, political rivals, so Tirzah could be a substitute. The name also serves as a pun, based on the Hebrew root *rṣh,* "pleasing" or "beauty." This allows the lover to intensify his statement that she is as "beautiful as Tirzah."

6:8. harem. A royal harem consists of (1) women who are designated as "queens" and whose sons are automatically in the line of succession; (2) concubines who have a lesser status and whose sons may not inherit without the direct command of the king; and (3) maidens who may be either women who have not yet been presented formally to the king (see Esther 2:8-14) or those who have not yet borne children. In this case the man boasts that his beloved is more beautiful that any number (sixty plus eighty equals infinity) of women in the king's harem.

6:11. nut trees. While pistachios and pine nuts were common in ancient Palestine, there were no naturally occurring "nuts" such as walnuts *(Juglans regia L.).* The term *'egoz,* which only appears in this verse in the Bible, has been translated as "walnut," and that suggests that

the tree may have been introduced in Palestine from its natural habitat in Persia and India prior to the Hellenistic period.

6:13. Shulammite. Since a definite article precedes this name, it is probably an epithet, such as "perfect one," not a personal name. The name may be based on a feminine form of the name Solomon, or possibly there is a connection with the Mesopotamian goddess Shulmanitu or Sala. It is unlikely that the name refers to an inhabitant of Shunem, since the woman is so closely associated with Jerusalem in the songs.

6:13. dance of Mahanaim. No specific dance has been associated with Mahanaim, a site in Transjordan on the Jabbok River (see 2 Sam 2:9). The name means "two camps," and thus some have interpreted the reference to mean a dance in which the men and women separate and dance in lines opposite each other. Dance is often associated with the celebration of a victory (1 Sam 18:6-7) and as an expression of joy (Ex 15:20; Judg 11:34).

7:2. blended wine. During the Hellenistic period wine was often mixed with water so that a greater quantity could be consumed and conversation could continue throughout the meal. However, in earlier periods blended or mixed wine was drunk. This was a more potent intoxicant and thus had to be consumed with more moderation (see Judg 9:13; Prov 9:2). In Mesopotamia, where wine was less common until the time of the Assyrian empire, wine was served on special occasions. Sometimes only grape syrup would be available, mixed with honey to create a liqueur.

7:4. ivory tower. See the comment on 4:4 for a comparison between a woman's shapely neck and a tall structure.

7:4. pools of Heshbon. Since pools of water reflect the light, they serve as an excellent metaphor for the beloved's dazzling eyes. Excavations at Heshbon, ten miles north of Madaba in Transjordan, have uncovered a large eighth-century B.C. cistern or reservoir that could be the basis for this image. The long, dry months of summer would have required the storage of water in cisterns, and these pools of water would have been beautiful indeed to the inhabitants of the city as they saw light sparkle off the water.

7:4. gate of Bath Rabbim. This place name has not been located, although one may presume that it was the entrance to the city reservoir. There may also be a pun on the meaning of the phrase, "daughter of many," based on the similar sounding title *bat nadib,* "nobleman's daughter," thereby granting the beloved an honorable title.

7:4. tower of Lebanon. A tall mountain, such as Mount Hermon in southern Lebanon, may be meant here. However, Fox's suggestion of a play on *Lᵉbonah*, "frankincense," with the place name Lebanon is attractive. Thus the woman's nose is fragrant and as desirable as a tall pile of this expensive incense.

7:13. mandrakes. The fruit of the mandrake is also mentioned in the Egyptian love songs as an aphrodisiac. Rachel quickly moves to obtain a mandrake when her sister Leah's son Reuben finds it in a field (see the comment on Gen 30:14-15). The plant has broad leaves with purple flowers with a strong fragrance and small yellow fruit.

8:2. spiced wine. See the comment on blended wine in 7:2. In some cases wine was made from fruit juices such as the pomegranate. Egyptian sources record the use of palm sap, date syrup and figs to make wines. The sweet flavor of such beverages is paralleled here with the sweetness of a kiss (1:2; 5:16).

8:6. seal metaphor. The metaphor reflects the intimacy of the constant and close contact represented by a seal ring (see Jer 22:24) or a cylinder seal worn around the neck as an amulet and thus near the heart (see comment on Gen 38:18, 25). One of the Cairo love songs (Group B, known as the "seven wishes") contains a phrase that is comparable: "If only I were her little seal ring, the keeper of her finger!"

8:11. Baal Hamon. This place name has not been identified and only appears in this verse. A similar name, Belamon, appears in Judith 8:3, but this may only be a coincidence. The name may have been chosen simply because it means "the possessor of wealth" and thus becomes synonymous with the fruitful nature of the vineyard and by extension of Solomon's harem containing a thousand women.

8:14. spice-laden mountains. These mountains are to be equated with the "hills of ether" (NIV: "rugged hills") mentioned in 2:17. The invitation in both cases is for the young man to come to the fragrant pleasures offered by the young woman, symbolized by the mountains or hills. The image is similar to that of Ishtar's divine lover Tammuz, who as a shepherd "springs over the hills."

PROPHETIC LITERATURE

Introduction

Since as Christians we believe that there is only one God, and since we understand that prophecy contains messages from that God, we are often inclined to think that prophecy in the Bible is a unique phenomenon. While we may be justified in thinking that any prophecy outside the Bible is fraudulent, the fact remains that biblical prophecy is part of a long tradition of prophecy in the ancient Near East. Even the Bible makes this fact known to us in the narratives about Balaam and the prophets of Baal sponsored by Ahab and Jezebel.

Divination can refer to any process that seeks to gain messages from beyond the human realm. In the ancient world divination took many different forms (see comments in Deut 18), but most of them were illegal for use in Israel because they assumed a low view of deity. Prophecy was a form of divination that was practiced legally by the Israelites. It was not mantic divination that required knowledge and training in specialized literature (e.g., spells or omen texts) or the use of magical rituals but instead was premised on direct inspiration by the deity. Texts that speak of prophets and present the messages of prophets are scattered throughout ancient Near Eastern literature. In some of these the prophets use other forms of divination in order to receive their messages.

The most prominent corpus of prophetic messages is found in about fifty letters preserved on tablets found in the royal archives of the town of Mari. These date to early in the second millennium B.C. (contemporary with the events of Genesis). The letters report to the king prophecies that were brought to the attention of local officials. The prophecies come from various deities and instruct the king in military matters and other issues of government policy. Occasionally they call for certain rituals to be performed.

A second corpus of nearly thirty oracles comes from the Neo-Assyrian period (seventh century). The primary deity is Ishtar of Arbela, and the prophecies typically forecast victory and prosperity for the king in his various undertakings. Some of the oracles are collected on large tablets that served as archive copies, while others are smaller texts concerning single oracles. The oracles are fairly brief, ranging from a sentence to a paragraph or two at the most.

In Egyptian literature there are no texts claiming to represent oracles from deity, but works such as the *Admonitions of Ipuwer* and the *Visions of Neferti* (both thought to date to the early second millennium) do contain observations concerning the chaotic state of society and warnings of coming judgment. They also at times refer to a coming restoration of order. These compositions therefore include the same types of messages that can be found in Israel's prophetic literature. Despite this similarity, there is no observable prophetic institution in Egypt like that found in the rest of the ancient Near East. The most obvious reason for this difference is that in Egypt deity was incarnate in the person of the pharaoh. There was therefore no need for a mouthpiece speaking for deity—deity was in their midst.

The prophetic oracles that are known from the ancient Near East are similar to an early phase of Israelite prophecy. The writing prophets of Israel have been designated as the "classical prophets," and the earliest of these appear at the beginning of the eighth century. Prior to that time prophets such as Nathan, Elijah, Elisha and many others are mentioned in the historical literature, but no collections of their oracles are known. They are referred to as the "preclassical prophets." These preclassical prophets show the most similarity to the prophets known from the ancient world. Their messages are directed to the king and concern public policy or other issues of national significance. In that sense these prophets serve as official or, more frequently, unofficial advisors to the king. In contrast, the classical prophets often address the people as they offer their social and spiritual commentary. Though their messages include the pronouncement of blessing or rebuke, it is now directed toward society as a whole. As a result, the writing prophets express warnings concerning captivity, destruction and exile that are new to this period and to the prophetic institution.

Prophets were often identified as madmen—a consequence of the fact that it was not unusual for them to receive their messages while entranced. One of the titles used for prophets in Akkadian literature is *muḫḫu,* which is usually translated "ecstatic." Nevertheless, prophets were taken very seriously. The very act of speaking their word was considered determinative in bringing their message to reality. This was true regardless of the social standing of the prophet. Some prophets were part of the temple personnel or on the king's council of advisors. But it was not at all unusual for the prophet to be a layperson or a commoner. In Babylon or Assyria the word of the prophet would be subject to confirmation. This was accomplished by using divination procedures. The question would be posed as to whether or not the message was to be received favorably, and the divination priest would look for the answer to be "written on" the entrails of the sacrificed animal.

It is clear that all of the cultures of the ancient world believed that the gods communicated through select individuals. In most of the ancient Near East the

prophets appear to have been supportive of imperial ideology. In Israel they more often represented a counterculture movement. As such the prophets tended to cluster around periods of great turmoil. During the preclassical period the prophets Moses, Deborah, Samuel, Elijah and Elisha all served during troubled times. During the classical period prophetic activity surrounds three key periods:

1. the Assyrian crisis that brought the fall of the northern kingdom and the siege of Jerusalem (760-700: Amos, Hosea, Micah, Isaiah)

2. the Babylonian crisis that brought the fall of Assyria and the fall of Judah and Jerusalem (650-580: Habakkuk, Zephaniah, Nahum, Jeremiah, Ezekiel)

3. the postexilic period with its Persian rule and identity crisis (530-480: Haggai, Zechariah, Joel, Obadiah, Malachi; Daniel could be counted among these, although he served during the exile)

The oracles of the writing prophets can be divided into four general categories. *Indictment oracles* notified the people of what they had done wrong. *Judgment oracles* described God's intended response to their offenses. *Instruction oracles* (which are relatively scarce until the postexilic period) told the people what they needed to do and how they needed to act and think. *Aftermath oracles* informed the people about God's plans after the judgment has come. All but the last occur also in ancient Near Eastern prophecies, but in the ancient Near East these prophecies were never collected, "published" and canonized as they were in Israel.

ISAIAH

1:1-31

Indictment of Rebellion

1:1. chronology. In 6:1 the commissioning of Isaiah is placed in the year King Uzziah died, about 739 B.C. Here it is indicated that his prophetic ministry continued into the time of Hezekiah, at least until after the siege of Jerusalem by Sennacherib in 701. This was a tumultuous half-century that witnessed the rise and dominance of the Neo-Assyrian empire, which was eventually responsible for the northern kingdom invasion, the fall of Samaria and massive destruction in Judah. Isaiah's commission coincided with the beginning of this renewed Assyrian threat (for details of the Assyrian threat in the previous century see comments on 1 Kings 22:1 and 2 Kings 9:14), as Tiglath-Pileser III conducted his first western campaign in 740-738. This campaign targeted Arpad in northern Syria but resulted in tribute being paid by some of the southern states such as Damascus, Tyre, Sidon and Samaria.

1:2. addressing heaven and earth. In other ancient Near Eastern literature the gods would be called as witnesses to an important event. Here the Lord is issuing a formal indictment against Israel, and the nondeified cosmos is called as witness. In one Hittite treaty, after a long list of divine witnesses, the mountains, the rivers, the sea, the Euphrates, heaven and earth, the winds and the clouds are also listed. In the covenant God made with Israel (see comment on Deut 4:26) heaven and earth had been called as witnesses, so it is appropriate here that they be called on to hear the indictment detailing the violation of that covenant.

1:4. accusations of national sin. The *Myth of Erra and Ishum* (eighth-century Babylon) speaks of the destruction of cities that was justified because the people abandoned justice and righteousness, committed atrocities and plotted wicked schemes. Nevertheless, explanations of famous city destructions in the ancient world are generally seen as a result of divine abandonment. The abandonment was usually blamed on either the violations the king had committed or simply on the idea that fate had decreed it.

1:7. fields stripped, laid waste. The devastation of the land was a natural consequence of invasion. Invading armies often lacked an adequate supply line and therefore expected to live off the land they were invading. What they didn't use for their own purposes they destroyed. Not only were the crops burned, but the trampling of the land often crippled the agricultural cycle for several seasons afterward. Sometimes people who were being attacked would even burn their own crops so that the enemy would not have the use of the food they had worked so hard to grow. The elements included in this threat of divine destruction are typical. A well-known section of the *Myth of Erra and Ishum* describes Erra's destructive intentions as including devastating cities and making them a wilderness; destroying mountains, cattle and produce; wiping out the population; putting a fool on the throne; bringing a plague of wild beasts; and leveling the royal palace.

1:8. daughter of Zion. Zion is the name for the mountain on which Jerusalem is situated and represents that cosmic location from which the Lord conquers and reigns. It is therefore also associated with the Davidic covenant and kingship ordained by God. The daughter of Zion would then be the city itself.

1:8. nature of comparison. Small huts were built in fields so that watchmen could stand guard over the fruit that was ready to be harvested. At the end of the harvest these huts would be abandoned and left desolate in a field stripped bare of its produce. So Jerusalem is portrayed as vacant and deserted with nothing left to protect.

1:9. nature of comparison. In the Sodom and Gomorrah account in Genesis 19 these cities are not destroyed by invading armies, but that is not the nature of the comparison here. The totality of the destruction as God's judgment is the emphasis of the text. Once the connection is suggested, verse 10 goes the next step by suggesting that the degree of wickedness is likewise comparable. A just God would be expected to bring comparable judgment for comparable crimes.

1:11. burnt offerings. Burnt offerings usually accompany petition. Many in the ancient world viewed sacrifice as providing food for the gods. If one had a special request to set before the gods, it was judged proper protocol to provide a meal. In Israel even though the burnt offerings were associated with petitions, the "meal for the gods" mentality had been theoretically discarded. As Isaiah and other prophets demonstrate, however, the revised view had not taken hold very firmly and there were frequent lapses into the popular syncre-

tism. The problem with the "feeding the gods" mentality was that it presupposed that God had needs that worshipers could meet and therefore procure his favor.

1:12. trampling of courts. Temples in the ancient world were considered sacred spaces that were protected by closely monitored, restricted access. Admission to the general public was granted only when a sacrifice needed to be offered and then only to the outer court. Entrance to sacred space for anything but holy purpose would be sacrilegious trespassing.

1:13. incense. In the ancient world incense was valued as an accompaniment to sacrifice. Its sweet scent effectively masked any of the unpleasant odors resulting from the performance of the rituals. It was expensive (see comment on Lev 2:1) but was believed to be favored by the gods.

1:13. New Moons and Sabbaths. Keyed to its use of a lunar calendar, ancient Israel marked the first day of the month, with its "new moon" phase, as a festival day (every twenty-nine or thirty days). As on the Sabbath all work was to cease (see Amos 8:5), and there were sacrifices to be made (see comments on Num 28:11-15). The festival continued to be observed in the postexilic period (Ezra 3:5; Neh 10:33). New Moon festivals were also prominent in Mesopotamia from late in the third millennium down to the Neo-Babylonian period in the middle of the first millennium B.C.

1:13. convocations, assemblies, appointed feasts. There were three major festivals that featured pilgrimage gatherings in Jerusalem and several others that would have included more local gatherings. Religious festivals offered frequent opportunity for celebrations, communal meals and social gatherings. What had been designed as a means to praise and honor God, however, was not bringing any pleasure to him.

1:15. spreading hands in prayer. In 2 Chronicles 6:12 Solomon is described as standing with his arms upraised and palms opened upward as he addresses the assembly and prays a dedicatory prayer for the temple. The incantation prayers of Mesopotamian sources, such as that to Ishtar, imply prostration of the supplicant as well as a ritual of raising the hands. Hittite sources suggest similar postures and gestures. Akkadian literature features a form of incantation called the *Shuilla* ("raising of the hand"). For more information see comment on 2 Kings 5:11.

1:15. deities ignoring prayers. The motif of the frustrated supplicant is well known in ancient literature. As an example, in the "Prayer to Every God" found in Ashurbanipal's library at Nineveh, the supplicant goes through a sequence of asking forgiveness for every offense he can imagine, from every deity. He then laments that despite his contrition no deity is willing to take him by the hand or stand by his side—no one hears him. Taking the standpoint of deity, the *Lament over the Destruction of Ur* reports that Anu and Enlil had determined not to heed the petitions for deliverance but were determined to carry out their plans for destruction.

1:16-17. ethical dimension of religion. Doing justice would be a basic requirement that any god would have for any people. In fact the instruction given here could not be more formulaic. These are considered the responsibilities that any civilized society would have. Establishing justice and defending the vulnerable are the hallmarks of a successful king. The only difference between Israel and the rest of the ancient world in this area would concern how these responsibilities related to spiritual obligations. In the ancient Near East the gods had the responsibility of maintaining justice. Part of that came to them for pragmatic reasons: oppressed people would be inclined to bother the gods with their continuous (annoying?) requests for relief. More foundationally they believed that justice was built into the fabric of the cosmos and its laws were under the guardianship of the gods. The difference in the Israelite worldview was that in their belief, justice was built into the very character of God and was an attribute, not just a stewardship. Mesopotamians had the spiritual obligation to please the gods. This was accomplished primarily by rituals but also by not rocking the boat of civilization. Israelites had the spiritual obligation to be Godlike. This was accomplished by ethical behavior and personal holiness. Mesopotamians would have viewed the washing in physical terms accomplished through ritual. Israelites were to accomplish it in spiritual terms through repentance and reformation.

1:18. nature of comparison. The dyes mentioned here are of the most durable and striking type, creating the most noticeable and permanent stains. There is nowhere in the Old Testament or in the ancient Near Eastern literature where red is specifically symbolic of sin, though white is symbolic of purity.

1:22. silver and dross. In the ancient world silver was extracted and assayed through a process called cupellation. In the initial smelting process silver was extracted from lead ores (galena) containing less than 1 percent silver in a given sample. The lead was melted in

shallow vessels made of porous substances such as bone ash or clay. A bellows was then used to blow air across the molten lead, producing lead oxide (litharge). Some of the lead oxide was absorbed by the bone ash, while some could be skimmed off the surface. Ideally the silver would remain. Unfortunately this process had many potential problems. If the temperature was too high or if the sample contained other metals (copper or tin were common), the cupellation would be unsuccessful. In this situation, when the litharge was skimmed off, rather than resulting in silver extraction what remained was tainted silver mixed with other metals and therefore unusable. This unusable product is perhaps what is referred to in the translation as "dross." Another possibility is that the text refers to the assaying process. This involved heating a sample of silver together with large amounts of lead in order to draw off the impurities. One of the possible results of the assaying process was that the quantity of lead would be insufficient to draw off the impurities, rendering the silver useless. Rather than being purified, then, the silver would be in worse shape than before the process. Perhaps this process is envisioned by the text, and the silver becomes this useless junk. The assaying process can be repeated and may eventually succeed (see v. 25).

1:22. choice wine. Many consider the beverage referred to here to be beer rather than wine because of the related term in Akkadian. The most common variety of beer was made from barley malt, but other types were made from emmer or even dates. There were many varieties of wine, and some were valued more highly than others. The library of Ashurbanipal contained a text that named the ten best wines (pure wine from Izalla was considered the best).

1:23. orphans and widows in courts. A major aspect of Israelite legal tradition involved making provision for groups classified as weak or poor: widows, orphans and the resident alien (see Ex 22:22; Deut 10:18-19; 24:17-21). Concern for the needy is evident in Mesopotamian legal collections as early as the mid-third millennium and generally addresses protection of rights and guarantee of justice in the courts. Based on very early statements in the prologues of the Ur-Nammu Code and the Code of Hammurabi it is clear that kings considered it part of their role as "wise rulers" to protect the rights of the poor, the widow and the orphan. Similarly, in the Egyptian *Tale of the Eloquent Peasant* the plaintiff begins by identifying his judge as "the father of the orphan, the husband of the widow." This reflects a concern throughout the ancient Near East that the vulnerable classes be provided for.

1:25. nature of imagery. For identification of dross see comment on 1:22.

1:26. judges/counselors. Since this section has to do with justice in society and in the court system, the judges here are most likely judicial functionaries rather than the deliverers of the Judges period. This would also be supported by the parallel term "counselors," which is never used to describe the deliverers in the book of Judges. The counselors were responsible for helping the king to formulate and carry out policies. The judges were responsible for helping the king to formulate and enforce law. National policy and the justice system are under indictment here.

1:29. sacred oaks and gardens. Gardens in the ancient Near East were often parks of fruit and shade trees, arboretums serving as outdoor shrines or providing comfortable surroundings for sacred enclosures. Sacred trees played a significant role in popular religion of the day. These popular beliefs would have viewed stone and tree as potential divine dwellings. In Canaanite religion they were believed to be symbols of fertility (see Deut 12:2; Jer 3:9; Hos 4:13), though there is very little in the archaeological or literary remains of the Canaanites that would clarify the role of sacred trees. Excavations at Late Bronze Kition have uncovered a temple that featured a sacred grove with sixty tree pits.

2:1-5

Jerusalem in Days to Come

2:2. mountain of the temple. Topographically, Jerusalem is elevated above its surroundings, so that one always had to climb up to the city. Additionally, the temple is located on the highest ground in the city, so one goes up to the temple from other locations in the city. This oracle uses these topographical data to proclaim the future political elevation of the city. The Weidner Chronicle declares that the city of Babylon should be elevated and exalted in all lands. In addition, Assyrian building inscriptions often talk about elevating the temple by restoring it and increasing its height. In Babylonian literature the Marduk Prophecy (from several centuries before Isaiah) announces the future elevation of Babylon with the temple doubled in height. That text also mentions returning the scattered ones (by which it means the statues of the gods that have been disenfranchised from their tem-

ples). It continues by describing a period of peace, justice and prosperity, including the dismantling of fortresses. This general language of city restoration and elevation is therefore familiar in the rhetoric of the ancient Near East.

2:2. all nations coming. Texts as early as 2000 B.C. speak of the universal appeal that will characterize a new temple. Gudea speaks of the temple he is building to Ningirsu as attracting people from distant and foreign lands who will gather together to honor the deity. Temples are where oracles are given to decide legal disputes and to inquire of the deity regarding courses of action that should be taken. It is not unusual for foreign people, even kings, to travel great distances to consult a deity. The Persian king Cambyses, for instance, received an oracle from the famous Egyptian shrine of Leto in Buto.

2:4. swords into plowshares. Rather than "plowshares" that turn over the dirt as they plow, this may refer to the metal tip of the plow that breaks up the earth and scratches out a furrow. This tip is about seven inches long. However, this same Hebrew word is used in 2 Kings 6:5, where it appears to refer to some sort of ax. Since the sword is "broken up," it is possible that the resulting product is metal shards that could then be put to various uses.

2:4. spears into pruning hooks. Pruning hooks are the small knives used to remove leaves and new shoots from the grapevines. Archaeological samples found are simply thin, short pieces of metal with a curved hook at the end sharpened on the inside edge as a sickle would be. The shape is reminiscent of the tangtype spearheads that had been popular during the Bronze Age.

2:6-22

The Coming Day of the Lord

2:6. superstitions, divination. The ancient worldview was heavily encumbered with superstitions of all sorts. For centuries omens that identified many occurrences or circumstances as favorable or unfavorable had been observed and recorded. The disposition of the gods toward an individual could only be assessed by the good or bad things that happened to him or her. Demonic forces were believed to be abroad and active, so prophylactic and apotropaic rituals were pursued to combat them. Spells and curses were cast by experts in magic, and the spirits of the dead were believed to wander the earth. Divination was the science of being able to interpret the omens and formulate incantations that would be effective in dispelling the powers that threatened them. For more information see comments on Deuteronomy 18.

2:7. full of horses and chariots. Assyrian chariots were large, carrying four men and being pulled by four horses. The chariotry corps and cavalry represented the cutting edge of military technology. Vast economic resources were required to import the animals, build the chariots and train the horsemen and charioteers (for an indication of the expense see 1 Kings 10:29). Assyrian military supremacy was dependent on the horses, and even the kings worried about the supply of horses and gathering the necessary fodder to care for the horses. Careful census figures were kept of the types of horses available, and horses were often collected in tribute or captured in raids. Reliefs show great care taken with the horses, and the army on campaign traveled with principal mounts as well as remounts for the cavalry.

2:8. idols. Idols came in a variety of shapes and sizes in the ancient Near East. They were typically carved of wood and overlaid with hammered-out sheets of silver or gold and then clothed in the finest attire. Basically human in appearance (except those from Egypt, which combined human and animal characteristics), they had distinctive, even formalized, poses, clothing and hairstyles. Images of deity in the ancient Near East were where the deity became present in a special way to the extent that the cult statue became the god (when the god so favored his worshipers), even though it was not the only manifestation of the god. Rituals were performed to bring the god to life in its idol. As a result of this linkage, spells, incantations and other magical acts could be performed on the image in order to threaten, bind or compel the deity. In contrast other rites related to the image were intended to aid the deity or care for the deity. The idols then represent a worldview, a concept of deity that was not consistent with how Yahweh had revealed himself. The idol was not the deity, but the deity was thought to inhabit the image and manifest its presence and will through the image. Archaeologists have found very few of the life-sized images that the texts describe, but there are renderings of them that allow accurate knowledge of details.

2:10. splendor of the majesty of deity. In the ancient world a bright or flaming aura surrounding deity is the norm. In Egyptian literature it is depicted as the winged sun disk accompanied by storm clouds. Akkadian uses

the term *melammu* to describe this visible representation of the glory of deity. It is especially evident in the divine warrior motif where the deity unveils his glory as he fights for his people (for more information on the divine warrior see comments on Ex 15:3; Josh 3:17; 6:21-24; 10:11; 1 Sam 4:3-4; 7:10). Akkadian literature occasionally evidences the same connection as here, when the word for fear or dread is associated with the *melammu.*

2:12. Day of the Lord. See sidebar at Joel 2.

2:13. cedars of Lebanon, oaks of Bashan. These two types of tree were valued for their size, beauty, strength and durability. They would be used in the building projects (such as gates and palaces) that were the sources of pride for nations and in which they would put their trust.

2:15. towers and walls. Walls of this period were solid (in contrast to the casemate walls of the previous age) and could be made of mud brick, fieldstone or ashlar hewn stone. While towers and walls were features of fortified cities, there were also many garrison fortresses built along trade routes and borders. In Israel both the fortresses and towers were rectangular. Examples at Kadesh Barnea and Horvat Uza measure between twenty and twenty-five thousand square feet. Since city walls have not been preserved to their original height, it is difficult to say how high they were. A width of fifteen to twenty feet was common, and judging from their massive foundations and the length of ladders used for scaling the walls, a height of thirty to forty feet would not be unusual. The walls at Lachish were about fifty feet high. Assyrian inscriptions usually give the height in courses of brick. The wall of Sennacherib's Nineveh is said to have been constructed of 180 courses of brick (sixty to seventy feet?). At the time of Isaiah Sargon's capital city at Khorsabad had a wall nearly one hundred feet thick with 150 towers circling the 750-acre city.

2:16. ships. Trade by means of seagoing vessels was already taking place in the first half of the third millennium B.C. By mid-second millennium a fleet of ships from Ugarit numbered 150. Excavations of a sunken merchant ship (off the coast of Uluburun, Turkey) from the period give a good idea of the variety of items being shipped. Trading ships of the first millennium were single-masted with a crow's nest and could feature either one or two banks of oars. A typical length would be about fifty feet, though larger ones are known.

2:19. effects of theophany. In the ancient Near East the trembling of the earth is an indication of the divine involvement in battle. Additionally, the dread of a deity as a divine warrior was often believed to precede a powerful, successful army into battle. Egyptian texts attribute this terror to Amun-Re in the inscriptions of Thutmose III, and Hittite, Assyrian and Babylonian texts all have their divine warriors who strike terror into the hearts of the enemy.

2:20-21. rodents and bats, flight to caves. A Sumerian Hymn of Enheduanna to the goddess Inanna from the third millennium depicts the gods fluttering away like bats to their caves from the goddess's terrible presence. This suggests the possibility that in these verses it is the idols being carried to caves and crags by the rodents (the flight of men has already been reported in v. 19). Just as men have fled from before the glory of the Lord, so do the idols, but, incapable of moving on their own, they are transported by the lowliest creatures.

3:1—4:1
Judgment on Jerusalem and Its Women

3:1. reality of siege. Siege warfare was designed to isolate a city and create a blockade that would eventually force a surrender. With the enemy camped around the city, the fields could not be harvested for their food supply. No one could get in to bring in food, so the people in the city had to live on whatever had been stockpiled in the city. If the water source for the city was a well or spring outside the city walls, the siege would be short, for the cisterns would quickly run dry. Jerusalem had a water supply that could be accessed from inside the city walls (see comment on 2 Chron 32:3). Support is typically viewed in terms of human leaders. The "resources" to survive a siege would be found in capable leadership that could keep morale high and successfully manage food rationing.

3:2-3. classes of leadership. The list of leadership resources here is fairly extensive, covering the military, clan leadership, religious personnel (both legitimate and illegitimate) and political advisors.

3:5. status of the elderly. In Israelite society the oldest active male was the head of the household. He typically represented the family in the community and made the decisions for the family. As a result the senior members of the family usually commanded a high degree of respect and honor.

3:6. cloak of leadership. The cloak was a basic piece of clothing that even the poor were expected to own. It was considered essential

enough that it was forbidden to keep overnight a man's cloak taken in pledge (see comment on Ex 22:26-27). Though this passage may suggest that the situation had gotten so bad that hardly anyone had cloaks (and therefore possession of one distinguished a person), there is also something special about a king's cloak. In Assyrian texts of this period the cloak of the king figured prominently in certain rituals, particularly the substitute king ritual. When there were omens suggesting that the king's life was in danger, a substitute king would be designated, who would take the king's place by being garbed in his cloak and generally suffer the consequences. While there is no suggestion of a substitute king ritual here, there may have been an important function for the cloak.

3:16. ornaments on ankles. Ankle bracelets were solid rings usually made of bronze. The word is also used of the irons used to hobble camels. Some burials of the Iron Age evidence arm and ankle rings still on the body.

3:17. sores and baldness. The translation "bring sores" is very uncertain. Another possibility is that it is another expression for inflicting baldness. While many translations suggest the shaving of the entire head, the forehead seems to be specifically indicated by the Hebrew word. In Mesopotamia shaving off half the hair was used as a punishment intended to bring public humiliation. Additionally, a particular style of haircut was used to designate a slave.

3:18-23. ancient finery. The NIV's "headbands" (v. 18) have now been identified as sun ornaments, while the crescent necklaces are moon ornaments. Many of the terms used admit of various interpretations. For instance, "perfume bottles" (v. 20) is highly interpretive, and though perfume bottles have been found by archaeologists, they could hardly have been worn as jewelry. Others have suggested some sort of amulet to parallel the next term. Information about jewelry in the ancient world comes from a number of different sources. Some literary works make reference to the wearing of various ornaments. Other written sources include inventories (such as one found at Mari) and lists of gifts or tribute. The pieces that are referred to can sometimes be matched up with pictorial representations in reliefs and paintings or with archaeological finds. But many words cannot confidently be matched with objects.

4:1. offer of the seven women. It is to be presumed that these women have lost their husbands and sons, and are therefore left socially defenseless even though they are not without means. This was a common aftermath of war. It was contractually and legally the husband's responsibility to provide food and clothing. These women are not looking for financial provision and would certainly be willing to bypass the usual conventions of bride price. Their need for familial association may simply stem from social mandates or, in the worst cases, may reflect the desire for a household for children that have been conceived through rape by enemy soldiers.

4:2-6

Future Glory

4:5-6. imagery. The cloud of smoke and fire is reminiscent of the pillar that offered the Israelites guidance and protection in the wilderness. In the ancient world a bright or flaming aura surrounding deity is the norm. In Egyptian literature it is depicted as the winged sun disk accompanied by storm clouds. Akkadian uses the term *melammu* to describe this visible representation of the glory of deity, which in turn is enshrouded in smoke or cloud. In Canaanite mythology it has been suggested the *melammu* concept is expressed by the word *'anan*, the same Hebrew word here translated "cloud," but the occurrences are too few and obscure for confidence. In any case, the pillar here would then be one beacon; smoke being visible in the daytime, while the inner flame it covered would glow through at night.

5:1-7

Parable of the Vineyard

5:1-2. parables and allegories in the ancient Near East. There is continued discussion about whether this should be categorized as a parable or an allegory, the distinction being how broad a comparison is intended by the tale. Parables are known from ancient Near Eastern literature as early as the Sumerian period, and a few are available from the Neo-Assyrian period. The metaphor of a city as an unproductive plant is known from the *Myth of Erra and Ishum* (copies date to the eighth century), in which Marduk laments Babylon. He says that he filled it with seeds like a pine cone, but no fruit came from it, and he planted it like an orchard but never tasted its fruit. For more information see the comment on Ezekiel 17:1.

5:1-6. vineyard preparation and upkeep. Grapes were among the basic staple products of the ancient Near East and therefore the care necessary for a vineyard was well known. In the rocky and hilly terrain of Israel special

care had to be taken to preserve the soil and the moisture necessary to produce good fruit. As the rocks were cleared from the hillside, the stones were used to create terraces to level the ground. This would prevent water drainage and soil erosion. More stones were used to build huts and watchtowers that would be used to protect the crop when it neared harvest time. Constant hoeing between the rows of vine was necessary to prevent weeds from springing up and sapping off the water supply in the soil. Various irrigation techniques were used to assure sufficient groundwater. If the ground did not have adequate moisture or if the vines were not pruned back, the resulting crop would be small and sour. Finally, some of the stones were also used for winepresses and cisterns on the site so that the grapes could be processed without risking damage during transportation.

5:8-30

Woe to Israel

5:8. oppressive real estate development. Expansion of real estate holdings in the ancient world was usually at someone else's expense. Bad harvests over several seasons could necessitate giving up ownership over property in order to pay off or work off debt. In Israel this was a theological as well as an economic crisis. Since God had given them the land as a benefit of the covenant, each family considered its landholdings as its little share in the covenant. Therefore, what otherwise would be a financial tragedy (often with an oppressive dimension) also served to deprive family members of their part in the covenant. For more information see comments on Leviticus 25. Additionally, the decision-making body in any community was comprised of landowners. The individual who obtained all the land rights in the community would have the power to do whatever he wanted.

5:10. normal levels of production. A vineyard would typically be expected to yield at least one thousand gallons of wine per acre. Harvests of grain in irrigated areas across the ancient Near East yielded a normal seed to crop ratio of about one to ten (though higher yields are attested in the literature). Therefore a homer of seed would usually be expected to yield ten homers of grain. Here the ratio is reversed as ten to one (an ephah is about one-tenth of a homer). The yields represented here, then, are meager fractions of that normally expected.

5:12. musical instruments. These are all typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which one as "lyre." The one the NIV translates "lyre" is a ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. The tambourine has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines. The instrument translated as flute is likely a double pipe made of either bronze or reed.

5:14. grave. The grave was understood as the doorway to the netherworld (Hebrew *sheol).* As the entryway it was considered part of Sheol, so the context must determine whether an author is referring to the place of burial or the world of departed spirits. Sheol was not a pleasant place. There were no possessions, memory, knowledge or joy. It was not viewed as a place where judgment or punishment took place, though it was considered an act of God's judgment to be sent there rather than remaining alive. Subsequently it is inaccurate to translate Sheol as "hell," for the latter is by definition a place of punishment. The Israelite understanding of the netherworld was more similar to the concepts found in Mesopotamia than to those found in Egypt. For more information see comment on 14:9. The idea of Sheol swallowing or devouring the wicked is paralleled in the Egyptian Book of the Dead. As the heart of the individual is weighed, the composite chaos monster with crocodile head stands by expectantly, prepared to devour those who fail the test.

5:22. alcoholic beverage. A wide variety of alcoholic beverages was available in the ancient world. Wine (from honey, dates or grapes) and beer were the most common. What is classed today as "hard liquor" (requiring a distillation process) was not yet known. The two terms used in this verse may refer respectively to grape wine and date wine, but it is difficult to be certain. The mixing that is mentioned here involves mixing in herbs, spices or oils.

5:23. judges bribed in ancient Near East. As evidenced by the preface to the Code of Hammurabi (c. 1750 B.C.) and the statements made by the eloquent peasant in Egyptian wisdom literature (c. 2100 B.C.), the standard for behavior by those in authority is to protect the rights of the poor and weak in society. True justice (see Lev 19:15) is expected of kings, of-

ficials and local magistrates. In fact the world turned upside down theme found in the book of Judges and in prophetic literature (1:23) describes a society in which "laws are enacted, but ignored" (for example in the Egyptian *Visions of Neferti* [c. 1900 B.C.]). An efficiently administered state in the ancient Near East depends on the reliability of the law and its enforcement. To this end every organized state creates a bureaucracy of judges and local officials to deal with civil and criminal cases. It is their task to hear testimony, investigate charges made, evaluate evidence and execute judgment (detailed in the Middle Assyrian Laws and the Code of Hammurabi). There are some cases, however, that require the attention of the king (see 2 Sam 15:2-4) and appeals are occasionally forwarded on to that highest magistrate (as in the Mari texts). The temptation for judges and government officials to accept bribes is found in every time and place (see Prov 6:35; Mic 7:3). Taking bribes becomes almost institutionally accepted in bureaucratic situations as competing parties attempt to outmaneuver each other (see Ezra 4:4-5; Mic 3:11). However, at least on the ideal level, arguments and penalties are imposed to eliminate or at least lessen this problem. Thus Hammurabi's Code 5 places harsh penalties on any judge who alters one of his decisions (presumably because of a bribe), including stiff fines and permanent removal from the bench. Exodus 23:8 forbids the taking of bribes and the perversion of justice as an offense against God, the weak and innocent, and the entire community (see Amos 5:12).

5:26. banner, whistling. The banner, or standard, was used as a means of calling out an army of a particular territory or indicating the place where a muster was taking place or a camp was located. It often featured an insignia of the tribe or division. The word translated "whistle" can also refer to a hiss. For the significance here see the comment on 7:18.

5:27. significance of belt and sandal thong. Neo-Assyrian military uniform consisted of a knee-length kilt fastened by a broad leather belt. Many of the infantry went barefoot, but the cavalry was equipped with knee-high soft leather boots held on by long crisscrossed thongs.

5:28. bows, arrows, horses' hooves, chariots. Horses were not shod by the Assyrians, so horses with hard hooves were the more desirable, especially for the rocky terrain of Syro-Palestine. The (composite) bow was the main offensive weapon of the Assyrian army. Arrowheads were made of various materials including bone, horn and various metals. Chariots could accommodate four people and had heavy six or eight spoke wheels.

5:29. lion behavior. The lion would typically roar as a warning in a territorial confrontation. The growl is appropriate to the seizing of prey. Both images are reflected here.

6:1-13
The Throne Vision and Isaiah's Commissioning

6:1. chronology. Uzziah is generally supposed to have died in 739. This is a critical juncture in history. In 740-738 Assyrian king Tiglath-Pileser III made his first campaign into the west. This is the beginning of a serious military threat that will eventually bring about the downfall of the northern kingdom, Israel, the destruction of the capital city of Samaria (along with many other cities of Israel and Judah) and the deportation of large segments of the population. The Assyrians are on the brink of establishing the empire that will dominate the ancient Near East for over a century. For more information on Uzziah's reign see comments on 2 Chronicles 26.

6:1. throne. The central Holy of Holies was viewed as the throne room of the Lord, so it is logical that the vision is set in the temple complex. The ark is portrayed as the footstool of his throne, and the cherubim typically flank the throne. This is, of course, the invisible throne of the invisible deity. For more information on thrones see comments on 2 Chronicles 3:10-13; 9:17-19.

6:1. train of robe filling temple. The word translated "train" elsewhere (and probably here) refers to the hem. It is the richly decorated and distinctive border around the high priestly robe (see comments on Ex 28:31-35). The hem was used as a mark of identity for people of rank such as priests and kings. In ancient Near Eastern iconography deities were also portrayed with such garments. The edge of the cloth was embroidered, and a fringe of three- or four-inch-long tassels trimmed the skirt by the ankles. The huge size of deity is common in the ancient Near East. For instance, at the Syrian temple in 'Ain Dara footprints more than three feet long are carved into the stone slabs leading into the entrance hall.

6:2. seraphs. This is the only place in Scripture where a supernatural creature is designated as a seraph. The serpents that plagued the Israelites in the wilderness, however, also go by that designation, and Isaiah twice refers to flying serpents (NIV: "darting" 14:29; 30:6). Since supernatural creatures are often portrayed as

composite (see comment on Gen 3:24), there is therefore good reason to think of the seraphs as winged serpents. Since the Hebrew root *sarap* is usually associated with "burning," there is also good reason to associate these creatures with fire. Ancient Near Eastern literature offers some support for these portrayals. Fiery serpents are well known in Egyptian art and literature. There the serpent, or uraeus, is a symbol of royalty and authority. It adorns the crown of Pharaoh and sometimes is pictured with wings (usually either two or four). It is not unusual for them to have hands, feet or faces. Serpents in an upright position with wings also decorate the throne of Tutankhamen. Many seals decorated with winged uraei have been found in excavations in Palestine dating to this period, so we know that the Israelites were familiar with this motif. Examples of six-winged creatures are not so widely attested. A relief from Tell Halaf, however, from approximately this period portrays a human-shaped figure with six wings.

6:4. effects of seraph calls. In Akkadian texts as well as in Amos 9:1 the shaking of doorposts or thresholds indicates the beginning of demolition. If this was the case, the smoke could be the result of destructive forces at work. The cries of the seraphs, however, are not easily taken as warning of imminent destruction (a consequence of God's holiness being compromised?). It is probably better to see smoke and trembling doorways as accompanying the theophany. This same word for smoke is used in 4:5.

6:7. purification of lips. Mesopotamian rituals often feature the purification of lips as symbolic of the purification of the person. It is viewed as a prerequisite, especially for diviner priests, before they may appear before the divine council and report what they have witnessed.

6:7. atonement. Translations have struggled with this term (for instance, some render it "forgiven"). For information on the ritual concept see the comment on Leviticus 1:4. The same verb occurs in Akkadian ritual literature referring to "wiping" away ritual impurity and is used specifically in the purification of the mouth. In one Old Babylonian prayer the diviner wipes his mouth with resin in preparation for appearing before the assembly of the gods. In Babylonian incantation texts fire is commonly seen as a purifying element. One incantation series is titled *Shurpu* ("burning") and is concerned with removing ritual offense or uncleanness.

6:8. us. The familiar picture of a heavenly throne surrounded by the heavenly council is well known from the Ugaritic texts (most notably the Epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host.

6:9-10. role of the prophet. The description of eyes and ears that do not function as they should or a heart that is hard or heavy matches that which occurs elsewhere in medical texts or in contexts of fear. In 1 Samuel 25 Nabal suffers some sort of paralysis, stroke or heart attack, and his heart becomes as stone. In a Babylonian wisdom hymn a sufferer describes his fear-induced paralysis as resulting in eyes that do not see and ears that do not hear. It is difficult to know whether the paralysis that meets Isaiah's messages comes from spiritual sickness or from fear. The prophet's role was to deliver the message regardless of whether there was any response or not. If the message did not result in response, it would at least establish clearly the people's guilt.

7:1-25

Immanuel

7:1. chronology. The chronology of the reigns of Jotham, Ahaz and Hezekiah is very complex. Nevertheless, the invasion referred to in this verse can be fairly confidently dated to 735. By 734 Tiglath-Pileser III had begun responding to the problems here in the west, and the coalition would not have felt at liberty to take such aggressive action.

7:1. political situation. Assyrian king Tiglath-Pileser III was occupied with Urartu and Media between 737 and 735. During this time the western states were working to put together a coalition that might resist Assyrian incursions. Rezin (see next entry) had most likely played a major role in bringing Pekah to the throne of Samaria (see comments on Pekah in 2 Kings 15). It is suspected that the attack against Jerusalem was related to Ahaz's pro-Assyrian (or at least neutral) position. The siege was intended to result in replacing Ahaz with an anti-Assyrian representative on the throne, who would then join in the coalition.

7:1. Rezin. Known to the Assyrians as Raqianu, which most likely represented the Aramaic name Radyan, Rezin ruled in Damascus from at least 738 (when he is named as paying

tribute to Tiglath-Pileser III) to the fall of Damascus in 732.

7:3. location. Hezekiah's tunnel had not yet been constructed at this time. Water was conducted from the Gihon spring (in the Kidron Valley on the east side of the city) toward the south through an aqueduct that brought the water to a reservoir at the southwestern tip of the city. This aqueduct is known as the Siloam Channel and in biblical times went by the name Shiloah (see 8:6). Presumably the waters of the reservoir (Pool of Siloam) would have been periodically released into an area below this to provide water for laundering. The road to the Washerman's Field would likely have traveled through the Kidron Valley. This would be a good place to find Ahaz if he were inspecting the water supply of the city to see how it could be secured for use inside the city in the eventuality of a siege.

7:6. son of Tabeel. Though nothing is known historically of this individual, the name Tabeel is Aramaic and thus suggests someone in the royal household (likely of Davidic lineage) whose mother was perhaps a princess from the area of Aram. Such an individual would be more likely to be a sympathizer with Aramean causes. Another possibility that has been suggested is that this is a reference to Tubail (=Ethbaal) the king of Tyre, who also had paid tribute to Tiglath-Pileser in 738.

7:8. chronology. From 735, the date of these events, sixty-five years would stretch to 670 B.C. This has seemed strange to some interpreters since Ephraim suffered significant territorial reduction in 733, and Samaria was destroyed and the people deported by 721. Esarhaddon was near the end of his reign in 670. He had successfully invaded Egypt in 671 and had a number of other campaigns to the west during this time period. So far, however, there is no indication of deportations into or out of Israel during his reign.

7:11. divine sign. There are a number of cases of signs being given from deity in the Old Testament. The most similar examples are found in 1 Samuel 2:34 and 2 Kings 19:29. In these instances the sign relates to the beginning of the fulfillment of the prophecy. Signs given by deity in the larger ancient Near Eastern context would typically be connected to omens. Behind the omens was the belief that there was an interconnectedness that stretched across all boundaries. The omens were related to historical events the way that symptoms are related to the onset of disease. Historical events were therefore considered to be related to corresponding happenings or phenomena in the natural world. For example, the gods wrote their signs in the heavens or on the kidneys or liver of sacrificed animals. These signs would not only portend coming events but would be thought of as part of those events.

7:11. depths and heights. Babylonian texts also speak of the range of signs (omens) in heaven and on earth, as their diviners tried to make use of all possible sources of information concerning what the gods were up to.

7:14. portentous names. Names were generally believed to be related to the character and destiny of the individual. In Egypt throne names were given (usually five of them) that embodied the claims, hopes and dreams of Pharaoh. Babies were sometimes named to reflect on a situation at the time of their birth (Gen 29—30; 1 Sam 4:21).

7:15. curds and honey. "Curds" would be better understood as a butter type product, since Proverbs 30:33 shows that it is produced by churning, not by coagulation or fermentation. In Assyrian and Babylonian texts the word used here in the Hebrew text is identified as a product called "ghee"—a refined form of butterfat—that is sweet and does not spoil as easily as other dairy products. It is the liquid produced when butter from cow's milk is melted, boiled and strained. In the Mesopotamian texts this product is most frequently paired up with honey in a variety of texts including ritual texts, medical texts and descriptions of food products. It was one of many products that were used for libation offerings for the gods. Honey is often a reference to the syrup from dates or figs. Bee honey was available when found, but bees were not yet domesticated for honey production. Honey and ghee were nourishing products that traveled well and would suit the needs of someone living off the land rather than farming the land. They were mixed together and used as a condiment on either confectionery date cakes or the more common wheat cakes.

7:16. fate of two kings. The land of Pekah was the northern kingdom of Israel. In 733 the Assyrians greatly reduced the territory of Israel, leaving only the capital, Samaria, and its environs. The remainder of the country was annexed and over thirteen thousand people were deported. Pekah himself was killed in a conspiracy led by Hoshea, his successor, and backed by the Assyrians (as indicated in Tiglath-Pileser's inscriptions). The pro-Assyrian Hoshea paid tribute to Tiglath-Pileser and accepted vassal status. He would reign until the final overthrow of the northern kingdom in 721—a likely time to consider the boy referred to in this verse as knowing good and evil (about age thirteen). The land of Rezin was

Aram, with its capital city, Damascus. The Aramean state was annexed by Assyria in 732, Damascus was overthrown and Rezin was executed.

7:17. Neo-Assyrian empire. The Neo-Assyrian empire was inaugurated soon after Tiglath-Pileser III's accession to the throne in 745. It was not to be overthrown until 612, when Nineveh fell to the alliance of the Medes and Babylonians. Though significant deterioration can be seen as early as 630, this still represents over a century of domination over a large expanse of the Near East. For a decade or so this even included Egypt. The major Assyrian kings, Tiglath-Pileser III, Shalmaneser V, Sargon II, Sennacherib, Esarhaddon and Ashurbanipal, are known from the biblical text as well as from many documents recovered from the period, including royal annals and chronicles from several of them. The empire expanded in all four directions: absorbing Urartu to the north, the Medes to the east, Babylonia and Elam to the south and Syro-Palestine to the west. At its height it included all or part of the modern countries of Iran, Iraq, Turkey, Syria, Lebanon, Jordan, Israel and Egypt. Assyria's reputation as a militaristic regime is supported by extensive documentation and stands as its historical legacy. Its strategy of psychological warfare included terrifying rhetoric, brutal destructions and carefully chosen examples of cruel torture. Its expansion was fueled by the potential for economic gain, which would come through the plunder, tribute and tariffs that would result from control of trade and the trade routes. For Assyrian activity in this period see comments on 1:1; 6:1; and 7:1.

7:18. flies and bees imagery. The word translated "whistle" can also refer to a hiss. Part of the lore of beekeeping maintained that a swarm could be lured out of its hive to another location by a whistling sound. Attacking armies are compared to flies and bees in Homer's *Iliad* as well.

7:19. imagery. This verse simply continues the imagery of bees by listing the places where bees are naturally inclined to make their hives.

7:20. shaving captives. In Assyrian nomenclature "barber" could be used as a divine title. Here the function is attributed to Yahweh. While many translations suggest the shaving of the entire head, the forehead seems to be specifically indicated by the Hebrew word. In Mesopotamia shaving off half the hair was used as a punishment intended to bring public humiliation. Additionally, a particular style of haircut was used to designate a slave. Most commentators believe that "the hair of your legs" is a euphemism for pubic hair.

7:23. value of vines. It is difficult to determine whether the text makes reference to a thousand vines that would be bought or sold for a shekel each (an exorbitant price), or, more reasonably, to a vineyard housing a thousand vines whose annual produce would bring a thousand shekels. The latter understanding would find support in Song of Songs 8:11.

7:24-25. farmland to pasture. Cattle and flocks could be devastating to agricultural land. Their movements would trample the soil, and their grazing would defoliate it, eventually leading to massive erosion of the topsoil and depletion of water sources.

8:1-10

Assyrian Invasion

8:1. scroll. If the writing instrument used is an engraving tool (see next entry), the material must be something that requires etching or incision—usually suggesting stone or clay that will be baked. The word used to describe the writing material is used only one other time in the Old Testament, Isaiah 3:23, where the NIV translates "mirrors" in the middle of a list of clothing. Akkadian texts list cylinder seals (worn around the neck) among other items of women's garments. These were worn as amulets to ward off demonic forces. They were inscribed with the name of the individual and often with artistic decoration as well. In Israel stamp seals were typically used, so there is no indication of what the word for cylinder seal would be, though cylinder seals have been found in Syro-Palestine and were well known there. Since cylinder seals were engraved with the name of the individual, and here an official document is being engraved with the name of an individual (including the preposition, not represented in the NIV's translation, that typically precedes the name on stamp seals as well as on Aramaic cylinder seals), it is possible that a cylinder seal is being made here, though the Hebrew word cannot be identified with any confidence (there is no known West Semitic technical term for cylinder seal). In the Neo-Assyrian period large cylinder seals (one, for instance, that is seven and one-half inches long) were used for seals of the gods. All of this information would fit well with the usage in 3:23 and with Isaiah's emphasis on significant names. Assyrian dream texts show an interesting relationship between a seal being given in a dream and information about a future offspring. One line says that if someone in his dream gives him an

inscribed seal, he will have a "name" or a son.
8:1. ordinary pen. The term for this tool is used only one other time in the Old Testament, Exodus 32:4, where it is used in the manufacture of the golden calf. It is therefore assumed to be some sort of drill or chisel. Exodus 32:16 uses the verbal root related to this noun to describe the inscription of the Ten Commandments on the tablets. Cylinder seal artisans used drills, including a "fine drill." The word translated "ordinary" here, when modifying a person, refers to humanity's fragile mortality. Perhaps here the use of a fragile drill is intended to suggest high-quality workmanship.
8:1-2. document. The presence of witnesses suggests an official document being drawn up. While some have suggested a marriage contract (because of v. 3), given the prominence of designating a name, something referring to a birth or naming appears more likely.
8:3. prophetess. The title "prophetess" is never used simply to designate the wife of a prophet but consistently for a female prophet. While we need not doubt that this prophetess was Isaiah's wife, she must also be regarded as a woman who functioned prophetically in her own right. Prophetesses, though somewhat rare, are known from Mesopotamia. The Mari texts from Syria in the early second millennium B.C. give evidence of both males and females in this position. Women are also known to have spoken out as prophetesses during the reign of Esarhaddon of Assyria. The females appeared to have served in the same role as the male prophets.
8:3. portentous names. See comment on 7:14.
8:4. plundering of Damascus and Samaria. Certainly the wealth of Damascus was carried off at the fall of the city in 732. It is more difficult to determine when one might consider the plundering of Samaria to have taken place. Second Kings 17:3 reports that Hoshea paid tribute to Shalmaneser, but this is not reported as a plundering of Samaria. It is more likely that the plundering should be associated with the fall of Samaria in 721.
8:6. waters of Shiloah. Hezekiah's tunnel had not yet been constructed at this time. Water was conducted from the Gihon Spring (in the Kidron Valley on the east side of the city) toward the south through an aqueduct that brought the water to a reservoir at the southwestern tip of the city. This aqueduct is known as the Siloam Channel and in biblical times went by the name Shiloah.
8:6. Rezin. See comment on 7:1.
8:7. flood waters overflowing its channels. This common metaphor is known as early as the Cuthean Legend of Naram-Sin (beginning of second millennium), in which the invading foe is likened to a flood, a deluge that overflowed the banks of the canals and destroyed cities.
8:8. Judah's treatment by Tiglath-Pileser. Tiglath-Pileser's records do not record any action taken against Judah in the campaigns of 734-732. Either that record is not preserved or verse eight offers a longer view of the eventual Assyrian invasion of Judah by Sargon and especially Sennacherib. The longer view is to be preferred, since the people of Judah would not have been "rejoicing over Rezin" (v. 6) until after the 732 campaign when Damascus was destroyed.
8:9-10. threat against the nations. Though many interpreters have attributed these words to Judah, it is more likely the threat of the Assyrians. It was a common strategy for the Assyrians to claim that the deities of their rebellious vassals had abandoned them because they had broken the oaths that had secured their loyalty to the Assyrians. Examples exist as early as Tukulti-Ninurta and as late as Esarhaddon.

8:11-22

Response to the Prophetic Message

8:14. imagery. Sanctuary and rock imagery go together in Psalms as well (such as Ps 18:1-2). The temple provided sanctuary for people in trouble, and it was built on a foundation rock. In spiritual imagery they would also then speak of God as their foundation rock. The trap and snare are used for hunting birds and small animals, though the latter more likely refers to a throwing stick, perhaps like a boomerang.
8:16. sealed documents in ancient world. Scrolls could be sealed either by tying a string around them and sealing the knot with clay or by placing them in a jar and sealing the cover. The clay or the seal around the lid would be impressed with the owner's seal. Mesopotamia used cylinder seals, Egypt used scarab seals, and Syro-Palestine used stamp seals. Tablets would be sealed inside a clay envelope, which would be impressed with the owner's seal. The seals were intended to ensure the integrity of the contents. They warned against tampering and, if intact, attested to the authenticity of the document. For more information see Nehemiah 9:38.
8:19. consultation of the dead. Because of the well-developed ancestor cult pervading much of the ancient Near East (evident, for instance, in the emphasis on the role of the male heir to

care for the father's shrine in Ugaritic documents), the dead were considered to have some power to affect the living. It was believed that if libations were poured out on behalf of the dead ancestors, their spirits would then offer protection and help to those still living. In Babylon the disembodied spirit *(utukki)* or the ghost *(eṭemmu)* could become very dangerous if not cared for and often were the objects of incantations. Proper care for the dead would begin with proper burial and would continue with ongoing gifts and honor of the memory and name of the deceased. The firstborn was responsible for maintaining this ancestor worship and therefore inherited the family gods (often images of deceased ancestors). Such care would have been based on a belief, as seen in Saul's consultation of the witch of Endor, that the spirits of the dead could communicate and had information on the future that could be of use to the living. These spirits were consulted through the efforts of priests, mediums and necromancers. This could be a dangerous practice, since some spirits were considered demons and could cause great harm. While it is difficult to totally reconstruct Israelite beliefs about deceased ancestors and the afterlife, it seems clear that prior to the exile there existed a cult of the dead or ancestral worship. This is evidenced by archaeological remains: (1) standing stones *(maṣṣebot);* (2) channels cut into tombs for the deposit of food and drink offering for the dead (see Deut 26:14; Ps 106:28); and (3) the importance placed on family tombs (see the ancestral tomb for Abraham and his descendants at Hebron) and mourning rituals performed at these tombs (see Is 57:7-8; Jer 16:5-7). The local and family ancestral cults were condemned by the prophets and the law.

9:1-7

Future Hope

9:1. treatment of Zebulun and Naphtali. The tribes of Zebulun and Naphtali were among those hardest hit by the Assyrians in the 733 campaign (see 2 Kings 15:29, supported in the inscriptions of Tiglath-Pileser). Their tribal territories comprised most of what became the Assyrian province of Magiddu (see next entry).

9:1. three regions. When Assyria came west in 733 to punish the northern kingdom of Israel for its participation in anti-Assyrian activities, one of the results was the reduction of their territory. All but the Ephraim hills was annexed as Assyrian territory. This territory was set up in three administrative districts referred to in the Assyrian records as Du'ru, Magiddu and Gal'aza. These are reflected in the three regions mentioned by Isaiah. Galilee of the Gentiles is the Magiddu (Megiddo) province (from the Valley of Jezreel north to the Litani River); the way of the sea is the Du'ru (Dor) province (the coastal plains from Joppa to Haifa); and along the Jordan is the Gal'aza (Gilead) province (Transjordan from the Dead Sea to the Sea of Galilee). Recent excavations in Dor have demonstrated a significant Assyrian presence at this time.

9:2. light of hope and deliverance. In Mesopotamian texts it is logically the sun god, Shamash, who provides light. He is praised for setting right the darkness and providing light for humankind. As a king who reigns justly, Hammurabi claims that he provides light for the lands of Sumer and Akkad.

9:4. Midian's defeat. The Midianite oppression in the middle of the Judges period had been some five hundred years earlier, but it still stood as the most outstanding example of God's ability to bring deliverance against overwhelming odds. It is clear that the reference is to that particular defeat of Midian because of the more specific reference in 10:26.

9:4. yoke imagery. Prophetic speech often refers to the burden of political domination as a yoke. In the Amarna letters the rulers of the Canaanite city-states speak to Pharaoh of how they willingly placed themselves in the yoke to serve Egypt faithfully. Akkadian wisdom literature indicates that bearing a god's yoke is desirable because of the fringe benefits. In the *Atraḥasis Epic* the gods find the yoke of Enlil unbearable and rebel. Assyrian inscriptions describe their conquest of other lands as imposing the yoke of the god Ashur on the people, and rebellion was portrayed as throwing off the yoke. Needless to say, the prophet is using an image familiar throughout the ancient Near East.

9:5. warrior's boot. The word for boot occurs only here in the Old Testament but is equivalent to one of the common Akkadian terms for sandal or shoe. In the Assyrian army many of the infantry went barefoot, but the cavalry was equipped with knee-high soft leather boots held on by long crisscrossed thongs. Officers also were equipped with boots. Boots would be among the most common plunder stripped from the slain.

9:5. garment rolled in blood. In Assyria it was common rhetoric to speak of cities and countrysides dyed red with the blood of enemies and of the army marching through the blood of their enemies. In Ugaritic literature

the war goddess Anat is described in battle as plunging her knees into the blood of the guards and her skirts in the gore of warriors. Paintings at Til-Barsip show Assyrians in red uniforms, and classical sources describe soldiers of this period as wearing red or purple tunics. Though there is no parallel to rolling garments in blood, there is one Assyrian text that speaks of dipping weapons in blood.

9:6. portent of the birth of an heir to the throne. In the ancient Near East the birth of an heir to the throne was a momentous occasion. An example can be seen in the Egyptian Myth of the Birth of the Pharaoh. Framed as a prophetic oracle from the god Amon, Hatshepsut's birth is announced with a proclamation of all that she will accomplish. Her name is decreed, and she enjoys the protection and blessing of the god. Even though this text represents Hatshepsut's contrived attempt to legitimate her claim to the throne, it illustrates the type of proclamation that would not be out of place in a birth ceremony.

9:6. throne names and titulary in the ancient Near East. It was common in the ancient world for the king ascending to the throne to take a throne name for himself. We should not imagine that the name Sargon, which means "The King Is Legitimate," just happened to be the given name of an individual who became king. But beyond that was the matter of titulary, titles that accredited the king with various qualities and accomplishments. In Egypt it was a formal, time-honored practice to bestow a titulary of five names on a pharaoh ascending to the throne as part of the accession ceremony. These were an expression of the Egyptian beliefs in the deity of the pharaoh. Perhaps even more intriguing is the titulary of Niqmepa, king of Ugarit (mid-second millennium) which includes titles such as Lord of Justice, Master of the Royal House, King Who Protects and King Who Builds.

9:6. sentence names in the ancient Near East. Most names in the ancient world make statements. That is, they are self-contained sentences. Many of the statements are about a deity. One can easily recognize the deity name in names such as *Ashur*banipal, *Nebu*chadnezzar, or *Ra*meses. Anyone even casually familiar with the Bible has noticed how many Israelite names end in -iah or -el, or start with Jeho- or El-. All of these represent Israel's God. This type of name is called a theophoric name, and it affirms the nature of the deity, proclaims the attributes of the deity or requests the blessing of the deity. One way to interpret the titulary of this verse is to understand it as reflecting important theophoric affirmations: The Divine Warrior Is a Supernatural Planner, The Sovereign of Time Is a Prince of Peace (note: the word "is" is not used in such constructions, as all names demonstrate).

9:6. compound names in the ancient Near East. The name Maher-Shalal-Hash-Baz in 8:1 is a compound name comprised of two parallel statements. Since 9:6 proposes this child's name (singular) rather than his names (plural; NIV translates around this), an attractive option is to consider this also to be just one (long and complex) compound theophoric name. Though such compound names are not the norm in the ancient Near East, Isaiah is not presenting these as common. Assyrian use of compound names can be observed in the names Tiglath-Pileser III gives to the palaces and the gates he built in Calah. The latter are named "Gates of Justice Which Give the Correct Judgment for the Ruler of the Four Quarters,Which Offer the Yield of the Mountains and the Seas, Which Admit the Produce of Mankind Before the King Their Master."

9:7. concept of coming king with ideal reign. In a work titled the Marduk Prophecy (from about 1100 B.C.) a king is "prophesied" who will rebuild temples and reestablish prerogatives for Babylon. His reign is characterized by reform, stability and prosperity. His favor with deity will open the gate of heaven permanently. Peace and justice will result from the deity's rule through this ideal king. Though the Marduk Prophecy may well have been written as propaganda for the king, who desired it to be understood as applying to himself, it demonstrates that the rhetoric used in Isaiah would have been familiar as a way to describe a future ideal kingdom.

9:8-21
Judgment Against Israel

9:10. bricks to dressed stone, figs to cedars. Sun-dried mud brick was a common building material in Palestine. It was inexpensive, readily available and reasonably sturdy. Sycamore (fig) was one of the most common trees in the region. A rapid growing tree, its shrublike character and soft wood made it less than ideal for posts and beams, but it was used nonetheless. The contrast of carefully dressed stone and imported hardwood cedar suggests luxury and permanence.

9:11. enemies of Rezin. The most notable enemies of Rezin are the Assyrians, and they are the ones from whom the judgment comes.

9:12. Arameans and Philistines. Arameans and Philistines were the other two major tar-

gets of the Assyrians in the 734-732 campaigns. It would be awkward, though not impossible, to view them as being devoured along with Israel by the enemies of Rezin. Since Rezin is the king of the Arameans, it is difficult to see them as comprising his enemies. The other possibility is that captured Philistines and Arameans had been pressed into service in the ranks of the Assyrian army as it moved against Israel. There is ample evidence of this practice during the time of Tiglath-Pileser.

9:14. palm branch and reed. The text does not refer to the date palm tree being cut off but to the frondlike branches that grow out of the top of the trunk. The head and the tail, being inseparable, are known to both go the same direction. The frond and reed are the same as they will bend in whatever direction the wind is blowing. They have no ability to act independently.

9:20. cannibalism. It is uncertain whether this text refers to cannibalism or not. Nevertheless, cannibalism is a standard element of curses in Assyrian treaties of the seventh century. It was the last resort in times of impending starvation. This level of desperation could occur in times of severe famine (as illustrated in the *Atrahasis Epic*) or could be the result of siege (as during Ashurbanipal's siege of Babylon, about 650 B.C.) when the food supply had become depleted, as anticipated in the treaty texts. Siege warfare was common in the ancient world, so this may not have been as rare an occasion as might be presumed.

10:1-34

Woes on Judah and Assyria

10:1. oppressive laws in the ancient Near East. Reference is made here not to creating a justice system but to issuing decrees or regulations regarding specific issues. In the political climate that existed in Isaiah's time one of the special issues that had to be addressed was the raising of funds with which to pay tribute. This was generally accomplished through special tax levies, though there were always exemptions granted to either classes of people or cities that had been given sacred status. Other possible issues include the manumission of debt slaves or the disposition of property in forfeiture. Usually the claim of unjust laws was made against a ruler by his successor. The Reform Text of Uruinimgina identified oppressive practices of former days that he put a stop to. Ur-Nammu claims that he did not "impose orders" but eliminated violence and cries for justice.

10:2. orphans and widows as victims. Based on the statements in the prologues of the Ur-Nammu Code and the Code of Hammurabi, it is clear that kings considered it part of their role as "wise rulers" to protect the rights of the poor, the widow and the orphan. Similarly, in the Egyptian *Tale of the Eloquent Peasant,* the plaintiff began by identifying his judge as "the father of the orphan, the husband of the widow." Individual statutes (seen in several Middle Assyrian laws) protected a widow's right to remarry and provided for her when her husband was taken prisoner and presumed dead. In this way the vulnerable classes were provided for throughout the ancient Near East.

10:9. list of cities. The first two cities represent northern Syria, with the southern city (Calno) treated as the northern one (Carchemish) had been. The second pair represents middle Syria, again with the southern one (Hamath) having been treated like the northern one (Arpad). The third pair represents southern Syria and Palestine, with the southern city (Samaria) having been treated like the northern one (Damascus). This presents a geographical rather than a chronological sequence. This leads to a final north-south sequence, with Jerusalem juxtaposed to Samaria in verse 11.

10:9. Calno. Also known as Calneh or, in the Assyrian texts, Kullani, this city was subjugated by the Assyrians in 738. The site has not been positively identified as yet, but it is in the vicinity of Arpad, in a territory known as Unqi in Assyrian texts. It was considered a significant victory by Tiglath-Pileser in that he included a relief in the Calah annals that depicts the gods of the city being carried away captive and the king bowed in submission with Tiglath-Pileser's foot on his neck. Kullani was identified as the principal target of the 738 campaign.

10:9. Carchemish. Carchemish was likely one of the allies of Urartu under Sarduri in the 743 coalition against Assyria. Carchemish did not actively oppose Tiglath-Pileser in the 738 coalition, rather its ruler, Pisiri, is listed among those that paid tribute in that year. It was not annexed until 717. The city was located on the west bank of the Euphrates, just inside modern Turkey, and was about fifty miles northeast of Arpad.

10:9. Hamath. After Arpad and its coalition collapsed in 740, another coalition was put together, including many of the cities of southern Syria. Hamath was among them and paid tribute when the coalition was broken up by Tiglath-Pileser in 738. Hamath (modern Ha-

ma, almost 100 miles south of Aleppo and about 130 miles north of Damascus) is located on the Orontes River.

10:9. Arpad. Arpad (modern Tel Rifaat), about twenty miles north of Aleppo in northern Syria, was one of the first in the west to take a stand against Tiglath-Pileser and feel the result of his determination. In 743 Mati'el king of Arpad formed a coalition with the Urartian king Sarduri and his allies to try to keep the Assyrians out of northern Syria. Tiglath-Pileser broke up the coalition in 743 but took three more years to finally subdue and annex Arpad in 740.

10:9. Samaria and Damascus. These were, of course, subjugated in the campaigns of 733-732 as Tiglath-Pileser extended his control farther and farther south.

10:10. images that excelled. There is no distinction made in this speech between the religious practices of Israel and Judah on the one hand and the other cities of the west. There is no adjective expressed in this verse, but only implied by the syntax. The idols of the nations are therefore identified as exceeding the idols of Jerusalem and Samaria. If the NIV is correct, the comparison may concern how ornately they were manufactured or clothed. The NASB prefers "greater," suggesting perhaps that they were capable of more impressive shows of strength. A third possibility could refer to the greater number of idols in the other cities. One of the grandest moments in the conquest of a city was when the idols were led out subdued and captive.

10:11. images and idols in Israel. Israelite religion was ideally supposed to be aniconic (no images). In actual practice, though, this was not the case. Isaiah as well as most other preexilic prophets indicted the people for their use of idols. For Ahaz's employment of idols see 2 Chronicles 28:2. This textual portrayal is not as well supported by the archaeological record as might be expected. The absence of idols dating to the monarchy, however, may be due to the diligence in destruction by reformers such as Hezekiah and Josiah, and the thoroughness of plunderers such as the Assyrian and Babylonian kings.

10:13-14. claims of royal inscriptions. The arrogant claims put in the mouth of the Assyrian king by Isaiah is not at all exaggerated. The royal inscriptions of these kings are extreme in the claims they arrogate to the king. Tiglath-Pileser declares himself beloved of the gods, light of all his people and shepherd of humankind, who subdued many kings, despoiled cities and imposed tribute. He claimed that he considered his enemies mere ghosts. One of his predecessors, Ashurnasirpal, shows a great propensity for proliferate titles, often including more than two dozen. Among them are included ferocious dragon, marvelous shepherd, holy creature, martial sovereign, fearless in battle, trampler of enemies, merciless hero and mighty floodtide who has no opponent and who by his lordly conflict has brought under one authority ferocious and merciless kings from east to west (excerpts from Grayson, *Assyrian Royal Inscriptions 2).*

10:16-19. judgment on Assyria. Though the Assyrian king fashioned himself as the light of all his people, Yahweh, the Light of Israel, was going to outshine him. The Assyrian kings boasted of their destructions of fields and orchards, and of their incineration of cities—now they will suffer a similar fate. The armies that were the power and pride of these kings were to be decimated by disease (epidemics were a constant threat to army camps) if the army is referred to here (see next comment). A devastation of the Assyrian army did take place outside the walls of Jerusalem in 701, though not through consumption (NIV: "wasting disease"; see 2 Kings 19:35). The overthrow of Assyria was not accomplished until about eighty-five years later as the Medes and Babylonians conquered Ashur and Nineveh.

10:16. wasting disease. There is little reason to accept the NIV translation of "sturdy warriors" in this verse (it nowhere else refers to soldiers or army). The word refers to that which is rich or luxuriant and in Daniel 11:24 applies to territory. Preference here would be for the idea that God would make the lushest regions of Assyria unproductive.

10:22-23. divine decree of destruction. The divine decree that a city should be destroyed is a familiar motif in the ancient Near East. As early as the Sumerian Laments the divine council decreed the destruction of the city of Ur. There, however, it is lamented that there is no explanation for Enlil's decree. In the Marduk Prophecy the god decrees his own removal to Hatti. The Weidner Chronicle reports that Marduk decreed the destruction of the city of Babylon at the hands of the Gutians. In this piece it was for the offenses of Naram-Sin. Ishtar became angry and stirred up an enemy against her city of Uruk in the *Myth of Erra and Ishum.* Though there is not always a reason that could be cited as "righteous," the concept presented here is very familiar.

10:24. Egyptian role. Egypt had little involvement in the affairs of Syro-Palestine during the reign of Tiglath-Pileser III, since this was a time of division and competing claims be-

tween Egypt, Nubia to the south and Libya to the west. A single incident reports that Hanun king of Gaza fled to Egypt for protection when Tiglath-Pileser came against his city in 734. It was not until the accession of Shalmaneser V to the throne of Assyria in 727 that Hoshea of Israel was emboldened to approach the Egyptians for help (see comment on 2 Kings 17:4). The reference to Egypt here is to the time of the exodus.

10:26. rock of Oreb. This is a reference to the Lord's deliverance of Israel under Gideon against all odds. The Midianite ruler Oreb was killed at the (unlocated) rock of Oreb in Judges 7:25.

10:27. yoke imagery. See comment on 9:4.

10:28-32. itinerary. The twelve cities mentioned here cut a path from the north directly toward Jerusalem. This is not the itinerary followed by Sennacherib when he came against Jerusalem in 701. In that campaign he cut off all the cities of the Shephelah southwest of Jerusalem, Lachish being the last, and so approached Jerusalem from that side. Aiath is usually identified with Ai, about ten miles north of Jerusalem. Migron is thought to be the Wadi Swenit that forms a deep pass between Micmash and Geba (see comment on 1 Sam 14:2). As the army camps at Geba, there is uncertainty which of the three roads out of Geba will be used. One road goes west to Ramah (under two miles); one goes southwest to Gibeah (about three and a half miles); and a third goes south to Anathoth (about four miles). The Anathoth road would lead by Gallim (uncertain location) and then south of Anathoth would pass through Laishah to Nob. Nob is believed to have been located on what is now called Mount Scopus, overlooking the city of Jerusalem from the northwest. Mademah and Gebim remain unidentified.

10:34. Lebanon. See comment on 2:13.

11:1-16
The Future Davidic King and His Kingdom

11:1. oracle of a future ideal ruler. See comment on 9:7. Texts from both Egypt and Mesopotamia predict kings coming to power who will be successful in bringing peace, justice and prosperity, though these are usually written after the king is on the throne as a means of legitimating his rule. Such an oracle in the time of Ashurbanipal includes the hungry being fed, the naked being clothed and prisoners being set free. Tiglath-Pileser III is described as the shoot or scion of the city of Baltil (=Assur) who brings justice to his people.

11:2. endowment with divine spirit in the ancient Near East. In the Judges period the Spirit of the Lord endowed an individual with central authority that only the Lord possessed (see comment on Judg 6:34-35). The role of the king represented a more permanent central authority and likewise relied on empowerment by the Lord. The king was an agent of deity and a heavenly functionary just as judges and prophets were. The Spirit is able to give the positive attributes of courage, charisma, insight, wisdom and confidence. In Mesopotamia the king was seen as being endowed with the *melammu* of the gods (the visible representation of the glory of deity). It designated him as the divine representative and indicated that his reign was legitimate and approved by the gods. In Assyrian inscriptions it is pictured hovering over the king. An additional correlation may be found in the Akkadian term *bashtu*. It refers generally to a sense of dignity and is often bestowed by the gods, but it also is personified as a protective spirit. It provides various attributes, as here, and gives authority to its recipient.

11:3-4. judge's challenge. The foremost responsibility of a king in the ancient world was to establish justice, and therefore the rhetoric of kings throughout the inscriptional material proclaims their success in that endeavor. The wisdom of a king was assessed by the brilliance of his insight into complex cases, and his suitability for the throne was evaluated by his commitment to provide for the vulnerable classes of society. The ability to resolve difficult cases was believed to be divinely endowed (compare Solomon; see comments on 1 Kings 3:16-28 and 2 Chron 1:12) and therefore was not dependent solely on the evidence that could be presented in court (see Prov 16:10).

11:5. belt/sash. The same word is used in both lines of this verse, but one item is a wrap around the thighs, while the other winds between the thighs. These are the most basic articles of clothing, and without them an individual would be naked.

11:6-8. animal behavior to convey utopian conditions. From Sumerian times the myth called *Enki and Ninhursag* describes a utopian situation in which the lion does not kill and the wolf does not snatch the lamb. Other utopian works describe an absence of predators (no snake, scorpion, lion or wolf in the account in *Enmerkar and the Lord of Aratta*).

11:10. banner. The banner, or standard, was used as a means of calling out an army of a particular territory or indicating the place where a muster was taking place or a camp was located. It often featured an insignia of the tribe or

division. In the Egyptian army the divisions were named for various gods (e.g., the division of Amun, division of Seth) and the banners would identify the division by means of some representation of the god.

11:11. places of exile. The places named here are not necessarily intended to represent locations of known exile for Israelites. Rather they are equivalent to the four quarters of the earth referred to in the next verse. Assyria is mentioned first as the actual location of exiles but also as a representative of the northeastern area. Egypt, to the southwest, is identified in three segments up the Nile, including the kingdom of Nubia (NIV: Cush). Elam and Babylonia represent the southeast extremes, while Hamath represents the regions to the north. Finally, the "islands" is a way of representing the areas furthest west.

11:12. four quarters. It was typical in the ancient world to refer to four regions of the inhabited world. Akkadian literature speaks of kings ruling the four quarters, most likely making reference to the most distant coasts or extremities in the four major directions. In this sense it is referring to not four slices of the geographical pie but four edges, thereby including everything in between.

11:14. near neighbors. As the previous verses had focused on a universal perspective, this verse addresses the near neighbors on the east, west and south.

11:15. gulf of the Egyptian Sea. This is the only occurrence in the Bible of a body of water called the Egyptian Sea and is therefore difficult to place with any certainty. Most commentators identify it with the Gulf of Suez.

11:15. Euphrates in seven streams. In Mesopotamia the water supply was regulated for irrigation use by separating and diverting sluice channels from canals that drew water off from the river system. As water was diverted, the various channels slowed the flow of the water.

12:1-6

Song of Victory

12:1-6. victory songs. The concept of an angry God who has now concluded the just punishment of the nation will be repeated later in Isaiah (40:1-2). The call to praise God's name is found in many Psalms, including 22:22-25 and 116:12-13. This theodicy of divine wrath followed by restoration of fortunes is also found in the Moabite inscription of Mesha. There the king notes how their god Chemosh allowed them to be conquered for a time but had eventually chosen to give them victories over their enemies. Similarly, the Assyrian annals of Esarhaddon, Shalmaneser I and Tukulti-Ninurta I praise their triumphant god Ashur, who has "universal sovereignty" and has given them authority to subjugate all nations.

13:1-22

Oracle Against Babylon

13:1. oracles against foreign nations. See comment on Jeremiah 46:1.

13:1. Babylon in Isaiah's time. At the time that Isaiah functioned as a prophet (second half of the eighth century B.C.), the Neo-Assyrian empire, under the Sargonid rulers, Sargon II and Sennacherib, was the most powerful political network the world had ever seen. It stretched across the Near East and would eventually even include Egypt for a short time. During this period Babylonia and its Chaldean rulers were subjugated, just like all other nation states by the Assyrians. However, they, like the Medes in western Iran, periodically tested the Assyrian hegemony with revolts or by attempting to subvert Assyria's allies and vassal states. Particularly troublesome was Merodach-Baladan, who ousted the Assyrian rulers of Babylon on at least two occasions. Finally, in 689 B.C. Sennacherib sacked the city and assumed the title of king of Babylon. Shortly after 660, as the Assyrian empire began to crumble, Babylonia and Media combined to put even greater pressure on the last of the great Assyrian kings, Ashurbanipal. His death in 627 marked the end of Assyrian world power and the emergence of Nebuchadnezzar and the Neo-Babylonian empire.

13:10. constellations. The constellations, according to the Mesopotamian creation epic *Enuma Elish,* were the divine assembly of the great god Marduk, placed there to oversee the forces of nature and help him manage creation. Since it was assumed that movements of heavenly bodies were omens for events that would occur on earth, astronomic observations were constantly made and recorded (such as the collection in *Enuma Anu Enlil*). Eventually this was also applied to the preparing of individual horoscopes in Mesopotamia, Egypt and Greece. In this way lucky and unlucky days could be determined by consulting the guild of magicians and astrologers. Mesopotamian constellations included animal figures such as a goat (Lyra) and snake (Hydra); objects such as an arrow (Sirius) and a wagon (Big Dipper); and characters such as Anu (Orion). The most popular of the constellations was Pleiades, often portrayed on seals

even in Palestine and Syria. Neo-Assyrian texts preserve sketches of stars in constellations.

13:10. darkened stars, sun and moon. By declaring that on the "day of Yahweh" the heavens and all of its celestial bodies would be damped out, Isaiah claims that the glory of Yahweh will outshine and mask the brilliance of all other supposed gods (compare the language of Ps 104:19-22, in which Yahweh is said to control the moon and sun). Since Assyria and Egypt both worshiped the sun god (Shamash and Amun respectively) as their primary deity and the moon god Sin was of great importance in Babylonia, the prophet targets these gods and these arrogant enemy nations. Such portents of darkness, as in the Deir 'Alla inscription of Balaam, generally forecast a time of great disaster, but Isaiah's message is one of triumph in which "lesser lights" are extinguished to better illumine Yahweh.

13:12. gold of Ophir. The particular purity of the gold of Ophir is the measure for the cleansing of humanity by Yahweh's intervention. The actual location of Ophir is still unknown, although Arabian and East African (Zimbabwe or Somalia) sites are favored (1 Kings 9:28). An eighth-century B.C. inscription from Tell Qasile mentions the gold of Ophir, and it further supports the idea that the name Ophir had become synonymous with purity.

13:13. heavens and earth trembling. Isaiah uses language similar to that which is used in the "storm god" theophany common in the Ugaritic Baal Epic cycle. The divine warrior manifests himself by convulsions of nature, strong winds and a booming within the heavens that nearly tear the very fabric of earth apart. A similar example is found in David's song of praise in 2 Samuel 22:8-16 (see comment there).

13:17. Medes. Median tribes and kings begin to appear in Assyrian texts in the late ninth century B.C., especially in connection with the acquisition of horses and in gaining control of trade routes through the Zagros Mountains. Tiglath-Pileser III and Sargon II each invaded the area several times, exacting tribute and deporting portions of the population (2 Kings 17:6). The Medes inhabited the region of central western Iran with their capital at Ecbatana. The Iranian kingdom of Elam ruled the area to the south. They do not appear to be a unified people until the seventh century, when their king Cyaxares combined forces with Nebuchadnezzar and the Chaldeans of Babylon to attack and destroy Nineveh (612 B.C.). Subsequently the Medes were conquered or absorbed into the Achaemenid empire by Cyrus II in 550 B.C. (Esther 1:3).

13:17. no interest in silver or gold. As the Assyrian annals of Sennacherib attest, it was possible for a city to ransom itself during a siege for a high price (2 Kings 18:13-16). However, the reputation of the Medes is that they were such fierce warriors that they could not be bribed or bought off once they had begun a campaign (see Zeph 1:18).

13:19. overthrow of Babylon. Despite the fact that Assyria is the source of Israel's destruction in Isaiah's time, that empire is seen as "the rod of God's anger" (Is 10:5), although assurance is given that its time of judgment will eventually come (14:25). Thus the elimination of the short-lived Chaldean monarchy of Merodach-Baladan provides an initial example within the larger picture of "the day of Yahweh" that will ultimately usher in a new age. The Bit Yakin tribe of the Chaldeans, who had previously inhabited the area south of Babylonia, established their rule over Babylon in 722 B.C. First Sargon II and then Sennacherib moved against them, but a final resolution of what came to be a series of revolts and counterrevolts did not occur until 689, when Sennacherib razed the city and many of its monumental buildings. The ruins of the city broke the Chaldeans for a century, and the memory as well as the sight of the destruction might well have been compared to the fate of Sodom and Gomorrah. Yet the involvement of the Medes suggests that the final destiny of Babylon provided the ultimate fulfillment of this prophecy as the Medes and Persians overran the city in 539.

13:20. fate of Babylon. The description of utter devastation and its perpetual emptiness follows a pattern of city lament found in the Sumerian Laments for Ur (c. 2000 B.C.). In a similar example of a woe oracle the Egyptian *Visions of Neferti* describes the end of the Old Kingdom, leaving the people without direction, the canals dry and Egypt open to invasion by Asiatics and desert herders. Babylon's ultimate demise came not at the hands of a destructive enemy but through gradual deterioration as the course of the Euphrates shifted and left the fabled city an isolated and abandoned wilderness.

14:3-23

Taunt Against the King of Babylon

14:4. taunt song. This song uses the metric pattern of a dirge but parodies the genre by mocking rather than eulogizing the dead.

14:8. woodsman. The forests of Lebanon were

considered a treasury by kings of the ancient world. The timber from the cedar trees was essential for temples and palaces. Kings boasted of having extended their conquests to these forests and of cutting trees from it. Nebuchadnezzar calls it the forest of Marduk, and the Gilgamesh Epic portrays the cedar forests as divine property guarded by the fearsome Huwawa. Invading them and taking their resources was the greatest adventure of all. Isaiah 37:24 and Ezekiel 31 portray a similar concept.

14:9-11. dead kings. In the ancient world it was believed that spirits of the dead were quite capable of returning to haunt the living. The status or power one enjoyed in life was often transferred into the netherworld existence, perhaps with the thought that the spirit would be content to remain. In the description here in Isaiah, however, it is not the return of the spirit that is the concern. The king of Babylon is portrayed stripped of all of his power and grandeur. In Canaanite mythology the god Mot is the ruler of the netherworld and is portrayed with royal characteristics. But it is Baal who descends into the netherworld to become the leader of all the fallen heroes and honored ancestors. In Ugaritic literature these are called the *Rapiuma,* the same word that the NIV translates as "spirits of the departed" in verse 9.

14:12. morning star. The Hebrew word behind this translation, *helel,* is not used anywhere else in the Old Testament. Many interpreters, ancient and modern, see it as a designation of Venus, the morning star. It is this interpretation that was behind the early Greek translation of the term, as well as the Latin Vulgate's *luciferos* (shining one, i.e., Venus). Most modern interpreters believe that Isaiah is using a well-known mythological tale as an analogy to the failure and consequences of the king of Babylon's rebellion and arrogance, but no known literature matches the details of Helel's rebellion.

14:12. son of dawn. Dawn *(shaḥar)* was often personified in the Old Testament and was a known deity in Phoenician and Ugaritic inscriptions.

14:13. rebellion in heaven in the ancient Near East. Some have seen some similarity between the story of Helel and a Ugaritic tale concerning the god Athtar. In Baal's absence, Athtar attempted to sit on his throne (rule in his place) but found he was not up to the task and subsequently took his place in the netherworld. Though Athtar's name may have a similar meaning to Helel, he is not the son of Shaḥar (as Helel is described), nor is he thrown down from his attempt to sit on Baal's throne. Neither is the attempt itself an act of rebellion. The theme of revolt against the gods is, nevertheless, a familiar one. One of the best examples from ancient literature is the *Myth of Anzu,* where a lion/bird creature attempts to steal the Tablet of Destinies by which the gods governed the world. Anzu decides to take supremacy of the world and the gods by stealing the tablet from the chief god, Enlil. He utters a series of "I will" statements just as the king does here: "I myself will take the gods' Tablet of Destinies. The responsibilities of the

AFTERLIFE BELIEFS IN ISRAEL AND THE ANCIENT NEAR EAST

Sheol is the Hebrew word for the netherworld. Though it might have been considered an act of judgment for a person to be consigned to Sheol from life, it was not in itself a place of judgment to be contrasted to the reward of a heavenly destiny. The word was sometimes used as a synonym for "grave" because the grave was the portal through which one entered the netherworld. The Israelites believed that the spirits of the dead continued to exist in this shadowy world. They were not thought to have a pleasant existence, but Sheol is never associated with the torment of hellfire in the Old Testament (the imagery seen in Is 66:24 is not associated with Sheol). It is not clear that there were any alternatives to Sheol. People who were spared from Sheol were spared from it by being kept alive rather than by going somewhere else. There was at least a vague idea of somewhere else to go seen in the examples of Enoch and Elijah, who avoided the grave and presumably did not go to Sheol. But those texts are very unclear about what the other alternative was. In the absence of specific revelation to the contrary, Israelite beliefs conformed generally to those current among their Canaanite and Mesopotamian neighbors.

In Mesopotamian beliefs the dead needed to cross a desert, mountains and a river, and then descend through the seven gates of the netherworld. Though described in Mesopotamian literature as a place where there is darkness and the inhabitants are clothed in bird feathers and eat dust, kinder accounts were also current. The denizens of this shadow world were believed to be sustained by the offerings presented by those who were still alive. They enjoyed some light as the sun god passed through the netherworld when it was night in the land of the living so he could rise in the east again the next morning. The rulers of the netherworld, Nergal and Ereshkigal, were assisted by a group called the Anunnaki. Despite these depressing descriptions, no one wanted to be turned away from the gates because the alternative was to be a wandering spirit with no access to funerary offerings.

gods I will seize for myself. I will establish myself on the throne and wield the decrees. I will take command over all the Igigi-gods." Boastful arrogance was typical of the antagonist in this type of account.

14:13. stars of God. The word used for God here is El. While this is sometimes used to refer to Israel's God in the Bible, it is also known as the name of the chief god in the Canaanite pantheon. In the Old Testament the word "stars" occasionally refers to angels of the heavenly court (Job 38:7), while in Ugaritic and Mesopotamian texts it would describe astral deities.

14:13. mount of assembly. Since the gods of Canaanite mythology were believed to live on the mountain heights (see next entry), it is understandable that their place of assembly was also located on an elevated place. In fact, El is portrayed as convening the divine assembly of the pantheon on the heights of Zaphon. Though the term "mount of assembly" has not been found, the council of the assembly is said to meet on the mount of El.

14:13. sacred mountain. Ancient Near Eastern thought, not unlike that familiar from Greek mythology, visualized a mountain height as the dwelling place of deity. There would have been little difference in their minds between the tops of mountains and the heavens. Baal's home was purported in Ugaritic literature to be Mount Zaphon (commonly identified with Mount Casius, Jebel al'Aqra, in Syria, elev. 5807 feet). The Hebrew word *zaphon* means "north" and is translated here by the NIV "sacred mountain" (see Ps 48:2).

14:14. Most High *(Elyon).* In the Old Testament the term *Elyon* is normally a title for Yahweh. However, since it also occurs as a divine title (and perhaps even as a divine name) in other literature from the ancient Near East (Ugaritic, Aramaic and Phoenician), its use in a context such as this can be ambiguous. It is best known outside the Bible as a title for Baal in the Ugaritic texts.

14:15. brought to the pit. In a Sumerian myth that shares some material with the *Anzu Myth* (see comment on 14:13), the god Ninurta overcomes the creature Anzu but ambitiously wants to gain power himself. When Enki discovers his scheme, Ninurta is thrown into a pit, and Enki chides him as a bragging upstart who recklessly tried to seize power that did not belong to him.

14:19. cast out of tomb. The mythological metaphor in verses 12-15 separates the response in the netherworld (vv. 9-11) from the response on earth in verses 16-17. Since the mutilated corpse of the enemy leader was often exposed by being displayed in a public place (see comment on 1 Sam 31:10), people would pass by and stare. The phrase used here, better rendered "cast out, without a tomb," indicates that the king will be deprived of proper burial. This represented a final humiliation and a desecration, for most ancient peoples believed that proper, timely burial affected the quality of the afterlife. See comment on 1 Kings 16:4. In the Gilgamesh Epic, Enkidu, back from the netherworld, reported to Gilgamesh that the one who died unburied had no rest and that the one who had no living relatives to take care of him could only eat what was thrown into the street. A Babylonian curse relates burial to the uniting of the spirit of the dead with loved ones. We know that even Israelites believed that proper burial affected one's afterlife, because they, like their neighbors, buried their loved ones with the provisions that would serve them in the afterlife; most often pottery vessels (filled with food) and jewelry (to ward off evil), with tools and personal items sometimes added.

14:19. fate of the slain. Alternatives to the corpse being put on public display would include the ignominious end of being piled in a heap of the slain or of being trampled and unrecognizable. The reference to "stones of the pit" is obscure.

14:20. never be mentioned. The mentioning of the name of the dead was one way of giving honor to them (examples in Gen 48:16; Ruth 4:14). Alternatively this phrase could refer to the name being either invoked or renowned. In any case, the idea is clearly that this king will not enjoy a prominent place in history.

14:24-27

Oracle Against Assyria

14:25. Assyria. The judgment pronounced against Assyria again appears to refer to the destruction of Sennacherib's army outside Jerusalem in 701 (see comment on 10:16-19).

14:26-27. plans of deity. Though there were fixed decrees that the gods superintended, the idea that a deity had a plan that stretched across time and space was not easily maintained in the polytheism of the ancient world. The gods were not immune to the changes of time, nor was any deity's jurisdiction universal. These would greatly limit the ability of a god, even of a powerful head of pantheon such as Ashur or Marduk, to sustain a plan such as that claimed by Yahweh here and elsewhere in Isaiah. Nevertheless, Assyrian kings do claim that it was in the plan of the gods that their throne was established, their con-

quests made and their empires expanded. But often these divine plans were seen to be made on a short-term schedule. The gods were believed to meet each New Year's to make their plans for the year. Their decrees would be recorded on the tablets of fate to be enacted throughout the year. Divination was typically used when people wanted to find out more about those plans.

14:28-32

Oracle Against Philistia

14:28. chronology. The chronology of this period is very complicated and it is not easy to determine the year of Ahaz's death. Some chronological systems overlap Ahaz and his son Hezekiah in a coregency, with Hezekiah being the lead ruler (due perhaps to the strength of the anti-Assyrian contingent in the administration). His death may have come as early as 726 or as late as 715. The earlier one is supported by the synchronism of 2 Kings 17:1.

14:29. Philistines in eighth century. Philistia had been under the control of Judah during the reign of Uzziah, which took up the whole first half of the eighth century. It regained its independence during the reign of Ahaz and became the aggressor. With the rise of the Neo-Assyrian empire, Philistia came under attack just as the rest of the nations did. Tiglath-Pileser targeted Gaza in his campaign of 734, and the cities of Philistia thus became tribute-paying vassals. When Sargon came to the throne, the Philistines attempted to break free of Assyria, but in 720 Philistia again came under attack and Gaza renewed its loyalty. In 712 Sargon again had to come west to subdue the revolt led by Ashdod. Ekron and Gath were also targeted at this time. Sennacherib's 701 campaign brought changes on the thrones of several of the Philistine cities, but only Ekron needed to be besieged. Through most of the eighth and seventh centuries the Philistines shared the fate of their neighbors in Judah.

14:31-32. fate of Philistia. Eventually the Philistines were defeated and deported by Nebuchadnezzar just as the Judeans were. The five cities retained some degree of prominence, but by the Persian period the people had been gradually assimilated into the general mix of the empire population.

15:1—16:14

Oracle Against Moab

15:1. Moab in eighth century. Like many of the small Syro-Palestinian states during the eighth century B.C., Moab was dominated by Assyrian hegemony over the region. Several Assyrian texts list Moabite kings paying tribute or being implicated in the periodic revolts by coalitions of these small nations (Ashdod revolt of 713 recorded in a prism from Sargon II's reign). Since Isaiah is probably speaking during the early reign of Hezekiah, the destruction of Moabite cities is probably due to incursions by desert tribes rather than the Assyrians. It seems clear from Sennacherib's annals that Moab attempted to ingratiate herself during the 701 campaign that saw much of Judah devastated and Jerusalem besieged. As a result Israelite prophets (Amos 2:1-5 and Jer 48) generally list Moab as an enemy nation.

15:1-4. cities. Those cities listed as destroyed or damaged are all in the northern sector of Moab: Kir (Kir Hareseth in 16:7) is on the upper portion of the Wadi el-Kerak and serves as the capital of the district of Ar; Nebo and Medeba both are located just east of the northern end of the Dead Sea and about twenty miles north of Dibon. Also attacked were Heshbon and Elealeh, located northeast of Nebo. The more southern cities of Dibon (twenty miles north of Kir) and Jahaz were apparently not directly affected by the raiders but were in fear of future incursions.

15:2-3. mourning practices. Communal and individual laments throughout the ancient Near East included weeping, the shaving of heads and beards, wearing sackcloth and lying on the ground or rolling about. These are all illustrative of grief as well as a temporary (usually seven-day) identification with the dead. See the comments on Micah 1:8 and 1:16 for discussion of these practices and extrabiblical evidence from Ugaritic and Assyrian texts.

15:5. flight itinerary. The key to the line of flight for the Moabite fugitives is Zoar since none of the other sites mentioned can be identified (only mentioned elsewhere in the parallel text in Jer 48:3, 5, 34). According to Genesis 14:2-3 Zoar is one of the cities of the plain. Speculation on its exact location, however, places it near Mount Nebo (Deut 32:1-3), near the northern tip of the Dead Sea, as well as in the area at the southern end of the Dead Sea. Considering the apparent focus of the attack in Isaiah 15:1-4 around Kir and Nebo, it seems that a southern site for Zoar and these other cities would be more appropriate for a flight to safety towards Edom.

15:6. waters of Nimrim. Following the same reasoning regarding a flight south by the Moabite fugitives, it seems best to identify Nimrim (Jer 48:34) with the Wadi en-Numeirah,

which flows west into the southern end of the Dead Sea. There is also a nearby site, Numeirah, which may have been associated with the water source and served as a Moabite outpost.

15:7. ravine of the poplars. Assuming a southern route for the fugitives, this poplar-lined ravine would be the Wadi el-Hesa (Zered River), which marks the border between Moab and Edom. This wide valley (up to four miles across) runs for thirty-five miles and concludes at the southeast end of the Dead Sea (Num 21:12).

15:8. Eglaim. Isaiah's oracle would indicate a southern location for this site, but no exact identification has been made. Among the possibilities are Eusebius's listing of Agallim, just south of Rabbah, and Aharoni's suggestion of Mazra', a site east of the Lisan Peninsula.

15:8. Beer Elim. This site has not been positively identified. Some scholars speculate that it is to be equated with Beer of Numbers 21:16, but the large number of place names which begin with Beer, "well," makes such an identification problematic. Following the line of thought used on other sites in this oracle, one would expect it to be a southern site near the Dead Sea, possibly in the vicinity of el-Kerak.

15:9. Dimon's waters. Because of its proximity to the Wadi Ibn Hammad on the Moabite plateau, Dimon has been identified with Khirbet Dimneh, about two and a half miles northwest of Rabbah. Surface survey has not revealed Iron Age pottery, but no excavations have been undertaken at the site.

16:1. lambs as tributes. Much of the Moabite plateau is suitable for grazing herds of sheep and goats (Num 32:4). Since this would have been a major part of their economy, it would make a suitable form of tribute (2 Kings 3:4). Assyrian annals often list huge quantities of precious metals, slaves and luxury goods as tribute payments (more likely war booty). However, in the normal course of taxing subject people, sheep would better serve the daily needs of officials (Ashurnasirpal II lists a thousand cattle and ten thousand sheep paid by the frightened ruler of Hattina).

16:1. Sela. This word, meaning "rock," appears only a few times as a place name. The best known usage is in 2 Kings 14:7, referring to an Edomite fortress that was conquered by Amaziah of Judah and is identified with either Petra or modern Sela', two miles northwest of Buseira. The site mentioned in Isaiah's oracle has not been identified. It is unlikely to be the same as the Edomite site because all of the other places mentioned in this text stop short of entering Edom.

16:2. fords of the Arnon. The Valley of the Arnon is in places three miles across and is a major barrier to traffic north and south. The fords refer to the point where the north-south highway crosses the wadi at Dibon (as in Mesha's mention of this in the Moabite Stone). This would a natural crossing point for the Moabite fugitives as well as an extremely strategic site (compare the military importance of fords in Judg 12:5; Jer 51:32).

16:7-9. cities. Recapping the area of devastation, the oracle describes the physical and economic ruin of the northern section of Moab. This includes the tableland cities of Heshbon and Kir Hareseth (Kir; see 15:1-4), and Jazer (Khirbet Gazzir, at the northern end of the Dead Sea). Both Sibmah and Elealeh are listed as part of the Heshbon district and were at one time part of Reuben's allotment (Num 32:3, 37; Josh 13:19). Sibmah's location is uncertain, while Elealeh is generally identified with Khirbet el-'Al, just over a mile northeast of Tell Hesban.

16:14. Moab's fate. While no exact historical event can be suggested for the prophet's oracle against Moab, it is conceivable that raids by desert tribes or perhaps the backlash of an Assyrian army as it passed through the region is the basis for this destruction.

17:1-14
Oracle Against Damascus

17:1. Damascus. The Syro-Ephraimitic War (see comments on 7:1), which raged during the middle 730s, ended with the Assyrian king Tiglath-Pileser III invading Syria and Israel and devastating both of these rebellious states (734-732). The Syrian kingdom, ruled from Damascus by Rezin (see 7:1-9), had been Israel's principal political and economic rival. He had meddled in Israel and Judah's internal affairs and had encroached on their territories for over a decade. It seems apparent, however, that Rezin overstepped his bounds in leading an anti-Assyrian coalition. Assyria did not welcome a rival "Greater Syria," and the destruction of Damascus in 732, as recorded in the Assyrian Annals, was massive, leaving hundreds of sites looking "like hills over which the flood had swept." This widespread destruction also included both the reduction of much of the city of Damascus to rubble as well as the redistribution of its territories in Syria as well as in Transjordan and the Galilee.

17:2. Aroer. The Assyrian campaign through Transjordan would have naturally included the capture of the strategic fortress site of Aroer on the Arnon ('Ara'ir, three miles southeast

of Dibon and two and a half miles east of the King's Highway). It guarded the passage through the valley of the Arnon and controlled the border between Moab and Ammon. It is possible that an earlier site for the city was located at Tel Esdar (one and a half miles north) and the name was moved to 'Ara'ir after its destruction in the eighth century.

17:3. fate of Damascus. Tiglath-Pileser III's Annals describe how he completely destroyed the sixteen districts and most of the cities of Aram in 732, deported portions of the population and gave charge of most of the cities and territories of Syria to other, more loyal vassals (the list includes 591 towns destroyed). Damascus was badly damaged but survived the experience to become the capital of a newly constituted Assyrian province. Subsequently Damascus joined yet another anti-Assyrian coalition, led by the Syrian state of Hamath, in 720. This rebellion was crushed by Sargon II in 720, and thereafter Damascus is ruled by Assyrian governors until 609. The city only regained its independence temporarily until the Neo-Babylonian empire absorbed it in 604.

17:5. imagery of reaper. The process of reaping, as depicted in Egyptian tomb paintings, involved the reaper grabbing the stalks of grain in his left hand while cutting them with a sickle in his right hand (Ps 129:7). In this way he was already prepared to tie together the stalks into a bundle that could be transported to a threshing floor. What little remained from this cutting would be gathered by gleaners (Ruth 2:3, 7).

17:5. Valley of Rephaim. This valley and its farms extend southwest of Jerusalem. It provided much of the food for the inhabitants of the city and must have also been heavily gleaned by the poor. A drought or a siege of the city would have put a major strain on the food supply, creating the image found in Isaiah's oracle. The Ein Yael Project has extensively surveyed the archaeological remains of the agricultural activity in this valley. It has shown the widespread use of terracing, an indication of the need to utilize as much of the land as possible to feed the growing population of Jerusalem and its vicinity.

17:6. olive gleaning. Like the grain harvesters, the workers who beat the branches of the olive trees to gather the fruit were told to leave a portion for "the alien, the fatherless and the widow" (Deut 24:20). Their long sticks brought most of the fruit to the ground, but that in the uppermost branches was to be left (Is 24:13). This provides an excellent image of a remnant who will survive to restore the covenantal relationship with Yahweh.

17:8. Asherah poles. See the comments on Deuteronomy 7:1-26 and Judges 2:13 for discussion of these cultic symbols of the fertility goddess of the Canaanites.

17:8. incense altars. Archaeological excavations have demonstrated a wide variety of incense altars throughout the ancient Near East. They range from large, elaborate stands containing intricate decoration (see the Taanach stand) to simple pedestals used in domestic worship as well as to fumigate houses, covering odors and repelling insects. While there is a long history of burning incense in Israelite worship (Ex 30:7-8; Num 16:46-48), it also has close associations with the gods of other peoples as well as magic (Is 65:3; Jer 19:13).

18:1-7
Oracle Against Cush

18:1. land of whirring wings. It is possible that this is a reference to the multitude of insects that infest the Nile Valley (Deut 28:42 contains a similar use of the Hebrew word). However, given the context of "envoys" on the waterways, this more likely refers to the many swift boats made of bundled papyrus that sped their way up and down the Nile.

18:1. rivers of Cush. Cush can refer to several different places in the Old Testament, though it most frequently is the designation for the area translations usually render "Ethiopia." This is misleading, for the area Cush refers to is not modern Ethiopia (Abyssinia), but the area along the Nile just south of Egypt, ancient Nubia (in modern Sudan). The boundary between Egypt and Nubia in ancient times was usually either at the first or second cataract of the Nile. It is unlikely that Nubia ever extended much beyond the sixth cataract at Khartoum. The period from 730 to 715 was one of flux in this area. During the Third Intermediate Period the Twenty-Fifth Dynasty was beginning to emerge, headed by Ethiopian monarchs Pianchia and his successor Shabaka. They remained for a time in the kingdom of Cush but were moving to gain control over all of Egypt and unite the country under their rule. This required battling the native Egyptian kings who held the Delta region, holding off threats from Libya to the west and negotiating mutual defense treaties with the expanding Assyrian empire to the east.

18:2. envoys by papyrus boats. Certainly there would have been a great deal of diplomatic activity during this period. There is some question, however, who is sending these envoys and to whom they are being sent. Given the desire of the Ethiopian dynasts to gain full control

over Lower Egypt and the Delta, they may well be sending messengers to Assyria seeking assistance or at least a recognition of their legitimacy to rule in Egypt (see the vision of good relations between Egypt and Assyria in 19:23-25). The use of papyrus boats on the Nile rather than the larger barque associated with nobles and troop carriers suggests some stealth was necessary. The light rafts made of papyrus could easily navigate the rapids along the Nile or could be carried past dangerous or highly populated sections.

18:2. tall and smooth-skinned. Although it seems clear that Ethiopia is sending diplomatic overtures to Assyria, they would not be making the entire trip in papyrus boats. These light crafts would only be suitable for the Nile. Since the Assyrians were neither tall nor smooth-skinned (we have many representations of short, bearded men in Assyrian reliefs), then the envoys may also be spreading the word to the Ethiopian people to join in the effort to unite Egypt. Herodotus's picture of the Ethiopians as the tallest of the Africans would fit this reconstruction.

18:2. strange speech. Despite the translation found here, the Hebrew form is a duplicated adjective *(qaw-qaw)*, which means "mighty." The onomatopoeic sound could characterize the rhythmic cadence of a marching army, and the resultant fear might arise from the blended or garbled voices of this host.

18:2. land divided by rivers. This is an apt description of Mesopotamia, the "Land of Two Rivers," the Tigris and Euphrates. However, since the envoys of the Ethiopian pharaoh Shabaka, at least initially, are being sent throughout Egypt, the "rivers" in this case may well be the tributaries and canals linked to the Nile River.

18:5. imagery from grape harvest. It is the wise farmer who knows the correct times of the year to cultivate and prune his vines to insure maximum yield. The grapevines first bloom in May, and the fruit will begin to ripen by August. There are two calculated prunings: (1) as noted in the Gezer Calendar, in the fall before the vines become dormant, the unproductive bunches from the previous year are removed, and (2) once the grapes appear, excess leaves and tendrils are cut away to encourage greater yield and even ripening. Yahweh will thus bide his time until the appropriate moment to make his pruning of nations on earth.

18:6. judgment by animals. The cuttings from the grape vines were often used for fuel (Ezek 15:2-4), but in this example they are left as food and nesting for birds and other animals. The pruned cuttings, like the shattered nations, become little more than scattered sticks, incidentally useful through the coming seasons, but no threat to Yahweh or to Judah.

19:1-25
Oracle Against Egypt

19:1. Egypt in eighth century. Egypt is a divided nation during much of the eighth century. The nominal rule of Sheshonq's successors at Tanis was virtually ignored by the dynasts at Thebes and the patchwork of kings and chiefs in the Delta. The rising threat to Egypt represented by the expansion of Assyria under Tiglath-Pileser III after 745 may have fueled the emergence of the Cushite kings Piankhy and Shabaka. Their efforts to unite all Egypt were stalled for about twenty years by the rulers of Sais, who had managed to merge all of the northern nomes under their leadership. The Saite success was aided by increased trade with the Philistines and the rest of the Levant. It was probably to the Saite king Tefnakhte that many of the Assyrian border states (Philistia, Israel, Transjordan) looked for aid in their attempts to rebel. Finally, in 712 the Sudanese king Shabaka conquered all of Lower Egypt and once again united the country under the single rule of the Twenty-Fifth Dynasty.

19:1. cloud as chariot. The image of a rampant God storming through the heavens in a cloud chariot is a common one (Ps 68:4; 104:3; Jer 4:13). Such descriptions of storm theophany may be found in the texts that speak of the Ugaritic god Baal. In both the Aqhat Epic and the Baal and Anat cycle of stories, Baal is referred to as the "Rider of the Clouds." Baal's attributes, commanding the storms, unleashing the lightning and rushing to war as a Divine Warrior, even appear in the Egyptian El Amarna texts. The characteristics of Yahweh as Creator, Fertility God and Divine Warrior share a great deal in common with the characteristics of the gods in these earlier epics. One of the ways that Yahweh presents himself as the sole divine power for the Israelites is by assuming the titles and powers of the other ancient Near Eastern gods.

19:1. idols trembling. The gods/idols and the people of Egypt are paralleled here in their awe of Yahweh's command over all of nature and every creature and nation. The anthropomorphic image of "trembling" idols is comparable to the fear of the Mesopotamian gods who through their collective efforts created the flood (Gilgamesh Epic and the *Atrahasis Epic*). They were overwhelmed by the ferocity

of the forces they had unleashed and are described as cowering like whipped curs behind a wall. Yahweh's magisterial entrance into Egypt may be compared to the derision of idols in Psalm 96:4-5 and Isaiah's general attitude toward nations that are "full of idols" but lack real divine power (Is 2:8; 10:10-11; 31:7).

19:3. consultation of idols and the dead. Following his similar description of Egyptian divination in 8:19, Isaiah derides that nation for its useless dependence on idols and mediums (see, however, the comments on 1 Sam 28:7-11). There is a great deal of information on the use of magic in ancient Egypt by priests and professional practitioners. They used herbs, chants, ritual performances and bloodletting to cure illnesses, exorcise demons, curse enemy nations and their leaders, and influence the gods. A portion of these magic texts was designed to speed the journey of the spirits of the dead through the process of judgment and on to a blessed afterlife. It was assumed that these spirits could also be consulted on a variety of matters. A number of "letters to the dead" soliciting information have been recovered.

19:4. fate of Egypt. An immediate threat to the native Egyptian rulers was the Ethiopian king Shabaka. His Nubian kingdom eventually conquered the Egyptian Delta states in 716 B.C., and that would fit the time period. It is also possible that Isaiah is referring to Assyria. The Delta kings had joined the Philistine revolt lead by Gaza against Assyria and Sargon II in 720. It could easily be surmised that Assyria would eventually wish to conquer Egypt and add it to the empire. Both Tiglath-Pileser III and Sargon II made treaties with Arab tribes along the Sinai and Philistine borders to keep a check on Egypt. Tensions continued to grow between the nations until in 663 Ashurbanipal successfully marched south through the Nile Valley and sacked Thebes.

19:5-7. Egypt's dependence on the Nile. Like the riverine system in Mesopotamia, Egyptian agriculture and commerce was completely dependent on the Nile River system. They were fortunate in that the Nile was a fairly predictable and manageable river. Its inundations occurred on a regular schedule (carefully recorded by scribes and kept in official repositories). Failure of the Nile's flood would mean poor harvests and the destruction of its industries (especially flax). The Nile's banks could be cut with canals and irrigation channels to expand the size of fields and the movement of light shipping. In addition, the controlled flooding of the Nile brought a rich silt to Egyptian fields, insuring abundant crops and lessening the need for fertilizing or crop rotation. Travel was also based on movement up and down the Nile. There was constant, heavy barge traffic carrying grain and other raw materials, manufactured goods and building stones. Royal messengers, bureaucrats and priests from the many temple communities sailed the Nile, visiting and supervising fields and the collection of taxes. In fact the very size of Egypt's domain was made possible because troops could quickly move from one end of the kingdom to the other.

19:9. flax and linen industry. The warm and humid climate in Egypt necessitated light clothing styles. Flax, cultivated since Neolithic times, was one answer to this need. It provided both food (seeds and linseed oil) as well as a fiber that could be woven into linen cloth. In Egypt flax was tightly planted (to increase height and prevent branching) in late October and harvested at a height of three feet in April or May. Such a field would be quite susceptible to hail storms (Ex 9:23-25). Younger plants were pulled up by the roots to produce fine linen, while older plants were used for ropes and belts. The stems were first soaked in tanks of stagnant water (retting) and then dried before the fibers were separated (Josh 2:6). The dried stems were beaten and the fibers combed out for spinning, with the longer threads being used for clothing and the shorter (tow) set aside as lamp wicks (1:31). There were several grades of linen produced. The best set was aside for the pharaoh, the nobility and the priests. Any interruption in production would have had a ripple effect, destroying the livelihood of countless workers in the fields and factories.

19:11. officials of Zoan. The highest ranking members of the pharaoh's court and of the priesthood were representatives of the noble families of Egypt. Those associated with Zoan, located in the upper Delta just twenty-nine miles south of the Mediterranean coast, considered themselves the direct descendants of the most ancient noble clans in the country. Their impotence to deal with this crisis underscores the lack of importance such lineage actually possessed. Zoan had become the capital of Egypt at the beginning of the Twenty-First Dynasty (1176-931 B.C.), the same period as the development of the Israelite monarchy. Memories of official court dealings between Jerusalem and Zoan may form the basis for this reference, since the Egyptian capital was moved to Sais and Napata after 873 B.C.

19:11. disciple of the ancient kings. Because it had such a long, virtually uninterrupted history, Egyptian officials faced with a crisis or an

unexplained omen would chant ancient prayers and magical incantations (such as those found in the execration texts). Or they would consult the records of previous administrations and the instructions of model officials. The cultural memories, recorded on papyrus for generations, had great authority, and the descendants of these earlier officials took great pride in being the inheritors of such wisdom (including the twenty-fifth-century B.C. *Teaching of Ptah-Hotep* and the twenty-second century B.C. *Instruction of Merikare).* However, this attitude also could prevent creative or innovative decision-making. Isaiah ridicules these men who pride themselves in wisdom but fail to understand how to deal with present crises (compare 43:8-9).

19:13. leaders of Memphis. Prior to 715 B.C. the Delta region of Egypt was ruled by at least four rival pharaohs. The area was divided into the Tanis region (eastern delta), the region of Leontopolis (central delta) and the Saite region (western delta). There were also many petty kingdoms claiming independence and a portion of Egypt's ancient legacy. Mention here of Memphis (Hebrew reads Noph) simply ties Egypt's administrative chaos to the ancient capital city. This contrasts the irony of current anarchy with past greatness. Only after the Nubian Twenty-Fifth Dynasty arises under Shabaka will Egypt once again be united under a single ruler.

19:15. palm branch or reed. See the comment on 9:14 for this contrasting metaphor. The leaders of Egypt are so confused that they cannot tell the difference between heads or tails or the powerful (for whom palm branches are waved) or the weak, who bow like reeds before the great (58:5).

19:18. five cities. It is impossible to identify these cities based on any historical event. Jeremiah 44:1 does mention four (Migdol, Tahpanhes, Noph and Pathros) in which Israelites are dwelling, but that may have no relation to this verse. Certainly there is evidence from the time of Solomon onward (Elephantine colony, Leontopolis) of an Israelite presence in Egypt (diplomatic and commercial). What seems most important to the statement is the very idea of Yahweh worship in Egypt and perhaps even in a major city associated with an Egyptian god.

19:18. language of Canaan. Normally when a foreign community is established in a nation, it is expected that they will speak the language of that country, except among themselves. It would be difficult to do business or engage in diplomatic activity otherwise. Thus for the Israelite languages of Hebrew or Aramaic to be spoken in Egypt would be unusual. Most likely this refers to the study of the sacred writings of the Yahwists and prayer raised to Yahweh. This suggests, as do verses 19-21, a conversion of Egyptians to Yahwism.

19:18. city of destruction. The meaning of this phrase is uncertain. The various sources do not agree on whether the original text read *heres,* "destruction," or *ḥeres,* "sun." The Septuagint adds another reading, *'ir haṣṣedeq,* "city of righteousness." If "city of the sun" is meant, that could refer to Heliopolis, the city of the sun god Re. If this is one of the cities where Hebrew will be spoken, then a major religious revolution would be at hand.

20:1-6

Ashdod, Egypt and Cush

20:1. Sargon's campaign against Ashdod. This is one of those rare instances where the biblical account of the Ashdod revolt of 713-711 B.C., the Assyrian records, and the archaeological remains all corroborate one another. The Philistine city revolted at the instigation of King Azuri, perhaps with the expectation of Egyptian support. The Assyrian Annals charge him with refusing to pay tribute and fomenting rebellion among his neighbors. The Assyrian emperor Sargon II responded with a swift campaign that quickly suppressed any hopes for independence. He placed Azuri's younger brother, Ahimeti, on the throne, who in turn was almost immediately deposed by a usurper named Yamani. Sargon sent another expedition in 712, and Yamani fled to Egypt. An Assyrian commissioner was then appointed to manage Ashdod for the empire. Excavations in stratum 8 of the city have revealed a number of mass graves under the floors. Several fragments of an Assyrian monumental stele were also found. They come from a copy of the one erected in Khorsabad, listing Sargon's conquests, including Ashdod.

20:2. Isaiah's role play. The enacted prophecy employed by Isaiah was startling. This older man (who had been called to be a prophet thirty years before, in 742 B.C.) is commanded by God to strip himself naked and parade before the people in that shameful state. His purpose is to graphically demonstrate to them their ultimate fate if they choose to join the Ashdod revolt. They too will be stripped naked and taken away as slaves (compare Mic 1:8; Nahum 3:5). Since style and quality of clothing was a status marker in the ancient world, criminals were also displayed naked as

a sign of their loss of social status (Middle Assyrian Laws).

20:3. role of Egypt and Cush in Ashdod campaign. The Assyrian records (Sargon's Nimrud Prism) mention the establishment of a Mediterranean harbor jointly held by Egypt and Assyria. Such cooperation may have been forced on Egypt because of Assyrian control of Cyprus and their pacification of Arab tribes along the Sinai border. The Delta kings, fearing further incursions, attempted to take some of this pressure off by supporting first the revolt of Hanno of Gaza and then that of Aziru of Ashdod. Because of this clandestine support, the usurper Yamani fled to the Delta at the approach of Sargon II's army in 712. However, the people there refused to harbor him or give him any further military aid. Yamani then attempted to gain help from the Nubian dynast Shabaka. This was to no avail; Shabaka was more interested in conquering the Delta kingdoms and did not want to raise Assyrian ire. Thus Yamani was delivered to the Assyrians in chains as a peace offering. Sargon's annals record this as a sign of how far word of his "awe-inspiring glamour" had spread.

20:4. treatment of captives. Prisoners of war were considered spoils to be divided among the conquerors. They would become slaves, and it was necessary to immediately break their spirit and at the same time use them as a means of shaming their home countries or cities. Assyrian annals include lists of captives among the other items taken by to Ashur or in some cases impaled as an example to other rebels. Egyptian royal tomb paintings often depict lines of prisoners, bound together by the neck, marching into captivity. While these figures are not completely naked, they have been stripped of all valuables and insignias of rank (see comment on 2 Sam 10:3).

21:1-10

Oracle Against Sealand

21:1. Desert by the Sea. The Hebrew here might better be translated "wilderness by the sea" or "swampland." Either would fit the southern portion of Mesopotamia, an area of marshes and quagmire as one gets closer to the Persian Gulf. At issue is concern for the capture of Babylon by the Assyrians in 703 B.C. and the expulsion of the Babylonian leader Merodach-Baladan. The anti-Assyrian party within Hezekiah's court had hoped that Babylon would be able to successfully challenge Assyria and thus give the outlying provinces like Judah an opportunity to gain their independence. These hopes were dashed with the resurgence of Assyrian power under Sennacherib. Thus the oracle of woe reflects that disappointment.

21:2. role of Elam and Media. While verse 9 makes it clear that Babylon is the city to be attacked, it is less clear what role Elam and Media would play in these events. Both of these Iranian peoples from east of Tigris had been helpful to Merodach-Baladan when he had established himself in Babylon in 720, and after Sargon II ousted him, he fled to Elam in 710. It is possible that the prophet is urging Elam and Media to once again help Merodach-Baladan against their common enemy, Assyria. However, the chaotic conditions of the time, with attendant looting and betrayal, could see a shifting of earlier alliances. In any case Elam ceased to be a factor in Near Eastern politics after 680, and that may be the result of the growth of Median power as well as pressure from Assyria.

21:5. set tables, spread rugs. The apparent banquet scene portrayed here might suggest that Babylon was unprepared for the attack that would capture the city. It may also refer to preparations for battle (as Anat in the Ugaritic Epic set up bleachers and tables so her warriors could watch as she slaughtered her enemies) or possibly a sketching out of Babylon's defenses or her various districts prior to a siege.

21:5. oil shields. The practice of oiling shields in preparation for battle may be based on the desire to make the leather more flexible and less brittle (2 Sam 1:21). Classical sources (Aristophanes' *Acharnians* and Virgil's *Aeneid)* suggest an oiled shield was more flexible and could shed a blow. The shine from a freshly oiled leather shield might also be helpful in blinding an opponent.

21:7. chariotry in eighth century. The Assyrians used chariot corps, divided into squadrons of fifty, as the heart of their army's campaign forces. They held two, three or four men crews, with one man serving as driver and the others as archers or shield bearers. In earlier periods (Ashurnasirpal) a third horse was attached to the side of the chariot, to be detached if one of the others was injured or the charioteer needed to escape a crippled vehicle. Depictions of chariots in Assyrian reliefs demonstrate that they initially had medium-sized wheels with six spokes, and a single pole extended from the front to hitch a team of two horses. Later, during the reign of Shalmaneser III, the chariots were heavier, with huge eight-spoke wheels. Sennacherib also added an additional team of horses to help pull these heavier chariots.

21:7. cavalry in eighth century. Most of what we know about the use of cavalry in the eighth century comes from depictions on Assyrian reliefs. They show that in areas such as hilly or wooded country where chariots were ineffective, the armies in the ancient Near East employed cavalry. Some of these men were equipped with bows, while other served as lancers, carrying a long spear. These latter forces would be used as shock troops, charging along with chariots against a massed enemy, driving wedges in their ranks so the Assyrian infantry could follow into the breaches (see 1 Kings 20:21). Cavalry archers often fought in pairs, with one using his bow while the other carried a shield to protect his companion (see 2 Kings 9:25). Riders were also used to carry messages on the battlefield and to report events to nearby fortresses and cities (see Ben-Hadad's escape with covering cavalry in 1 Kings 20:20).

21:9. fall of Babylon. At the death of Sargon II in 705, Merodach-Baladan once again set himself up as the ruler of Babylon. This signaled yet another series of revolts throughout the Assyrian empire (among them the Anatolian provinces of Que, Tabal and Hilakku). Sennacherib's annals describe how he systematically subjugated each rebellious region. Babylonia and Elam were dealt with first because of their proximity to the heart of the Assyrian empire. Fighting took place at Kish and then within the marshlands of southern Mesopotamia when Merodach-Baladan fled Babylon. Still the Babylonian leader was able to maintain control over a portion of the south and cause Sennacherib continual problems, despite Assyrian attempts to conciliate the Chaldean people. Babylon was finally besieged in 689, and when the walls were breached the Assyrians slaughtered the population and destroyed the wall systems, the temples and every house within the city. They even dug canals to channel water from the Euphrates through the city to wash away foundations and brickwork.

21:9. shattered images. Sennacherib's annals contain graphic accounts of the capture of Babylon in 689. In their frenzy of destruction the Assyrian soldiers had no respect for the gods of their enemy, smashing Babylon's sacred images and crushing many of them into tiny fragments. In the midst of this destruction, however, the soldiers managed to rescue two statues of their own national gods, Adad and Shala, which had been captured 480 years earlier by the Babylonian king Marduk-Nadin-Ahe.

21:11-12

Oracle Against Edom

21:11. Dumah. This is an oasis town in north central Saudi Arabia near the southern end of the Wadi Sirhan. Its association with the Kedarite confederacy of Bedouin tribes of that region (Gen 25:13) may explain the place name's tie to Edom. There may also be a pun expressed here in the Hebrew of this word *(duma),* which means "silence," and Edom.

21:11. Seir. This portion of the territory of Edom included the wooded area which stretched from the Transjordanian plateau south to the Wadi al-'Arabah, perhaps including Petra (see Judg 5:4). The term appears in fourteenth-century Egyptian texts listing the names of peoples and cities as the "country of Seir-nomads."

21:11. Edom in eighth century. During the eighth century Edom was struggling to maintain its independence. The country was weakened by Judah's interest in expanding into the region: Amaziah (801-787 B.C.) staged a raid at the turn of the century (see 2 Kings 14:7), and his successor, Uzziah, rebuilt the port of Elath on the Gulf of Aqaba (2 Kings 14:22). A further sign of their weakness was Edom's payment of tribute to the Assyrian king Adad-Nirari III (809-782 B.C.). When the Syro-Ephraimitic war caused turmoil in Judah in the 730s, the Edomites regained Elath (2 Kings 16:6). However, they were forced into vassalage by Tiglath-Pileser III after 732 B.C. and became a link in the Assyrian empire's trade route south from Damascus to the Aqaba, the King's Highway. Assyrian tribute lists also demonstrate that for the rest of the century Edom remained loyal to the empire, giving little or no support to the other rebellious Palestinian vassals.

21:13-17

Oracle Against Arabia

21:13. Arabia. Comprising territories claimed by various Bedouin tribal groups, Arabia was an area that Assyrian kings listed as a part of their empire but never truly controlled. The Arab tribes occupied the region between the southern Negev and the north central portion of the Arabian Peninsula. This could suggest a translation in this passage of "wasteland" rather than Arabia, paralleling it with "swampland" in 21:1. Some Arab groups engaged in caravan trade, transporting frankincense and myrrh, slaves and dyes to both Egypt and Mesopotamia. The number of raids mentioned in various ancient texts also attest

to their occasional occupation as predators on the caravan routes. Arabs appear in the records of Shalmaneser III dealing with the alliance formed against him at the Battle of Qarqar in 853 B.C. They continue to appear in Assyrian records down to the reign of Ashurbanipal at the end of the seventh century. It is also noted in the annals of Sargon II that some Arabs were forced to resettle in Palestine after the fall of Samaria in 722 B.C.

21:13. Dedanites. The Dedanite tribes used Khuraybah (modern al-'Ula) in northwest Arabia as their base of operations. Excavations had uncovered an extensive group of small satellite villages in the nearby valley of Wadi al-Qura. They operated as caravaneers with contacts in Syria, Phoenicia and Palestine. During the seventh century they may have been part of Edom's sphere of influence and subject to Assyria's control.

21:14. Tema. Based on its mention in Assyrian and Aramaic inscriptions, Tema has long been identified with the oasis city of Tayma, located on the western border of the North Arabian Desert. It lies at the crossroads of three major trade routes of the "incense road" from South Arabia to Syria, Mesopotamia and eastern Arabia. The riches of Tema were tapped by the emerging Mesopotamian empires of the first millennium B.C. The Assyrian king Tiglath-Pileser III lists the city as one of those paying tribute in 734 B.C. Along with Dedan, Tema served as a major urban center for its region during the seventh and sixth centuries. The Chaldean monarch Nabonidus made it his headquarters for ten years (553-543) as he attempted to gain control over the incense trade.

21:16. Kedar. Assyrian and Neo-Babylonian texts refer to these North Arabian tribes as *Qidr* or *Qadr.* Tied to the Ishmaelites in Genesis 25:13, the Kedarites functioned as sheep breeders and caravaneers at least as late as the Hellenistic period. Their mention in this verse along with Tema may refer to Nabonidus's expedition to conquer the area in 553 B.C. There is clear evidence of ties between Kedar and Tema in Babylonian economic texts.

22:1-25
Oracle Against Jerusalem

22:1. Valley of Vision. Based on 22:5, this is probably a reference to Jerusalem and perhaps to the Hinnom Valley (see its use in Jer 7:31-34 for divination rituals). Isaiah rebukes a people who have sought guidance from other gods and thus, despite their physical location on Mount Zion, have no true vision of events.

22:1. going up on roofs. This may also be a reference to divination or false worship. There is ample evidence in the prophetic books of Israelites burning incense on the roofs of their houses (Jer 19:13; Zeph 1:5). This may also refer to the symbolic "roofs" of incense stands like the one excavated at Megiddo. It is shaped like a house, with cornices around the top and contained charred remains on top. The first alternative would be supported by the ancient Near Eastern evidence. Offerings on a rooftop occur in narrative both in Mesopotamia (Gilgamesh) and in Ugarit (Keret).

22:2-3. historical context. These events occur during the 701 B.C. campaign of Sennacherib (see comments on 2 Kings 18:1—20:21). The Assyrian king led a huge army of mercenaries and conscripts from throughout his empire. During the course of the invasion of Palestine, they will, according to Sennacherib's annals, "lay siege to forty-six fortified cities, walled forts, and countless villages." King Hezekiah was bottled up in Jerusalem "like a bird in a cage." Any of his officials who attempted to escape were captured, and many were executed. The strategic western border citadel at Lachish was captured and burned. Archaeological evidence of a mass grave indicates that its garrison was massacred, and Assyrian reliefs from the palace in Nineveh depict prisoners being taken into exile. Sennacherib claims to have taken 200,150 prisoners of war—an inflated figure so large that there would have been virtually no one left in Judah. Both the biblical account and the Assyrian records agree there was widespread destruction, but the invaders eventually withdrew after Hezekiah paid a huge sum as tribute and ransom for the city of Jerusalem (2 Kings 18:13-16).

22:6. Elam. See the comment on 21:2. Sennacherib regularly conscripted levees of soldiers from subject and allied peoples. Although Elam has previously supported the Babylonians and opposed Assyria, in this 701 campaign it seems clear that they have supplied a contingent of bowmen for Sennacherib's host.

22:6. Kir. There is no consensus on the exact location of the country of Kir. Because of its association with the Arameans in Amos 9:7, several attempts have been made to place it either in northern Syria or in the western desert (west of the Euphrates). Its mention here with Elam also suggests proximity to that country east of the Tigris River.

22:8. palace of the forest. See the comment on 1 Kings 7:1-12 for this storehouse within the palace complex. The people hope to draw on the arsenal it contained to defend themselves

against the Assyrian invaders.

22:9. storing water in lower pool. Based on the comment in 2 Kings 20:20 and the discovery of the Siloam Tunnel inscription, it seems clear that Hezekiah constructed a water tunnel over eighteen hundred feet long from inside the walls of Jerusalem to the Gihon Spring in the Kidron Valley. In this way he was able to insure a safe and continuous water supply for Jerusalem during the Assyrian siege. The "lower pool" was one of two reservoirs used to hold and channel water (see 7:3). It was designed to provide irrigation flow to the terraced areas along the slope of the Kidron Valley, and it eventually drained into the Pool of Shelah, modern Birket el-Hamra.

22:9-11. building in Jerusalem in preparation for siege. The defenses of Jerusalem had to be repaired and strengthened in anticipation of Assyrian efforts to take the city. There was also a need to balance the demands for more housing by the people of Judah who had fled to Jerusalem for protection and the all-important defense of the city. As a result the area between the city's dual wall system was cleared of all temporary shelters to provide a "killing ground" should the Assyrians penetrate the outer defenses. This area was also partially flooded to make it more difficult to transverse and to add to the city's water supply.

22:15. royal steward. The position of "royal steward" may have evolved from a relatively insignificant post into that of a chamberlain, who was in charge of all of the affairs of the palace in Uzziah's time. There is precedent for this title in Ugaritic and Phoenician texts, and it would be comparable to the position of vizier in the Egyptian court. It has been argued that the steward in question here is Shebna, mentioned as a scribe or secretary in 2 Kings 18:18. The possibility exists that Shebna was addressed by various titles during his career, depending on his current assignment. One would expect, however, that as royal steward he would have been the preeminent adviser and facilitator for the king. If he was referred to by a lesser title in Hezekiah's reign, then it may be surmised that he had been demoted.

22:16. rock-hewn tomb. The valleys and slopes around Jerusalem contain a large number of tombs hewn from the native limestone cliffs. Among them on the slope of Silwan is a tomb containing a partial inscription and the title *'asher 'al habbayit,* the same phrase used in verse 15 to describe the position once held by Shebna. The lack of a name in this inscription makes it impossible to tie it conclusively to Shebna. Isaiah's rebuke of this official is based on the extravagance of constructing an individual tomb rather than utilizing a communal cave or hewn mortuary chamber within the confines of his family holdings. These more traditional tombs included shelves for internment of the bodies and lamp niches, as well as a recessed pit for disposal of bones when the shelves were needed for fresh burials. Only the very wealthy could afford to carve an individual chamber, perhaps incorporating Phoenician or Egyptian design (pyramids or elaborate facades).

22:20. Eliakim on seal. The name of this official, which means "May El establish," has been found on seal impressions from Tell Beit Mirsim, Beth Shemesh, and Ramat Rahel. He served as *'asher 'al habbayit,* royal steward, under King Hezekiah (see 2 Kings 18:18; 19:2; Is 36:3), and therefore would have been expected to affix his official seal to many documents. The seal impression containing the name Eliakim appears on a large collection of jar handles dating to Hezekiah's reign. The Iron Age Lachish stratum 3, dated to 701 B.C., is the most important of the sites where these handles have been found. It is likely that Eliakim's seal appears on these jars as a part of his regular duties, managing palace stores and distributing oil and wine to royal fortress sites like Lachish.

22:22. key to house of David. The relatively tiny locks used to secure our doors today require a very small key. However, in the biblical period locks were quite large and required a correspondingly large and heavy bronze or iron key (see Judg 3:25; 1 Chron 9:27). When Eliakim is given this key, its size and probably its elaborate decoration would serve as a visible symbol of his authority to lock and unlock the rooms and gates of the palace in Jerusalem. This is also known as one of the functions of the Egyptian vizier.

22:23-25. imagery. The apparently domestic images portrayed here, a tent peg in firm ground or pegs driven into mud-brick walls to hold up shelves or to hang kitchen ware, function as part of a ritual of installation for Eliakim. The origins of such images probably go back to the village culture of ancient Israel, and their basic familiarity gave them the authority that compares to Jeremiah's commissioning: "to uproot and tear down, to destroy and overthrow, to build and to plant" (Jer 1:10). One of the most well-known installation ceremonies in ancient literature is Marduk's installation as the chief Babylonian deity in *Enuma Elish.* There it is proclaimed that his command cannot be changed and that the limits he sets (for the gods) will be inviolable.

23:1-18

Oracle Against Tyre

23:1. Tyre in eighth century. The eighth century B.C. was a time of commercial and political expansion for the Phoenicians. A colonial empire was established, with Carthage as the principal city in the western Mediterranean (founded by Dido about 814 B.C.). The degree to which the Phoenicians of the island city of Tyre and of Sidon operated freely depended in this period on the extent of Assyrian influence over them. Adadnirari III (810-783) received tribute from them, but no significant Assyrian pressure was applied until the reign of Tiglath-Pileser III (744-727). The Assyrian king skillfully played on the fear of Tyre's expanding commercial empire to gain alliances with the city-states on Cyprus. He also forced Tyre to pay a huge amount annually (evidence of which is found in Assyrian tribute lists) to save themselves from military invasion. The wealth of Tyre was legendary (see Ezek 28:4-5; Zech 9:3), and in order to defend it Tyre's king Lulli forced the Cypriot states to submit to him. This brought on a five-year siege of Tyre by Shalmaneser V (726-722) and his successor Sargon II (721-705). Some attempts were made by Lulli to negotiate an end of the hostilities since the Assyrians occupied all of the Tyrian mainland. However, when he again revolted at the time of Sennacherib's accession, the Assyrians forced Lulli to flee to Cyprus and installed Ittobaal over the Sidonian kingdom.

23:1. Tyre in the seventh century. Tyre and Sidon continued to vacillate in their allegiance to Assyria throughout the seventh century. In response to the Phoenician alliance with the Ethiopian Tirhakah of the Egyptian Twenty-Fifth Dynasty, Assyrian armies repeatedly invaded the coastal region around Tyre and Sidon, devastating towns and villages and placing increasing pressure on the port cities to submit to Assyrian rule. Finally in 677 B.C. Esarhaddon utterly destroyed Sidon, parading the head of its ruler, Abdimilkutte, in Nineveh. Severe diplomatic restrictions were placed on Baal I of Tyre in an effort to prevent him from aiding the Egyptians. Ashurbanipal (667-627) also records dealing with anti-Assyrian rulers in Syro-Palestine. After crushing the Egyptians and destroying their capital at Thebes in 663 B.C., Ashurbanipal installed a native Egyptian, Psammeticus I, as ruler of Lower Egypt. He then brought his army back up the coast to punish Baal I and the Phoenicians. He completely stripped Tyre of its autonomy, transforming all of Phoenicia into an Assyrian province and taking full control of the shipping trade that had been the basis of Phoenician wealth and independence. However, after Ashurbanipal's death Tyre regained its supremacy in Mediterranean trade.

23:1. ships of Tarshish. The tonnage required for a merchant ship to make a profit and be seaworthy enough to ply the waters of either the Mediterranean or the Red Sea required skillful building practices. Since the "ships of Tarshish" are often mentioned in relation to trade mission (see 1 Kings 22:48; 2 Chron 9:21), there must have been a particular type of ship involved. It is possible that they were constructed in Tarshish, but it may be that they were named for their ability to sail as far as Tarshish in the western Mediterranean. Assyrian reliefs and the bronze gate covers of Shalmaneser III from Balawat depict these ships being used for military transport as well as carrying cargoes of tribute taken from their many vassals. A relief found in the palace at Nineveh depicts Lulli of Sidon's flight to Cyprus. Among the ships in his fleet are tubby-looking merchantmen with a row of shields along the hull and two levels of oarsmen on either side to aid the ship's movement when the sails were becalmed. Ships like this with two rows of oarsmen were called biremes.

23:2. merchants of Sidon. The silence of the usually boisterous and wealthy Sidonian merchants may be based on the extension of Assyrian hegemony over the area starting in the mid-eighth century, cutting off some of their profits. Or it refers to the growing pressure placed on that area by Sennacherib (after 701) and ending in 677 with the destruction of the city of Sidon by Esarhaddon. A new Assyrian city was built over its ruins by levies from throughout the Assyrian sphere of influence and named Kar-Esarhaddon.

23:3. grain of Shihor. Phoenician merchants transported items from throughout the Mediterranean. Grain from Shihor, possibly Egyptian *p̄ šḥr,* where Shihor would be translated "pool of Horus." It represents the fertile harvests of Egypt, shipped up the Nile and on to the coast by way of either the Wadi el-Arish (Brook of Egypt in 1 Kings 8:65) or the Pelusiac arm of the Nile. The stream may also parallel a portion of the "Way of Horus" that connected Palestine and Egypt.

23:3. economic role of Tyre. Standing out from the coast approximately six hundred yards from the mainland, the island city of Tyre and its harbor were secure from anything but a sustained siege. The waters were also deep enough to allow for heavily laden ships to approach and offload their cargoes. Dedi-

cated to commercial activity, Tyre was supplied with food and other essentials by its sister city of Ushu. Tyrian fleets established colonies, including some on Cyprus and the North African city of Carthage, around the Mediterranean to draw on the resources of these areas, especially metals, and to funnel goods back and forth between the eastern and western Mediterranean. Archaeological evidence from throughout this region of Phoenician metalwork and pottery indicates the extent and longevity of trade relations. Their principal exports were cedar wood, fabrics and dyes, and glasswork. The economic partnership between Solomon and Hiram I (969-936) that extended Phoenician and Israelite interests south to Somalia may have been only one such venture. The expansion of Assyrian hegemony over the Levantine coast forced Tyre and Sidon into cooperating with the Mesopotamian power. Efforts to revolt or withhold tribute payments resulted in invasion and curtailment of economic activity. However, the Assyrians also needed Tyrian expertise and access to the sea, so it is likely business continued virtually uninterrupted despite occasional hostilities.

23:4. fortress of the sea. Tyre was originally founded around 2750 B.C. on a sandstone reef about six hundred yards off the coast of southern Lebanon. Its occupied area was enlarged in the tenth century when Hiram I used fill to connect the older city with a nearby reef. To approaching sailors it must have looked like a city floating on the sea. No army was successful in capturing the city until the time of Alexander of Macedon, who built a causeway from the mainland in 332 B.C. However, Tyre was not totally self-sufficient. Its vulnerability was shown when its sister city of Ushu was captured by the Assyrians. As a result a vassal treaty was signed in the time of Esarhaddon that reflected Tyre's capitulation to the extent of even having an Assyrian official present whenever the king read diplomatic correspondence.

23:5. report from Tyre. The exact time period or event described here is unclear. It could be referring to any number of events that would have dismayed the Egyptians, representing the cessation of trade and the elimination of an important political ally. Possible occasions include the Assyrian incursion into Phoenicia by Sennacherib in 701 and the destruction of Sidon in 677 by Esarhaddon. Some commentators also suggest the much later period when Sidon was conquered by the Persian king Artaxerxes III (343 B.C.) or even Alexander's capture of Tyre in 332. Such a late date, however, requires either a prophetic vision of an event long after Isaiah's time or the removal of this passage completely from its Isaianic context, making it a later editor's gloss.

23:6. Tarshish. The ambiguity in biblical and extrabiblical sources only indicates that Tarshish is to be found to the west of Israel. This would allow for identification with Carthage in North Africa and sites on the southeastern coast of Spain, including Tartessos. There is even some support for identifying it with Ezion-Geber in the Gulf of Aqaba. After his defeat of the Egyptians in 677, Esarhaddon claims in his annals to have sovereignty over Cyprus, Greece and Tarshish, in other words the entire Phoenician commercial empire.

23:10. Tyre's harbor. Tyre's original site was built on two large reefs approximately six hundred yards offshore. Since the island had limited living space, multistoried houses were closely packed together (based on scenes in the Assyrian reliefs). A port existed on each side of the island to accommodate the large number of ships that were constantly arriving and departing. The natural harbor existed on the north end and was protected by a sea wall and roadstead, sheltered by a chain of smaller islands. An artificial harbor was also constructed at the southern end of the island. This southeastern area was eventually transformed after Alexander of Macedon constructed a ramp to connect the city with the mainland and further silting created a broader peninsula. Excavations are difficult since a modern city still occupies much of the site of ancient Tyre.

23:11. Phoenicia. The Hebrew text here actually reads "Canaan." The choice to translate "Phoenicia" helps the reader stay focused on Tyre's destruction. However, that destruction is (1) based on the Canaanite culture of the Phoenicians that is condemned by Yahweh and (2) exemplified here by Yahweh stretching out his hand over the sea to demonstrate that this friendly resource of the Phoenician traders will not save them. This terminology is reminiscent of the motif of the contest between Baal and Yamm in the Ugaritic epics where the sea god is defeated.

23:12. Cyprus. Cyprus lies just seventy-six miles off the Syrian coast. It served as a place of refuge for Phoenician kings (Lulli of Tyre escapes to Cyprus under pressure from Sargon II's Assyrian armies). This oracle discounts it as a safe haven. If the Phoenicians lose control of Tyre and Sidon, their merchant fleet will become orphans. Their cargoes may either rot or be turned over to the Assyrians.

23:13. Babylon punished by Assyrians. See the

comments on 13:1 and 13:19 for the historical background of Sennacherib's capture of Babylon in 689 B.C. and the exile of the Babylonian leader Merodach-Baladan. In this passage the destruction of southern Mesopotamia's major city is cited as an example of Tyre's ultimate fate at the hands of the Assyrians.

23:13. siege towers. Assyrian reliefs from the palace at Nineveh and the annals of several kings depict a number of different types of siege engines. One of the most common was the siege tower, which was rolled up as close as possible to a city's walls. From its heights archers could target enemy soldiers, and assault bridges could be extended onto the ramparts. At the base of the tower, protected from the rain of stones, hot oil and arrows, engineers and sappers could work to undermine the walls or employ battering rams (see 29:3; Ezek 21:22).

23:15. Tyre's seventy years. There are several instances in the prophets where seventy years became a term of exile or punishment (Jer 25:12; Dan 9:2; Zech 1:12). There is also a sense of completion in this number, suggesting that Tyre and the Phoenicians are in God's hands and will not be allowed to prosper again until divine judgment is fulfilled. In fact, for much of the seventh century Tyre was dormant as a succession of strong Assyrian rulers controlled both the city and its commercial activities. There was a brief resurgence after the destruction of Nineveh in 612, but the city was then besieged for thirteen years by the Babylonian ruler Nebuchadnezzar, severely limiting its contacts with the mainland. The Persians exercised control over the Phoenician ports as well, with Artaxerxes III burning Sidon in 345 after it had joined an Egyptian-inspired revolt. Tyre's destruction by Alexander of Macedon in 332 followed a seven-month siege and effectively ended the independence of the city.

23:15-16. song of the prostitute. The pitiful condition of Tyre after Yahweh's judgment of the city is compared to an aged prostitute who must now walk the streets singing to advertise her profession and attract customers who are no longer willing to come to her door. The tune and coupleted lyrics were probably part of the raucous culture of Mediterranean seaports that catered to sailors on leave.

24:1-23

Judgment of the Day of the Lord

24:1-13. description of city's desolation. The litany of destruction found in this city lament parallels the style contained in the Sumerian *Lament over the Destruction of Ur* as well as in other ancient Near Eastern expressions of grief over fallen cities. Comparisons include the descriptions of utter desolation, the fact that no person of any rank has been spared, and the failure of nature to provide what had previously nurtured the people. The Sumerian lament speaks of devastating winds, drought, famine and bodies piled in the streets unburied. The twentieth-century B.C. Egyptian *Visions of Neferti* also depicts a land laid bare and cursed by the disappearance of the sun and the drying up the life-sustaining canals. The prophecies of Balaam (found at Deir 'Alla and dating to 700 B.C.) describe angry gods who "lock up the heavens," turning every creature into a scavenger and forcing even princes to wear rags and priests to "smell of sweat."

24:18. floodgates. See the comment on Genesis 7:11 for this metaphorical expression describing the cataclysmic effects of flood waters raining down from heaven and bursting from the waters of the underworld. The scene is one of utter destruction.

24:22. prisoners in a dungeon. The apocalyptic character of this passage makes it more likely that the author is describing the imprisonment of other powers (angels) who have attempted to rival God's power, rather than earthly kings. Certainly the pattern in much of the Old Testament is for kings to be executed (see Judg 8:21; 1 Sam 15:33) or forced to negotiate terms of surrender (2 Sam 10:19). Mesopotamian texts from Mari describe the "imprisoning" of sacred images as does the Cyrus Cylinder from Persians records. The idea of holding prisoners for long periods beneath the earth is eventually developed in the apocalyptic visions of Revelation 19:20—20:15 and in *Enoch* 18:16.

25:1-12

Victory Banquet

25:6. banquet hosted by the gods. Banquets hosted by the gods were most common in coronation settings—when a deity was ceremonially ascending the seat of his domain of power. This is the case when El calls the Rephaim (see comment on 14:9-11) to a banquet to honor Baal. Marduk's enthronement also includes a banquet. Though these banquets were for the gods, the people would join in the feasting when the enthronement was celebrated annually.

25:7-8. destruction of the shroud and swallowing of death. In the Old Testament, death is occasionally personified (Hos 13:14), but

in Ugaritic mythology, Mot ("death") is a deity of the netherworld who is an enemy of Baal. Since Baal is a fertility god, his defeat of Mot is a cyclic symbol of life returning to the world each spring. Mot is often pictured as one who swallows his prey. Rituals that target Mot are intended to put an end to his destructive activities. Here it is Yahweh who swallows death (Mot) and the setting is political (nations) not agricultural. It is the ruthless, devouring empire that threatens death to the nations who are being destroyed, so that the death masks are removed from those who have been so close to extinction.

26:1-21

Judah's Song

26:19. resurrection in the ancient Near East. Concepts of afterlife are most clearly defined in Egyptian texts. The Book of the Dead provides a guide for dealing with the questions asked of each soul on entering the nether regions. Mummification, the construction of tombs, the rich grave goods and the priestly and family cult that supplied food and drink for the dead through eternity all testify to elaborate preparations for a life beyond this one. Even in this rich afterlife doctrine, however, resurrection is reflected in the belief that the righteous dead can be resuscitated in the afterlife. Mesopotamian concepts are more pessimistic. Gilgamesh, the hero who crosses the "sea of death" and seeks out the flood hero Utnapishtim, is told by the barmaid/goddess Siduri that humans are fated to die from their conception. She advises a life filled with personal enjoyment and accomplishment, since there is no joy in death. Job echoes this opinion when he says (7:9) that "he who goes down to the grave does not return." Only in Daniel 12:2 does the Old Testament clearly refer to bodily resurrection. Thus this passage, like Ezekiel 37:4-14, may speak only of God's ability to reawaken a dead nation, to revive a covenantal community. There may be some Egyptian influence here, however, in the use of "dew" as the expression of God's power. Egyptian texts describe the dew as the "tears of Horus and Thoth," containing the power of resurrection. Dew is the only moisture available to keep plants alive during the long, dry months of summer and thus is an appropriate symbol of resurrection (for further discussion see comment on Dan 12:2).

27:1-13

Israel Gathered

27:1. gliding serpent, coiling serpent. This same description occurs in the Ugaritic Baal Cycle as one of the supernatural opponents of Baal: "When you killed Litan [Leviathan], the fleeing serpent, annihilated the twisty serpent, the potentate with seven heads" ("fleeing" is the same word as NIV's "gliding"; "twisty" is the same word as NIV's "coiling"). For seven heads see comment on Psalm 74:14.'s

27.1. Leviathan. Ugaritic and Canaanite myths contain detailed descriptions of a chaos beast representing the seas or watery anarchy in the form of a many-headed, twisting sea serpent. There is a close affinity between the description of Leviathan in Isaiah as a "coiling serpent" and the Ugaritic Baal Epic, which speaks of how the storm god "smote Litan the twisting serpent." In both cases there is a sense of the God of order and fertility vanquishing a chaos monster. Several other passages in the Old Testament mention Leviathan, but most of them, like Psalm 74:14 and Job 41:1-34, speak in terms of God's creative act that established control over watery chaos (personified by the sea serpent). In 27:1, however, that struggle between order and chaos occurs at the end of time. It may be that the fall of Satan, portrayed as a seven-headed dragon in Revelation 12:3-9, also echoes the Ugaritic image of Litan as "the tyrant with seven heads."

27:1. monster of the sea. The obvious physical struggle between the sea and the land as well as the fierce, seemingly unstoppable energy displayed by the savage sea gave rise to cosmic myths in the ancient Near East. The *Enuma Elish* creation epic from Babylon describes how Marduk vanquished Tiamat when this goddess of watery chaos was in the form of a dragon. Much of the cycle of stories about Baal in Ugaritic legend involve Baal's struggle against his rival Yamm, the god of the sea. Similarly, the Ugaritic Epic has both Anat and Baal claim to have conquered Litan, the seven-headed dragon, and thus gained mastery over the seas. In Psalm 104:26 Yahweh is said to play with Leviathan, and in Job 41:1-11 God challenges Job to show his control over Leviathan as God does. Although the text is not explicit here about whether the monster represented a nation or city, it could be a reference to Egypt or Tyre, both of which had connections with the sea.

27:9. chalk stones. Limestone is crushed to produce a chalky substance that can be used for mortar, as a liming agent in cesspits and to seal stone walls with a type of "whitewash." For altars to be crushed in this manner is to completely extinguish their sacred nature. Isaiah in this passage describes the reform mea-

sures of Hezekiah in 2 Kings 18:4 and prophesies the religious reforms of Josiah in 2 Kings 23:12.

27:9. Asherah poles. See the comment on Deuteronomy 7:5 for a description of these sacred objects associated with the Canaanite goddess and her cult.

27:9. incense altars. The term in Hebrew may refer to the small incense altars, usually shaped like houses, that continually burnt frankincense or some similar spice to honor the gods of Canaan. It has also been suggested that the word used here, *ḥammamim*, is a term for "standing stones," another monumental cult object of the Canaanites (see comment on Deut 7:5).

27:12. threshing imagery. There is an artful double meaning to the word in this passage for a "flowing stream *[shibbolet]*." Isaiah is speaking of Yahweh gathering all of the people from the area between the "stream of Egypt" (the Wadi el-Arish) and the Euphrates. However, this is coupled with the other meaning for *shibbolet*, "ears of grain." Thus the image of grain gathered to the threshing floor where the stalks and kernels of grain are separated becomes clear.

27:12. territory from Euphrates to wadi of Egypt. One traditional way of speaking of the full extent of the scattering of the exiles is to say from the Euphrates River in Mesopotamia to the Wadi el-Arish, which forms the boundary with Egypt (see Gen 15:18; 2 Kings 24:7). See the comment on 1 Kings 4:21 in which this geographic range is used for the limits of Solomon's kingdom. Mention of the wadi of Egypt is found in the Assyrian annals of Tiglath-Pileser III (744-727 B.C.). This is the limit of Assyrian expansion until Ashurbanipal finally conquers Thebes in 663 B.C.

27:13. great trumpet. Perhaps because of their use for signaling in battle (as in the reliefs from eighth-century Carchemish depicting military musicians), the blast of a trumpet became a common image used in eschatological and apocalyptic literature as a signal for the end time (see Zech 9:14 and Rev 8:6-12). Here it awakens the exiles to the moment when they will return from Assyrian exile and from the places in Egypt where they have fled for refuge.

28:1-29
Woe Oracle Against Ephraim

28:1. wreath. The garland worn by revelers is usually a sign of joy and happiness (see Prov 4:9; Is 61:10). In this instance, however, the wreath will quickly fade as the party turns sour and drunkenness presages the destruction of the city of Samaria by the Assyrians in 722 B.C.

28:2. characteristics of theophany. A theophany is an appearance by a divine being to a human. To indicate the power of the deity, this encounter generally includes such things as smoke and fire, mighty winds and storms, and earthquakes (see comments on Josh 10:11 and 1 Kings 19:11-13). The manifestation of God's presence, of course, is done for a purpose, usually to call a leader or prophet to service or to carry out judgment on an enemy nation (Hab 3:13) or the wicked (Ps 94:1-3). Theophanies also are common in the Ugaritic epic (Anat and Keret both receive divine visits), and in Mesopotamian texts they often occur in dreams, either to priests or to kings.

28:7. drunkenness in ancient world. The brewing of various types of beer and the fermenting of wine from dates and grapes is known in Mesopotamia and Egypt from protoliterate times (c. 4000 B.C.). Banqueting scenes are common in Assyrian art; they depict parties of men and women eating from tables stacked high with food and drinking from cups and through straws. The Babylonian creation epic *Enuma Elish* describes how the gods banqueted, making "the sweet liquor flow through their drinking tubes" (a necessity since the lees of the beverage were so thick). A Sumerian hymn to the goddess Ninkasi celebrates the brewing process and gives thanks for the beverage that slakes the thirst and gushes forth in abundance like the Tigris and Euphrates. The ills of drunkenness are found in Psalm 69:12, Proverbs 20:1, and in the drunken parties portrayed in Esther 1:3-8 and Daniel 5:1-4, and were also well recognized across the ancient Near East. Egyptian wisdom literature warns against intoxication with its accompanying lack of control and the resulting social rejection. There is evidence from the Mari texts of intoxication being viewed as a favorable condition for receiving divine oracles.

28:15. covenant with death. It is tempting to see in this passage a treaty or act of submission to the Canaanite god Mot ("death") or to the Egyptian god of the dead Osiris (see 30:1-2). Both would then represent political alliances made with various Syro-Palestinian nations or with Egypt against the Assyrians. The prophet warns the Israelites, however, that this is folly and a sign of their wicked nature (see Job 8:5-21). As the Mesopotamian hero Gilgamesh learned, no human, except in rare individual cases (Enoch, Elijah, Utnapishtim) escapes death (Job 30:23).

28:16. architectural function of cornerstone. Israelite Iron Age architectural design made increasing use of cut-stone masonry over the rough boulders and rubble construction of earlier periods. In order to provide stability and to bind two adjoining walls together, a finely shaped block of stone was inserted that became the cornerstone. It would have been a larger stone than those normally used, and its insertion often required special effort or rituals. Its large, smooth surface was a natural place for inscribing religious slogans, the name of the architect or king responsible and the date of construction. It is possible that the cornerstone could also serve as the foundation stone. For information on the latter see comments on Ezra 3:3 and 3:10.

28:21. Mount Perazim. Known as Baal Perazim in 2 Samuel 5:18-20, it commands the heights above the Valley of Rephaim (Josh 15:8). Although its exact location is unknown, the text suggests that it is just northwest of Bethlehem, near Jerusalem.

28:21. Valley of Gibeon. The site of Gibeon (el-Jib) is located six miles northwest of Jerusalem. It is best known for its association with Joshua's treaty with the Gibeonites (Josh 9:3-10:15) and for his driving a Canaanite army from Gibeon to the Beth Horon Valley (Josh 10:9-11). In this case, however, Yahweh will reverse his role of Divine Warrior and allow the Israelites to be defeated in this place of former victory.

28:25. sowing strategy. Two sowing strategies are employed here. Black cumin, a condiment, and cumin, a spice and a source of oil, were broadcast by hand. This was done in the freshly plowed furrows after the first rains. Wheat, barley and spelt had to be handled more carefully to avoid mixing the seed. It seems likely that the Israelites used a seed drill to push holes into the furrows as oxen pulled the plow through the fields. A man following kept the hollow shaft of the drill filled with seed, which dropped into the ready-made spots. The action of the plow then covered the seed. Representations of the seed drill in action are found in Kassite and Assyrian art.

28:27. threshing caraway and cumin. The seeds of these two grains were too fragile to use the larger threshing instruments. Using a rod would accomplish the threshing process without damaging the seeds.

28:28. sequence of grain production. No bread can be made if the farmer performs only one of his tasks. Therefore it is necessary to bring the harvested grain to the threshing floor, where it can be crushed under the feet of the oxen (Deut 25:4) and further processed by running a threshing sledge over it. The wheel-thresher mentioned here was a common wooden device with two or more rows of wheels affixed. Once the grain had been separated from the stalks, it had to be winnowed, sieved and then given to the women to be crushed on grinding stones to make the fine flour used for baking.

29:1-24

Woe Oracle Against Jerusalem

29:1. Ariel. This is a descriptive term for the city of Jerusalem. The name itself refers to the "altar hearth of El" (translated this way at the end of v. 2; see also Ezek 43:15). The present oracle tells of a city that will be destroyed like the sacrifices brought to the altar.

29:1. cycle of festivals. See the comments on Exodus 23:15-16 and Deuteronomy 16:9-17 for descriptions of the Feast of Unleavened Bread, Feast of Harvest and the Feast of Ingathering that served as the major agricultural festivals of the Israelite calendar. The Gezer calendar, a tenth-century B.C. schoolboy exercise on a small limestone tablet, also provides the breakdown of the year according to planting, harvesting and feasting.

29:2. altar hearth. The hearth was the uppermost block of the altar, on which the sacrifice would be burnt (Lev 6:9) and from which the horns projected on each corner (1 Kings 2:28). In Ezekiel 43:15 the hearth of the altar in the vision of the reconstructed Jerusalem temple is described as being eighteen feet square.

29:3. siege works and towers. See the comment on 23:13 for a description of siege towers erected by an army attacking a walled city. Assyrian reliefs depict these moving towers as well as engineers tunneling to undermine walls, battering rams being employed on walls and city gates, and siege ramps built to facilitate the movement of towers (Jer 32:24). Siege camps also would have been established to house the army and to prevent the city dwellers from escaping (see 2 Kings 25:1; Jer 52:4). One of the most striking examples still in existence is the remains of the first-century A.D. Roman camps and enveloping wall around the Jewish fortress of Masada.

29:6. characteristics of theophany. See the comment on 28:2.

29:10. covering heads of seers. Closing the eyes and covering the head are most likely images of death here, as they are parallel to the deep sleep of the first line. Both phrases, however, are used only here and are therefore difficult to decipher.

29:11. sealed in scroll. Official documents

were written on scrolls of papyrus or vellum and then, when stored or dispatched by messenger, were rolled up and sealed with string and an affixed seal (see 1 Kings 21:8; Jer 32:10-11). The seal, either a ring or signet, was impressed into either wax or a lump of clay known as a bulla (Job 38:14). Archaeologists have found many of these clay bullae with the names of Israelite officials.

29:17. Lebanon. Using the same image of nature reversed that is found in 32:15, the prophet describes how the mountains of Lebanon, known from the Gilgamesh Epic and the Egyptian Tale of Wenamon for their stands of cedar forest, will become a fertile field. The fields of Carmel will become forest land. The sense is of the fulfillment of the covenant and a magnification of fertility that will restore Israel's fortunes.

30:1-33
Woe Oracle Against Stubborn Disobedience

30:1. alliance. See the comment on 28:15 and its warning against making a "covenant with death," referring to political dealings with the Egyptians.

30:2. Egypt's role. During Hezekiah's reign the Nubian-based Egyptian Twenty-Fifth Dynasty and Pharaoh Shabaka continuously attempted to foment revolt among the Syro-Palestinian peoples against Assyria. Sennacherib's account of his 701 B.C. campaign against an Egyptian army takes him as far as Eltekeh, just about one hundred miles from Egypt's border. In Josiah's time it was Pharaoh Psammeticus I who took advantage of the growing weakness of Assyria at the end of the reign of Ashurbanipal (d. 627 B.C.). He too hoped to expand Egyptian influence but was stymied by the rising power in Babylon.

30:4. Zoan, Hanes. Isaiah emphasizes the futility of Hezekiah's diplomatic overtures to Egypt. He says that despite having ambassadors travel to the Egyptian capital at Zoan (Tanis in the upper Delta, just twenty-nine miles south of the Mediterranean) and to Hanes (Heracleopolis Magna, forty-five miles south of Cairo on the west bank of the Nile), their mission will be in vain. Hanes was an important regional capital under both the Twenty-Fifth Dynasty ruler Shabaka as well as during the Twenty-Sixth Dynasty reign of Psammaticus I (663-609). It would have been necessary for Hezekiah to send representatives to meet with the Egyptian leaders in both of these important cities in order to initiate treaty alliances or plan strategies against Assyria.

30:6. animals of the Negev. The dangers of travel through the difficult terrain of the arid Negev are magnified by reference to wild beasts that assault the unwary. The remains of carnivores such as lions and leopards appear in excavations from the Chalcolithic to the Iron Age. Poisonous snakes, including the adder and the cobra, are also known in the area. The Assyrian king Esarhaddon's annals describe a "flying serpent" that plagued his campaign (see Num 21:8; Is 14:29).

30:6. caravan from the Negev. The caravan described here is most likely that of Hezekiah's ambassadors. The route they took avoided the normal coastal highway that was blocked by Assyria during Sennacherib's reign. Instead they traveled south to Aqaba and across the Sinai to Egypt. What they carried with them may have included the sort of goods that would have been expected to induce Egypt to become involved: frankincense, resins for cosmetics and embalming, ingots of copper or iron, indigo, ivory and lapis lazuli.

30:7. Rahab. Although not mentioned in any known text outside the Bible, Rahab is comparable to the chaos monster Leviathan, which also takes the form of a twisting serpent (Job 26:12-13; see the comment on Is 27:1). Rahab is also used synonymously for Egypt. For instance, in Psalm 87:4 the major nations are listed as subject to the power of Yahweh. Rahab, Egypt's metaphorical name, is paired here with Babylon in terms of importance. The further sign of Rahab's dual character may be found in 51:9-11, a passage that refers to Yahweh's destruction of the monster (see Ps 89:10) as well as how God "dried up the sea," a clear reference to the exodus tradition and the defeat of Egypt. In 30:7 the prophet taunts an impotent Egypt/Rahab's ability to help Israel or stop Assyria.

30:8. tablet, scroll. While the mention of both tablet and scroll may simply be parallelism, writing down a prophecy on both a clay tablet (or possibly an ostracon) and a scroll may be a sign of the coming destruction. For instance, in the first-century pseudepigraphal *Life of Adam and Eve,* Eve instructs her son Seth to write down her "testament of the fall" on both stone and clay tablets to insure some record would survive either flood or fire. This charge to write is also found in 8:1, Jeremiah 30:2 and Habakkuk 2:2. Like the spoken word, the process of writing enacts the prophecy, and it also holds it secure for later generations to see.

30:10. manipulated prophets. It is a common charge by Yahweh that the Israelites have either ignored the prophets or told them to prophesy only pleasant words and visions (see Jer 7:25-26;

Amos 2:12). Throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. It is no wonder then that there would be some attempt to control a negatively disposed prophet. In Assyrian king Esarhaddon's instructions to his vassals he requires that they report any improper or negative statements that may be made by anyone, specifically naming prophets, ecstatics and dream interpreters. One can perhaps understand why people would be inclined to discourage a prophet whose very words might impose doom.

30:13-14. basis of imagery. Given the extensive use of mud-brick architecture throughout the ancient Near East, this must have been a common occurrence. Egyptian tomb paintings as models depict the process from gathering clay, water and straw to shaping the bricks in molds (see Ex 5:7-8). As the bricks weathered, they eroded and lost stability. If the bricks were only sun-dried and not fire-hardened in a kiln, then they were subject to crumbling under the weight of a high wall. This would often first be manifested in cracks and bulges, and eventually the entire structure would come down in an avalanche of masonry (see 9:10). To guard against faulty construction and increase the life of the brick walls, Hammurabi's Code provided strict punishments for careless contractors.

30:22. defiling idols. There could be no more defiling substance than menstrual blood (Lev 15:19-23) and, for the people, no more defiling object than an idol (Deut 4:15-19). Here then, the idols, usually among the most precious objects in the culture, will be treated as the most disgusting piece of trash.

30:24. fodder and mash spread with fork and shovel. Because of the people's return to covenant obedience, even their draft animals will share in the abundance provided by God. Fodder for animals normally consisted of the remains of the chaff left by the threshing process. A common term for fodder means "small pieces of straw," which might be mixed with barley. Here, however, the stock are fed chickpeas that had been specially prepared for them using a wooden shovel and winnowing fork. Both of these implements helped separate the grain from the chaff and were used to create heaps.

30:28. sieve of destruction. The two types of sieves used by Israelite farmers gave them different results. The *kebara* (Amos 9:9) had large holes that caught stones and other large objects as the worker shifted it back and forth. The sieve in this passage, the *napa,* had smaller holes and was meant to separate out the smaller items from the grain through a swift up-and-down motion. This makes an excellent metaphor for God's act of judgment.

30:30. characteristics of theophany. See the comment on 28:2.

30:33. Topheth. This instance is the only case in the Hebrew Bible where this word is used as a noun, meaning "crematory" or "pyre." God's wrath is to literally burn up the Assyrian king in much the same way that sacrifices were made in the cult site in the Valley of Hinnom near Jerusalem to the god Molech (2 Kings 23:10). In fact, the Assyrian king Sin-Shar-Ishkun died in the flames of his palace when the city of Nineveh was destroyed in 612 B.C.

30:33. burning sulfur. Finely ground sulfur can increase the intensity and brightness of a fire. It may be this property that has made it a symbol of God's wrath, as in the case of Sodom. In this image of Assyria's funeral pyre it magnifies the power of God to punish the enemy nation. Mixed with salt, sulfur could also rob the soil of fertility, again a sign of God's extreme displeasure.

31:1-9
Woe Oracle Against Political Alliances

31:1. role of Egypt. See the comment on 30:2.

31:8. fate of Assyria. The ultimate fate of Assyria is its annihilation as a nation by a coalition of states headed by the Chaldeans of Babylon and the Medes. The Babylonian Chronicle describes how Nineveh falls to an allied army led by Nabopolassar of Babylon and the Median ruler Cyaxares in 612. The final battle at Carchemish in 605 demonstrated the ability of the Babylonian leader Nebuchadnezzar to totally demoralize the formerly invincible Assyrian shock troops and their Egyptian allies. Thus the hand of Yahweh and the loss of strong Assyrian leadership after the death of Ashurbanipal in 627 spelled elimination of that people's influence from the ancient Near East.

32:1-8
The Coming King

32:1-5. visions of better times. These verses form a reversal of the conditions faced by Isaiah in his call narrative in 6:9-10. What changes Israel's fortunes is the rise of a righteous king who enforces the law and maintains order. Statements such as these are part of the wisdom tradition of the ancient Near East that includes works from Egypt and Mesopotamia on the "just king." Among them is the Egyptian *Tale of the Eloquent Peasant,* who describes

a righteous king as one who is "father to the orphan" and "mother to the motherless." Similarly, the eighth-century Egyptian sage Ankhsheshonqy states that "blessed is a city with a just ruler."

32:9-20
Oracle Against the Women of Jerusalem

32:11. sackcloth around waist. One of the rituals associated with mourning and supplication is to wear sackcloth (Gen 37:34; 1 Kings 20:31-32). Pictorial representation of this practice is found on the sarcophagus of the Phoenician king Ahiram (c. 1000 B.C.), which depicts two mourning women as well as other figures performing symbolic acts associated with the passage of the deceased.

32:14. citadel and watchtower. The Lachish Letters, which date to the early sixth century and the invasion of Judah by Nebuchadnezzar, describe signal fires that are lit in towers in each of the important border towns. The writer of this passage may be referring to these signal/defensive towers, or it is possible that the word for citadel *('ophel)* refers to a portion of Jerusalem where a specific watchtower stood (see comment on Neh 3:26).

33:1-24
Woe Oracle Against Those on Whom the King Will Take Vengeance

33:4. locusts. The image of locusts as a ravaging horde stripping the land of its harvest and wealth is more fully developed in Joel 1:4-12 and Amos 7:1-2. See also the comment on Deuteronomy 28:42. The irony in the Isaiah passage is that the former destroyer, Assyria, is now to be picked over even more thoroughly than were its victims.

33:9. Lebanon, Sharon, Bashan, Carmel. The shattering of nature's normal function, coupled with a gloomy recital of areas known for their fertility, once again reflects God's displeasure at work (see 24:4-7; comment on 24:1-13). The itinerary runs generally north to south: from the lush forests of Lebanon and the wine country of the Beqa' Valley (Ps 72:16; Hos 14:7), south to the fertile plain of Sharon on the coastal plain (Song 2:1), east of the Galilee to the Bashan plateau and its excellent grazing areas (Ps 22:12), and then south again to the Carmel range also known for its herding (1 Sam 25:2; Jer 50:19).

33:18. officials. Every government requires bureaucrats to conduct its business. In this vision of the future when God's king will reign once again, the people think back to the "bad old days" when their lives and fortunes were strained by the activities of men who recorded tax assessments, counted out the tribute payments and determined ("counted towers") how many soldiers would be needed to man the Assyrian garrisons (for which they had to provide troops). The Mari texts contain a number of letters sent to local officials from provincial governors and the king, instructing them to perform these tasks. The harshness of punishments threatened against the officials for failure to collect taxes or draft workers and soldiers assured that they would in turn be a "terror" to the people they oppressed.

33:19. foreign language. The Assyrian tax collectors, some of whom may have come from various parts of the empire, spoke Aramaic, while the majority of Israelites spoke only Hebrew (see 36:11). They may also have had strange-sounding accents, which added to the sense of foreign control and oppression for the people of Judah (see Jer 5:15 for the same reaction under Babylonian rule).

33:22. role of lawgiver. One of the attributes that all kings claim is "lawgiver." For instance, as early as the end of the third millennium Sumerian king Urukagina of Lagash and the Neo-Sumerian king Ur-Nammu pledge in their royal inscriptions "not to hand over the widow and orphan to the powerful." In the same vein the eighteenth-century B.C. prologue to Hammurabi's law code contains a statement that the gods appointed him "to cause justice to prevail in the land" so that "the strong might not oppress the weak." The similarity of wording in these texts, plus the language in 2 Samuel 8:15 in which David is described as "doing what was just and right for all his people," suggests a common ancient Near Eastern tradition of the "just king." However, when the monarch fails to perform this essential task, God steps in to restore order and justice (see Ezek 34:7-16).

33:23. boat metaphor. A similar metaphor is known from an Assyrian elegy about a woman who died in childbirth. She is described as a boat that is adrift with its mooring rope cut and the seat where the oarsman would sit broken.

34:1-17
Oracle of Judgment Against the Nations

34:4. imagery of disappearing stars. Always in command of all creation, Yahweh shows mastery over the heavens and celestial bodies, causing their brightness to be snuffed out in a

reversal of creation. Prominent astral motifs in the Mesopotamian religion included the idea that the gods were given stations within the heavens and "their astral likenesses" marked the zones of the calendrical year (for instance, in the Babylonian *Enuma Elish* creation epic). In the celestial omens the disappearing of a star or planet always suggested that the related deity had suffered defeat in battle. Astral deities were considered among the most prominent and powerful of the gods. The dissolving of the stars and the fall of the starry host are therefore related. Both the natural manifestation as well as the deity connected to it are overcome in this act of judgment. Additionally, dream omens in Mesopotamia hold that the observation of stars falling is a bad omen. In the destruction described in *Erra and Ishum,* Erra says that he will make planets shed their splendor and will wrench stars from the sky.

34:4. sky rolled like a scroll. More often the heavens are compared to a canopy (40:22) or a tent (Ps 104:2) spread over the earth. This image in Isaiah of the whole panorama of the sky being rolled up like a parchment scroll is unique in the Hebrew Bible (see the New Testament parallel in Rev 6:14). Additionally, the three major Babylonian gods are not represented by stars but by the sky itself. Anu is the sky god, and the horizon is divided into three paths (connected to Anu, Enlil and Ea). Therefore, rolling up the sky is an act of judgment against the three main deities of the ancient world.

34:5. role of Edom. Since the larger passage here (see vv. 1-4) is concerned with God's punishment of the nations, it may be that the description of Edom as a sacrificial victim is simply a example of what will happen to them all (compare 63:1-6). Certainly Edom serves in many cases as Israel's prototype "enemy" (see Obad 5-9; Mal 1:2-4). The lack of a specific act by Edom in the late eighth-early seventh century against Jerusalem (although see 2 Chron 21:8-10) has convinced many scholars that this passage is a reference to Edom's role as Babylon's ally in 587 B.C. (see Ezek 35:2-15).

34:6. Bozrah. This is the capital of ancient Edom and is to be identified with Buseirah in the northern region of the country. It guards a portion of the King's Highway and is fairly close to the copper mines found five miles to the southwest at Wadi Dana. Excavations demonstrate seventh to sixth century levels from the most heavily fortified and largest settlement in the area.

34:9. pitch and sulfur. Although often mentioned as a sealant material for boats (see Gen 9:14; Ex 2:3), boiling pitch appears in Old Babylonian texts as a form of punishment. Coupled with the foul smell of burning sulfur, both materials being available in the region of the Dead Sea, they could easily be associated with God's wrath (see Gen 19:24).

34:11. owls and ravens. The symbol for utter destruction here is that birds best known as inhabiting and scavenging desolate places (Job 38:41; Ps 102:6) have settled in the ruins of towns (see Is 13:22). One parallel to this picture is found in the Egyptian *Visions of Neferti* (c. 2000 B.C.), which describes an Egypt so weak that a "strange bird will make its nest near the people" and "desert herds will drink from the Nile."

34:13-15. jackals, hyenas, falcons. Isaiah's vision of Edom's desolation concludes with a land left to scavengers and phantoms (see Jer 9:11). It is easy to imagine the cry of jackals and hyenas would sound demonic in origin to people who are already in fear of their lives (Mic 1:8). Some commentators read Lilith, the Mesopotamian female night demon (v. 14), as one of the creatures inhabiting this nightmare world.

35:1-10

Restoration

35:2. Carmel and Sharon. With the elimination of Edom, regions north of that land are freed from oppression and are restored to fertility and prosperity. These include Carmel and Sharon (see the comment on 33:6, where this is reversed), the area along the northern coastal plain of Israel. Even the desertlike portions of the Arabah (within the Jordan Rift Valley; Jer 17:6) will become rich and abundant with life, like these normally fertile areas.

35:7. jackals/papyrus contrast. Jackals are creatures of the steppe and desert regions, ranging over a barren landscape (Mal 1:3). In Isaiah's vision of a garden replacing what once had been wilderness, these haunts for wild predators will be transformed into wetlands like those in the Huleh Valley (see 43:20). The marshy area will remain moist year round, allowing for the growth of grasses and papyrus plants (see Job 8:11-13 and Is 19:5-6).

36:1—37:38

Sennacherib's Siege of Jerusalem

See comments on 2 Kings 18—19 and 2 Chronicles 32.

38:1-8

Hezekiah's Illness

See comments on 2 Kings 20.

38:9-20
Hezekiah's Prayer

38:9. Hezekiah's letter. A thanksgiving psalm such as this pertaining to a situation that threatened the life of the king would typically be inscribed on a stone stele. An example of this is found in the inscription of Sin-Iddinam, who was king over the town of Larsa in the nineteenth century B.C. In a letter to the god Nin-Isina (known as a healer) the king presents his piety, benevolence and effectiveness as reasons why the god should extend healing mercy, which is granted.

38:11. seeing the Lord. Hezekiah does not view "seeing the Lord" as an afterlife experience. Seeing the Lord involved worshiping in the temple and enjoying the Lord's favor. Verses 18-19 continue to make it clear that the king anticipated no positive afterlife experience. See comment on 14:9 for more information about Israelite beliefs concerning afterlife.

38:12. metaphors. The shepherd moved frequently from place to place and therefore could break camp quickly. The weaver working on a horizontal loom had the threads and material stretched on bars between stakes. When it had to be moved, the bars could simply be pulled off the stakes and rolled up (see comment on Judg 16:13-14). When the weaver finished a piece of cloth, the threads connecting the material to the loom had to be cut. The weaving of Hezekiah's life had been completed, and he was now to be cut loose from the land of the living. Life or history as a fabric being woven is known from Greek mythology but has not been identified in ancient Near Eastern literature.

38:20. play my songs. The king's involvement in psalm composition is particularly well known in connection with David but neither began nor ended with him. As early as the end of the third millennium, Shulgi king of Ur was famous for his hymns offering prayers for the health and welfare of the king. As late as the Roman period, Nero was a patron of the arts and considered himself a first-rate composer. The ideal king was a wise king, and music was one of the realms of wisdom.

40:1-31
Comfort in God's Sovereignty and Transcendence

40:3-4. building roads in the ancient Near East. The roads of the ancient Near East were for the most part unpaved (except for a few roads in the Late Assyrian Period). Although unpaved, those intended for wheeled transport (called "wagon roads" in the Nuzi texts) had to be staked out, leveled and consistently maintained. However, very few texts describe the construction and maintenance of these roads. Roads for heavy transport were somewhat rare and were primarily along the trade routes. Thus, a vassal king complained to the king of Mari that he had to arrive at the Syrian capital by a roundabout route along a major highway. Assyrian kings rarely boasted of their road constructions as it appeared to be the duty of the local populations. In a treaty text Esarhaddon commands that when his son succeeds him the vassal must submit to him and "smooth his way in every respect."

40:3-9. voice in the wilderness, bringer of tidings. Messengers were well known in the ancient Near Eastern world. They played an essential role as the bearers of political and civic news to the inhabitants of a city. Virtually every town had a "crier" who announced important news to the inhabitants. Foreign invaders often sent a herald to a town to discuss terms with those remaining in the city. An example similar to the Rabshakeh's visit to Jerusalem is when the Assyrians sent a herald to Babylon to discuss terms during a seventh-century attack in southern Mesopotamia.

40:6-7. human mortality. The awareness of fleeting human mortality is not exclusive to ancient Israel. According to the Mesopotamian Epic of Gilgamesh, the gods decreed mortality for humans, while immortality was left only to the gods themselves. Nonetheless, the Sumerian king Gilgamesh went on many adventures to gain immortality. He first attempted to gain a type of immortality through procreation, by making a name for himself through the vanquishing of nonhuman foes, and then by searching for Utnapishtim, the hero of the flood, who had been granted immortality by the gods. Though Gilgamesh was successful in finding the flood hero and even located the "plant of life," he unselfishly wanted to bring the plant back home with him to his city (Uruk), so that all of the citizens could partake of the plant. Alas, it was stolen by a snake, and Gilgamesh returned home empty-handed. However, the reader was reminded that Gilgamesh had built the walls of Uruk, which still stood, and thus had gained a form of immortality. Thus the epic was in part an explanation for something that every Mesopotamian person knew: life was short and in death one was confined to a dreary existence in the netherworld.

40:8. what stands forever in ancient Near East. The concept of "forever" in the ancient

Near East connotated continuous and permanent time rather than endless time. Mesopotamian kings hoped that their names would be established "forever." Kings gave property to individuals and their families "forever" (i.e., in perpetuity). According to the Epic of Gilgamesh, only the gods' days were "forever" (continuous), while human days were "numbered." The concept of a word standing forever is paralleled in the fixing of destinies. In the Gilgamesh Epic Enkidu uses a curse to "fix the destiny" of Shamhat forever. Assyrian inscriptions also refer to gods whose orders cannot be changed and whose words are valid forever. In *Enuma Elish* the rebel leader Kingu and Marduk each have their destiny fixed so that their command will not be changed and their word will be eternal.

40:10. reward on return of king from battle. The terms for reward and payment were probably technical words for tribute and booty brought home by victorious warriors and kings from battle. The Assyrian kings made specific reference to the large booty received from conquered peoples. For instance, Sennacherib constructed a Lachish Room in his palace at Nineveh to house all of the booty collected from the destruction of this Judahite fortress city in 701 B.C. The return home from successful battle was an opportunity for the distribution of rewards to those who were favorites of the king.

40:11. king as shepherd. The ideology of the king as a shepherd to his people is found with Lugalzagessi of Sumer as early as c. 2450 B.C. The contemporary king Urukagina of Lagash claimed that the god Ningirsu owned his state and that the king had been chosen as a "shepherd" to administer the city on behalf of the gods and the people. For the most part this ideology continued in the ancient Near East into the period of the Israelite monarchy.

40:12. ordering of cosmos. It was the job of the chief deity to bring order to the cosmos. In *Enuma Elish* (the Babylonian creation epic) the deity Marduk, after having defeated the goddess Tiamat, "crossed the heavens and surveyed the regions; he squared Apsu's quarter, the abode of Nudimmud, and measured the dimensions of Apsu." He continued to organize the constellations, the divine astral images and other heavenly bodies.

40:13-14. council of the gods in the ancient Near East. In the ancient Near East the major decisions were all made in the divine council. There the gods would consult with one another and share their information and opinions. In the Babylonian creation epic Apsu and Tiamat, the gods from whom spawned all living creatures, had as their trusted advisor Mummu, who often rebuked them. When the high council of gods assembled to determine how to attack Tiamat, they drank themselves into a stupor and subsequently chose Marduk as their king, accepting his harsh demands of absolute rule. Isaiah insists that Yahweh has no advisors nor does he work within an assembly of gods (though a divine council of sorts was believed to be operative; see comments on Ex 20:3 and 2 Chron 18:18).

40:15. dust on the scales. The dust of the earth was used to express abasement, smallness and insignificance in the Old Testament. In this passage the dust of the nations makes no significant difference in the scales. The Babylonians took no notice of a little dust on the scales when meat or fruit were being weighed.

40:16. wood and wildlife of Lebanon. The Israelites considered that the land with the greatest forests and most varied animal life was Lebanon. In addition to supplying lumber for the temple of Solomon, the cedars of Lebanon provided sacred barges for Egypt and ships for Tyre. Moreover, the Assyrians exacted a tribute of timber from Lebanon for temple building.

40:19. manufacture of idols. Images in the ancient Near East were either cast or carved. Wooden idols were manufactured by a sculptor who stretched a line over the wood to measure the length and width of the image. He then drew an outline of the idol with his stylus, chiseled out the rough spots and put all of the body parts in the right proportion. Here, however, the reference is clearly to cast images. These would have been anywhere from four to ten inches high. The mold would be created by coating wax figurines with clay, then melting out the wax and baking the clay. The bronze would then be poured into the mold through a spout on the bottom of the feet, which would later serve as a peg to attach the idol to a wooden base. The cast would then be overlaid with gold or silver foil using a small hammer to affix it to the edges provided for that purpose. Grooves were also designed on the cast so that gold or silver wires (NIV: "chains") could be squeezed into them. Then a solid wood was chosen for a base. Recent suggestions have identified the wood as sissoo, a wood similar to teak, native to India. Literally thousands of idols throughout the Near East have been uncovered by archaeologists.

40:22. circle of the earth. The picture of the universe described here is the common cosmological view of the ancient Near East. The sky was a dome that arched over the disk of the earth, which sat on top of a primeval ocean. Under the ocean was the netherworld,

virtually a mirror image of the space above the earth. Thus, the entire universe was an enormous sphere, cut in the center by the earth. Nevertheless, here it is the earth itself that is described as circular. In Babylonian literature Shamash is praised as the one who suspends from the heavens the circle of the lands. Likewise, in a prayer to Shamash and Adad Adad causes it to rain on the circle of the earth. The circle simply reflects the curvature of the horizon (thus, disk-shaped) rather than a sphere (for which Hebrew uses another word). In the ancient world the earth was consistently regarded as being circular.

40:26. creator gods. There are many creation traditions throughout the ancient Near East. Not many of them, however, speak of the creation of the heavens or the stars. In the prologue to a Sumerian astrological treatise the three great gods An, Enlil and Enki, are credited with setting up the heavens and the astral gods and decreeing their courses. Marduk in the Babylonian creation epic is given the power of creation by the assembly of the gods, and he tests it by destroying and recreating a constellation. After defeating Tiamat, he sets up the positions of the great gods and establishes the constellations.

40:26. names of the starry host. In the Babylonian creation epic Marduk constructed stations for the gods in the heavens and fixed their astral likenesses (i.e., heavenly bodies) as images for them. Thus, although he did not actually name the stars, he appointed a deity for a respective star.

40:27-28. gods being unaware or tired. In the ancient world the gods were viewed as having human weaknesses and often were inattentive or simply unaware of events that were taking place. One result of this was that the pantheon of gods were constantly outwitting or tricking each other. For example, when Enlil brought on the flood to destroy humankind, Enki outwitted him by saving a remnant of humans. However, Enki may have been tricked when he advised the human Adapa to reject the "bread of death" while in the presence of Anu, the high god. Anu subsequently gave Adapa the "bread of life," which was apparently unexpected by Enki. The gods were not indefatigable. They were in constant need of food, drink and shelter. In fact, humans were created to do the hard labor the gods preferred not to do.

41:1-29

God's Help for His Servant Israel

41:1. islands. The islands or coastlands are a reference to the far-off reaches of the Mediterranean. The word describes any place that was reached by sea travel.

41:7. smith's craft. See comment on 40:19. In this verse the craftsman is the one who prepares the mold and creates the cast figurine. The goldsmith attaches the plating and inlay. Then the hammer is used to planish (smooth out) and burnish (shine) the overlay. The last step is difficult to translate because it is full of technical terms, but it appears to refer to the fitting of the tenon (peg) into the hole in the wooden base.

41:11-12. similarity to ancient Near Eastern prophetic oracles. Prophetic oracles were not unique to Israel. They were a common theme in certain periods in Mesopotamia. The largest corpus of prophetic oracles is found at the city of Mari on the Middle Euphrates (c. 1800 B.C.). For the most part these oracles are on a mundane plain, placing divine demands (usually of a very material nature) before the king and his advisors. They are also often concerned with the well-being of the king. Closer to the time of Isaiah, the Assyrian kings Esarhaddon and Ashurbanipal received oracles concerning the king's responsibility to shepherd his people and to act justly. Like the verses here in Isaiah, they often promise victory over enemies. In one prophecy to Esarhaddon, Ishtar states that his enemies will roll before his feet "like ripe apples."

41:15. threshing sledge. The threshing sledge was a heavy wooden sledge with stone or iron teeth. It was used to separate the grain from the chaff before the winnowing process.

41:16. winnowing. The process of winnowing was usually carried out on hilltops, where the wind carried away the chaff and allowed the grain to fall to the ground. The grain was tossed into the air with wooden shovels or fans. There are numerous depictions of winnowing on funerary wall reliefs from Egypt.

41:19. reforestation. The reforestation of depleted areas was done only on a minor scale in the ancient world. The Assyrian kings planted many "gardens" in their chief cities, including hundreds of trees, but this cannot be considered full-fledged reforestation.

41:25. parallel between north and rising sun. There is no contradiction here, as both statements here concern Cyrus of Persia, who was from the east but descended on "the rulers" (Babylon) from the north, conquering Armenia and northern Mesopotamia first. The same Cyrus is said to have come from the east (41:2).

42:1-25

The Servant of the Lord Who Will Bring Judgment

42:5. creator of heavens, earth and people. The creator gods of the ancient Near East were more limited in their range of creation. Often the cosmic elements are generated by procreation of the gods, though a creator deity may have oversight in some versions. Especially in Mesopotamian traditions, people are created by a separate deity. Egyptian traditions have more of a tendency to consolidate creative activity in one deity.

42:9. proclaiming past and future. The gods of the ancient Near East were not necessarily able to predict the future. The future was in the hands of Fate, an impersonal force that controlled the destiny of things. Enki, the god of wisdom, wore a sorcerer's hat, showing that he attempted to control and predict fate, much like a human sorcerer. Fate was written on tablets, and those who controlled the tablets controlled the destiny of the universe. If they were in the wrong hands, there was chaos in the world. In one myth a bird deity (Anzu) stole the tablets of fate, which caused quite a stir within the divine community until he was killed. At any rate it was not in the god's nature to predict the future, but rather it was a concept they desired to control.

42:11. Kedar and Sela. Kedar was a nomadic Arab tribe living in northern Arabia between Edom and Babylonia, while Sela was an Edomite capital, possibly located at the later site of Petra. They both represent remote areas of the desert and mountains who are invited to worship Yahweh.

42:13. divine warrior. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. This is not to be viewed as "holy war" because in the ancient Near East there was no other kind of war. In most situations prayers would be made and omens asked to assure the god's presence. Standards or statues of the deity were usually carried to symbolize their presence. Assyrian kings of the ninth and eighth centuries regularly refer to the divine standard that goes before them. The Assyrians believed that the gods empowered the weapons of the king and fought before him or at his side.

42:22. parallel between pits and prisons. When prisons were far off or not available, pits were often used to hold prisoners for a temporary period of time. In fact, prisons were primarily for detention of individuals awaiting trial or for political reasons, both in Israel and Babylonia.

43:1-28

God's Mercy on Israel

43:3. Egypt, Cush, Seba. The Persians successfully invaded Egypt and gained control of Cush (Nubia) during the reign of Cyrus's successor, Cambyses. Seba's location is disputed.

43:14. Babylonians as fugitives in ships. This passage is describing the defeat and capture of Babylon (i.e., Chaldeans) by Cyrus. Though not found in other sources, apparently the Chaldeans unsuccessfully attempted to escape the conquest by traveling in their own ships by sailing on the Euphrates to the Persian Gulf.

43:15. deity as king. Many of the polities in the ancient Near East considered the god as the true king of the land; the earthly ruler was merely a viceroy to the god. For example, the Assyrian kings were regents for the god Ashur. Marduk was king at Babylon, as was Baal in many Canaanite states. Even in ancient Sumer, Enlil was king of the gods. In fact, kingship itself was described in Sumerian as "Enlilship" (Enlilutu).

43:24. calamus. Calamus (botanically known as *acorus calamus)* was used in the manufacture of incense. It is a strongly aromatic cane that grew in the swamps of Syria and was imported from India to the west.

43:24. fat. The fat parts of the animal were also to be included in the sacrifice. Neither fat nor blood was to be eaten. Blood was drained and then sprinkled on the altar. The fat was always burned on the altar as part of the essentials of sacrifice. For more information see comment on Leviticus 3:4.

44:1-5

Servant Israel

44:2. Jeshurun. Jeshurun was an endearing name for Israel (see Deut 32:15; 33:5, 26). The meaning of the name is somewhat obscure, but some think it is derived from a Hebrew root meaning "upright."

44:5. writing on hand. The writing on the hand probably refers to the mark of a master on the hand of a slave (see 49:16). Slave markings were common throughout the Near East. For example, in many periods in Mesopotamia the slave was required to be "marked" by shaving half of the hair on his head. The marking on the hand by tattoo or brand also signifies ownership. Generally it

was the owner's name that was incised on the right hand. Hundreds of jar handles have been found in Israel from the Iron Age that are inscribed *l'mlk,* "belonging to the king."

44:6-20

Worthless Idols

44:10-14. blacksmith and carpenter in manufacture of images. See the notes on Isaiah 40:19 and 41:7. In the eighth-century copies of the Epic of Erra and Ishum, Marduk speaks of the manufacture of his image. It starts with the wood of a sacred tree with its top brushing heaven and its roots in the netherworld. The roles of the skilled carpenter and the metalworker using millstones are featured, and the craftsmen are praised for their skills.

44:17-18. how images are "brought to life." The ancients did not believe that the idol was the deity itself but a representation of the deity. However, they did believe that the god's spirit came to inhabit the image, and thus they prayed to the image as if it were the god itself. The gods of ancient Egypt were consecrated with a ritual called the Opening of the Mouth. Life was symbolically imparted to them in much the same way that the Opening of the Mouth gave life to a mummy. There was an Opening of the Mouth ritual in Mesopotamia as well. This was a rite that was performed to purify and introduce into the temple the divine image. The same ritual was repeated when the image came into contact with impurity or impure individuals.

44:21-28

Redemption of Israel

44:24. alone created. The fact that the Bible portrays Yahweh as having no pantheon means that all divine activity is carried out by him. This is in contrast to many of the traditions of the ancient Near East, where various deities were involved with different aspects of creation. Another common belief in the ancient Near Eastern creation traditions is that cosmic elements came into being through the birth of the gods associated with those elements, rather than by a creative act of a deity. This concept of creation through procreation maintains that cosmogony (the origins of the cosmos) is related to theogony (the origins of the gods). Such a concept is rejected in this text. Yahweh has no consort, and therefore neither he nor the cosmos is the result of procreation, nor does he carry out his creative activity by means of procreation. (There have been some inscriptions found in Palestine that imply that some Israelites believed that Yahweh had Asherah, a Canaanite goddess, as his consort. These texts are in direct contradiction to the writings of the Old Testament.)

44:25. diviners made fools. This verse connects to the previous one in that the omens consulted by the Assyrian and Babylonian diviners were drawn from heaven and earth. In fact, major prognostications had to be confirmed by omens from both realms. Yahweh's creation of those realms indicates his control of any signs being given. Prophets were supposed to be giving messages from deity, and diviners were presumably using their arts to determine what the gods were up to by reading the omens in heaven and earth. These professionals therefore offered a constant flow of theoretically divine insight concerning the course of political events. When Yahweh's plans brought about completely unanticipated events, those who were respected as wise men were shown to be farces.

44:28. Cyrus's background. Cyrus was born about 590 B.C. in the modern Iranian province of Fars. Virtually nothing is known of him until he came to the throne of Persia in 559 B.C., except for a few legends concerning his childhood written down by Herodotus, the Greek historian.

44:28. foundation of temple. All ancient Near Eastern temples were built with foundations. The building of temples in Mesopotamia was accompanied by certain ceremonies that are not fully understood. A series of items was deposited in the foundations of the buildings. This is known from building inscriptions and ritual texts, as well as actual foundation deposits found by archaeologists. Deposits included peg- or nail-shaped objects, animal sacrifices, cones, cylinders and tablets. One of the primary purposes of the foundation deposit was to memorialize the building of the edifice (for more information see comments on Ezra 3:3 and 3:10).

45:1-25

God's Restoration of Israel

45:1. Cyrus's accomplishments. Cyrus of Persia was one of the greatest conquerors in world history. He inherited the throne of Persia from his father, Cambyses I, in 559. In 556 the Babylonian king Nabonidus, motivated by a dream, abandoned the treaty that his country had maintained with the Medes for over half a century and made a treaty with Cyrus. This gave Cyrus the freedom to move against the Medes (ruled by his grandfather Astyges)

whom he conquered in 550. The new Medo-Persian Empire was thus formed, with control over the entirety of Iran. By 546 he defeated the Anatolian kingdom of Lydia and Ionia. For the next five years he consolidated his control over the tribes in northeastern Iran. All of this success paved the way for his crowning achievement, the conquest of Babylon in 539 B.C. The whole of the Near East (excluding Egypt) was under the control of the Persians when Cyrus was killed in battle in 530.

45:2. gates of bronze, bars of iron. The Greek historian Herodotus described Babylon as having "one hundred gates in the circuit of the wall, all of bronze with bronze uprights and lintels." Large bronze gates have been excavated at the Assyrian period site of Balawat, giving a glimpse of what the Babylonian walls may have been like. Gates were locked by means of a bar slid across the gateway, and iron would obviously be the most difficult to break (see comment on Deut 33:25).

45:4. religion of Cyrus. Cyrus most certainly was not a worshiper of Yahweh. In his inscriptions his polytheism is evident. In one case he requests that all the gods pray for him to Nabu and to Marduk his lord, whom he claims to worship. Other indications suggest that Cyrus was a Zoroastrian (a religion based on the teachings of Zarathustra, an Iranian holy man who lived sometime in the early first millennium B.C.). Zoroastrianism flourished during the Achaemenid empire in Iran (for more information see comment on Ezra 1:2). Though there is no concrete evidence for Zoroastrianism until the reigns of Darius I and his successor Xerxes I, the names of Cyrus's children show Zoroastrian influence, and he is known to have set up a fire stand (important in Zoroastrian worship) for the king's daily ritual.

45:13. Cyrus's policy of return and rebuilding. Judah was not the only land that benefited from Cyrus's policy of returning exiles to their place of origin and rebuilding the major cities of a ruined area. For example, he claimed to have restored Marduk to his rightful position as the god of Babylon. He claimed to have restored many other people groups to their homelands (including displaced Babylonians) and restored their temples and other public buildings (for more information see comment on Ezra 1:2-4). Many Babylonian structures were rebuilt during Cyrus's reign.

45:14. Egypt, Cush, Sabeans. A major canal was built in the Red Sea by the Persians during the reign of Darius I that linked the Nile cultures of Egypt and Cush with Arabia (Sabeans). This facilitated the flow of shipping between the two continents. Also see the note on 43:3.

46:1-13
Yahweh's Superiority to the Gods of Babylon

46:1. Bel. Bel was not a proper name in Babylonia but was the Akkadian equivalent of "lord" (Hebrew, *Ba'al).* The Sumerian deity Enlil of Nippur was called "lord," a title also given to Marduk the god of Babylon in later periods. Bel in this context is most certainly a name for Marduk. Marduk was the chief god of Babylon, its patron deity and the head of the pantheon. The Babylonian creation epic, *Enuma Elish,* is actually a myth recounting his elevation to that position, believed to have taken place at the end of the second millennium. He was considered to be the son of one of the members of the most august ancient triad, Enki, the patron of Eridu. Though we often see Baal in the Bible as the principal rival of Yahweh, no deity in the first millennium had the political clout that was connected to Marduk. His principal shrine was the temple Esagila ("temple with the exalted head") in Babylon, which was connected to the famous ziggurat, Etemenanki ("foundation of heaven and earth").

46:1. Nebo. Nebo (Akkadian, Nabu) was the god of Borsippa, a city near Babylon. He was the god of wisdom and the patron deity of scribes and the son of Marduk. His prominence in the Neo-Babylonian period is demonstrated by the fact that most of the kings' names make statements about Nabu (e.g., Nebuchadnezzar, Nabonidus). He was already prominent in Isaiah's time, as is demonstrated by the fact that Sargon made his shrine the most prominent one in his new capital, the citadel called Dur-Sharruken (=Khorsabad). An eighth-century inscription urges worshipers to trust in Nabu and not in any other god.

46:1-2. idols taken captive. Babylonian festivals were frequently occasions for the idols of the gods to be brought out in grand processions. But this passage does not refer to a victory parade. There are many examples of images of Mesopotamian deities taken captive during battle. Marduk the god of Babylon was taken captive and removed from Babylon on a number of occasions. The Hittites in 1595 B.C., Tukulti-Ninurta I of Assyria (r. 1244-1208 B.C.) and Sennacherib (r. 705-681 B.C.) all plundered Babylon and took the Marduk statue, which was eventually returned in all three cases.

46:6. use of silver and gold in image manu-

facture. See the notes on 40:19 and 41:7.

46:7. treatment and use of idols. The images of deities in Mesopotamia were fed, dressed and even washed daily. Food sacrifices were brought to the deity on a daily basis (and no doubt eaten by the temple technicians). Other attendants were required to dress and undress the statue, and still others were employed to wash the statue and transport it in times of celebration.

46:10. deity with purpose. The gods of the ancient Near East were not capable of controlling the destiny of the world without help. In Mesopotamia there existed the "tablets of destiny," texts which contained the destinies of all things (including the gods) in the universe. Whoever controlled these tablets controlled fate. Occasionally these tablets came into the "wrong hands," and chaos ensued. Some gods, including Enki, wore sorcerer's hats, showing that they had the ability to control and predict the future, but only by way of spells and incantations. Conversely, Yahweh controlled all things without resort to superficial means of tablets or spells (see comment on 14:26-27).

47:1-15

Babylon's Disaster

47:1. virgin daughter of Babylon. The biblical writers, like their cuneiform counterparts, often depicted cities as feminine in nature. The term "virgin daughter" was addressed to a community that faced disaster. In the ancient Near East no one was considered a more helpless victim of war than the unmarried girl. Defeat often meant the loss of an intended husband as well as the loss of virginity at the hands of the marauding victors. The *Lamentation over the Destruction of Ur,* an early-second-millennium B.C. Sumerian literary text, describes the fall of the city Ur in such a manner.

47:2. grinding as lowly occupation. Grinding grain at the flour mill was one of the most menial of tasks, often done by slave girls in both Egypt and Mesopotamia (see comments on Ex 11:4 and Judg 16:21).

47:2. veil. In most ancient Near Eastern cultures a married woman was partially veiled in public, and this was the mark of her marital status. This is found in the Middle Assyrian Laws. Slaves or concubines could not afford veiling, and in any case they did not have the legal right to be veiled.

47:2. wading through streams. Bridges were virtually nonexistent in the ancient world, so streams and rivers were waded across at fords. A slave had to cross a stream on foot, in contrast to a rich person who was carried over in a carriage or in a chair carried by servants.

47:5. daughter of the Babylonians. This terminology is used in Akkadian literature to refer to female inhabitants of a region, city or people. Here it is a reference to the personified city of Babylon, a usage not observed in extant Babylonian literature.

47:8. "I am, and there is none beside me." The use of "I am" would have immediately struck a chord for this Israelite audience (see Ex 3:14). There was no claim too arrogant for these kings to make for themselves. An Assyrian king of the ninth century, Ashurnasirpal, had a list of eleven "I am" titles for himself.

47:9. sorceries and spells. Babylonia was famous in the ancient world for its magic and divinatory practices. Literally thousands of texts have been uncovered, dealing with a multitude of subjects, including incantations that help alleviate the pain of a toothache, help a baby that is stuck in the womb and help a mother who is barren. It appears that the common person hired an incantation priest for even the most mundane problem. The priest then came and recited a spell to exorcise a problematic demon or other divine irritant. How much more did they resort to incantation priests to practice their art for the avoidance of disasters that were either portended or threatened. Incantations were intended to magically bind the supernatural powers that posed a threat.

47:11. ways of avoiding portended calamities. There are thousands of omen texts in which the Babylonians attempted to predict and control future events. The common person hired an omen priest before he or she made any important decision. The priest then recited the proper omen, which told the individual what to expect in the event of a certain action. The omens were related to historical events the way that symptoms are related to the onset of disease. Thus the individual who was fearful of a portended calamity avoided it by not participating in a particular activity that was harmful. For example, there were certain days in which a husband and wife were not to engage in sexual relations, since these days portended disaster (including death). In other instances, the individual would hire an incantation priest to utter a spell or incantation that would neutralize the dreaded event. Best known are the *namburbu* avoidance rituals in which ritual acts were used in conjunction with formalized prayers to the gods. Such procedures could not be sought if there had been no indication of impending danger.

47:13. astrologers and stargazers. A form of

fortunetelling in Mesopotamia that rivaled divination was astrology. In the Late Assyrian Period (c. 900-612 B.C.) reports were regularly made to the king about the appearance of the moon and planets, with comments about what these things foretold. The Babylonians appeared to have invented the twelve signs of the zodiac about 500 B.C., roughly the same time as Cyrus of Persia. For more information see comments on Isaiah 2:6; Deuteronomy 18; Joshua 10:12-13; 2 Kings 23:4.

48:1-22
Announcement of the End of Captivity

48:10. silver refining. Silver in the ancient world was refined by a process in which it was melted in order to rid it of base components. Silversmiths, as well as goldsmiths, used blowpipes to ventilate their furnaces and cast their products with the aid of steatite or clay molds. For more information see comment on 1:22.

48:13. heavens and earth. See comments on 40:12 and 42:5.

48:14. Cyrus's campaign against Babylon. Cyrus began a propaganda campaign against Nabonidus king of Babylon, an action attested in later Babylonian sources. The Persian king advanced against Babylon in 539 B.C. and fought a victorious battle at Opis, about fifty miles north-northeast of Babylon on the Tigris in early October. On the eleventh of October, Sippar (thirty-five miles north of Babylon) fell. On October 13 the Persian army marched into Babylon peacefully, welcomed by the local populace. Cyrus himself entered the city on October 30 and was proclaimed its liberator.

49:1-26
The Servant Brings Deliverance and Restoration

49:1-7. kings with divinely ordained tasks of deliverance. Although kings in the ancient Near East were given responsibilities by the gods, they generally perceived themselves as having been ordained to conquer rather than to deliver. Cyrus of Persia was seen by the priests of Marduk and the city of Babylon as a savior from an oppressive regime. In the prologue to his laws Hammurabi claims himself to be the one who gathers the scattered people of the city of Isin and gives shelter to the people of the city of Malgium.

49:2. mouth as sword imagery. The sword imagery is also used for the prophet's word (see Jer 23:29) and God's word in the New Testament (e.g., Gal 6:17). Since the sword was an offensive weapon, the implication is that the word is in some sense aggressive. One of the Hebrew words for mouth *(peh)* also signified the term edge, as in "edge of the sword." Thus there may be a play on words in this verse.

49:9-10. characteristics of restoration. In Assyrian literature the just reign of a king is characterized by prosperity, diligent worship, rejoicing, freeing prisoners, healing of sickness, anointing with oil, and providing food and clothing for the needy. Similar elements are projected for Yahweh's restoration of his people and become part of the messianic profile.

49:11. building of highways. See the comment on 40:3.

49:12. Aswan (Sinim). Sinim was the city on the First Cataract of the Nile, the ancient boundary of Egypt and Nubia to the south. The site was later known in Greek sources as Elephantine and is the modern city of Aswan.

49:16. engraved on palms. The meaning of this imagery is that Jerusalem will be cut into (or tattooed, although this was forbidden; see Lev 19:28) the flesh of God and thus will be on his mind permanently. See comment on 44:5.

49:18. ornaments of a bride. The Israelite bride sometimes wore embroidered garments, jewels, a special girdle and a veil. In this passage the bride wears an ornamental waistband. There are scores of texts from Mesopotamia that describe the exchange of gifts between two families for the purpose of marriage, but little is said of the attire of the bride or of the ceremony itself.

49:26. imagery. "Eat on their own flesh" and "be drunk on their own blood" are most likely metaphors meaning they are reduced to the last extremity (see comment on 9:20).

50:1-11
Sin and Punishment

50:1. children sold to creditors. When one took out a loan or mortgage in the ancient Near East, the security took the form of a pledge of a personal item. Where there was no security to forfeit, debtors or their family members could be sold into slavery. For example, the Middle Assyrian Laws regulate the pledge of children to pay off debts. Of course, the extended family took great pains to make sure that family members stayed within the family structure. See comment on Exodus 21:2-6.

51:1-23
God's Deliverance of His People

51:6. end of heavens and earth. This is not an

apocalyptic verse concerning the end of the earth. The writer intends on emphasizing the permanence of God's salvation, which is even more permanent than the creation itself. In the ancient Near East the universe (or rather, matter) was an uncreated entity. In the Babylonian creation epic matter had apparently always existed and was later formed by Marduk into the heavens, the earth and the netherworld. There is no discussion concerning the end of the material world.

51:9. Rahab. Although not mentioned in any known text outside the Bible, Rahab is comparable to the chaos monster Leviathan, which also takes the form of a twisting serpent (Job 26:12-13; see the comment on 27:1). Rahab is also used synonymously for Egypt. For instance, in Psalm 87:4 the major nations are listed as subject to the power of Yahweh. Rahab, Egypt's metaphorical name, is paired here with Babylon in terms of importance. See comment on 30:7.

51:14. prisoners set free from dungeons. While most of those who had been deported to Babylon would not have been imprisoned, there would have been some political prisoners. Pits were used as prisons in most of the ancient Near East. The modern idea of a prison as a place where prisoners are to be reformed into good citizens would have been foreign to the ancient world. Those in debt, criminals awaiting trial and political prisoners were held in confinement of one sort or another.

51:18. imagery of sons caring for elderly parents. In Mesopotamia as well as Israel the eldest son received a larger inheritance than the rest of the children for the purpose of caring for the parents in their old age. The imagery here shows Jerusalem as a mother without any children to take care of her in her old age.

51:20. head of the street. Some cities in the ancient Near East show evidence of intense city planning. The norm, however, especially in the smaller towns, was a very haphazard approach in which there were few real streets but only passageways or open areas on which no homes were built. The "head of the street" refers to a corner or intersection. Most cities and towns featured blocks of housing tracts filled with random alleyways and dead ends with no intersecting routes. The intersections would occur when one emerged into an open square.

51:23. walking over captives. Egyptian kings in the early third millennium B.C. are depicted as trampling over the corpses of defeated enemies. For instance, Narmer, possibly the one who unified Egypt, is seen with a mace smashing enemies and stepping over them. Likewise, the Sumerian kings from Lagash are depicted as marching over the dead bodies of their enemies. The tradition of trampling over one's enemies continued on into the first millennium in Assyria and Babylonia.

51:1-12
Captive Zion Set Free

52:11. vessels of the Lord. The vessels of the Lord were temple vessels that were transported to Babylon during the conquests of Jerusalem (for specific vessels see comments on 2 Chron 4). They were returned to Jerusalem during the Persian period. In the palace of Sennacherib at Nineveh there were numerous artifacts from the Judean fortress city of Lachish.

52:13—53:12
The Suffering Servant

52:14. battered king. During the Babylonian Akitu festival (at the New Year), the king was required to "take the hand of Bel" (Marduk) and proclaim his innocence as a righteous monarch. On the fifth day of the eleven-day festival the king was taken before the high priest, who stripped the monarch of his royal insignias (mace, loop and scepter) and struck him on the cheeks. The priest then dragged the king by his ears and forced him to bow to the ground before Marduk, again proclaiming his innocence.

53:4-10. substitutionary rites in the ancient Near East. The rite of the substitute king was used in Assyria when evil omens (especially an eclipse) suggested the life of the king was in danger. It is attested primarily in the reign of Esarhaddon in the early seventh century but had been practiced for over a thousand years. It worked on the principle that evil could be transferred from one individual to another. When the dangerous period was to occur, the king was replaced by a substitute on whom the evil fate could fall. In some cases this substitute was someone considered of no significance and was perhaps even mentally or physically impaired. He was then exalted to high status and office for as long as one hundred days, though often a shorter period. During this time the real king was kept in relative isolation (a virtual exile) and participated in numerous purification rituals. Meanwhile the substitute was going through the motions of being king and sitting on the throne. He was portrayed as the shepherd (a common title for Mesopotamian kings), but

one could understand that he was simply a sheep about to be slaughtered. At the end of the period the substitute was put to death so that the evident design of the gods would be accomplished. The omens had suggested that it was the will of the gods to crush him. As one text puts it, he died to save the king and the crown prince. He was given a rich state funeral and an offering was made and exorcism rituals performed (including washings and sprinklings) so that the omens would be cancelled and the days of the king could be prolonged.

53.4. healing of diseases. The Ugaritic myth of the struggle of Baal and Mot contains the story of the Rapiuma (saviors or healers), led by Baal, who had risen from the dead. These venerated ancestors were believed to intervene on behalf of the living. They healed mortals' diseases, helped in matters of fertility and protected them against the evils of society. The Rapiuma, however, did not take the infirmities of the mortals on themselves.

53:7. sheep silent before shearers. Ancient Near Eastern texts often describe the shearing of sheep, who underwent their lot in silence. Shearing was done annually in the spring, using shears, which were invented about 1000 B.C. An individual could shear twenty to thirty sheep a day.

53:10. guilt offering. The reparation offering was traditionally termed the guilt offering. Though the term that is used is often appropriately translated as guilt, the term serves a more technical function within the sacrificial system. This offering is designed to address a particular category of offense—a breach of faith or an act of sacrilege. Breach of faith would appropriately describe the violation of a covenant, while sacrilege refers generally to desecration of sacred areas or objects. See comment on Leviticus 5:14-16. In this context, Israel's violation of the covenant would be the most likely cause for a guilt offering to be required.

54:1-17
The End of God's Anger

54:2. enlarging tents. Zion is seen here with the patriarchal image of the tent. As a mother who has been blessed with many children, Zion will need a spacious tent. The tents were made of hand-woven, three-feet-wide strips of dark goats' hair. When more family members needed to be accommodated, additional strips could be sown on. The cords that stretched from center poles to corner poles would have to be longer and the stakes made of stronger, thicker wood in order to hold the weight.

54:4. shame of youth, reproach of widowhood. The metaphor here is clarified in verse 6. A woman who was unable to bear children in the ancient world was believed to be under the punishment of deity, incapable of serving the function for which she was married and therefore liable to be rejected and abandoned by her husband. The word translated "youth" here refers to one who has not borne a child. Her shame is her barrenness. She is a widow because her husband has abandoned her (as most marriage contracts allowed) and therefore is the object of reproach with little hope of remarrying. She is thus stripped of short-term support by a husband and the support in her old age that could be expected from children.

54:11. stones of turquoise, foundations of sapphires. An alternate translation of the word rendered "turquoise" is antimony, which was used for a mortar, especially for mosaics. The word here translated "sapphire" is generally considered to be lapis lazuli, a beautiful blue stone that was highly valued in the ancient world. The procession way to the famous Ishtar gate in Babylon was lined with intricate patterns with the background made by blue glazed bricks that gave the appearance of lapis. In a work referred to as the Uruk Prophecy, it is said that a future king will build the gates of Uruk of lapis lazuli.

54:12. gate description. The description of the approach in verse 11 leads to discussion of the gateway. The word translated "battlements" is actually "suns" and most likely refers to the round, burnished shields used as crenellations along the top of the towers that flanked the gate. These are visible along the entire wall in Sennacherib's portrayal of the fortifications at Lachish (see also Ps 84:11 for the association of sun and shield). NIV's "ruby" is a guess here, and others support jasper. The word is used only here and in Ezekiel 27:16, where it is listed among exports from Aram. Red burnished copper was popular for gates and would be plausible for these sunlike shields. The stonework of the gate area features some sort of sparkling stone. The word translated "walls" is a technical term for low walls that lined the inside passage of the gateway (see Ezek 40:12). They are described here as being made of "desirable stone"—high-quality stonework, perhaps with mosaics.

54:17. invincibility. Since the Assyrian attack in 701 B.C. there had been a tradition in Judah that Jerusalem was invincible from attacks from invaders. This idea was trampled by the Babylonian conquest and destruction of the

city (605-586 B.C.). Now Isaiah states that in the future the city will be absolutely invincible.

55:1-13

Call to Seek the Lord

55:8-9. distinctions drawn between the ways of gods and mortals. In the ancient Near East there was considerable continuity between the divine and human realms. There was a hierarchy of divinity. For example, the Mesopotamian pantheon had a council of seven gods at the top of the hierarchy, followed by numerous other gods, descending to personal gods, angels, demons, heroes (humans who had attained a semidivine status) and lastly humans. Even the highest gods resembled humans in their character and behavior, and were subject to many of the same laws and limitations as their human counterparts. They were not elevated above the natural world nor transcendent in the way that Yahweh was understood to be. Instead they were part of the natural order. Nevertheless, statements such as those made here are also made in Mesopotamian literature. Wisdom literature considers the ways of the gods unknowable. In *Enuma Elish* the proclamation of Marduk's fifty names serves as a delineation of his ways.

55:11. word will not return empty. The claim of sovereignty represented in orders and commands that cannot be countermanded and are effective without exception is made for the gods of the ancient Near East as well. As early as the Sumerian myth *Lugal-e,* Ninurta is praised as one whose orders are not changed and whose decisions are truthfully carried out.

55:13. reforestation. See comment on 41:19.

56:1—57:21

Justice and Judgment

56:2. keeping Sabbath. The Sabbath observation has no known parallel in any of the cultures of the ancient Near East and is distinctive in that it is independent of any of the patterns or rhythms of nature. A similar term was used in Babylonian texts for a full moon day when the king officiated at rites of reconciliation with deity, but it was not a work-free day and had little in common with the Israelite Sabbath. There were particular days of the month in Mesopotamia that were considered unlucky and were often seven days apart (that is, the seventh day of the month, the fourteenth day of the month, etc.). Israel's Sabbath was not celebrated on certain days of the month; it was simply observed every seventh day. During the Babylonian captivity, the Sabbath became the most conspicuous marker showing membership in the community of Yahweh worshipers. It thus became one of the central themes in postexilic Judaism (including during the time of Jesus).

56:4-5. eunuchs in temple service. This Hebrew term can at times refer simply to a court official, but it later came to refer specifically to eunuchs. Eunuchs were highly valued in government service in many varied roles during the Neo-Assyrian and Neo-Babylonian periods. The great demand for eunuchs led to young boys being included in the tribute paid to Persia so that they could be castrated and trained for government service. They had no families to distract them from their service. They were often entrusted with the care and supervision of the royal harem since they posed no threat to the women of the harem and could not engender children by the harem women who might be mistaken for royal heirs. They would be less likely to become involved in conspiracies because they would have no heirs to put on the throne. Assyria, Urartu and Media had all made use of eunuchs in government offices. Eunuchs (or, better, castrated ones) had originally been forbidden in the Israelite community (Deut 23:1). The context in Isaiah 56:5 makes it clear that these officials cannot have children, yet the Lord provides for them.

56:9. beasts as punishment. Wild beasts were a constant source of fear for city dwellers throughout the ancient Near East. Of course, in this passage wild beasts are a metaphor for human "beasts" who plunder and pillage city dwellers. In Assyrian texts and reliefs of this period the kings are seen hunting lions to symbolically rid the city of the scourge of wild beasts. In one case it has been suggested that the killing of eighteen lions represents the eighteen gates of Nineveh and the roads leading out of them.

56:10-11. dogs in Israelite society. Dogs in the ancient Near East lived as scavengers. They often roamed in packs on the outskirts of the city (sometimes in the city) and wherever they found refuse (Ps 59:6, 14). They were often the source of a biting insult (2 Sam 3:8). However, dogs were also often associated with healing and were used in rites of purification and exorcisms, and as offerings in both Mesopotamia and Anatolia. The term *dog* was used for certain cultic functionaries in Israel (Deut 23:19), Phoenicia and Anatolia. Some have thought that these "dogs" were prostitutes. Strangely enough a dog cemetery with over

seven hundred shallow burial pits has been uncovered at Ashkelon in Philistia during the Persian period. There is no evidence of any cultic activity (although dogs were revered by the Persian Zoroastrians).

57:1. death for righteous a reward rather than a punishment. This verse implies that there has been a complete overturning in society, since the righteous perish. A number of Babylonian wisdom texts discuss this theme. For example, the Babylonian Theodicy (a text similar to the biblical book of Job) complains that the just man suffers from all kinds of injustice, while the evil man is free to do his evil activities. The writer also complains that his personal god has done nothing to alleviate the problem. This verse offers the explanation that the righteous are not being *punished* with death but rather are being spared from evil times.

57:2. afterlife of peace and rest. The line is obscure but the sense is that the death of the righteous brings them into a peaceful state. This does not offer a hope of heaven but an escape from turmoil. Even Sheol is to be preferred to the wicked state of affairs on earth.

57:3. sorceress. Sorcery and adultery together point to polytheistic fertility rites. In Mesopotamia sorcery was usually forbidden, however. The Mesopotamians as well as Hittites made a distinction between black (malevolent) magic, performed by a sorcerer/sorceress, and white (benevolent) magic, performed by a legitimate exorcist. Sorcery was punishable by death in the Middle Assyrian Laws. It involved the use of potions, figurines and curses designed to bring death, disease or bad luck to the victim. The Egyptians do not appear to have made a distinction between black and white magic. The few Ugaritic, Aramaic and Phoenician magical texts show that those people appear to have viewed magic and sorcery in a similar way to their Mesopotamian counterparts.

57:5. lust among oaks. Gardens in the ancient Near East were often parks of fruit and shade trees, arboretums serving as outdoor shrines or providing comfortable surroundings for sacred enclosures. Sacred trees played a significant role in the popular religion of the day. These popular beliefs would have viewed stone and tree as potential divine dwellings. In Canaanite religion they are believed to be symbols of fertility (see Deut 12:2; Jer 3:9; Hos 4:13), though there is very little in the archaeological or literary remains of the Canaanites that would clarify the role of sacred trees. It is likely no coincidence that the word for oaks *('elim)* can also mean "gods." The Canaanite fertility goddess was Asherah, and these trees (or wooden poles) were her cult symbol. A cult stand from Taanach pictures a sacred tree flanked by lions, as the goddess Asherah is usually pictured. The fertility of the earth was symbolized by the fertile union of humans, cynically described here by Isaiah as "lust among the oaks."

57:5. child sacrifice. The biblical writers attributed child sacrifice to the Phoenician worshipers of Molech (see comments on Lev 18:21 and 2 Chron 28:3). Archaeological discoveries at Carthage (a Phoenician site in north Africa) give evidence of child sacrifice, as hundreds of urns containing the charred remains of infants have been found. Commemorative stelae describe the role of the children as sacrificial victims, referred to in Punic as *mlk* (i.e., Molech) offerings. Outside of Scripture, however, the evidence in Syro-Palestine for child sacrifice is scant. There is a possible reference from the ninth century B.C. from Tell Halaf and from penalty clauses in Late Assyrian juridical contracts.

57:6. smooth stones of ravines. The ravines or wadis were the place where child sacrifices took place, the most notorious being the Hinnom Valley on the west side of Jerusalem. These wadis were the preferred burial place in Israel and therefore also served as the logical choice for the rituals used in the worship of the dead. If "smooth stones" is the correct translation, the text may refer to the rock-cut tombs that were found in these wadis and were so identified with them that the word for wadi can also take the meaning of tomb or grave. An alternate suggestion is based on the identification of this same root (translated "smooth stones") with a root meaning "to die, perish" in a number of Semitic languages closely related to Hebrew. This would then be a reference to the dead who had been buried in the wadis and had become the objects of worship. The cult of the dead is referred to in the latter part of the verse.

57:6. drink offerings, grain offerings. Because of a well-developed ancestor cult that pervaded much of the ancient Near East (evident, for instance, in the emphasis on the role of the male heir to care for the father's shrine in Ugaritic documents), the dead were considered to have some power to affect the living. It was believed that if libations were poured out on behalf of the dead ancestors, their spirits would then offer protection and help to those still living. In Babylon the disembodied spirit *(utukki)* or the ghost *(eṭemmu)* could become very dangerous if not cared for and often was the object of incantations. Proper care for the dead would begin with proper burial and

would continue with ongoing gifts and honor of the memory and name of the deceased. The firstborn was responsible for maintaining this ancestor worship and therefore inherited the family gods (often images of deceased ancestors). Such care would have been based on a belief, as seen in Saul's consultation of the witch of Endor, that the spirits of the dead could communicate and had information on the future that could be of use to the living. These spirits were consulted through the efforts of priests, mediums and necromancers. This could be a dangerous practice since some spirits were considered demons and could cause great harm. While it is difficult to totally reconstruct Israelite beliefs about deceased ancestors and the afterlife, it seems clear that prior to the exile there existed a cult of the dead or ancestral worship. This is evidenced by archaeological remains: (1) standing stones *(maṣṣebot),* (2) channels cut into tombs for the deposit of food and drink offering for the dead (see Deut 26:14; Ps 106:28) and (3) family tombs (note the importance of the ancestral tomb for Abraham and his descendants at Hebron) and mourning rituals performed at these tombs (see Jer 16:5-7). The local and family ancestral cults were condemned by the prophets and the law.

57:7. bed on a hill. The bed on a hill is a probable reference to the Canaanite high places (cf. Jer 2:20) where cultic fornication was committed. Its double meaning of "a place to lie down" also brings out the image of death and the grave.

57:8. fertility symbols. There is no clear indication as to what these symbols were. They may have been symbols of the household gods (fertility figurines?) or phallic symbols of fertility. This latter is likely because the last line of the verse also refers to male genitalia (NIV: "nakedness"). The Israelites also had a memorial behind their door, consisting of a metal container with a portion of Scripture inside (Deut 6:9; 11:20).

57:8. cultic prostitution. Much of the so-called sacred prostitution in the ancient Near East may have been an occasional prostitution for the payment of a vow (see comment on Deut 23:17-18). The texts that describe cultic prostitution from either Canaanite or Mesopotamian sources are ambiguous at best. One can conclude that prostitution was occasionally organized by the temple estates. The Old Testament has ample evidence of feasts that led to sexual excesses, but this does not mean that cultic prostitution was institutionalized in these regions.

57:9. Molech. The Old Testament describes Molech as a Canaanite deity to whom children were brought for sacrifice. There is literary evidence from the ancient Near East as early as the third millennium B.C. of a god Malik or Milki\u who was worshiped at Ebla and Mari in Syria. He was also worshiped in Assyria and Babylonia, as well as Ugarit (where he was known as *Mlk).* From these texts it appears that Molech was a netherworld deity involved in the cult of dead ancestors. The term Molech is probably related to the Semitic root denoting "king." See the comment on Isaiah 57:6 for the idea that Molech was involved in child sacrifice in Phoenician North Africa (see comment on Lev 18:21).

57:9. olive oil and perfumes. It is not certain what the olive oil and perfumes were used for. The olive oil may have been offerings, while the perfumes were to kindle incense offering. Another suggestion is that they were used to anoint the children that were being offered to Molech.

57:9. ambassadors/descended to Sheol. These ambassadors are those who practice necromancy, the consultation of the dead on behalf of the living. The ambassadors probably went to the shrines where the powers of the netherworld (Sheol) were venerated in order to seek their will by oracular means. Molech was the god of the netherworld.

57:13. collection of idols. In Ugaritic literature the term that occurs here is used to make reference to deceased spirits.

57:14. building highways. See comment on 40:3.

58:1-14
Fasting and Sabbath

58:2. seeking information by oracles. Oracular divination was employed throughout Mesopotamia, Anatolia and Egypt from 2000 B.C. onward to communicate with their deities. Intuitive divination involved oracles, prophecies and dreams. The Mari letters describe the relationship of Dagan to his worshipers, who spoke by way of oracles, dreams, ecstatic possession and oral command. He gave messages to both male and female prophets, as well as commoners. For example, a certain woman named Yanana claimed that Dagan came to her in a dream saying that only Zimri-Lim (the Mariote king) was able to save a kidnapped girl who had been traveling with her.

58:3-7. fasting. Fasting is little attested in the ancient Near East outside the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance

of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10; 102:4). It is not an end in itself, but rather it is the disciplined training in preparation for an important event.

58:9. pointing the finger. In the ancient world pointing the finger was involved in a formal accusation (as in Hammurabi's laws). The omen literature attaches to the gesture the power of a curse. Here it is indicative of malevolent slander.

58:12. rebuilding ancient ruins. Many ancient cities were rebuilt after having been destroyed. For instance, Babylon was plundered by the Assyrians at least three times; by Tukulti-Ninurta I in the thirteenth century B.C., by Sennacherib in 689 B.C. and by Ashurbanipal in 648 B.C. Each time the ruins of Babylon were rebuilt, often making the city more splendid than before.

58:13. significance of Sabbath. According to later rabbinic writings, the Sabbath in the postexilic period took on the idea of laying aside the day to worship God. The Sabbath became one of the primary means of showing loyalty to God and his statutes. In a Babylonian wisdom hymn the worshiper claims that the day of worshiping the god was a pleasure to him and that it was a delight and joy to make music to honor the deity.

58:13. Sabbath in the ancient Near East. The Sabbath observation has no known parallel in any of the cultures of the ancient Near East and is distinctive in that it is independent of any of the patterns or rhythms of nature. That is, it was not celebrated on certain days of the month and was not linked to the cycles of the moon or to any other cycle of nature; it was simply observed every seventh day. Though Mesopotamians did not divide time into seven-day periods, there were particular days of the month that they considered unlucky and that were often seven days apart (that is, the seventh day of the month, the fourteenth day of the month, etc.). In addition a similar term was used in Babylonian texts as a full moon day when the king officiated at rites of reconciliation with deity, but it was not a work-free day and has little in common with the Israelite Sabbath. The biblical legislation does not require rest as much as it stipulates cessation, interrupting the normal activities of one's occupation.

58:14. riding on the heights. Cities were typically built on hills because of their natural defensibility, and armies chose hills as strategic points of control. The metaphor of treading on the heights is therefore one that speaks of victory and security. As Israel rides the heights, its God rides the clouds. The image of a rampant God storming through the heavens in a cloud chariot is a common one (Ps 68:4; 104:3; Jer 4:13). Such descriptions of storm theophany may also be found in the texts that speak of the Ugaritic god Baal. In both the Aqhat epic and in the Baal and Anat cycle of stories, Baal is referred to as the "Rider of the Clouds." Baal's attributes, commanding the storms, unleashing the lightning and rushing to war as a divine warrior, even appear in the Egyptian El Amarna texts.

59:1-21

Yahweh as Redeemer

59:17. warrior's raiment. Yahweh is here again taking the role of the divine warrior and girding himself for battle. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are both divine warriors. When Marduk prepares for battle with Tiamat in *Enuma Elish,* he is equipped mostly with weapons for attack rather than the defensive gear referred to here. But he is said to be clothed with a cloak of awesome armor and crowned with a terrible radiance. Stone sculptures of the gods doing battle sometimes portray them with breastplate and helmet, but often they have only weapons.

60:1-22

Zion's Glory

60:6. camels from Midian and Ephah. Camels were freight carriers for merchants; thus those who had many camels were considered wealthy. Midian was a nomadic Arabian tribe that had had dealings with Israel from Mosaic times. Ephah is mentioned only two other times in Scripture (Gen 25:4; 1 Chron 1:33) and is associated with Midian, possibly a clan of that tribe. It is also mentioned in the Assyrian annals of Tiglath-Pileser III.

60:6. Sheba. The kingdom of Sheba was a great trading center in southwestern Arabia that exported precious stones, gold and incense. This kingdom is known as Saba in native sources and in the Assyrian annals. It had a very advanced urban civilization in the first millennium B.C. For more information see 2 Chronicles 9:1.

60:7. Kedar. Kedar was a nomadic Arabian

tribe. They were also mentioned in Assyrian and Neo-Babylonian texts. The tribe is mentioned in a text from Tell el-Maskhuta, in apocryphal writings, and even by the Latin writer Pliny the Elder.

60:7. Nebaioth. The Nebaioth were a nomadic tribe also found in the annals of the Assyrian king Ashurbanipal. They are also mentioned in the Taymanite inscriptions, dated to the sixth century B.C. They may have been a precursor to the Nabataeans, an Arabian tribe known in Hellenistic and Roman times.

60:9. ships of Tarshish. The ships of Tarshish were large heavy vessels built for long voyages with high tonnage. Tarshish was thought to have been a Phoenician colony in Spain.

60:13. glory of Lebanon. The "glory" of Lebanon was its cedar forests (see 35:2), but other types of lumber were also exported.

60:16. nursing imagery. The Egyptian kings are often shown in iconographic portraits as being nursed by the gods. For example, the female monarch Hatshepsut is shown suckling at the breasts of Hathor, the bovine goddess of women, dance, drunkenness, sexuality and the dead. She was usually depicted as a woman with the horns of a cow. The image represents being given the finest of care and personal attention.

60:19-20. obsolescence of sun and moon. Both the sun and the moon were important deities in the Babylonian pantheon. The sun god was Shamash, god of justice, and the son of the moon god. As the god of justice, Shamash gave Hammurabi, the Babylonian lawgiver, the authority to make laws. Sin, the moon god, was the lord of the calendar and the god of vegetation. His consort was Ningal, the mother of Shamash. Though his main centers were at Ur and Harran, he played a fundamental role in Babylon during the period of the last Babylonian king, Nabonidus. Since these gods were so central in the religious system of the ancient world, there is no suggestion in other texts that they would become obsolete or cease to function.

61:1-11

Yahweh's Blessings

61:1. freeing prisoners as act of justice. In the ancient Near East the freeing of prisoners (from debtors' prison) as an act of justice often occurred in the first or second year of a new king's reign (and then periodically after that). For example, the Old Babylonian king Ammisaduqa (seventeenth century B.C.) cancelled economic debts on behalf of Shamash. Thus the "jubilee" in this case was primarily concerning those in debt (for either financial or legal reasons) and for the freeing of debt-slaves. Unlike that of Israel this Babylonian edict was entirely at the whim of the monarch, and there is no evidence that it was divinely sanctioned. For an example of this as being accomplished by an ideal king, see comment on 11:1. Historically a proclamation of freedom is recorded by the last king of Judah, Zedekiah (Jer 34:8-10). For these and other characteristics of a just king's reign see comment on 49:9-10.

61:4. rebuilding ancient ruins. See comment on 58:12.

61:10. adorning of bridegroom and bride. The evidence for clothing and grooming in Western Asia relies heavily on iconographic images. It appears that in ancient Israel both the bride and the bridegroom wore ceremonial clothing. The Babylonian and Israelite brides sometimes wore embroidered garments (Ps 45:13-14), a special girdle (Joel 2:32) and a veil (Gen 24:65). Here the groom wears a "garland." The type of special festive clothing probably depended on the economic status of the marriage partners.

62:1-12

Zion's Elevation

62:10. building roads in the ancient Near East. See comment on 40:3.

62:10. banner for the nations. Banners in ancient Israel were used for marking tribes. They appear to have been used most often in military contexts, either to rally troops together or to identify regiments of troops. In this, Israel was most certainly imitating its neighbors. The Assyrians used standards to identify particular regiments of troops.

62:11. reward for return of king from battle. See comment on 40:10.

63:1-19

Judgment on Edom, Loyalty to Israel

63:1. Edom, Bozrah. See comment on 34:5-6.

63:3-6. divine warrior. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors (for more information on the divine warrior see comments on Ex 15:3; Josh 3:17; 6:21-24; 10:11; 1 Sam 4:3-4; 7:10). In Assyria it was common rhetoric to speak of cities and countrysides dyed red with the blood of enemies and the army marching through the blood of their enemies. Isaiah 9:5 refers to a

practice of warriors rolling their garments in blood. In *Enuma Elish,* after Marduk has defeated Tiamat and her general Kingu, he tramples the battle filth of his enemies, including the lower part of Tiamat's corpse.

64:1-12

Prayer for Yahweh's Deliverance

64:4. difference between Yahweh and other gods. Yahweh was distinct from other gods in the ancient Near East in a number of ways. Most fundamentally Yahweh was transcendent, meaning that he was not subject to or locked within the material universe. This is in stark contrast to the gods of Mesopotamia, who inhabited the material world. He was an only God, without consort or pantheon, unlike the gods of other nations, who shared in a multiplicity of power. The specific issue in this verse is the willingness of God to act on behalf of his faithful followers. The key here is that which motivates Yahweh to action. He does not have to be bribed or coerced into action. In the ancient polytheistic beliefs faithfulness to a deity was expressed in the gifts that were given—gifts that were intended to provide care for the deity (e.g., food). If these gifts did not motivate the kindness or action of the gods, then magical rituals could be used to bind the god or force the sort of action that was desired. See comment on 1 Samuel 15:23.

65:1-25

New Heavens and New Earth

65:3. sacrifices in gardens. Gardens in the ancient Near East were often parks of fruit and shade trees, arboretums serving as outdoor shrines or providing comfortable surroundings for sacred enclosures. Sacred trees played a significant role in popular religion of the day. These popular beliefs would have viewed stone and tree as potential divine dwellings. In Canaanite religion they are believed to be symbols of fertility (see Deut 12:2; Jer 3:9; Hos 4:13), though there is very little in the archaeological or literary remains of the Canaanites that would clarify the role of sacred trees. Excavations at Late Bronze Kition have uncovered a temple that featured a sacred grove with sixty tree pits. These gardens were likely the sacred groves of the Canaanite fertility cult of Asherah.

65:3. brick altars. Most incense altars were made of limestone. This has led to the very plausible suggestion that the word NIV translates "brick" can also mean "incense altars" (as it does in the inscription on a fifth-century limestone altar from Lachish). These were common features on the high places where illegitimate worship took place. Alternatively, there were Babylonian rituals directed toward celestial deities that included sacrifices made on bricks.

65:4. night vigils in graveyards. Many individuals who practiced necromancy (contacting the spirits of the dead, see comment on 57:6) in the ancient Near East spent the night in the graveyards, waiting for communication from the dead. This is similar to incubation rituals (see comments on 1 Sam 3:3 and 2 Chron 1:7-12).

65:4. eating pig meat. Assyrian wisdom literature calls the pig unholy, unfit for the temple and an abomination to the gods. There is also one dream text in which eating pork is a bad omen. Yet it is clear that pork was a regular part of the diet in Mesopotamia. Some Hittite rituals require the sacrifice of a pig. Milgrom observes, however, that in such rituals the pig is not put on the altar as food for the god but absorbs impurity and then is burned or buried as an offering to underworld deities. Likewise in Mesopotamia it was offered as a sacrifice to demons. There is evidence in Egypt of pigs used for food, and Herodotus claims they were used for sacrifice there as well. Egyptian sources speak of herds of swine being kept on temple property, and they were often included in donations to the temples. The pig was especially sacred to the god Seth. Most evidence for the sacrifice of pigs, however, comes from Greece and Rome, there also mostly to gods of the underworld. In urban settings pigs, along with dogs, often scavenged in the streets, making them additionally repulsive. The attitude toward the pig in Israel is very clear here in Isaiah, showing close connection to worship of the dead. It is very possible then that sacrificing a pig was synonymous with sacrificing to demons or the dead.

65:10. Sharon. Sharon was a coastal plain verging on the Judean hill country in the east and the Mediterranean Sea on the west. The valley was known for its beauty, desolation and pastureland. It was about thirty-two miles in length and was on average eleven miles in width.

65:10. Valley of Achor. The Valley of Achor was probably located on Judah's northern border and is identified with the modern El Buqe'ah, a small plain in the northern Judean wilderness in the vicinity of Jericho. Three Iron Age settlements have been uncovered in El Buqe'ah.

65:11. Fortune/Destiny. The proper (divine?) names used here, Gad (NIV: "Fortune") and

Meni (NIV: "Destiny"), are obscure. Gad is attested in Canaanite and Phoenician texts and is considered a good luck deity. Meni may have something to do with portion, and therefore some have thought that it may have had something to do with fate or fortune. It may have been the same as the Arabian goddess Manat mentioned in the Qu'ran. In the Babylonian pantheon the god Namtar ("Destiny") was the vizier of the netherworld. Fate was also at times personified and deified.

65:17-25. utopian visions. Although there is nothing else quite like the utopian visions found in the Bible, there are apocalyptic (futuristic, prophetic) visions found in Akkadian literature of the second and first millennia B.C. The Akkadian texts are pseudo-prophetic, that is, they were predictions composed after the event in question. They appear to have been written to justify a particular event that had taken place or institution that had been created. A typical phrase used is "a prince will arise." The prince is usually anonymous but easily discernible. In one of these, the Marduk Prophecy, Marduk projects a king who will arise and "draw the plans of heaven and earth" in the shrine Ekursagil. He will gather the scattered peoples, bring prosperity to the land and show compassion to the people, and society will function properly. Beyond this, however, in 66:1 it is clear that the heavens and the earth, the cosmos, is God's temple. The creating of new heavens and a new earth may then be equated to the making of new sanctuaries or renewing sanctuaries in the ancient Near East. This was a very common activity. The New Jerusalem is the new capital city, which also represents God's chosen dwelling place. Similarly Marduk orders that the new holy city of the gods, Babylon, will be rebuilt.

66:1-24

Peace Like a River

66:1. house for deity. In the Ugaritic Baal Cycle Baal wants to build a house for himself so that he will have a resting place. Likewise Ningirsu makes a request that Gudea build a house for his repose. The former is more pertinent here because Baal is building the house for himself, just as Yahweh has done. In *Enuma Elish,* after Marduk has defeated the enemy Tiamat, he proclaims that he will make a house for himself, which he names Babylon, that will serve as a resting place for the gods. At the end of tablet five a somewhat broken section relates this to Marduk's creating of the earth and his authority over it.

66:3. breaking dog's neck. The dog was not a sacrificial animal in Israel, although it was used in this manner in Hittite Anatolia.

66:3. pig's blood. Pigs and dogs figured prominently in the rituals of the Hittites in Anatolia in the Late Bronze Age. When confronted with a ritual impurity, the Hittites often slaughtered a pig (usually by cutting it in half). Pigs and dogs were particularly prominent in worship of chthonic deities (those having to do with the netherworld or the fertility of the land). For more information see comments on 56:10-11 and 65:4. Some have suggested that the treatment of the pig in this type of ritual may have been one reason why the pig was considered unclean.

66:15. fire, chariots, whirlwind. In the ancient Near Eastern imagery major deities are at times accompanied by charioteers. There is a deity known as Rakib-El, who is the charioteer of the Canaanite god El. In Akkadian literature Bunene, the advisor to the sun god Shamash, is designated the charioteer. The charioteer would be responsible for transporting the deity, especially into battle. In Israelite religious belief Yahweh is sometimes portrayed or manifested in ways familiar to ancient Near Eastern thought. For instance, in Elijah's contest with the Baal prophets, Yahweh is shown to be a God who controls fertility and responds with fire, and figurative language often associates him with the sun (Ps 84:11). Here his portrayal may share elements with Hadad, the storm god who is accompanied by a charioteer. These similarities suggest the possibility that familiar imagery was being used to clarify the involvement of deity in this unprecedented event.

66:17. rituals in gardens. See comment on 65:3.

66:17. eating flesh of pigs and rats. This is another description of foreign rites, probably of Canaanite origin (see comment on Lev 11:7). There is no extrabiblical evidence illuminating this custom. The word translated "rat" here can refer to a wide variety of small rodents.

66:19. Tarshish. Tarshish represented the farthest land across the sea to the west. See comment on 23:1.

66:19. Libyans. Here Libya is a translation of "Put," but in Nahum 3:9 the two are different entities. Ancient Libya was mostly along the coast west of Alexandria but included the long expanse of desert west of the Nile Valley. Put is more difficult. The most likely conclusion is that Put is an alternative name for Libya and that together they refer to the area to

the west of ancient Egypt represented by the modern state of Libya. This was the most distant land across land to the southwest.

66:19. Lydians. Lud was probably the area of Lydia in west central Turkey. The Lydians spoke an Anatolian language similar to Hittite. They carved out a large empire in Turkey during the sixth century B.C. but were defeated and conquered by Cyrus of Persia. This was the most distant land across land to the northwest.

66:19. Tubal. Tubal was probably an area south of the Black Sea. It is mentioned in the Assyrian annals as Tabal and in the *Histories* of Herodotus as Tiberanoi. It represented the most distant land to the northeast.

66:19. Greece. *Javan* probably represents the Greek name Ionia, the Greek region of the western coast of Turkey and the Aegean islands. Ionian Greeks settled this area just before the first millennium B.C. There is evidence of contact between them and the Assyrians by the eighth century B.C. Classical Greek literature (e.g., Homer) and philosophy appear to have begun in Ionia.

JEREMIAH

1:1-19

Jeremiah's Call

1:1. Anathoth. The precise location of Anathoth, a priestly city in Benjamin, has long been debated. It was either located on the high mound of Ras el-Kharrubeh just south of the village of Anata or in the valley adjacent to Anata (the Jewish historian Josephus identified Anathoth with Anata). The most recent idea is that Ras el-Kharrubeh was initially Anathoth, but the city relocated to Anata after the Babylonian exile of the late sixth century B.C. The archaeological record appears to confirm this. The city is first mentioned as the home of some of the bodyguards of David, and later Abiathar the priest was exiled there. According to Isaiah 10:30 the city was on the route of the Assyrian invasion of Palestine, but it was not destroyed.

1:2. chronology. Jeremiah's ministry began in the thirteenth year of Josiah's reign (c. 627 B.C.) and continued until the eleventh year of Zedekiah and the second deportation (c. 587 B.C.). He was apparently active for a few years after the exile (see 42—44). The initial year was a significant one in that it was just one year after the beginning of Josiah's reform activity and one year before Babylon's declaration of independence from Assyria. Both the political world and the religious world were about to see dramatic changes.

1:2. Josiah. During the early years of Jeremiah's ministry Josiah was king of Judah (640-609 B.C.). The Book of the Law (an unidentified portion of Scripture) was found early in his reign, after which Josiah enacted many religious and cultural reforms. He may have seized this opportunity because of a catastrophic civil war in Assyria (c. 631-626 B.C.). When the Assyrian empire began to collapse a decade later, Josiah sided against their Egyptian allies and was either killed in battle or murdered at Megiddo in 609 B.C.

1:3. Jehoiakim. Jehoiakim was placed on the throne of Judah by the Egyptians, who had rushed into the vulnerable area of Palestine after the end of the Assyrian empire (c. 608 B.C.). His given name was Eliakim, but the Egyptians changed it to Jehoiakim. He was a vassal to Egypt until 605 when the Babylonians under Nebuchadnezzar II defeated Egypt at Carchemish and subsequently took control of the Levant. Because of the Babylonian setback on the border of Egypt four years later, Jehoiakim rebelled against them and once again sided with Egypt. However, Jehoiakim suffered reprisal when the Babylonians captured Jerusalem in 598/7, and he was either killed or deported (the Jewish historian Josephus states that Nebuchadnezzar killed him in Jerusalem).

1:3. chronology. Jeremiah continued his ministry until the eleventh year of Zedekiah (c. 587 B.C.).

1:3. exile. Jeremiah was evidently active after the second deportation in 587 B.C. (see 42—44). The Babylonians exiled the leading citizens of the land. Excavations in the Shephelah, Negev and Judean desert show signs of the Babylonian destruction. Babylonian sources describe the siege of Jerusalem and the deportation of many prisoners to Babylon.

1:5. ancient Near Eastern examples of deity knowing and electing before birth. There is an Egyptian parallel to the idea of the deity

knowing an individual before birth. The god Amon knew Pianki (an Egyptian monarch of the Twenty-Fifth Dynasty in the eighth century B.C.) while he "was in the belly of his mother," where he knew he was to be the ruler of Egypt. In the Gilgamesh Epic, Gilgamesh's role as king was said to be destined for him "when his umbilical cord was severed."

1:5. prophet to the nations. The term translated "nations," when used in the plural, usually signifies foreign nations. Thus there were no limits to the scope of Jeremiah's prophetic ministry. His messages were not only to Judah but also to the nations who would be potential allies, as well as those who would be enemies.

1:9. hand on mouth as commissioning in ancient Near East. Royal mouth purification rites in Egypt show the idea of preparing the mouth for utterance. Mesopotamian rituals often featured the purification of lips as symbolic of the purification of the person. It is viewed as a prerequisite, especially for diviner priests, before they may appear before the divine council and report back on what they have witnessed. In contrast Yahweh put words in the mouth of his prophet, with no ritual purification.

1:11. almond tree. The almond tree reached a height of fifteen to thirty feet. It was the first tree to bloom in late January/early February. The almond flower is white with shades of pink, ripening with almonds about ten weeks later.

1:14-15. northern kingdoms. This is either a reference to Babylon or Scythia or an echo of a future where all nations come up against Jerusalem (see Ezek 38—39; Joel 3; Zech 12—14). The north was often a symbol of dark powers, such as the Philistines, Assyrians and Arameans. Enemies often had little choice but to come at Jerusalem from the north, because of the way the major routes went. As early as 627, there was little evidence that Babylon had the ability to launch an invasion in the Levant. The Scythians, however, did invade western Asia at this time, according to the Greek historian Herodotus.

1:15. thrones in gateway. The gateway was the usual site for a king to publicly perform his duties. It could have been used for ceremonial or diplomatic occasions or legal proceedings. The Ugaritic Epic of Aqhat describes King Danil sitting in the gate area judging the cases of widows and orphans. A conquering king would take his seat on this public throne in the gateway in order to pass judgment on a city and its leaders. Recent excavations at Tel Dan have revealed what appears to be a stone platform set inside the gate area, which once was canopied and may have held a throne.

1:16. purpose of burning incense. Incense was a mixture of spices that made a pleasant fragrance when burned. Offerings of incense were common throughout the Near East and Israel. They were used in conjunction with sacrifice (see comment on 44:18). One of the more luxurious spices was frankincense (a white gum resin) which came from Sheba in south Arabia. Excavations have produced a large variety of incense altars throughout Israel, including two at Arad and ten at Miqne/Ekron.

1:18. iron pillar metaphor/bronze wall metaphor. Iron and bronze were symbolic of strength in many biblical passages (see comment on Is 45:2). Bronze gates built by the Assyrians have been found at Balawat. They were a decorative feature on strong walls. Thutmose III of Egypt described himself as a wall of iron and bronze for Egypt, meaning that he was like an impregnable fortress city.

2:1—3:5

Israel's Abandonment of God

2:8. prophesied by Baal, following idols. Despite the reforms of Hezekiah and Josiah, the people of Judah often reverted back to religious syncretism, performing the rituals and worshiping the deities of Canaan. The prophets who were associated with this syncretism would offer messages from Baal in his name and would ask for oracles before the idols of Baal.

2:10. coasts of Kittim. Kittim is mentioned in the table of nations (Gen 10) as a descendent of Javan (Greek, Ionia), who is associated with the Aegean and eastern Mediterranean. Kittim is probably the Hebrew term for Kition, near modern Lanarca on the south central coast of Cyprus, but most likely referred to the whole island. It was a Bronze Age site. In the period of Jeremiah, the term Kittim most likely denoted Greece or in general a faraway place. Ostraca from Arad in the seventh century B.C. mention individuals from Kittim who have Greek names. These were probably Cypriot traders.

2:10. Kedar. Kedar, the second son of Ishmael (Gen 25:13), was the name of an Ishmaelite tribe that flourished from the eighth to the fourth centuries B.C. The tribe is known from Assyrian and Late Babylonian texts as Qadar. The personal names of the Kedarites appear to have been related to the southern branch of the Semitic languages. These tribal peoples were based in the Arabian peninsula and often made their way into the Levant via the Si-

nai. The Kedarites inhabited the eastern wilderness, while the Kittim inhabited the western reaches of the sea.

2:11. nations changing gods in the Near East. Because of the infiltration of foreign elements, many nations added gods to their pantheon. Moreover, the names of gods endured slight alterations as time went on. But the concept of a nation exchanging its god(s) for others was a foreign idea in the ancient Near East. The verb possibly carries the idea of "barter" in which case it does not refer to simply a change but to trading for something of greater value.

2:13. broken cisterns. Cisterns were often built in hills made of limestone. An individual had to plaster the inside with lime plaster and direct rainwater into it. But these cisterns often developed cracks, and water would seep out, with the farmer losing a life-giving commodity.

2:15. lion metaphor. This probably represents the Assyrians who, like lions, devoured cities and lands. Any number of Assyrian military campaigns are being alluded to here. The Assyrians had winged human-headed lions at the gates of many of their cities.

2:15. burned towns. This refers to specific campaigns of a number of Assyrian rulers who came into the Levant, including Tiglath-Pileser III (745-727 B.C.), Shalmaneser V (727-722 B.C.), Sargon II (721-705 B.C.), Sennacherib (705-681 B.C.) and Esarhaddon (681-668 B.C.). Since the Assyrians had no intention of occupying these towns, their practice was to burn them in order to warn against the cost of noncooperation.

2:16. Memphis. Memphis was the residence of the early Egyptian kings. Many Judeans (as well as Phoenicians, according to Herodotus) fled there during the Babylonian invasion of 587 B.C. It is identified with the modern site of Mitrahineh, about fifteen miles south of Cairo, on the west bank of the Nile. The city had been in decline since about 1000 B.C. However, it was restored by the Twenty-Fifth Dynasty and became the primary residence of the Egyptian kings in the seventh century B.C. It was most likely also the residence of the kings of the Twenty-Sixth Dynasty. For more information see comment on 46:19.

2:16. Tahpanhes. Tahpanhes was an outpost in the eastern Delta region of the Nile, bordering the Sinai. It was known as Daphne by the Greeks, who inhabited the outpost as mercenaries by the seventh century B.C. The Greek historian Herodotus states that Daphne was one of three outposts set up by the Egyptians to stop the Assyrian invasion. The Jews in flight from the Babylonians may have stopped there in the early sixth century B.C.

2:16. shaved head. A shaved head in the ancient Near East usually (but not always) denoted a slave or a subordinate. However, the Hebrew term used here "to shave" is problematic and there is little agreement on its meaning.

2:18. Shihor. Shihor is probably the Hebrew name for "waters of Horus," the falcon deity of Egypt. Although it was probably a body of water in the northeast Delta region of the Nile, its location is uncertain. Some have associated it with the Brook of Egypt, the first body of water seen traveling south into Egypt from Palestine.

2:18. the River. In Scripture the Euphrates River is often referred to as the River.

2:20. high hill and spreading tree as place of prostitution. Part of the fertility rites of local Canaanite sanctuaries were carried out on hilltops in connection with various sorts of trees (including oaks, poplars and terebinths). The sexual rituals dedicated to gods of fertility are also mentioned in Hosea 4:13. Asherah is pictured in Israelite iconography as a stylized tree.

2:22. soda, soap. The term translated "soda" refers to a sodium carbonate byproduct, most likely imported from Egypt. Soap was made from the ashes of a local plant.

2:23. Baals. The employment of the plural Baals refers to the many cult centers of Baal in Canaanite practice. In other words, there was a Baal for each city (e.g., Tyre, Sidon and Gad). A number of place names in the Old Testament contain the element Baal (e.g., Baal-Zephon and Baal-Peor). It is presumed that they mean "Baal of Peor," or "Baal of Zephon." Baal, which means "lord," occurs as a divine name as early as the eighteenth century B.C. in Amorite personal names from Mari. Some would offer examples as early as the late third millennium. By the fourteenth century the title was used by Egyptians to refer to the storm god. The name is also evident in texts from Alalakh, Amarna and Ugarit as the personal name of the storm god Adad. Baal was a fertility deity and was a dying (winter) and rising (spring) god. In the mythology of Ugarit he is pictured in combat with Yamm (the sea) and Mot (death). His consorts are Anat and Astarte.

2:23-24. camel/donkey metaphor. Young female camels are not at all reliable creatures and nervously wander around in a disorderly fashion. The female donkey, when in heat, becomes almost violent and chases after the male donkey, just as Israel, like the wild female donkey, chases after the Baals.

2:27. wood-father, stone mother. In this case the tree was an image of Asherah, a female deity, and the male symbol is that which "gave me birth." Thus the Israelites are completely confused as to their worship. It is difficult to determine whether the text is referring generally to polytheistic worship or specifically to fertility symbols.

2:28. as many gods as towns. The various pantheons of most ancient Near Eastern peoples included hundreds and sometimes even thousands of deities. Jeremiah is claiming that the Judeans are no different from their polytheistic counterparts. It was also common practice for towns to have patron deities, so that gods could multiply as towns developed.

2:32. jewelry. The term for jewelry here is translated elsewhere as "jewels," but here it probably denotes the bridal attire or a specific item that was unique to the bride. See comment on Ezekiel 16:11-12 for description of the ornaments.

2:36. disappointed by Egypt and Assyria. It is not certain whether Jeremiah is referring to specific events or to these nations in general. By at least 732 B.C. both Judah and Israel entered into a vassal relationship with Assyria. However, in the end Assyria did not protect its vassals but destroyed them, as they did to Israel in 721 B.C. and to Judah in 701 B.C. Egypt, however, had been unable to protect its vassals against the power of Assyria or other West Asiatic kingdoms. In the end then, neither kingdom provided the safety or security that Judah was looking for.

2:37. hands on head. The "hands on the head" gesture was a sign of grief in the ancient Near East. It has been illustrated by the mourning female figures on the Phoenician sarcophagus of Ahiram, thirteenth-century king of Byblos. The Egyptian Tale of Two Brothers also describes this gesture as an indication of mourning.

3:1. divorce legislation. There are numerous texts from both Mesopotamia and Egypt that describe divorce legislation. Although the laws were usually in favor of men, in both cultures women were allowed, under certain stipulations, to obtain a divorce. Jeremiah in this context is referring to the one specific piece of divorce legislation in the Old Testament, Deuteronomy 24:1-4, which states that a man may not remarry his ex-wife if she has been married to another man in the interim. Thus, the answer to Jeremiah's query is no, a man may not remarry her.

3:3. spring rains. The two kinds of rains described here are the showers, which usually fell in March, and the late rains of spring, normally falling in April.

3:6—4:4

Faithless Israel Called to Return

3:6. worship practices. See comment on 2:20.

3:8. certificate of divorce. Divorce certificates were well known in the ancient Near East. In fact, even a royal certificate of divorce written on a clay tablet from Ugarit in the Late Bronze Age has been found. Scores of texts describing divorce legislation have been found in cuneiform texts from Mesopotamia and in papyri from Egypt.

3:9. adultery with stone and wood. Committing adultery with stone and wood refers to the "spiritual adultery" of following after the Asherim (the sacred trees, i.e., wood) and the Baals (stone).

4:4. metaphor of heart circumcision. Circumcision was not unique to Israel, as iconographic evidence has been found in Egypt. But the meaning behind it was unique, as it was a sign that the people of Israel belonged to Yahweh. Regular circumcision symbolically put the organ of generation under the control of Yahweh as a reminder of his covenant promise to make Israel a great nation. The concept of circumcision of the heart symbolically put the organ of the will under the control of Yahweh as a recognition of the obligation to the law.

4:5-31

Enemy from the North

4:5. major fortified cities of Judah. According to Sennacherib, king of Assyria (r. 705-681 B.C.), Judah had forty-six strong cities (i.e., walled towns), which he had overrun, and countless small cities or villages. There were thus a number of cities with major defensive systems. The defensive system at Lachish, one of the primary fortresses in Judah, has been extensively excavated in this century. It contained two layers of city walls and strong towers.

4:6. nature of signal. The blowing of the horn announced a state of emergency (see Amos 3:6). On hearing it citizens who lived in villages or were out farming fled into the confines of the walled city. In this case the trumpet was blown throughout the entire land because of a national emergency.

4:6. army from north. see comment on 1:14-15.

4:8. sackcloth. Sackcloth was a black coarse linen garment (usually goat's wool) worn by mourners in time of sorrow (death of a loved one) or great disaster. It was also used by Palestinian shepherds because it

was cheap and durable.

4:11. wind to winnow or cleanse. The hot wind from the desert was most likely the sirocco, a wind that was too strong for winnowing the grain on the threshing floor, as it carried away both the grain and the chaff. The metaphor is thus clear; God's judgment will be like the hot wind, engulfing both the good and the bad. The word translated "cleanse" here is used in the Dead Sea Scrolls to refer to the separating of the grain and most likely has that connection here as well.

4:15. announcement from Dan. The city of Dan (modern Tel el-Qadi) was at the northern limit of Israel. Excavations have shown that it was a substantial city during the time of Jeremiah. This city would have noticed the northern invaders first. Thus a messenger from Dan would run southward, "causing all Israel to hear" the bad report.

4:15. hills of Ephraim. From Dan the invader descends the Golan Heights until reaching the hills of Ephraim, the mountainous region in the center of the former northern kingdom, reaching from Shechem to Bethel.

4:23-26. world upside-down motif. Jeremiah has taken his imagery from the creation account in Genesis 1:2. He describes in poetic imagery the reversion of creation back to its chaotic stage before God had done his work. The Babylonian *Myth of Erra and Ishum* is roughly similar in that it describes a reversal of Marduk's creation of order out of the original primeval chaos. In the world upside-down motif all that is considered most consistent and reliable is jeopardized. The concept can be applied to the cosmic realm (sun growing dark), the natural realm (mountains being leveled), the political realm (empires overthrown), the social realm (poor becoming rich) or the animal realm (lion and lamb together). It is often used in prophetic literature in connection with the Day of the Lord and coming judgment.

4:28. heavens growing dark (eclipse). In this poetic imagery the earth is personified (as are many inanimate objects in Hebrew) as if it is in mourning and "turning black" or "growing dark." It is not necessary to assume that Jeremiah is attempting to describe a heavenly phenomena, such as an eclipse, though that could be described in similar terms.

4:30. dressing in scarlet/eye paint. Scarlet clothing represented the most exquisite finery for a woman. The dye for this color was made from the eggs of an insect that were collected from oak leaves. The eye paint (antimony) was used (and is still used in the modern Middle East) to make the eyes look larger and thus enhance one's beauty. Neither of these were specifically associated with prostitutes but were simply used when a woman wished to be her most attractive.

5:1-31

Israel's Falsehood

5:1. comparison to Diogenes. Somewhat like Diogenes, the Greek Cynic philosopher of the fourth century B.C., the people of Judah are asked to traverse the city and search for an honest (or in this case, a just) man. The comparison to Diogenes ends, as the Judeans are searching for someone that acts justly and is faithful to Yahweh. Diogenes was looking for someone who conformed to his secular idea of justice, an idea not necessarily attached to a deity.

5:6. how common were predator attacks? Lions and other predators were much more common in the Middle East than they are today. An attack by a predator was not considered a rare or surprising occurrence. Thus the Judeans would have been well acquainted with this metaphor.

5:8. stallion metaphor. Stallions were known for their powerful sexual proclivity and mindless obedience to their instincts. In much the same way the people of Judah pursued their promiscuity, whether that was their spiritual adultery or their participation in the sexual aspects of the fertility cult.

5:12-13. prophets proclaiming peace. Certainly a prophet who offered the people the hope of peace, security and resolution of the problem would be popular. Denial is the path of least resistance. There would likewise be no shortage of prophets who saw personal gain in supporting the desires of the throne on these matters and were therefore willing to represent the best interests of the king and whatever propaganda he desired to circulate. The literal term for these prophets is that they "will become wind": in other words, they will be like old windbags whose words do not have any value.

5:24. autumn and spring rains. The autumn and spring rains were simply called the "former and latter" rains. Israel has a rainy season (winter months) and a dry season (summer months). The rainy season begins with the autumn rains ("early rains," October-November) and ends with the spring rains ("latter rains," early April). These are important for what they contribute to the overall moisture levels in the earth and for softening the ground for plowing. Baal was considered the lord over nature who con-

trolled the rains in the Canaanite cults of Palestine. However, Jeremiah argues that it is Yahweh who should be worshiped as the giver of rains in their proper season.

6:1-30

Siege of Jerusalem by the Army from the North

6:1. Tekoa. Tekoa (Khirbit Tequa) was a town in the highlands of Judah ten miles south of Jerusalem on the border of arable land and desert. A refugee from Jerusalem was able to reach the city within one day.

6:1. Beth Hakkerem. Beth Hakkerem was associated with Tekoa and Bethlehem, but its precise location is uncertain. The early church father Jerome stated that it could be seen from Bethlehem, and thus it has been tentatively identified with 'Ain Karim, four miles west of Jerusalem, or Ramath Rahel, two and a half miles south of Jerusalem, which would have been ideal for a signal location.

6:6. siege ramps. The ancients were notorious for their inability to conduct siege warfare. The construction of a siege ramp was a useful tool but very precarious, as the city defenders made every attempt to thwart its progress. It was normally made as a sloping ramp, built with a foundation of trees and large stones and mixed with earth and other elements at hand. Numerous wall reliefs from Assyria depict Assyrian siege ramps employed throughout the Near East. Moreover, remains of an Assyrian siege ramp have been uncovered at the Judean city of Lachish (for more information see comment on 32:24), where the Assyrians were successful in capturing and destroying the fortress city.

6:20. incense from Sheba. One of the more luxurious spices used for incense was frankincense (a white gum resin) which came from Sheba in south Arabia, a center of the spice trade. Incense accompanied sacrificial offerings (see comment on Lev 2:1).

6:20. sweet calamus. Sweet calamus (or aromatic spice cane) most likely originated from India. It was among the ingredients listed in the anointing oil in Exodus 30:23. It was a marsh plant that was used as a tonic and stimulant. It is not to be confused with sugar cane, which spread east after the Old Testament period.

6:23. cavalry units in seventh century. Chariot and cavalry warfare in the seventh century B.C. were primarily used as shock weapons. However, with the reforms of Tiglath-Pileser III of Assyria (r. 745-727 B.C.), horses and chariots also played the role of light artillery, as arrows were shot from the horse-drawn chariots. Later a heavier chariot with four men appeared with Ashurbanipal (r. 668-627 B.C.). Cavalry (exclusive of chariotry) was developed in Urartu (biblical Ararat), which furnished up to a thousand specialized units to the Assyrian army by the time of Sargon II (r. 721-705 B.C.). Stud farms were created in various points of the empire, especially in Syria and in the Assyrian capitals. This cavalry tradition was inherited in its entirety by the Chaldeans in the late seventh century B.C. For more information see comment on Habakkuk 1:8.

6:26. rolling in ashes. Rolling or groveling in the dust or sprinkling ashes on oneself was a sign of mourning in the ancient Near East.

6:27. metal assayers. The assayer/refiner here was a metallurgist whose duty was to assess the quality of the ore. It was then refined by stripping it of its impure elements. However, if there were a great deal of impurities in the metal, the item was totally discarded.

6:28. bronze, iron metaphor. In the ancient world silver was extracted and assayed through a process called cupellation. In the initial smelting process silver was extracted from lead ores (galena) containing less than 1 percent silver in a given sample. The lead was melted in shallow vessels made of porous substances such as bone ash or clay. A bellows was then used to blow air across the molten lead producing lead oxide (litharge). Some of the lead oxide was absorbed by the bone ash, while some could be skimmed off the surface. Ideally the silver would remain. Unfortunately this process had many potential problems. If the temperature was too high, or if the sample contained other metals (iron, copper or tin were common), the cupellation would be unsuccessful. In this situation, when the litharge was skimmed off, rather than resulting in silver extraction, what remained was tainted silver mixed with other metals and therefore unusable. This unusable product is perhaps what is referred to in the translation as "dross." Another possibility is that the text refers to the assaying process. This involved heating a sample of silver together with large amounts of lead in order to draw off the impurities. One of the possible results of the assaying process was that the quantity of lead would be insufficient to draw off the impurities rendering the silver useless. Rather than being purified, then, the silver would be in worse shape than before the process. Perhaps this process is envisioned by the text, and the silver becomes this useless junk.

7:1-29

Sermon in the Temple Court

7:2. proclamations at the temple gate. Proclamations were typically made at public places where a lot of traffic could be expected. Gateways were hubs of activity in the ancient city. The temple gateway would receive all the traffic of those doing business at the temple, including anyone who was bringing a sacrifice. This is the target audience for Jeremiah's proclamation.

7:2. nature of worship. The two terms in Hebrew that are used for worship signify "service" and "prostration" (reverence). The latter is used here and usually represents an act of humility, often associated with petition. The temple was primarily a state sanctuary and thus was part of the royal estate. The temple was the "house of God" and was his residence. It was not intended as a place of corporate worship, and worshipers were admitted into the temple courts but not into the temple itself. Sacrificial rituals were done in the courts and elsewhere. Though there are many texts describing temples in the ancient Near East, none describe in any detail the nature of the individual's worship within the walls of the temple. We know that worshipers were given dreams by the deity (e.g., at Mari) when viewing its image, but actual entry into the temple must have been rare.

7:4. temple ideology. The people in this context had come to believe that the temple was so important to God that the people were also secure. In the ancient Near East the entire city was considered protected by the city deity. In these terms Jerusalem was considered inviolable because of housing the temple and thereby God. This was certainly enhanced by the salvation of Jerusalem during the reign of Hezekiah a century earlier. In a similar way temples in ancient Western Asia were described as the "house of god." The most righteous of kings was the one who kept the god's house in order and did constant rebuilding on it. The god dwelt in the temple, just as the king and people dwelt in their own houses. The temple had to be kept up in much the same way the image of the deity had to be fed and clothed daily. These were the needs of the gods. The deity "needed" a house, so it was believed that he would protect that house and the city that provided for his housing. The Israelites, thinking too much like their neighbors, had come to think the same way about their God and his temple, converting it to a protective talisman.

7:6. vulnerable people in ancient Near Eastern law. Mosaic Law had a profound concern for human welfare, especially for historical reasons. Since the Israelites had been slaves in Egypt, they were to be sensitive to the needs of slaves, widows, orphans and other vulnerable people. There are numerous legal texts in Mesopotamia concerning dealings with unfortunates such as widows, orphans and foundlings. However, these texts usually dealt with their legal rights (or lack thereof) and not with their care. For example, widows in the Neo-Babylonian period were under the legal protection of their father, brother or brother-in-law. Those who were financially independent after their husband's death were not legally considered widows, however, and thus were not in need of a protective ward. For more information see comment on Exodus 22:22-24.

7:9. ethics and religious responsibility. The religions practiced by Israel's neighbors would have expected ethical behavior from people but perhaps with a slightly different logic behind it. In Babylon, for instance, Shamash the sun god was the god of justice. Shamash was responsible for insuring that justice was maintained in the world because justice was a part of the order that was the fabric of the cosmos. In much the same way, a shop proprietor might require honesty from his employees because he knows that will contribute to the success of his business. He himself may not be honest at all. In Israel it was not the smooth operation of the cosmos that motivated Yahweh to insist on moral behavior. The law grew out of his character, and the holiness that he required was a reflection of him.

7:10. house bearing the name. The temple is where God chose to set his name or in other words, where he laid his legal claim and thus was his personal property. The temple in the ancient Near East was considered the private residence of the deity and thus his private property. The king was merely the caretaker of the building and responsible for its upkeep.

7:10. temple as providing sanctuary. In Mesopotamia and Israel the temple provided sanctuary because the deity resided there and thus the worshiper had greater access to the god's protection. Unlike in ancient Greece, however, there was no special law of sanctuary for an individual just because they were in the confines of the temple property.

7:12. Shiloh. Shiloh (modern Khirbit Seilun), in the heart of the Ephraimite hills, was the site where Israel convened sacred assemblies before using Jerusalem. Excavations have exposed extensive architecture by the eleventh century B.C. The site lasted throughout the

Iron Age, but the sacred structures were most likely in ruins by Jeremiah's time. It is thought to have been overrun by the Philistines in the aftermath of the victory at the Battle of Aphek (1 Sam 4).

7:18. cakes for the Queen of Heaven. The term for cakes described here is a loanword from Akkadian. The Babylonians used sweetened cakes in the cult of the goddess Ishtar. It is possible that the Queen of Heaven here is Ishtar as well, but some evidence points to an unnamed mother-goddess or to Asherah. The cakes were baked directly on the embers of the fire and not in an oven. As described in this passage, the entire family took part in the cult rituals. Offering cakes to deities was very common in Babylonia. Forty-seven molds for cakes representing a goddess (some female-shaped, some star-shaped) were found in an early second millennium B.C. royal kitchen at Mari in northeast Syria.

7:18. drink offerings. Drink offerings were common in Israel, but the phrase used here, "pour out libations," normally refers to offerings that are described elsewhere as offered to other gods on the roofs of houses (see comment on 32:29), suggesting astral worship.

7:20. anger against beasts, trees, produce. The parallel between "man and beast" is common in Scripture (for instance, Ex 8:13-14). However, the addition of trees and produce is not seen elsewhere. When Enlil, the king of the gods in Mesopotamia, brought on the flood, it was leashed on all flesh indiscriminately. The Babylonian *Myth of Erra and Ishum* also describes devastation that took both humans and animals. On the other hand, warfare tactics often targeted the produce and the trees. Trees were chopped down for the needs of the besieging army or simply as punitive deforestation. Produce was used to supply the army, trampled underfoot or intentionally destroyed in order to cripple the economy.

7:21. eating the meat of burnt offerings. Since the burnt offering was entirely consumed on the altar, it was supposedly unavailable as food for worshipers. However, since God had no intention of listening to the petitions that accompanied the burnt offering, they might just as well have eaten the meat themselves.

7:29. cutting off hair and throwing it away. The cutting of the hair was normally a gesture of mourning. However, the object of the verb here is often used for the consecration of priests and Nazirites, who took a vow not to cut their hair. Thus, Yahweh is ironically commanding the people to cut their consecrated hair, for their vows will accomplish nothing.

7:30—8:3

Death in the Hinnom Valley

7:31. high places of Topheth in the valley of Hinnom. "Topheth" was the cultic installation where children were offered to the god Molech. The word is thought to signify the hearth where the child was placed. The Hebrew term has parallel terms in both Ugaritic and Aramaic with the meaning "furnace or fireplace." Scholars have thought that Topheth was at the edge of the valley of Ben Hinnom before connecting with the Kidron Valley. The valley of Ben Hinnom has been identified with Wadi er-Rababi southwest of the City of David. Many consider Molech to have been a netherworld deity whose rituals had Canaanite origins and focused on dead ancestors. An eighth-century B.C. Phoenician inscription speaks of sacrifices made to Molech before battle by the Cilicians and their enemies. The name Molech appears to be related to the Hebrew term *mlk* ("to rule"). Sacrifices to Molech were done at the installation of Baal, which may mean that the term was an epithet of Baal himself, as well as other deities (32:35).

7:31. burn sons and daughters in the fire. Evidence for this practice outside of Scripture is rare indeed. Assyrian legal texts describe a penalty clause as "he will burn his son to Sin (a lunar deity) and his daughter to Belet-seri." Also see the comment on 2 Chronicles 28:3.

8:2. exposure of bones. Bones in tombs were considered sacred. The bridge between life and death in the ancient Near East was different from ours. Individuals were understood to have a consciousness after death as long as their bodies (i.e., bones) still existed and had been buried properly. Often the desecration of graves was not merely to retrieve treasure but to disturb the bones of the dead. Ashurbanipal, king of Assyria, attacked the Elamite capital of Susa and carried off the bones of the dead with the purpose of "imposing restlessness upon their spirits and depriving them of food offerings and libations." Cults of the dead abounded throughout the Near East. In Israel the bodies of the dead were also treated carefully; disturbing tombs was looked on with horror. One is reminded that both Jacob and Joseph desired that their bones be taken to the Promised Land when the Israelites returned there.

8:2. astral worship. The "host of heaven" (NIV: "stars") was the celestial army that was made up of the planets and stars that were inhabited by divine spirits who were

in control of human destiny. The Babylonians were experts in the discipline of astral divination, attempting to predict and control fate by the use of omina by examining the stars. Modern astrology has its roots in Babylonia of the Hellenistic period (after 331 B.C.), centuries after Jeremiah. Israelite stamp seals of the seventh century show that astral symbols for deity were very popular in this period. For more information see comments on Deuteronomy 4:19; 17:3; 2 Kings 23:4; 2 Chronicles 33:5.

8:4—9:26

Punishment Coming

8:7. bird migration metaphor. Though the exact identification of the birds mentioned here is uncertain, it is clear that they obey Yahweh's will (by migrating to the right place at the right time), while his children do not.

8:14. poisoned water metaphor. It was crucial for a city under siege to have access to a protected water supply. If the supply was poisoned, the city became literally defenseless and was obliged to surrender to its attackers. This then is a metaphor for shortening the siege.

8:16. Dan as direction of attack. See the comment on 4:15.

8:17. snakes in Palestine. The snakes here are most likely a metaphor for the Chaldean army. The snakes described in Scripture appear to have been of the poisonous variety, although no particular species can be determined. Isaiah 11:8 describes the "hole of the asp," and commentators have suggested that the cobra is being described, since they typically live in holes. Other poisonous snakes were probably the carpet viper (known for its striking without provocation) and the desert viper.

8:17. charmed vipers. Snakes were greatly feared in the ancient world as magical beings as well as for their venom. Both Egyptian and Mesopotamian literatures contain examples of incantations against serpents and their bites. The word translated "charmed" here should not evoke cartoonlike images of swaying serpents hypnotized by pipe-playing swamis. Instead the reference is to snakes against which the incantations are ineffective. Akkadian texts also speak of snakes that are "unconjurable."

8:20. connection between seasons and deliverance. Since the time when grains and fruits were gathered was over, and the season of growth and ripening was over, there was nothing in the granaries. This is describing a time of famine; because of invading armies there was no opportunity to harvest, and the prospect was a winter without food.

8:22. balm of Gilead. Although balm is associated with Gilead, there is no evidence for a balm-producing tree or shrub ever having grown there, although the boundaries of Gilead were never well defined. There are two possibilities: either the reference is to something other than balm (see comment on 46:11), or Gilead was the importer of balm rather than the producer of it. The King's Highway, the main trade route in the region, passed through Gilead, and balm was a primary commodity of trade. Spice caravans from the east followed that route, and no doubt balm was traded there (see Gen 37:25). Balm was probably the resin of the storax tree, obtained by an incision on the bark of the tree. It was believed to have had medicinal qualities. Josephus claimed that En-Gedi near the Dead Sea was a major center for the cultivation of perfume-producing plants (including balm), a fact confirmed by archaeologists, who have discovered at Tel Goren at En-Gedi on the west shore of the Dead Sea something that appears to be a balm installation.

9:15. bitter food. The term here for bitter food is wormwood (the name for several plants of the genus *Artemisia),* a low shrub with very bitter leaves and fruit used in folk medicine, primarily for intestinal problems. It is eaten by goats and camels, and today Bedouin dry the leaves to make a strong aromatic tea. The term wormwood in Scripture is used figuratively for bitterness and sorrow.

9:17-20. trained mourners. This is the only reference in Scripture to professional mourning women, although it was a widespread custom throughout the ancient Near East. Professional mourners (women in virtually every case) are depicted on numerous wall reliefs in Egyptian tomb paintings. They are also often mentioned in Mesopotamia and in Syria as lamenting for not only the human dead but for the dying and rising gods (e.g., Dumuzi or Tammuz). The custom was also prevalent in the eastern Mediterranean, notably in classical Greece, and continues in some parts of the Middle East today.

9:26. circumcised heart. See comment on 4:4.

10:1-25

Contrast Between the Lord and the Idols

10:2. celestial omens. The celestial gods (sun god, moon god and Venus particularly; in

Babylonia, Shamash, Sin and Ishtar respectively) were primary in most ancient religions. Controlling calendar and time, seasons and weather, they were viewed as the most powerful of gods. They provided signs by which omens were read, and they looked down on all. By the end of the second millennium, a major compilation of celestial omens, the seventy tablets of the work known as *Enuma Anu Enlil,* had been compiled and was consulted for nearly a thousand years. There were many constellations recognized by the Mesopotamian astrologers (many, though not all, the same we recognize today, transmitted through the Greeks), but the Zodiac was not yet known.

10:3-4. manufacture of idols. See comments on Isaiah 40:19; 41:7; 44:10-14.

10:5. ancient Near Eastern beliefs about and treatment of idols. Idols came in a variety of shapes and sizes in the ancient Near East. They were typically carved of wood and overlaid with hammered-out sheets of silver or gold. Basically human in appearance (except those from Egypt, which combined human and animal characteristics), they had distinctive, even formalized, poses, clothing and hairstyles. Images of deity in the ancient Near East were where the deity became present in a special way, to the extent that the cult statue became the god (when the god so favored his worshipers), even though it was not the only manifestation of the god. Rituals were performed to bring the god to life in its idol. As a result of this linkage, spells, incantations and other magical acts could be performed on the image in order to threaten, bind or compel the deity. In contrast, other rites related to the image were intended to aid the deity or care for the deity. The idols then represent a worldview, a concept of deity that was not consistent with how Yahweh had revealed himself. The idol was not the deity, but the deity was thought to inhabit the image and manifest its presence and will through the image. Archaeologists have found very few of the life-sized images that the texts describe, but there are renderings of them that allow accurate knowledge of details. The images of deities in Mesopotamia were fed, dressed and even washed daily. Food sacrifices were brought to the deity on a daily basis (and were no doubt eaten by the temple technicians). Other attendants were required to dress and undress the statue, and still others were employed to wash the statue and transport it in times of celebration.

10:5. impotence of idols. The word translated "scarecrow" occurs only here in the Old Testament. This was as close to an image that Israel was allowed to make. Thus, the "sacred" idols are diminished to the status of scarecrows, no more powerful than palm fronds twisted around a pole. They certainly inspired no fear.

10:9. silver from Tarshish, gold from Uphaz. Although Uphaz was known for its gold (Dan 10:5), its precise location is not known. An Aramaic targum locates it at Ophir, a source of gold in southern Arabia. Uphaz also may be an adjective meaning "pure." There are a number of references to Tarshish in the context of precious stones. These references appear to connect Tarshish with Ezion Geber in the Red Sea area, which correlates Uphaz with Ophir. In other passages, however, Tarshish clearly denotes a western location.

10:9. dressing idols in blue and purple. Ancient color words are difficult to interpret. These terms indicate shades of blue/purple and were colors of royalty and divinity (for more detail see comment on Num 4:6). Many images in the ancient Near East were gold or gold-plated and clothed in these colors.

10:12-13. creator God/cosmic God. This description of Israel's God portrays him both as a creator deity and a cosmic deity. He established order in the cosmos, and he maintains order in his governance of the operation of the cosmos. These two areas of operation did not often coexist in one deity in the ancient world. Marduk, the chief deity of Babylon, however, did have thunder and rain connections as well as being the creator god.

10:13. wind from storehouses. The Canaanites and Babylonians attributed manifestations of storms to Adad, the storm and wind god. However, Jeremiah claimed that Yahweh was solely responsible for atmospheric phenomena. He used the imagery of Yahweh having storehouses of rain, hail and snow, which are set in motion by the wind, presumably instigated by his breath (also see Deut 28:12; Job 38:22; and Ps 33:7). The word translated "storehouses" can be used to refer to treasuries that would store precious objects as well as royal weapons. Hail, snow, wind, thunder and lightning were often seen as the weapons that God uses to defeat his enemies. Likewise storehouses could serve for the storage of raw materials such as barley, dates, grain or tithes in general. In the same way God rations out the products from his storehouses as necessary. Cosmic storehouses are not common imagery in the ancient Near East.

11:1-17

Conspiracy Against the Covenant

11:4. iron-smelting furnace. In the ancient world they did not use a blast furnace such

as is used today to produce cast iron. Iron has a melting point of 1537 degrees centigrade, a temperature that could not be consistently achieved by ancient technology. But once the iron is heated beyond 1100 degrees centigrade, it takes a spongy, semisolid form that can be forged. The furnace was usually fueled by charcoal to provide the carbon necessary for the chemical process. The strength of the steel is dependent on the amount of carbon it is able to absorb. The lower the temperature, the more often the process has to be repeated in order to get rid of enough slag to achieve a usable product. While a furnace can certainly be a metaphor of oppression, the fire of the smelting furnace is not destructive but constructive. It is the furnace that transforms the malleable ore to the durable iron product. The Egypt experience transformed Israel into the covenant people of God.

11:5. land flowing with milk and honey. The phrase "flowing with milk and honey" was a common cliché in Scripture designating the fertility of an area. The Canaanites described the land in ritual texts in a similar manner, as did the Egyptian literary text of Sinuhe (early second millennium B.C.) from Egypt. For more information see comment on Exodus 3:7-10.

11:13. as many Baal idols as streets. The phrase is emphasizing the large amount of Baal idols in Jerusalem. A typical city in the ancient Near East had dozens of street corners in residential districts. The text does not imply that each street corner had a Baal image. Nevertheless, Babylonian texts speak of small open-air shrines or niches on street corners or courtyards. One text says that in the city of Babylon there were 180 of them dedicated to the goddess Ishtar. These shrines featured a raised structure with an altar on the top and seem to have been frequented primarily by women.

11:15. consecrated meat. Much of the meat that was consumed in Israel was connected to the sacrificial system and was therefore eaten in specified areas in the temple. Consecrated meat would refer to meat that was used under such circumstances. The irony here is that even as they sit in the temple precincts and partake of a sacral meal, they discuss their wickedness in the table conversation.

11:16. storm as judgment of god. The storm god imagery has already been used several times in the book. God's storm of judgment is accompanied by lightning that ignites the tree that stands for Israel. For more information see comment on 1 Samuel 7:10.

11:18-23
Conspiracy Against Jeremiah

11:21. Anathoth. See comment on 1:1.

11:21. prophesying as a capital crime. Elsewhere in Scripture those who prophesied falsely were legally put to death. Prophecy was a vocation employed throughout the ancient Near East, but capital punishment for false prophecy is known primarily from Israel. Nevertheless the men of Anathoth have not suggested that Jeremiah's prophecies are false. Their threats seek simply to silence him. Speaking a prophecy was a means of effectuating it (just as writing it down was; see comment on 36:23), so they believe that by silencing him (by either threat or murder), they can prevent the disasters he is announcing from taking place.

12:1-17
Jeremiah's Lament and God's Response

12:4. basis of cynical thinking. In the ancient Near East disaster struck when the deity became angry and removed his protection. The people would then be subject to all sorts of problems, many believed to be demonically perpetrated. In Deuteronomy 32:20 God says that he will respond to Israel's wickedness by hiding his face. He would then "see what their end will be"—that is, how well they would fare without his blessing and protection. Here in Jeremiah, God has hidden his face (evident from the drought and famine), but the evildoers are convinced that God will not "see their end" (same phrase as in Deuteronomy) because they are determined to survive on their own

12:5. Jordan thickets. The thickets (literally, "height") of the Jordan is a term that refers to the area where the Jordan River overflows to its junglelike thicket of reeds, bushes and trees, which often became a den for lions. It was a dangerous place and difficult to navigate.

12:9. speckled bird of prey. This word is used only in this context, and many consider it to refer not to a bird at all but to a hyena who is surrounded by birds of prey. This is supported by the Septuagint reading as well as by usage in related Semitic languages, but the text remains difficult.

13:1-14
Belts and Wineskins

13:1. identification of garment. There were two different depictions of the loincloth. One

is a Canaanite depiction of a wrapped cloth that did not pass between the legs, while the other is in an Egyptian depiction of Syrians, where the garment is composed of narrow strips of overlapping cloth that did not pass between the legs. Some of these garments were made of leather, but others were made of linen, as this one was.

13:4. Perath. Perath is a term often used for the Euphrates River, which is over 350 miles north of Anathoth, which would make for two very long round trips! Others have suggested it refers to the Wadi Pharah (symbolically called Perath?), some four miles northeast of Anathoth (referred to in Josh 18:23).

13:12. wineskins filled with wine. This has been a notoriously difficult phrase to interpret. It is possible that Jeremiah is quoting a current proverb about everything having its use; wineskins fulfill their purpose by being filled with wine in much the same way that a hat fulfills its purpose by being on a head. Jeremiah is likely making an ironic statement with a simple proverb, similar to Isaiah 28:23-29.

13:15—14:12

Judgment: Captivity, Drought, Famine

13:18. queen mother. The queen mother was an official title in ancient Israel. It was an office with high rank and official prerogatives, especially when the monarch was a minor (and the queen's husband, the former king, had died). She did not just have influence over her son the king but had great authority of her own. Athaliah was able to seize the power of the throne (2 Kings 11). Since the queen mother had an official position in the kingdom, the writer of the books of Kings mentioned her in nearly every case in conjunction with her son. She was probably afforded rank on the accession of her son as king. There are general parallels in Hittite and Ugaritic texts concerning the office of queen mother. There is no direct evidence of the office in the northern kingdom of Israel. For more information see comment on 1 Kings 2:19. The queen mother mentioned here is most likely Nehushta, the mother of Jehoiachin who sat on the throne briefly in 597 until he was carried off captive to Babylon.

13:18. crowns. The royal crown in Judah was probably a golden diadem worn over a turban (see Ps 21:3; Ezek 21:26). Kings in Egypt wore an elaborate variety of crowns, while kings in Assyria usually wore a truncated conical cap with embroidery or precious stones, and Babylonian kings wore a curved cap that came to a point.

13:19. cities in the Negev. The term *Negev* normally referred to the large desert area south of Judah. In this context, however, it likely denotes the portion of southern Judah dotted with towns and garrisons running from Bethlehem to Beersheba, with Hebron in the middle. It is unclear to what extent these cities came under attack by Babylon in 597, but the ostraca from Arad suggest that Edom posed a threat to them.

13:23. Ethiopian, leopard. In the Egyptian *Instruction of Ankhsheshonqy* a similar saying ("There is no Nubian who leaves his skin") occurs in a sequence of results that are inconceivable (e.g., "There is no fool who finds profit"). In the Aramaic *Words of Ahiqar* there is a conversation between a leopard and a goat in which the former offers the latter his coat so that the goat can be warm. The goat replies that the leopard only wants to take his skin away, an exchange of coats.

13:26. skirts covering face. This does not describe women being carried away into captivity but enemy soldiers ranging through the town, raping and pillaging. Judah is here portrayed metaphorically as suffering a similar fate.

14:12. fasting. Fasting was total abstention from food for a temporary period of time. The Day of Atonement was the only national fasting day listed in Scripture, although public fasting was called at special times, especially in the postexilic period. Individuals fasted in times of mourning and penitence. Fasting is little attested in the ancient Near East outside of the Bible. When it does occur, it is usually in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). In connection with repentance the Israelites would fast in order to remove any sin or other obstacle that may have led to their subjection.

14:13—15:21

False Hopes and Only Hope

14:22. Israelite meteorology. Like most people from the ancient Near East the Israelites

viewed seasonal climate as coming from the four winds derived from the four corners of the earth. God not only controlled the winds but created them. The north wind was associated with cold conditions, dispersing rain and snow. The south wind was at times the bringer of the sirocco. The east wind brought a dry wind from the wilderness. The west wind came in from the Mediterranean Sea and was described as the "father of rain." It is clear in this verse that the common Israelite would have thought it absolutely ridiculous to imagine that the skies rained all by themselves. Weather did not happen independent of deity.

15:4. actions of Manasseh. Second Kings 21:3-7 and 2 Chronicles 33:3-7 describe Manasseh's wicked acts, which included astral worship and Baal altars even within the temple itself. He was considered to have done the most to combine the worship of Yahweh with Canaanite cultic ritual. Though he later repented (2 Chron 33:12), his sins were so great that their consequences were not to be overturned by God.

15:7. winnowing at the gate. After grain has been threshed, it is winnowed with the winnowing-fork, with the remainder of the chaff removed with the winnowing shovel. This activity did not take place at city gates but on threshing floors out in open countryside. Here, however, winnowing is a metaphor for judgment (since winnowing separated the good from the bad), and judgment did take place in the gate areas. This verse could refer to the decisions of a conqueror made at the city gates determining who would be put to death, who would be deported and who would remain. Alternatively, the term translated "land" is sometimes a reference to the netherworld. In this case the imagery would still be of the judgment of God at the gate of the netherworld consigning people to death.

15:8. destroyer. Noon was considered the most secure time of the day and thus the time for surprise attacks. The destroyer here represents the Chaldean army, which is being prepared by God to attack his people. This is not the same word as used for the destroying angel in the Passover (Ex 12:23), but it is used of the military operations conducted by the Lord in 47:4 and 51:55.

15:20. wall of bronze metaphor. Bronze gates built by the Assyrians have been found at Balawat. They were decorative features on strong walls. Thutmose III of Egypt described himself as a wall of iron and bronze for Egypt, meaning that he was like an impregnable fortress city.

16:1—17:18

Disaster Approaching

16:4. no burial. Burial was a mandatory duty in ancient Israel. To be left unburied, vulnerable to the elements and beasts, was the worst curse imaginable. Furthermore, as there was no clear distinction between body and soul in the Hebrew mentality, death was not regarded as the separation of those two elements. Thus one who had no burial was still thought to be conscious (in some form) of his fate. In the ancient Near East those who were left unburied were restless until a proper burial had been performed.

16:5. funeral meal. The Hebrew term for funeral meal is used only here and in Amos 6:7, although it is well known in many other Semitic traditions. Extrabiblical information concerning the funeral meal have been found in Ugaritic texts, Aramaic texts from Elephantine (Egypt) and inscriptions in Punic, Nabataean and Palmyrene. In these examples the funeral meal was often held in a banquet hall with an excess of drinking and inappropriate behavior. The context in Amos 6:7 suggests the same type of atmosphere. Whatever the Israelite custom, Jeremiah was forbidden to participate (as he was forbidden to attend marriage ceremonies).

16:6. mourning rites. The rites mentioned here were both forbidden in Israelite tradition (see comments on Lev 19:28 and Deut 14:1). Slashing oneself is also mentioned in 5:7 in the context of Baal worship.

16:20. idols not gods. See comments on 10:5.

17:1. engraved tablets. The iron-engraving tool referred to here is used for etching permanent inscriptions on stone, while the flint (emery-stone) was used in engraving gems. Their hearts are here portrayed as an extremely hard writing material.

17:1. inscribed altar horns. The horns of the altar were protrusions fixed on the four corners of the altar. Though they functioned to provide a means to secure the wood and animals on the altar, they were also where the blood of the animal was dabbed to purify the altar from defilement. The imagery suggests that the sins of Judah will be permanently inscribed there, with the result that sacrifices cannot expunge them.

17:2. Asherah poles and spreading trees. See comment on 2:20.

17:3. high places. See comment on 1 Samuel 9:12.

17:6. salt land. The presence of salt in the land was a curse. There are a number of texts from Mesopotamia that describe a progressive salinity in the soil of southern Iraq in the third and second millennia. When it reached a cer-

tain point of salinity, the land was unable to be used for agriculture and was thus abandoned, sometimes for a period of centuries.

17:11. partridge behavior. The partridge lays her eggs in shallow nests on open ground. Though the eggs are therefore vulnerable to predators or to accidents, the bird lays many eggs, and both the male and female brood over them. The analogy here of laying eggs it does not hatch thus refers to hopes and plans that never come to fruition. There is no evidence that partridges hatch the young of other birds, as the NIV translation suggests.

17:13. written in the dust. This problematic passage either has the idea of a name that is written in the dust, which will disappear quickly, or a name written in the earth (or underworld). This word is not one of those usually translated "dust," but it is the same word used in 15:7, where it could mean either land or netherworld. The latter would make the best sense of the context. To have one's name written in the netherworld would mean being consigned to death. To be written in heaven's ledgers meant that one was destined for continuing life. To be blotted out from that book of life and to have one's name recorded in the ledgers of the netherworld meant doom. Psalm 88:4 expresses the same concept using different terminology.

17:13. deity as spring of living water. "Living" water refers to running water in contrast to the stagnant or contaminated water that gathers in cisterns or pools.

17:19-27

The Sabbath

17:19. gate of the people. The "gate of the people" (literally, "the gate of the sons of the people") is otherwise unknown. The gate seems to have been in the north wall of the city, where the kings left and entered the city.

17:19. number of gates in Jerusalem. There were numerous inner and outer gates in Jerusalem during the period of the divided monarchy. There were at least six outer gates and numerous gates that protected the temple and palatial enclosures. The gates were the areas where public proclamations would normally be made.

17:22-24. carrying a load. In Isaiah 46:1-2 the "burden" is made up of images that are carried around in procession, but Nehemiah 13:15 uses the same word to refer to agricultural products being brought in on the Sabbath by merchants. Either one could be referred to here.

18:1—19:15

The Lesson of the Potter and the Pot

18:2. potter's house. The potter's house, or workshop, needed to be near the clay sources and where water was available. It needed space for the potter's wheel, a space for treading, a kiln, a field for storing vessels and a dump for those discarded items. Once the pot was fired there was painting to be done. The typical hand-turned wheel was made of two pieces of stone. The upper stone had a cone-shaped protrusion on the bottom that fit into a corresponding recess in the top of the bottom stone and served as a pivot.

18:3-4. shaping a vessel on the wheel. There were two kinds of potter's wheel, a slow or hand-turned wheel (or a tournette), and the fast or kick wheel, which was rotated by foot. The potter shaped the clay vessel by hand on the smaller revolving stone that was on top. The lower stone provided the momentum and quickened the turning. The potter rotated the lower disk with his foot. This created a centrifugal force on the clay, which was shaped by the potter's hands as he exerted force to shape it against its own force.

18:13. Virgin Israel. The term translated "virgin" here refers to a woman who is still legally under her father's supervision. Comparable to such a girl who betrays her father's trust and honor is Israel's unfaithfulness to Yahweh, often described in the Old Testament as "playing the harlot." In Ugaritic texts this same word is used as a title for Baal's sister, "Virgin Anat," whose behavior is less than commendable and is thought by some to be promiscuous (though the evidence is not as strong as previously thought).

18:14. snow of Lebanon. The snow of Lebanon probably refers to the highest mountains of Lebanon (e.g., Qurnat as-Sawda), where snow does not leave until late August. At any rate, many of the high peaks are snowcapped for the better part of the year.

18:15. roads not built up. A paved road was one that was built up. Paving was an expensive undertaking. In Babylon dirt and gravel were used to build up the roadbed. Then bricks were laid in asphalt to form a foundation. Finally, limestone slabs were laid on top, and the crevices were filled with asphalt. This process was only affordable on the most prominent streets in a city. Excavated examples occur in Palestine as early as the Middle Bronze Period. Cobblestone streets using pebbles and pottery shards set in clay were the norm. Sometimes they were coated with a

lime plaster. There is no evidence of paved country roads during this period. Even an unpaved road, however, could be built up with dirt so that water flowed off it to the sides. The alternative was a road that had simply been traveled often enough to cut a path. These were etched into the terrain and tended to gather water and become mud holes.

18:20. digging a pit. Pits were dug in the ancient Near Eastern world for a variety of reasons. A great number of pits found in archaeological excavations were for storage of ceramics, burying rubbish or, less often, to create a makeshift prison for criminals. The terminology here is borrowed from hunting and trapping practices, where pits and snares were used.

19:1. type of pottery. The type of pottery here is described as a "flask," a word used twice in Jeremiah 19 and in 1 Kings 14:3 (where it is a container for honey) for storing liquids. Its Hebrew name, *baqbuq,* suggests the sound made by a wide-bellied bottle with a narrow neck. Because of the narrow neck, it could not be mended. This type of vessel was used throughout Palestine in the Iron Age.

19:2. Valley of Ben Hinnom. The Valley of Ben Hinnom was on the south side of Jerusalem and joined the Kidron Valley at the southeast corner of the city. It became infamous for Baal worship because of the acts of Ahaz and Manasseh. Josiah defiled the region in order to prevent future idolatrous acts.

19:2. Potsherd Gate. The location of the Potsherd Gate, mentioned only here in Scripture, is unknown. It may have been the same as the Dung Gate (known from various passages in Nehemiah), as both dung and pottery were among the items of trash thrown into the Valley of Ben Hinnom. If the Potsherd Gate was adjacent to the valley, it was on the southeastern side of Jerusalem.

19:5. burning sons and daughters. See comment on 7:31.

19:9. cannibalism in the ancient Near East. Cannibalism existed in the ancient Near East during times of famine or siege. The cities of Samaria (2 Kings 6:24-31) and Jerusalem (Lam 4:10, and later during the war with Rome, according to Josephus) both experienced cannibalism. Furthermore, "eating the flesh of one's children" was a typical curse form in Mesopotamia. There are sparse references in Mesopotamian sources concerning cannibalism for the same purposes mentioned in Scripture (dire famine conditions, city under siege).

19:10-11. smashed as pots. This imagery is known as far back as Sumerian times. The *Lament over the Destruction of Sumer and Ur* states that the people of Ur were smashed as if they were clay pots.

19:13. burning incense to astral gods. Sacrifice to pagan astral gods was often done on the roofs of houses (see 2 Kings 23:12; Zeph 1:5). Ninsun, the mother of Gilgamesh in the Mesopotamian Epic of Gilgamesh, ascended the roof to offer incense to Shamash, the sun god. The same ritual is described in the Keret Epic from Ugarit. (Also see the comment on 8:2).

20:1-18

Confrontation and Imprisonment

20:2. stocks at the Upper Gate. The meaning of the term translated as "stocks" is not certain. It also occurs in Jeremiah 29:26 and 2 Chronicles 16:10 ("house of stocks"). It was most likely a device that confined the body in a stooped position or perhaps simply a dungeon or guardhouse. At any rate, it is clear that Jeremiah was incarcerated.

20:11. divine warrior. The idea that God fought as a partner in battle was a common theme in the ancient Near East. Victories were attributed to deities in both Egypt and Mesopotamia. The encounter was initiated by the deity itself, who then fought alongside the monarch (see comment on 1 Sam 4:3-7). In Egypt regiments were named after the god under whose standard they fought. In Canaan the divine warrior was identified as one who devastated nature. However, it was recognized by these societies that the gods also participated through the use of individual agents who had been commissioned to do the god's bidding in battle.

20:12. kidneys as seat of intelligence. The NIV's "heart and mind" translates the Hebrew "kidneys and heart." In the ancient world a number of human organs were held to have psychical functions, including the kidneys, which were seen to be the center of the affections and hidden motives. The kidneys could be troubled (Job 19:27; Ps 73:21), be "tested" by God (Jer 11:20) and rejoice (Prov 23:16). The kidneys also instructed (Ps 16:7), a concept known from Ugaritic texts. Akkadian texts tend to connect these abstract notions to the liver rather than the kidneys.

20:14-18. cursing one's birth. In the *Myth of Erra and Ishum* the governor of the city that is being destroyed is portrayed as expressing to his mother a wish that he had been stillborn or obstructed in the womb so that he would not have been born to this destiny.

21:1-14

God's Pronouncement of Judgment on Zedekiah

21:2. Nebuchadnezzar's attack of Jerusalem. In 589 Zedekiah had decided to withhold tribute, relying on the new, anti-Babylonian Egyptian pharaoh, Hophra, for support against the Babylonians. On January 15, 588 (by the Tishri calendar, 587 by the Nisan calendar) Nebuchadnezzar's troops arrived at Jerusalem and blockaded the city, while eliminating any potential sources of aid, including the Egyptians (see comment on 34:21). Other fortified cities were destroyed, and then full siege of Jerusalem began as the Babylonians worked toward creating a breach in the northern walls. The wall was breached in mid-August of 586.

21:7. devastations of siege. The hardships of the siege were significant. The whole idea of siege is to drive the inhabitants to the extremities of hunger and thirst so that they capitulate without a fight. Famine in this case is not an environmental condition but the results of the siege when food supplies have been exhausted. Overcrowded conditions tax the infrastructure of the city, and when water becomes scarce, people will drink even water that has been contaminated. As a result illness often reaches epidemic proportions during siege.

21:7. Zedekiah's eventual fate. See the note on 32:4. It appears that Zedekiah died in captivity after being handed over to Nebuchadnezzar.

21:14. forests of Jerusalem. Rather than referring to the adjacent woods, the term "forest" is an expression used in connection with the royal palace (see comment on 1 Kings 7:1-12) because of the large amounts of cedar used in its construction.

22:1-30

The Fate of Kings

22:5-6. making the palace a ruin. In the *Myth of Erra and Ishum* the destruction of towns and the royal palace is treated in similar terms. Erra expresses his intention to allow wild beasts from the mountains and the countryside to enter the city and devastate the public areas. He specifically states that he will make the palace a ruin.

22:6. Gilead and the summit of Lebanon. Gilead was on the east side of the Jordan River. The northern limits of Gilead were vague, and the east was bounded by desert. The summit of Lebanon refers to its forests (also see Zech 10:10). Both Gilead and Lebanon were known for the lush productivity of their forests.

22:10. exiled king. The exiled king mentioned here was probably Shallum, the fourth son of Josiah, who succeeded his father in 609/8 B.C. He took the throne name of Jehoahaz. After he had been king of Judah for three months, he was then exiled to Egypt by Necho II, where he later died. He was condemned by the writer(s) of Kings as a wicked ruler.

22:13. forced labor for palace building. This may be a reference to a rebuilding and enlargement of Solomon's palace by Jehoiakim or to another palace altogether. At Ramat Rahel a number of structures have been found that possibly date to the time of Jehoiakim, together with a large collection of stamped jar handles bearing the phrase "belonging to the king." Since the king needed to pay a heavy tribute to Egypt, he may have engaged in the forced labor project. Forced labor without compensation is reminiscent of practices during Solomon's time (see comment on 1 Kings 11:28) and of practices periodically observed in both Egypt and Babylonia. It is a form of taxation.

22:14. cedar paneling. Cedar paneling was considered the most luxurious and expensive material that could be used. It was used almost exclusively in palaces and temples. Wall painting is not widely attested in Israelite excavations but is well known in the larger Near Eastern context. Frescoes such as the coronation scene at Mari attest to the preference for red and orange in interior decoration. This characteristic is also referred to in the wall decorations in Ezekiel 23:14.

22:18. Jehoiakim. See comment on 1:3.

22:20. Lebanon, Bashan, Abarim. These are three mountainous areas; Lebanon was in the north, Bashan in Transjordan in the northeast, and Abarim in Moab to the southeast. Whether these mountains represent places for mourning, homes of allies or centers for natural resources is uncertain.

22:24. signet ring. The term "signet" probably refers to a seal, which could have been either a cylinder seal worn with a cord around the neck or a stamp seal embedded in a ring, as found here. The former was very common in Mesopotamia, while the latter was used in Israel. Thousands of cylinder seals and stamp seals have been found in Mesopotamia and Syro-Palestine, respectively. They were a sign of authority, identification and ownership. By pulling off the signet ring (i.e., Jehoiachin), Yahweh was effectively rejecting his kingship.

22:25. Jehoiachin's fate. Jehoiachin was only

on the throne for three months before he was forced to surrender to Nebuchadnezzar. He was taken into exile in Babylon, where he spent the rest of his life (see 2 Kings 25:27-30). He is mentioned on a rations list from Babylon, confirming the biblical information that he was fed at the king's table.

23:1-8

The Branch

23:5. branch as royal heir. The term "branch" appears in the messianic passages such as Zechariah 3:8 and 6:12, where it is attributed to Zerubbabel. Most consider it a technical term referring to the rightful heir of an established dynastic line—in Israel, a future Davidic king who would restore the monarchy. Similarly, an early third-century B.C. Phoenician votive inscription honoring Melqart that has been found in Cyprus refers to a legitimate "branch" of the Ptolemaic dynasty of Egypt. The Dead Sea Scrolls from Qumran do not use the term in a messianic sense, but the kingship sense does occur in Ugaritic and Assyrian texts. For instance, Tiglath-Pileser III is described as the shoot or scion of the city of Baltil (Assur), who brings justice to his people. The statement that he will do what is right and just in the land also finds a parallel in the reform declarations commonly made by Babylonian kings. Zedekiah issued such a proclamation in 588 (see comment on 34:8-11).

23:9-40

False Prophets

23:13. prophesying by Baal. Baal prophets had found support in Samaria as early as the middle of the ninth dynasty (Ahab and Jezebel). Two centuries have passed, and though the dynasty of Ahab had been wiped out, syncretism had never fully departed from the north. When the northern kingdom fell in 721, the Assyrian deportation policy had brought foreigners in to mix with the population that remained of the northern kingdom of Israel. Second Kings 17:24-34 describes the resulting syncretism that plagued the area. Undoubtedly these prophets were spreading false hopes that Baal, a fertility god, could break the drought (v. 10) and restore the land's productivity.

23:18. standing in the council of the Lord. The council of the Lord was probably the assembly of beings who stood in his heavenly court, similar to the council of holy ones of Psalm 89:7. Deities from other cultures in the ancient world were assumed to have divine councils where various gods and goddesses assembled to conduct their business. Prophets were often viewed as being privy to this assembly's actions (as in 2 Chron 18:18). For more information see the comments on Isaiah 6:8; 40:13-14.

23:19. storm of the Lord. See comment on 11:16.

23:23. God nearby, far away. Yahweh is affirming both his transcendence (above and beyond the created world) and his immanence (integrally involved in the created world) in this passage. Moreover, he is affirming his omnipresence, as no one can be hidden from him, and he is aware of everything, no matter how remote or obscure. In the broader religious spectrum of this time period a shift had taken place from seeing deities associated with the sun, aloof and removed, to deities associated with the stars and planets, who were seen as more approachable and involved. Another possibility is that "near and far" may combine the aspects of a locally involved patron deity and a powerful cosmic deity. Few gods in the ancient world would have been believed to fit this profile.

23:25. dreams as form of revelation. Dreams were one of the standard means for receiving messages from a god in the ancient Near East (see Jacob in Gen 28:12; Joseph in Gen 37:5-11; Nebuchadnezzar in Dan 2, 4). They appear in Old Babylonian omen texts, along with the reports of the examination of sheep livers, anomalies in the weather and birth of animals, and other presumed signs of the divine will. Among the most famous is the dream of Gudea of Lagash (c. 2150 B.C.), who was commanded in a dream to build a temple by a figure reminiscent of the apocalyptic figures in Daniel's dreams and Ezekiel's call narrative (Dan 7; Ezek 1:25-28). The royal correspondence from Mari (c. 1750 B.C.) contains around twenty prophetic utterances involving dreams, always from nonprofessional personnel. These portents were taken quite seriously and studied. The professional priesthood in both Mesopotamia and Egypt included instruction in the interpretation of dreams and other omens (see the comment on Dan 2:4).

24:1-10

Good Figs, Bad Figs

24:1. circumstances of Jehoiachin's exile. See the comments on 22:5 and on 2 Kings 24:12.

24:1. Nebuchadnezzar. Nebuchadnezzar II (r. 605-562 B.C.) was the second of the Chaldean kingdom centered at Babylon which ruled the ancient Near East for nearly a century. He was

the son of Nabopolassar, a Chaldean who declared independence from Assyria in 626 B.C. In his long reign of forty-three years Nebuchadnezzar pacified Egypt (though he was unsuccessful in conquering it) and literally rebuilt Babylon. In fact, most of the city of Babylon that was uncovered by modern excavators dates from Nebuchadnezzar's reign. The Chaldean kingdom was primarily his creation, and it crumbled only a generation after his death. This great king was remembered in many cultural traditions, including sources from Greece (who knew him as a great builder) and Israel (not only the biblical material, but later rabbinic sources).

24:2. early ripening figs. The branches on fig trees from the previous year bore early fruit in late May/early June, even before the new leaves sprouted. The new branches brought forth figs at least three months later.

25:1-38

Seventy Years of God's Wrath

25:1. chronology. The fourth year of Jehoiakim and the first year of Nebuchadnezzar II of Babylon has been synchronized as 604 B.C. The Babylonian king had just defeated the Egyptians at Carchemish and prepared to make Judah its vassal.

25:9. Nebuchadnezzar as Yahweh's servant. The kings of nations who came against Israel are often described as servants of God, in that they are carrying out the will of Yahweh. Since Yahweh is unconquerable, any conqueror is doing his bidding as his rod of punishment. It does not mean that the Babylonian king was a worshiper of Yahweh. Cyrus is described in a similar manner, though there is no evidence that he worshiped Yahweh (Is 44:28—45:1). In ancient Near Eastern treaties the vassal became the servant of the suzerain, and his armies became the suzerain's to command. They were at the disposal of the overlord and did his will.

25:10. millstones and light of the lamp. The cessation of the most familiar daily activities left nothing but an eerie stillness, with no food production and a fearful and terrifying darkness.

25:11. seventy-year period. Though the expression "seventy years" could denote generally an individual's life span, as it does in a statement of Esarhaddon of Assyria, it can also make reference to a specific span of time. The period of seventy years was approximately from the destruction of the temple in 587 B.C. to its rededication in about 515 B.C. It also represents the time that elapsed from the initial subjugation of Israel under Nebuchadnezzar in 605 to the return from exile by Cyrus's decree in 535.

25:12. seventy-year exile. When Esarhaddon of Assyria discusses his father Sennacherib's destruction of Babylon, he views it as Marduk's judgment of his own city. Marduk's anger with the people of Babylon led him to decree a seventy-year exile of himself from the city. Esarhaddon rebuilds the city only a decade after its destruction and announces that Marduk reduced the exile to only eleven years. Little is known of Palestine during the exile and partial reoccupation of the land. The deportation followed the destruction of Jerusalem in 586 B.C. Only the leading citizens went into exile. Signs of destruction have been found throughout Judea, but not everything was destroyed. The peasants continued their life in the area, and some even worshiped amid the ruins of the temple (see 41:4-5). Judah became a Babylonian province, with headquarters at Mizpah, north of Jerusalem.

25:15. wine of wrath. The image of wine as a cup of punishment is found often in the Old Testament (Ps 11:6; 75:8; Jer 49:12; 51:17; Hab 2:15-16). It is especially clear from Isaiah 51:17 that the cup results in drunkenness (staggering) and not death. Those forced to drink this cup lose all control of themselves and all ability to defend themselves (v. 27). They become senseless.

25:19-26. geographical coverage. The geographical context of these areas is quite wide. From Egypt in Northeast Africa, Jeremiah lists the kings of Uz (probably the Negev), the Philistine cities along the coast, the Transjordanian states (Edom, Moab, Ammon) and back to the coastal regions in the north (Phoenicia). The coastlands beyond the sea refer to Cyprus and other islands. Jeremiah then traverses south across northern Arabia (Dedan, Tema and Buz; Akkadian Bazu in Arabia). He skips Mesopotamia (the land of Babylon) and travels to southwest Iran (Elam and Media). He then summarizes by adding "all the kings of the earth." The specific areas mentioned were all terrorized by Nebuchadnezzar.

25:26. Sheshach and the use of cryptograms. Sheshach is an "atbash" for Babylon. The atbash was a code in which the letters of a name counted from the beginning of the Hebrew alphabet are exchanged for letters counted from the end (see also the comment on 51:1). In English A would be represented by Z, B by Y, and so on. In the previous passage Elam becomes Zimki in Hebrew, and Babylon *(bbl)* becomes Sheshach *(shshk).* The atbash was used to disguise the identity of the adversary. There

is no atbash in Akkadian, since cuneiform uses syllables, not an alphabet.

25:30. shouts of those who tread grapes. The shout mentioned here is used both for those who tread grapes and for those who fight in battle. Yahweh's roar is like the shout of those who tread grapes. Treading grapes marked the end of the harvest season and was used as an opportunity for community celebration before the onset of winter. It was characterized by a tumult of rejoicing, sometimes heightened by overindulgence in the wine being produced.

25:34-38. shepherd/leader metaphor. The metaphor of national leaders as shepherds over their people (sheep) is a very common one in the ancient Near East. It portrayed the ruler's responsibility and authority. Just as a sheep owner would call his shepherds to account for their sheep, so deity held kings accountable for the welfare of their people. Here it is no longer the sheep who are being slaughtered but the shepherds.

26:1-24

Death Sentence for Jeremiah

26:1. chronology. The phrasing used here refers technically to what is termed the accession year. This was the initial portion of the year between when a king first came to the throne and the new year, when his first year officially began. The period of the accession year of Jehoiakim was about from September 609 B.C. to April 608 B.C.

26:6. Shiloh. See comment on 7:12.

26:8-9. prophecy as treason. Throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. In Assyrian king Esarhaddon's instructions to his vassals, he requires that they report any improper or negative statements that may be made by anyone, specifically naming prophets, ecstatics and dream interpreters. One can perhaps understand why a king would be inclined to imprison a prophet whose very words might incite insurrection or impose doom.

26:10. topography of Jerusalem. Jerusalem is situated on a limestone plateau about eight hundred meters above sea level in the central hill country of Judea, on the border of the desert. It consists of two main ridges surrounded by the Hinnom and Kidron Valleys, and the small depression of the Tyropoeon. The eastern ridge included the original city of David and the temple complex. The latter is on the northern and highest section of the ridge, thus one had to go up from the palace to the temple. The New Gate is also mentioned in 36:10, but its exact location is unknown. Speculation usually places it on the south side of the court as a passage between the temple precinct and the royal palace just to the south.

26:18. chronology. Hezekiah ruled a century earlier at the end of the eighth century. Here it is evident that prophetic messages were recorded and remembered.

27:1-22

Under the Yoke of Babylon

27:1. chronology. There is a major problem in this verse because the Hebrew text identifies the setting as the accession year of Jehoiakim yet in the following verses identifies the king as Zedekiah. Most interpreters think that this phrase has been misplaced here from 26:1. The chronological notation should instead read the fourth year of Zedekiah, 594 (see 28:1).

27:2. yoke construction. The yokes used for draft animals consisted of a wooden frame that sat across the top of the necks with pegs fitting through holes on either side of the neck. Under the neck the pegs were connected with straps. Yokes were used for certain human tasks as well as on plow animals. Assyrian inscriptions from the ninth and eighth century depict captives being transported or laboring in such yokes. Bars on either side of the neck are clearly visible. For more information concerning yoke imagery see comment on Nahum 1:13.

27:3. occasion for gathering of envoys. The envoys from Edom, Moab, Ammon, Tyre and Sidon all conspired with Zedekiah to revolt against Babylon in 594 B.C. The meeting was probably in response to a domestic rebellion in Babylon against Nebuchadnezzar in December 595 and January 594, which is described in one of the Babylonian Chronicles.

27:6. subjection of wild animals. Just as the yoke symbolized the subjection of domesticated animals, the prophecy goes on to suggest that wild animals will likewise come under the domesticating hand of the Lord. There are numerous depictions on wall reliefs of Assyrian kings hunting wild animals, such as lions and other large carnivores. The domestication of wild animals was also at times included in utopian visions of a kingdom controlled and at peace (see comment on Is 11:6-8).

27:7. survey of Neo-Babylonian empire. The Neo-Babylonian empire was founded by Nebuchadnezzar II's father, Nabopolassar, a Chaldean who freed himself from Assyrian

rule in 626 B.C. The founder reigned until 605 B.C. and thus contributed to the end of Assyria. He oversaw the great victory of the Babylonians over Egypt at Carchemish, causing most of Western Asia to fall into the hands of the Babylonians. Nebuchadnezzar inherited this powerful state in 605 B.C., becoming its most famous king. He literally rebuilt the city of Babylon and solidified Babylonian control throughout the Near East and even attacked Egypt (although unsuccessfully). His long reign lasted until 562 B.C. He was briefly succeeded by three descendants, who reigned a total of six years. The last king of the dynasty was Nabonidus, who had apparently been a high official during Nebuchadnezzar's reign. He reigned until 539 B.C. when Babylon was captured by the Medo-Persians under Cyrus the Great. Although Nabonidus is not mentioned in Scripture, his son Belshazzar figures prominently in the book of Daniel as king. Since Nabonidus abandoned Babylon and lived in Arabia for about ten years, Belshazzar took the place of his father for that time.

27:8-11. prophets advising submission. Though the biblical prophets counseled submission, such advice is unattested in ancient Near Eastern prophetic texts. Kings in the ancient world generally had high opinions of themselves, and prophets had a reputation for telling kings what they wanted to hear. If there was submission to be advised, it was submission to a god through certain rituals, not political submission. In contrast, there were diviners who might advise against one political action or another on the premise that the omens were not favorable for a particular action at a particular time.

27:9. categories of professional. Five categories of experts are identified here. The prophets received messages from deity and passed them on. Diviners read omens, most of which came from the examination of the entrails of sacrificial animals (see comment on Deut 18:11). Dreams were believed to be an important form of revelation throughout the Near East. Interpreters used a variety of academic resources (see comment on Dan 2:4). The medium was one who made contact with the dead and offered advice from them. The last category, the sorcerer, was one who specialized in spells and incantations. In seventh-century letters to Assyrian kings the five principal classes of scholarly experts serving the king were astrologer/scribe, diviner, exorcist, physician and chanter of lamentations.

27:16. articles from the Lord's house. The articles here probably refer to all types of movable objects in the temple, including vessels and utensils. Nebuchadnezzar carried off many of the temple treasures in the first capture of Jerusalem in 597 B.C., but there were still some accessories that were carried off eleven years later. For more information see comments on Daniel 1:2 and 5:2. For description of the articles see the various comments in 2 Chronicles 4.

27:19. pillars. The bronze pillars (see comment on 1 Kings 7:15-22) were just outside the forecourt situated in the courtyard of the temple. They were given names (Jachin and Boaz), and evidently the king stood by one of them on special occasions (2 Kings 11:14; 23:3).

27:19. sea. The molten sea (see comment on 2 Chron 4:2-5) was a very large bronze basin over fifteen feet in diameter and over seven feet high. It rested on the backs of twelve bronze oxen, arranged in threes, with each group of threes facing in different directions. The vessel held about ten thousand gallons and was for ritual washing.

27:19. movable stands. The movable stands were ten smaller bowls used for washing sacrificial animals. These were supported by decorated stands mounted on four mobile bronze wheels. Each basin had the capacity of two hundred gallons. Archaeologists have found a bronze stand that would have held just such a basin dating from the twelfth century B.C. The stand had wheels and was decorated with winged composite creatures (see 1 Kings 7:29).

27:20. Jehoiachin's exile. See the note on 2 Kings 24:12. A Babylonian administrative text describes tribute from Iakukinu (Jeconiah, or Jehoiachin) to Nebuchadnezzar.

27:22. sacred things taken into exile and brought back. Jerusalem was not the only temple in the ancient world that had its articles carried off and returned at a later date. For example, the statue of Marduk was plundered from Babylon on a number of occasions (e.g., by the Hittites in 1595 B.C., by Tukulti-Ninurta I of Assyria, c. 1235 B.C., and by Sennacherib in 689 B.C.). Eventually the statue of the deity was returned to its original place in Babylon.

28:1-17

Hananiah and the Yoke

28:1. chronology. Given the time necessary for King Zedekiah to organize his government (see 27:3; 51:59) after the capture of Jerusalem in 597 by Nebuchadnezzar, it seems most likely that the reading of "in the fourth year" is correct. This would date the event to 594-593 B.C. The proximity to the meeting of ambassadors to plan a response to the revolt against

Babylon in December 595 also argues for this date.

28:1. Gibeon. See the comment on Joshua 9:3. Like Anathoth, Gibeon (el-Jib) is located in Benjamin (six miles northwest of Jerusalem), making it likely that Hananiah and Jeremiah were acquainted prior to this incident.

28:10. breaking the yoke. Some commentators think it more probable that it is the pegs that hold the yoke in place on either side of the neck that are being broken, rather than the crossbar (for yoke construction see comment on 27:2). This would make sense of the choice of terms used throughout the passage.

28:13. contrast between wooden and iron yoke. It is likely again that it is the yoke pegs that are visualized as made from iron. Clearly a wooden yoke could be broken, providing a dramatic gesture of release from oppression. However, iron could not be broken so easily.

28:14. subjection of wild animals. See the comment on 27:6.

29:1-32
Letter to the Elders of the Exiles

29:1. letter to exiles. Evidence of correspondence between Jerusalem and the exiles taken away in 597 is found in this letter, presumably delivered by a Babylonian messenger or a merchant traveling to Mesopotamia. There is ample precedent for the transport of both private and official correspondence throughout the Old Testament period. The Lachish Letters represent the type of internal communication employed in the kingdom of Judah during the Assyrian invasion of 701. For evidence that this letter was received and respected see Daniel 9.

29:2. queen mother. The queen mother in Judah apparently had a high status and was both an influence on her son the king as well as a power in her own right (see comment on 1 Kings 2:19 and the need to remove her from power in Asa's time in 1 Kings 15:13). In this case we know that Jehoiachin's mother was named Nehushta (see 2 Kings 24:8; Jer 13:18) and that she was also stripped of her crown and attendant power when they were taken together into exile.

29:2. exile of craftsmen and artisans. In choosing persons to take as hostages in the exile of 597, Nebuchadnezzar naturally took members of the royal family and their advisers among the nobility and priesthood. Craftsmen (see 10:3) and skilled artisans might have been useful to the king's ambitious building plans, but they also represented the relatively wealthy middle class of Judah. Most importantly, the skills of craftsmen and artisans were generally passed on through families, generation to generation, and often comprised trade secrets. The Babylonians would desire to preserve these and benefit from them. This same respect for the guilds is seen in Utnapishtim's inclusion of artisans in his ark in the Gilgamesh flood story.

29:10. seventy-year period. There are a number of different ways that the seventy-year period can be calculated. The capital city of Assyria, Nineveh, fell in 612. In 605 the Babylonians gained nominal control of all Syria-Palestine. Twice the Babylonian armies came against Jerusalem and went away with exiles, 597 and at the destruction of Jerusalem and the temple in 586. Any of these four can be identified as starting points. On the other end, Babylon fell in 539, and the first return of deportees took place in 538. The temple was rebuilt in 515. While it is therefore not difficult to put together a scenario that involves a literal seventy years, it should also be recognized that seventy is often a symbolic number representing a period of divine judgment. When Babylon was destroyed in the seventh century by Sennacherib, it was said that Marduk, the god of Babylon, had decreed seventy years as the period that it would lay in ruins. Sennacherib's son, Esarhaddon, however, used a trick of interpretation to reduce the number to eleven and had the city rebuilt.

29:26. stocks and neck irons. The word used for "stocks" here only appears twice elsewhere (2 Chron 16:10 and Jer 20:2), and in neither case is its meaning clear. Some have suggested a narrow or low prison cell, but the addition of "neck irons" in this passage suggests a restraining device of some sort in which the prophet could be held and displayed in a humiliating and uncomfortable stance (see Jeremiah's complaint in 20:7-8). Further identification will have to await future discoveries.

30:1-24
Oracle of Restoration

30:2. books. The book of Jeremiah is one of the few prophetic works in the Bible that makes explicit mention of writing down the words of Yahweh to the prophet. Jeremiah was aided in this task by Baruch, a professional scribe (see 36:2-4). In this passage the word translated as "book" is a general term for a written document, and in that time period it meant a scroll. Papyrus scrolls were in use in Egypt from the third millennium, and the climate of Egypt has allowed for the preservation and recovery

of numerous documents. In Mesopotamia, where clay tablets had long been the favored medium, scrolls are attested beginning in the Neo-Assyrian period (eighth century). Israelites were probably using scrolls during most of the Old Testament period, but little evidence has been recovered prior to the second century Dead Sea Scrolls (of these, over 90 percent are parchment). The oldest example is a few lines of a letter dated to the seventh century B.C. found in the caves at Wadi Murabba'at. An average papyrus scroll would contain about twenty pages of papyrus sheets glued together. The resulting scroll would be about fifteen feet long and about one foot tall. Parchment (using animal skins) was much less in use during the Old Testament period but was known.

30:14. situation with allies. Jehoiakim of Judah had been put on the throne by the Egyptians in 609 and remained loyal to them until Nebuchadnezzar's domination made that impossible. After the fall of Ashkelon to Nebuchadnezzar in 604, Jehoiakim paid tribute to Babylon for a few years. But when Nebuchadnezzar failed in his attempted invasion of Egypt in 601, Jehoiakim again sided with Egypt and stopped sending the yearly tribute east. Thus in 597 when Nebuchadnezzar undertook his punitive raid against Jerusalem, Egypt was the principle ally on whom Judah relied. Later that year Nebuchadnezzar put Zedekiah on the throne. He almost immediately began meeting with a coalition of the small western states to stand together against Nebuchadnezzar (see comment on 27:3). In 595 a new pharaoh, Psammeticus II, took the throne of Egypt. He enjoyed an early military success against the Nubians in the south, and one papyrus reports that his success was celebrated with a victory tour in Palestine. Therefore, though Egypt was not the instigator of the alliance, there was cause to expect their support against Babylon. It is uncertain which nations were actually part of the alliance when it finally took shape. As it turned out, Egypt's army was routed in their confrontation with the Babylonians in 588 (see 37:5-7), and it would appear, based on Psalm 137:7, that allies such as the Edomites threw their support to Babylon when it became clear that Jerusalem was about to fall. Only Ammon and Tyre of the western states became objects of Nebuchadnezzar's wrath.

30:23. storm of the Lord. The poetic style of these verses resembles that found in the Sumerian *Lament over the Destruction of Ur* (c. 2000 B.C.). Both there and here devastation is ascribed to a storm or a blistering wind. In one strophe of the Sumerian text the wind "blows through the gate of the city" like an invading army, while in another the author despairs over "the day of the storm fated for me." Nearer the time of Jeremiah a first-millennium lamentation titled He Is a Storm, At the Healing portrays the anger of the gods in the form of a storm sweeping over the nations. This is one of over three dozen compositions identified as *balag* lamentations that make frequent use of the storm metaphor. The original function of these lamentations was to appease a deity whose temple had been or was being razed. For more information on the elements of a storm accompanying divine activity see comment on 1 Kings 19:11-13.

31:1-40

New Covenant

31:4. Virgin Israel. See comment on 18:13.

31:8. gathered from ends of earth. This is similar language to Isaiah 11:12, where Israel is gathered from the four edges of the earth. Akkadian literature speaks of kings ruling the four quarters, most likely making reference to the most distant coasts or extremities in the four major directions. Rather than referring to four slices of the geographical pie, "the ends or edges of the earth" refers to the farthest points, thereby including everything in between.

31:9. led beside running wadis. In a land where rainfall is seasonal (basically from October to February), the wadis (stream beds) are often dry. This makes them useful as pathways (for instance the Wadi Kelt that runs between Jericho to Jerusalem), but the image of them bearing water brings to mind other examples of refreshing, even miraculous, water in the wilderness (Num 20:1-13) as well as the covenantal promise of fertility (for this theme, see the comment on Deut 8:7). As he did in the wilderness, God will provide for them as he brings them back to the land.

31:10. coastlands. See 2:10 for the use of this term for coastlands and islands. There it refers to Phoenicia, Cyprus and the Greek Islands. In this context it is a generic term for faraway lands or the ends of the earth.

31:12. grain, new wine, oil. The basic staples of life in the Mediterranean world are grain (wheat or barley), the products of the vineyard and olive oil (Hos 2:5, 8). They are the physical expression of fertility in the covenant with Yahweh. In the ancient law codes of Mesopotamia, a husband's obligation to his wife or concubine is defined in terms of his providing her with barley, oil and clothing (Code of

Lipit-Ishtar, Laws of Eshnunna, Hammurabi's Code).

31:15. Ramah. This site is most likely to be identified with er-Ram, three miles north of Jerusalem. The name itself means "height" and thus is applied to many towns in Palestine since such a place would be easier to defend. Jeremiah's reference to lamentation here may be based on the use of the site as a staging area for shipment of exiles to Babylonia after the fall of Jerusalem in 587 (see 40:1). The tie to Rachel is probably based on the proximity of Ramah to Zelzah, the site of Rachel's tomb (see comment on 1 Sam 10:2).

31:21. road signs and guideposts in ancient world. While there is no mention of formal road markers prior to the Roman period, Jeremiah's injunction to the departing exiles to mark their way with piles of stones or cairns suggests that this was not a new practice. Otherwise roads were distinguished by landmarks *(ittu* in the Gilgamesh Epic and the Enuma Elish) or by their destination (King's Highway in Num 20:17).

31:21. Virgin Israel. See comment on 18:13.

31:23. sacred mountain. Ancient Near Eastern thought, not unlike that familiar from Greek mythology, visualized a mountain height as the dwelling place of deity (see comment on Is 14:13). Since Jerusalem, the dwelling place of God, was on an elevated area, it is referred to as God's holy mountain.

31:33. written on the heart. Extispicy is the practice whereby diviners pose a question to deity and seek the answer by examining the entrails of sacrificed animals. When extispicy was being performed, the incantation priests asked the deity to write his revelation on the exta (entrails) of the sacrificed animal so that his will or instruction could be understood. Another frequent diviner's prayer was to place the truth in the exta. Both the verbs of this verse (*put,* write) and the nouns ("mind" = entrails, specifically intestines; heart) are the same words as are used in extispicy omens in Akkadian literature. But if Jeremiah is using the language and concepts of omens, it is only as a convenient bridge to his message. God's decrees and will are going to be made known through the careful examination of the heart of his people. Akkadian also uses the nouns (heart and mind) parallel to one another in reference to the center of reason and emotion.

31:36. cosmic decrees. In Mesopotamia the Tablets of Destiny contained the decrees that were the foundation for all that happened on earth. The people took omens seriously because they believed that these decrees were mirrored in the heavenly bodies, in the behavior of animals and even in the entrails of animals. The assumption is that a divine decree is binding for all time. For instance, in the Babylonian creation epic *Enuma Elish* the gods proclaim that Marduk's "word shall not be challenged" and his "decree shall not be altered." Similarly, the wisdom sayings of the Egyptian Amenemope about justice state that "judgment belongs to the divine assembly, verdicts are sealed by divine decree." In the Ugaritic epic of Baal the goddess Anat, in her attempt to flatter the chief god El, tells him that his "decrees are wise" and his "wisdom endures forever." Occasionally a text will refer to a god's decree as "evil," as in the Atrahasis flood story, but still these commands are carried out because of the lordship the ancient gods are said to have over creation. For information concerning the reigns of kings related to the endurance of the cosmos, see comment on Psalm 89:35-37.

31:37. unknowns of the cosmos. While Yahweh is capable of measuring the heavens (see comment on Is 40:12) and is intimately familiar with the foundations of the earth, these are beyond the reach of any human endeavor. The various creation epics from Mesopotamia (Atrahasis, *Enuma Elish)* describe the establishment of the heavens and the earth, the ordering of the universe and the charges given to each god to regulate his/her sphere of influence. Thus the knowledge of the heavens and the nether regions belongs only to the divine. There is no instance in which any human succeeds in quests to gain such knowledge (the heroes Gilgamesh and Adapa come the closest, but they are also limited by their mortality). The mysteries and prerogatives of election are exclusive to Yahweh, just as much as the mysteries and prerogatives of the cosmos are.

31:38. Tower of Hananel to the Corner Gate. See the comments on Nehemiah 3:1 and 2 Chronicles 25:23. The reference is most likely to the western part of the north wall where the Babylonian armies are believed to have breached the fortifications and entered the city. The north side of the city was the most vulnerable because there were steep valleys to deal with on the other sides.

31:39. Gareb and Goah. The exact locations of these two hills near Jerusalem are unknown. They function as part of a restored Jerusalem in Jeremiah's vision. Gareb is generally identified with the southwest hill of the city, west of the Tyropoeon Valley and north of the Hinnom Valley (today called Mount Zion). If this is correct, Goah would be south or east of Gareb.

31:40. topography of Jerusalem. In this vision

of the restoration of Jerusalem's holy precincts Jeremiah refers to several adjacent areas. First is the Hinnom Valley (Wadi er-Rababi, west of Jerusalem), the site of Baal worship and human sacrifice. The Kidron Valley lies to the southeast of the city. Terracing of hillsides to provide space for vineyards and olive trees is common throughout Palestine. Naturally agricultural areas would not have been inside the city walls, but their importance to the city would have led them to be described as part of the city's resources. The Horse Gate was located on the east side of Jerusalem near the northern end of the Kidron Valley (see comment on Neh 3:28).

32:1-44
Jeremiah's Land Purchase

32:1. chronology. There were two different systems for reckoning a king's reign in use by Israel and her neighbors. One counted years from Nisan to Nisan (Nisan is March/April) in accordance with the religious calendar, while the other counted years from Tishri to Tishri (September/October) in accordance with the civil calendar. If the Israelite calendar began in the spring, Zedekiah's tenth year would extend from March 588 to March 587. The Babylonian king Nebuchadnezzar's eighteenth regnal year extended from March 587 to March 586 (it is known that they used the Nisan system). For this and other reasons a case has been made that Israel used the Tishri system at this time, in which case Zedekiah's tenth would overlap Nebuchadnezzar's eighteenth by six months. There are problems with either scheme, and at this point the difficulties cannot easily be resolved.

32:2. siege of Jerusalem. The events described here relate to the more detailed description of the siege of Jerusalem in 37—38 (with the siege probably starting on January 15, 588; alternatively, January 5, 587). There was a brief respite in the intensity of the siege when the Babylonian forces had to be partially withdrawn to deal with an approaching Egyptian army (37:5). One of the Lachish Letters mentions negotiations between a Judean official and Egypt. This may have prompted a preemptive strike by the Egyptians in hopes of preventing a Babylonian invasion of their territory. Once that allied contingent had been effectively repulsed, Nebuchadnezzar was able to concentrate all of his attention on Jerusalem.

32:4. Zedekiah's fate. See the comments on 39:4-7. Jeremiah's prophecy of Zedekiah's fate contains an ironic note since it describes an "eye to eye" confrontation with the Babylonian king. As punishment for his rebellion, Zedekiah will be forced to watch his sons executed, and then he will be blinded. This idea of the danger of close contact with the king parallels similar expressions of fear and danger in the theophanic appearances of God (see Jacob's reaction in Gen 28:16-17 and Isaiah's startled cry in Is 6:5). The Assyrian Annals of Sennacherib contain a similar example of the king's manifest "glory." In this inscription from a previous siege of Jerusalem, it states that Hezekiah "was overwhelmed by my [Sennacherib's] terror-inspiring splendor."

32:7. land redemption. In Israelite tradition the ownership of land is tied to membership in the covenantal community (see Nabal's rejection of Ahab's attempt to purchase his vineyard in 1 Kings 21:3). When Jeremiah's relative is forced to sell the property, the prophet has the obligation of "redeeming" the field so that it will remain within the extended family of his clan (see Lev 25:25-31). There is no clear indication why Hanamel felt compelled to sell the land. It may be that he simply wished to escape the Babylonian invasion and take away something with which to start over. Or, this may be a reflection of his heavy debts in a time when it would have been difficult to bring crops to market.

32:8. courtyard of the guard. Jeremiah was confined, in protective custody, within an area of the king's palace known as the courtyard of the guard (see Jer 37:21). Presumably, he would have been quartered with members of the royal guard. This was much more comfortable accommodations than the "vaulted prison" in Jeremiah 37:15-16 and the empty cistern in 38:6.

32:9. seventeen shekels of silver for land. With 11.4 grams per shekel, this would make the price of Hanamel's field about 194 grams or less than half a pound of silver. This would be the equivalent of about a year and a half of income for the regular laborer. Considering the immanent danger of Babylonian occupation of the entire area, it would seem that land prices would be depressed. However, with no other example to compare, and no idea of the size of the field, it is not possible to say whether this was a fair price.

32:10. deeds. Real estate transactions are found on some of the earliest Mesopotamian clay tablets. These documents, recording the stipulations of purchase and sale, were placed in a clay envelope that also had the details of the transaction written on it. Hammurabi's Code also contains restrictions on the sale of feudatory holdings since they are simply deeded temporarily to soldiers. For other ex-

amples of land deeds, see Genesis 23:16-18 and 33:19.

32:10. weighing silver in the scales. Standard commercial procedure would have required that the purchase price be publicly weighed out before witnesses to insure the satisfaction of both parties (see Gen 23:16; Is 46:6). This was necessary since coined money, with standardized weight and value, would not be commonly circulated until the late sixth century.

32:11. sealed and unsealed copies. The Elephantine papyri contain land deeds similar to the one drawn up by Jeremiah and Baruch. The practice of making two copies on a single piece of papyrus or parchment allowed for one to remain open and available for public inspection. The other half, containing the same inscription, served as an archival record to prevent alteration of the stipulations of the transaction. It would have been rolled up and sealed with the names of the witnesses inscribed on it.

32:12. legal agreements in courtyard. Business was often transacted in places like the city gate, where the elders of the city sat (Ruth 4:1; Prov 31:23). The addition of the notation that Jeremiah signed and sealed his deed for the purchase of Hanamel's field before witnesses and "all the Jews sitting in the courtyard of the guard" may be an attempt to mark that place as a suitable place of legal transaction. It may also be related to the charge made against Jeremiah in 37:12-15 that he was attempting to desert the city. He answered that he had only planned to view his newly acquired field, but the captain of the guard, who should have been witness to the transaction, refused to listen and imprisoned him.

32:14. deed sealed in clay jar. Given the uncertain future for Jerusalem, Jeremiah wanted to do everything he could to preserve his deed for the future. Placing the document in a sealed clay jar is similar to what the first-century A.D. inhabitants of Qumran did to store the Dead Sea Scrolls in the face of Roman occupation of their settlement.

32:17-20. connection between creator, judge, and planner. The flow from one area to another in Jeremiah's prayer demonstrates the integrated view of deity that was common in Israel and the ancient world. The role of deity was seen in terms of bringing order out of chaos. In the primeval past this had been accomplished on the cosmic scale through the creation and ordering of the universe. Whether chaos was viewed as monsters that needed to be subdued or the formless void that need to be filled and made functional, the role of deity as creator brought order to the cosmos. On a day-by-day basis, this role was accomplished in society by establishing justice. The chaos of anarchy had to be overcome in the life of the individual, the family, the community and the country. Third, God in his capacity as planner has brought order to the direction of history. As the future unfolds under his guidance, meaning and purpose are brought to what often appear to be random and jumbled sequences of events.

32:21. terror of theophany of divine warrior. The terror in this case is that which is imposed on Israel's enemies (see the comment on Ex 15:13-16). The splendor or "glory" of God overwhelms the enemy. In Mesopotamian texts, the might of the gods is referred to with the term *melammu,* "terrifying radiance and splendor." It is the gods who infuse the kings of Assyria and Babylonia with the knowledge of warfare, give them strength to overcome

SEALS AND BULLAE

Seals are small oval stones (sometimes semiprecious) engraved with names or designs to identify the owner. They were stamped onto clay or wax as a signature. The lump of clay or wax is called a bulla. Official and legal documents were sealed to indicate their authenticity. Thousands of seals and bullae have been found by archaeologists, most dating from the eighth to the sixth centuries B.C. These stamp seals were popular in Israel, in contrast to the cylinder seals that were used in Mesopotamia (see comments on Is 8:1 and 8:16). The seals were often engraved with the owner's name and either his father's name or his position. Seals of many periods feature a decoration of some sort. There are many names on these seals that are known from the Bible, but most of the seals do not refer to the person in the Bible, just to someone of the same name. There are, however, about a dozen biblical personages who are named on seals or bullae. This list includes kings such as Jeroboam II, Uzziah, Jotham, Pekah, Ahaz, Hezekiah and perhaps Jehoahaz and Manasseh. Another seal names a Jezebel who may well be the queen who was Elijah's nemesis. Other high officials include Eliakim (Is 22:20), Baruch (in this passage), Jerahmeel (Jer 36:26), Gedaliah (40:5), Jaazaniah (40:8) and perhaps Pelatiah (Ezek 11:1, 13). The seal of Baalis, the sixth-century Ammonite king (see 40:14), has also been found. The greatest significance of the seals is in their ability to help trace the popular beliefs from one period to the next, since the images represented in the art and the divine names used in the personal names both offer authentic data concerning that which was of most importance to the people.

the enemy "like a clashing flood" (Sargon II) or "the onslaught of a storm" (Sennacherib). In the face of such divine magnificence, both the gods and the forces of other nations are utterly defeated and forced to submit to the supreme deity.

32:22. milk and honey. See comment on Numbers 13:27.

32:24. siege ramps. Evidence for the use of siege ramps in the mid-first millennium includes archaeology, reliefs and textual material. The ramp built by the Assyrians for the siege of Lachish in 701 is still visible today. It is estimated that its construction required about twenty-five thousand tons of soil and stone and would have taken a thousand workers three to four weeks to build. Sennacherib's depiction of the siege likewise shows the ramp being used for the battering rams and siege machines. Literary references include Tiglath-Pileser III's description of the artificial mounds and siege works that he used to conquer cities. For more information see comment on 6:6.

32:29. burning incense on roofs. See the comment on Isaiah 22:1 for information on incense altars. Rooftop offerings are predictably made to celestial deities and are attested in Mesopotamia (Gilgamesh's mother in the Gilgamesh Epic) and in Ugarit (Keret).

32:34-35. apostate practices. This litany of offenses relates to the apostasy of Ahaz and Manasseh as traced in the books of Kings and Chronicles. For details see the comments on 2 Chronicles 28 and 33. See the comment on Deuteronomy 12:2-3 for discussion of outdoor shrines. See the comment on Deuteronomy 18:10 for the practice of child sacrifice associated with the god Molech. See the comment on 1 Kings 11:5, 7 for discussion of Molech/Milcom, an Ammonite deity also mentioned in the Old Babylonian Mari texts. Phoenician texts also mention the sacrifice of children to Molech.

33:1-26

Coming Restoration

33:4. tearing down buildings to be used against siege ramps. The Hebrew in this passage is difficult and may be based on technical terms referring to the construction of battlements during the siege of Jerusalem. During time of siege, residences along the wall (common or royal) were commandeered for military use. Some would be used for headquarters or army barracks; some would be dismantled or scavenged for building materials to strengthen the fortifications; some would be used for makeshift hospitals and morgues; some would be torn down to make room for additional towers, ramparts or a counter-ramp. In Lachish the evidence remains of a counter-ramp that was built inside the walls of the city to strengthen the wall against the ramp the Assyrians constructed outside the city. Archaeological excavations on the eastern slope of Jerusalem, overlooking the Kidron Valley, have uncovered huge masses of masonry that may have been the evidence of the Babylonian attack and the demolishing of private homes that once stood there on terraces. But if this is referred to here, it is difficult to understand what verse 5 is referring to when it says they will be filled with corpses.

33:15. Branch. See comment on 23:5.

34:1-22

Proclamation of Release

34:1. chronology. A more detailed chronology for the beginning of the siege of Jerusalem appears in 2 Kings 25:1 and Jeremiah 52:4, the ninth year of Zedekiah's reign and the tenth day of the tenth month (January 588). The events described in Jeremiah 34:1-7 most likely took place in early spring 588, prior to the Egyptian invasion that briefly lifted the siege.

34:5. funeral fire. These funeral rites were quite elaborate and included the burning of spices as well as a general lamentation and internment in the family tomb. The fire does not imply cremation of the body or an attempt to mask the odors associated with a diseased body, but rather was an expensive display of the king's wealth. The practice is well known among Assyrian kings, where it was used as an apotropaic ritual.

34:7. Lachish and Azekah. These two Judean fortresses guarded the Shephelah border and were the last remaining towns to fall to the invading Babylonians. Dominating the Shephelah and western Judah, Lachish served as the center point of the defensive line of the kings of Judah. Located midway between Jerusalem and the Philistine city states, Lachish guarded the major roads from the coast inland. Its site, Tell ed-Duweir, shows evidence of occupation from the Chalcolithic Period, with massive construction of city defenses and an impressive city gate in the Middle Bronze II (as a major Canaanite city) and Iron II (as the western bastion established after the division of the kingdoms; 2 Chron 11:5-10). Despite its commanding position (a tell 150 feet high), the city fell after a siege by the Assyrian king Sennacherib in 701 B.C. (Annals of

Sennacherib; for more information see 2 Chron 32:9). Graphic evidence of the ferocity of this siege are found in Assyrian reliefs from the royal palace at Nineveh depicting the events and the remains of a massive siege ramp on the southwest corner of the tell. A mass burial, with approximately fifteen hundred bodies, may also be a result of the fall of the city. The city was rebuilt toward the end of the seventh century, but it never regained the importance it had in Assyrian times. Written records of the Babylonian siege in Jeremiah's time exist in the form of twenty-one ostraca letters that were discovered in a guardroom in the city gate (see next entry). Azekah (Tell Zakariya), stood eleven miles north of Lachish and eighteen miles southwest of Jerusalem. It is only a one-acre site overlooking the Elah Valley, but since it is about thirteen hundred feet above sea level, it has strategic value as a mountain stronghold (mentioned in the Assyrian records of Sargon II). The Lachish Letters mention when Azekah's signal fire went out—a very ominous sign for both Lachish and Jerusalem.

34:7. Lachish Letters. The Lachish Letters consist of twenty-one inscribed pieces of broken pottery (ostraca—only twelve of which are actually letters), found at Tell ed-Duweir in British excavations led by J. L. Starkey between 1932 and 1938. The letters were written in a cursive form of Hebrew with a reed pen and a soot-based black ink. They were found in the remains of the city's guardroom and may have been copies of letters sent to Jerusalem by the commander of the garrison during the invasion of Judah by Nebuchadnezzar in 589-587. The letters reflect the breakdown in military discipline during this time of emergency and describe the negotiation with Egypt to reinforce Judah and the desperate situation of the defenders as they note the extinguishing of the signal fires from neighboring Azekah.

34:8-11. proclamation of release. Zedekiah's extraordinary proclamation to release all Hebrew debt slaves comes in the period after the beginning of the Babylonian siege of Jerusalem (January 588) and before the Egyptian invasion of Palestine that temporarily ended the siege (summer 588). It is unclear whether the release was simply a way to add to the number of available defenders for the city or was associated in some way with the slave legislation found in Exodus 21:2-6, Leviticus 25:39-55 and Deuteronomy 15:2-3. In the ancient Near East the freeing of prisoners (from debtors' prison) as an act of justice often occurred in the first or second year of a new king's reign (and then periodically after that). For example, the Old Babylonian period king Ammisaduqa (seventeenth century B.C.) cancelled economic debts on behalf of Shamash. Thus, the "jubilee" in this case was primarily on behalf of those in debt (for either financial or legal reasons) and debt-slaves. Unlike that of Israel, this Babylonian edict was entirely at the whim of the monarch, and there is no evidence that it was divinely sanctioned.

34:14. sabbatical year release. See the comments on Exodus 21:2-6; Leviticus 25:39-55; and Deuteronomy 15:2-3. Each of these passages deal with the matter of releasing slaves either in the seventh year or during the Jubilee year.

34:18. cutting a calf in two. The ritual of severing an animal body as part of a covenant-making ceremony is found only here and in Genesis 15:9-10 (see the comment on this passage). Ancient Near Eastern parallels from the Old Babylonian Mari letters and the eighth-century Aramaic text of the Sefire Treaty between Abban and Yarimlim both describe cutting an animal in two. The symbolic aspect of this type of sacrifice is to provide a graphic picture of what would happen to the covenant-breaker. When the landowners of Judah took back their debt slaves after the Egyptian invasion had temporarily lifted the siege of Jerusalem, they broke their solemn oath to Yahweh and laid themselves open to horrendous punishment.

34:21. Babylonian withdrawal. The Egyptian pharaoh Psammeticus II had spent much of his reign attempting to regain the territory in Phoenicia and Palestine that Nebuchadnezzar had taken away from his predecessor Necho II. Judah relied heavily on Egyptian promises of aid in return for rebellion against the Babylonians (as noted in the Lachish Letters). Their hopes and the hopes of the Judean exiles were seemingly answered when Pharaoh Apries (who had succeeded to the throne in 589) finally invaded southern Palestine in early summer 588 (see Ezek 30:20-26). This, plus an Egyptian fleet that sailed to Tyre and quickly took control there (mentioned by the Greek historian Herodotus), forced Nebuchadnezzar to withdraw from Jerusalem. The Egyptians, however, were quickly defeated (possibly near Gaza), and the siege resumed by late summer 588.

35:1-19

The Example of the Recabites

35:2. Recabites. This clan associated with the Kenites (1 Chron 2:55) took on a special

distinction as a result of the founding of a nomadic order or guild of craftsmen by a ninth-century member, Jehonadab (or Jonadab) son of Recab (2 Kings 10:15-23). Over two centuries later the clansmen told Jeremiah that they lived according to their "father's" rule a nomadic existence, never planting a crop, cultivating a vineyard or tasting wine.

35:6-10. lifestyle of Recabites. What we know about the Recabites is found only in this passage. They claim to follow the command of their founder, Jonadab son of Rechab, who instructed their community to live a nomadic existence, dwelling in tents. They were not to build houses, cultivate fields or drink wine. Frick's evaluation of this group removes them from the realm of religious fundamentalists who have rejected the corrupt religion of the cities of Judah. Instead, he sees them as itinerant craftsmen, doing metal work and repairing chariots and weaponry. This is based in part on Ugaritic and Aramaic texts that associate the name Recab with chariot makers or chariot drivers (see Jehu's invitation to Jonadab in 2 Kings 10:15). By maintaining an independent life on the fringes of settlements, the Recabites were free to move to where employment was available and did not have to be troubled by local jurisdictions or taxes. Their refusal to drink wine may be a defensive measure designed to prevent guild secrets from being disclosed by a drunk member. Their loyalty to the rules of their founder stands in stark contrast to the broken covenant in Zedekiah's time.

35:11. Aramean army. The magnitude of the danger to Judah's inhabitants is found in the Recabites' acceptance of refuge in Jerusalem and the inclusion of an Aramean army in the coalition of Nebuchadnezzar's forces. These events actually occur during the reign of Jehoiakim, and the Recabites are speaking to Jeremiah during the first siege of Jerusalem in 600-597. The Babylonian Chronicle lists a series of campaigns by Nebuchadnezzar into Syria and Palestine between 601 and 598. As a result of these military forays, legions of vassal troops would have been added to the Babylonian ranks. Though we are most familiar with the Arameans connected to the Aramean state north of Israel, there were also eastern Arameans, a Semitic-speaking people who inhabited much of the Tigris-Euphrates Valley. They often appear alongside the Chaldeans. It appears that the Chaldeans were more of an urban based group, while the Arameans were seminomadic.

36:1-32

Burning the Scroll

36:1. chronology. The fourth year of king Jehoiakim was 605-604 (using the Tishri calendar, see comment on 32:1). Nebuchadnezzar's first full regnal year had begun in the spring of 604 (See comments on Daniel 1:1-2). Though Jehoiakim was pro-Egyptian, it is considered likely that he had paid tribute to Nebuchadnezzar in Syria in early 604. The dictation of the scroll probably takes place at the end of Jehoiakim's fourth year (August-September 604), because it is not read until the fifth year (v. 9). Toward the end of 604, Nebuchadnezzar traveled down the coast of Palestine and captured the Philistine city of Ashkelon. There was a massive destruction of the city and a significant deportation. Nebuchadnezzar's march into the south was an occasion for much fear in Judah.

36:2. scroll. The Hebrew in this case suggests a technical term for a special or finer quality scroll, suitable for official use by a government scribe. Such a medium for writing would only be used for the most important proclamations of the king. For more information on scrolls see comment on 30:2.

36:4. scribe taking dictation. The public nature of Jeremiah's dictated oracle required that a careful copy be made, and Baruch's skills as a professional scribe are therefore employed. Many Egyptian tomb paintings as well as the *Teachings of Khety* attest to the importance of scribes to ancient society. Scribes, of course, could be used by anyone, but archaeological evidence (seal impressions containing his name) strongly suggests that Baruch is a royal scribe.

36:6. day of fasting. Baruch is instructed to read the dictated scroll on a fast day when a large crowd would be gathered in Jerusalem. A "fast day," other than the one associated with the Day of Atonement, was not a part of the regular religious calendar but instead was called in the face of some emergency that required the full religious energies of the people. This was likely based on the arrival of Babylonian forces in Palestine (December 604).

36:9. chronology. The ninth month of the fifth year was November-December 604. In December 604, the Babylonian army marched down the Philistine coast and captured the city of Ashkelon. The likelihood that this enemy "from the north" would then turn east toward Jerusalem would be plausible occasion for the fast day on which Baruch was to read the dictated scroll. Nebuchadnezzar returned

to Babylon January/February 603.

36:10. topography. The temple of the monarchy period featured three stories of side chambers surrounding the temple on three sides. It can be assumed that Gemariah's chamber was one of these. Little description is offered in the Old Testament of the courts of the temple. It is likely that the upper court referred to here should be considered the same as the "inner" court of 1 Kings 6:36, the area surrounding the temple itself. This is the highest elevation in the temple precinct. The New Gate is also mentioned in Jeremiah 26:10, but its exact location is unknown. Speculation usually places it on the south side of the court as a passage between the temple precinct and the royal palace just to the south.

36:12. secretary's room. The king's audience chamber must have been offset by small rooms where groups could meet to discuss official business or share information. One sign of authority as a king's advisor or scribe would be to have one of these rooms designated as his "office." It seems likely that Jehoiakim's advisers gathered in "Elishama, the secretary's room" prior to taking Jeremiah's scroll to the king because this was their regular meeting place.

36:16. obligation to report prophetic message to king. According to the eighteenth-century Mari texts, it was a strict obligation of any royal adviser or official to report prophetic speech to the king. Several of these documents report warnings by prophets, in one case of a possible revolt, in another to offer a sacrifice, while yet another cautions the king against going on campaign. The emphatic nature of the Hebrew in this verse reinforces the urgency associated with such startling warnings. These officials are frightened by the message, but they also know how important it is to apprise the king of the potential danger in Jeremiah's oracle.

36:18. ink. The composition of the ink used by scribes in the ancient Near East varied somewhat, although they all contained a carbon base. In Egypt, it was common to combine a gum mixture with lampblack. Chemical analysis of the ink used to write the Lachish Letters shows that iron ink was created by mixing the carbon with oak galls and olive oil.

36:22. firepot. Since this event occurred in December, it would have been necessary for the king to have several braziers burning in his audience chamber. It was therefore not surprising that one was near at hand for warmth and perhaps to burn a fumigating incense. It is possible this was actually a permanent hearth within his "winter apartment," but the narrative seems to suggest a portable brazier into which the scrap of scroll could be dramatically dropped.

36:23. written in columns. The word used for "column" in this verse is usually translated as "door." This may suggest that the sheets of the scroll are hinged together or perhaps only that the size of each sheet is approximately the same as that of hinged writing tablets. These tablets, usually wood covered with beeswax, have been found in ancient shipwrecks as well as in a Neo-Assyrian context (the latter being sixteen ivory boards found at the bottom of a well in Nimrud).

36:23. scribe's knife. It is conceivable that Jehoiakim borrowed the scribe's penknife to cut the scroll or that he simply ordered the scribe to do this task. However, if this is a parchment scroll, it would have been easier to cut the leather hinges binding the portions of the scroll together. Parchment would also be slow to burn and would leave a foul odor. If this was a papyrus scroll, the text could have more easily been shredded and burned.

36:23. cutting and burning as means of nullifying. In a sense, by cutting and burning Jeremiah's scroll the king is performing an execration ritual. Early in the second millennium the Egyptians had the practice of writing down the names of cities to be attacked on clay bowls or figurines and, after reciting appropriate spells, smashing them. The writing down of a prophecy like Jeremiah had done was a means of effectuating it (just as speaking it would be). By burning the scroll Jehoiakim hopes to undo or take away the effect of the pronouncement.

36:30. exposure of corpse. What is combined in this phrase is the physical act of dishonoring a corpse by leaving it unburied as well as the divine pronouncement that Jehoiakim's family will be denied the right to rule Judah. A similar curse was laid on Jeroboam by the prophet Ahijah in 1 Kings 14:10-11 and on Ahab by Elijah in 1 Kings 21:21-24. In a later period the Jews of Elephantine cursed their regional governor, Vidranga, who had ordered the destruction of their temple. They prayed to God to allow his corpse to be eaten by dogs, having been exposed to the elements instead of being given proper burial. On the importance of proper burial see comment on 1 Kings 16:4.

37:1-21

Jeremiah Imprisoned

37:1. chronology. Jehoiachin succeeded his father Jehoiakim during the Babylonian siege of

Jerusalem in December 598. His reign only lasted until the city was taken three months later. At that point, his uncle Mattaniah (see 2 Kings 24:17) was placed on the throne by the victorious Nebuchadnezzar and renamed Zedekiah.

37:5-8. Egyptian troop movements. During the siege of Jerusalem in 588, the Egyptian pharaoh Apries dispatched an army into Palestine. This required the Babylonians to temporarily lift their siege (see the comments on Jer 32:2 and 34:21). This action by the Egyptians may be based on treaty commitments made between Zedekiah and Psammeticus II when that pharaoh made a brief visit to Palestine in 592 (based on the Rylands IX papyrus). No actual treaty document exists, and it is not clear whether Zedekiah personally met with the pharaoh or whether (according to the Lachish Letters) a Judean delegation was sent to Egypt. References in Herodotus indicate that the Egyptian troops were more concerned with reestablishing their control over the Phoenician ports of Tyre and Sidon, and there is no indication of a battle with the Babylonians in Palestine before their withdrawal to Egypt.

37:13. Benjamin Gate. Of the many gates of Jerusalem, the Benjamin Gate opened to the northeast and would have been the most convenient for Jeremiah to use when he wished to visit Anathoth. Its importance and the amount of traffic going through this gate are attested in Jeremiah 17:19 and the fact that King Zedekiah used it as a seat of office in Jeremiah 38:7.

37:15. prisons. In the ancient Near East, prisons were used for temporary detention, usually pending a final judgment or prior to execution of sentence. For instance, Mesopotamian practice included imprisonment in a holding cell in a temple (Nungal Hymn) or under house arrest (Mari letters). The fact that Jeremiah is imprisoned in the house of Jonathan the secretary suggests that formal prisons were also uncommon in monarchic Jerusalem. Prisons are seldom mentioned in biblical literature. Only Joseph is described (Gen 39:20) as being held with other prisoners in a detention facility. The prophet Micaiah is imprisoned in an unspecified location pending judgment on whether his prophecies against Ahab came true (1 Kings 22:27). Other examples of imprisonment include work houses, such as that in which the blinded Samson was forced to grind grain (Judg 16:21).

37:16. vaulted cell in a dungeon. Since Jeremiah was accused of attempting to defect to the enemy, it may be presumed that his cell was in an undesirable portion of the house of Jonathan the secretary. Quite likely the architecture of a house built near a gate area or the temple complex would include some small alcoves among the ceiling vaults. These cramped spaces would probably have been too small for a man to stand erect and might well have been poorly ventilated.

37:21. courtyard of the guard. See the comment on Jeremiah 32:8 for this minimum-security area where Jeremiah was next confined.

37:21. street of the bakers. Several references in the prophets suggest that the city of Jerusalem had market and manufacturing districts (see Is 7:3—fullers; Jer 18:2—potters). Similar establishments are mentioned in the Egyptian *Teachings of Khety,* which describe a weaver's shop where workers were confined to an airless room all day. The courtyard of the guard was located near the palace (Jer 32:2), and thus the street of the bakers must have been near by.

38:1-13

Imprisoned in a Cistern

38:6. imprisoned in a cistern. A staging area for troops would have had a cistern to store rainwater during the dry months. Since this stage of the siege of Jerusalem took place during the normally rainy winter months of 588-587, the fact that a narrow-necked limestone cistern was available as a prison and was empty of water attests to the larger population in the city and the desperate situation they faced. The quagmire at the bottom of the cistern, however, would have prevented Jeremiah from resting and would have been extremely unhealthy. Since the king was afraid to execute Jeremiah, he may have been relying on disease or malnutrition to rid him of the prophet (see Ps 79:11).

38:7. Cushite official in the palace. Since Ebed-Melech had a Hebrew name (meaning "servant of the king"), it is likely that he was either an Ethiopian slave or a freedman who had come into royal service. The easy manner in which he confronted Jeremiah's guards and King Zedekiah as he sat in judgment in the city gate suggests both familiarity with the king and that his counsel was held in high esteem. The designation "eunuch" may indicate either his capacity as a royal official and/or his physical condition (see comment on Is 56:4-5).

38:7. king sitting at the Benjamin Gate. There is ample biblical and archaeological evidence available for kings having regularly sat in judgment at the city gate. For example, the

Iron Age gate area at Tell Dan contains a raised platform with stone pedestals for a canopy that served as a place of justice. Absalom argued against his father David's political ability when he charged that the king was not sitting at the gate hearing the cases of his people (2 Sam 15:2-6).

38:14-28

Audience with Zedekiah

38:14. third entrance to the temple. This "third" entrance to the temple is only mentioned in this text. However, since Zedekiah wished a very private audience with Jeremiah, no more secure place could be found than the king's personal entrance to the temple precincts.

38:23. wives and children brought out. When a city fell and a king was taken, his family and his administration were taken also. It was a fearful time, for prospects included, at best, exile and captivity, and at worst, rape, torture and death. Less is known about Babylonian treatment of captives than about the Assyrian practices.

39:1-18

Fall of Jerusalem

39:1-2. chronology. The siege of Jerusalem began in January 588 and ended as the wall was breached on July 18, 586, and the temple destroyed in mid-August of the same year. See comments on 2 Kings 25:1-12.

39:3. seats in the middle gate. The place where the Babylonian officers took their place after the walls of Jerusalem were breached is only attested in this passage. Recent archaeological excavations by Avigad in the Jewish Quarter of the Old City have revealed a portion of the northern wall and a gate area that shows signs of attack and burning. Others believe it should be identified with the Fish Gate in Nehemiah 3:3.

39:4. Zedekiah's flight. Realizing that the city had fallen, Zedekiah and his court took flight through a southern gate (the Babylonian attack was targeting the north wall; see comment on 31:38), located near the "king's garden." This royal estate was probably an orchard watered by the springs of the Kidron Valley (see Neh 3:15). The reference to the two walls may be the section of wall reconstructed by Hezekiah when he bolstered the city's defenses against the Assyrian threat (see 2 Chron 32:5).

39:5. Jericho on way to Arabah. The Arabah refers to the Jordan Valley, where Zedekiah hopes to cross at the fords of the Jordan by Jericho and escape to Moab or Ammon to find asylum. The road from Jerusalem to Jericho plains is about fifteen miles, a steep descent through barren rocky hills. There are no places to hide, no alternate routes and no defensible fortress on the way—the king is simply counting on a head start to help him escape the country. He nearly made it—he was within a few miles of the river when the Babylonians overtook him.

39:5. Riblah in Hamath. The site of Riblah is located on a large plain in Syria. It was then being used by Nebuchadnezzar as the headquarters for his army. The modern city of Ribleh is located on the Orontes River just south of Lake Homs (see comment on 2 Kings 23:33). Necho II had used the same site as his staging area during the Battle of Carchemish. Hamath refers to both the Syrian city of Hamath as well as the district, which includes the entire area of the Orontes Valley.

39:7. blinding captured kings. See the comment on 2 Kings 25:7. The Assyrian vassal treaty between Ashur-Nirari V and Matti-Ilu of Arpad includes the curse that the one who breaks the treaty will have his eyes torn out. The Assyrian king Esarhaddon boasted of depriving his enemies of ear, nose and eye. Other examples of the use of blinding as a punishment for rebellion can be found in Samson's fate (Judg 16:21) and in the Ammonite threat to blind the right eye of every man in Jabesh-Gilead (1 Sam 11:2).

39:7. bronze shackles. There is evidence from the Assyrian bas-reliefs in Ashurbanipal's palace of prisoners being shackled together as they are herded off to captivity. As early as Tiglath-Pileser III, iron fetters began to be used, and certainly this would be expected in the Neo-Babylonian period. There is no reason to think, however, that bronze shackles did not continue to be used as well.

39:9. Babylonian policy of deportation. The Neo-Babylonians continued the policy of deporting rebellious populations that was first employed by the Assyrian kings Ashurnasirpal II and Tiglath-Pileser III. This was both a political and an economic ploy. It was designed to hold a portion of the people as hostages while a native dynast continued to rule the vassal state. Thus, in 597 Zedekiah had been placed on the throne of Jerusalem while Jehoiachin, much of the royal family, high-ranking priests, nobles and artisans had been taken back to Mesopotamia. Even after Zedekiah's revolt and the fall of Jerusalem, Nebuchadnezzar attempted to maintain native Judean rule through the appointment of Ged-

aliah. However, his assassination resulted in a Babylonian governor being installed. It should be noted that only a portion of the population was ever deported. The Babylonians still wanted to derive revenue from Judah, and thus land was redistributed to the landless poor with the expectation that the economy of the region could be restored.

39:10. gift of vineyards to poor. Not all of the people of Judah were deported after the fall of Jerusalem in 586. Many of the people, like Jeremiah, had actually been pro-Babylonian or at least anti-Jerusalem in their sentiments (compare Micah's condemnation of Jerusalem in Hezekiah's time—Mic 3:8-12). By redistributing the land that had belonged to persons now exiled, the Babylonians created friendships with the landless poor and also laid the foundation for the agricultural and economic restoration of a land that had been devastated by years of warfare.

40:1-6

Jeremiah Given Freedom

40:1. imperial guard. While Nebuzaradan's honorific literally means "chief butler," this is clearly a traditional job title. It had evolved into a position as the commander of a contingent directly under imperial orders. He and the company of soldiers in his charge were given specific tasks (see Jer 39:10, where he is in charge of the deportation of prisoners, and 2 Kings 25:8-11, in which his company destroyed the Jerusalem temple). Delicate tasks, such as the release of Jeremiah from the prisoner-of-war camp at Ramah after the fall of Jerusalem were also part of this extraordinary official's duties.

40:1. Ramah. See the comment on Jeremiah 31:15. This site just north of Jerusalem was being used as a staging area for the deportation of prisoners from Judah.

40:5. Gedaliah. After the fall of Jerusalem in 586 and the arrest of Zedekiah, Nebuchadnezzar installed Gedaliah, son of Ahikam, of the important but non-Davidic house of Shaphan, as governor of Judah. During approximately one to two months of work, he began the restoration of the country's economy from his new administrative center at Mizpah (see 2 Kings 25:22-26). A seal impression bearing the name Gedaliah has been found at Lachish, suggesting that this man had some administrative experience. It is also possible that he was "Master of the Palace" under Zedekiah, a post fitting him for his Babylonian appointment. His efforts at getting a harvest in did encourage some of the refugees to return to Judah (Jer 40:12), but this was cut short when he was assassinated by Ishmael, son of Nethaniah, who was a member of the royal house and did not want a precedent set of non-Davidic rule.

40:6. Mizpah. After the destruction of Jerusalem and most of the southern Judean cities, Gedaliah was forced to place his administrative capital in the border fortress of Mizpah. The most widely accepted location for this site is Tell en-Nasbeh, eight miles north of Jerusalem on the border with Israel. Archaeological excavations reveal Iron Age fortifications at Tell en-Nasbeh and no destruction level from this period, both suggesting the suitability for immediate use by a newly appointed royal governor. There is also a significant architectural change in the Babylonian period evidencing the change from fortress to government center.

40:7—41:18

Assassination of Gedaliah

40:11-12. refugees in ancient Near East. The nearly continuous periods of warfare in the ancient Near East from the eighth to the sixth centuries created many refugees. While this could include whole families, many times unattached males slipped away, perhaps to form guerilla bands (like those commanded by Jephthah and David in earlier periods) or to blend into the wadis and isolated caves, waiting for the invaders to leave. The less fortunate are depicted on the walls of the palace in the Assyrian capital of Nineveh. These reliefs show some of the refugees from the destroyed city of Lachish (principally women and children), riding in and walking beside wagons containing their few salvaged belongings. Both Assyrian and Babylonian annals contain accounts of the number of prisoners taken from the sacked cities of Syro-Palestine, but one may presume that many others fled before the armies, hiding in the hills, crossing the Jordan River into Moab or joining Bedouin groups.

40:14. Baalis. This Ammonite king may have been supporting the Davidic family's claim to the Jerusalem throne, or he may have simply been an anti-Babylonian monarch who wished to further destabilize Gedaliah's fledgling government. He appears nowhere else in the Bible, but a recently recovered seal impression may provide extrabiblical evident of his reign. This seal, which dates to around 600 B.C., was found at Tell el-'Umeiri, just south of Amman, Jordan. The inscription contains the names Baal-yasha, "Baal saves" and Milkom'or,

"Milkom is light." Recently the seal of Baalis has also been found.

41:1. chronology. Although some commentators suggest that Gedaliah's administration lasted as many as five years, most consider his assassination to have taken place in 586, just one month after the destruction of the temple. The seventh month would have been the time of the Feast of Booths, when many pilgrims would have been on the road, masking the group led by Ishmael.

41:5. shaved beards. See the comments on Leviticus 19:28; Isaiah 7:20; and Esther 4:1 for these common mourning practices and their prohibition. Clearly, popular practice, especially during this period after the destruction of Jerusalem, still included shaving the beard, but there is little attestation of this practice in the extrabiblical texts.

41:5. bringing sacrifices to a destroyed sanctuary. With Jerusalem and its temple destroyed, it seems curious that pilgrims would be on their way to make sacrifices there. Considering the places from which these pilgrims are coming (Shechem, Shiloh and Samaria), all of which have been cultic and political centers, their journey may have overtones of an attempted restoration of Jerusalem. It may be that they even were planning to perform cultic rituals to purify the destroyed temple and thus restore its usefulness (compare the restoration by Josiah in 2 Chron 34:8 and see comment there). Considering the number of destroyed shrines throughout the ancient Near East, there must have been prescribed rituals designed to cleanse them and prepare them to be used once again. Evidence of this is found in the Assyrian annals of Esarhaddon that describe how Marduk allowed Babylon and its temples to be destroyed and restored.

41:9. historical reference. Since Mizpah was not destroyed by the Babylonians, its architectural remains from that period are more intact than those of most other sites. They include large-roomed houses and possibly a small palace indicating Gedaliah's administrative center. There have also been a number of rock-cut cisterns uncovered, one of which may be the one referred to here as having been constructed by King Asa three hundred years earlier (see comment on 2 Chron 16:6). At that time the king of Judah received help from Ben-Hadad of Syria in his war against Israel's King Baasha. A portion of the looted building materials taken from Baasha's fortress at Ramah was used to fortify Mizpah.

41:10-12. distance and directions. If the party is trying to get to Ammonite territory, Gibeon is in the wrong direction. From Mizpah travelers would usually go a couple of miles north to Bethel or a couple of miles south to Ramah to connect to a major road heading east to Jericho and the Jordan. One could only surmise that perhaps when they reached Ramah they found they were being pursued from the north, or perhaps they were even confronted by Johanan's party cutting off the eastern road. Such circumstances might explain their decision to head west toward Gibeon rather than continue east. Gibeon (el-Jib, six miles northwest of Jerusalem) was about three miles southwest of Mizpah.

41:17. Geruth Kimham. This site near Bethlehem is probably the traditional holding of Kimham (2 Sam 19:37). Royal pensioners such as this man generally received a plot of land in exchange for their service (a practice also found in the Mari texts). Geruth is a word unknown elsewhere in the text and may mean "fief" or "land holding."

42:1-22

The Egypt Decision

42:10. God grieving over punishment he sent. In the *Myth of Erra and Ishum,* Marduk abandons his shrine in Babylon to allow Erra, a destructive god, to bring judgment on the people of the city. When the destruction has been carried out, Marduk is full of grief for the city of his dwelling. Yahweh's grief is over the destruction that Jerusalem brought on herself, not second thoughts wishing that he had not acted the way that he did. There is much that is different between the Israelite and Babylonian material, but the motif of a deity grieving over destruction that he himself has brought or allowed is an element common to both. In earlier Sumerian literature, a similar motif is reflected when deities abandon a city for which the divine council has decreed destruction.

43:1-13

Flight to Egypt

43:7. Jewish settlements in Egypt. The flight of Judean refugees to Tahpanes after the assassination of Gedaliah simply swelled the existing Israelite population in Egypt. Isaiah 11:11, dating to the Assyrian period, mentions remnants of the Israelites in both Upper and Lower Egypt. Jeremiah himself addresses Judean settlements in Lower Egypt at Migdol and Memphis (44:1 and 46:14) and in Pathros in Upper Egypt. Papyri found at some of these sites contain obviously Jewish names. The best known of the Jewish communities in

Egypt was that at the island military colony of Elephantine, founded prior to 525, and mentioned in Josephus's "Letter to Aristeas" as the home of mercenary troops in the employ of Pharaoh Psammeticus I. Letters and legal documents from Elephantine speak of a transplanted culture attempting to maintain traditional customs in the face of some hostility by the local Egyptian government and populace. For instance, a small temple was constructed there, but it was subsequently destroyed. Among the letters are communications with the returned Jewish community in Jerusalem during the time of Nehemiah.

43:7. Tahpanhes. This Egyptian fortress is located in the eastern Delta region as it borders on the Sinai. It has been identified with Tell ed-Defenna, with its earliest substantial occupation coming in the seventh century, when Psammeticus I placed a garrison of Greek mercenaries there. Its proximity to the major road leading to Syro-Palestine makes it a likely spot for Judean refugees to find sanctuary.

43:9. Pharaoh's palace in Tahpanhes. Excavations at Tell ed-Defenna are centered on a large rectangular building that dates to the Saite period (seventh-sixth centuries B.C.) and probably served as a governor's residence/administrative center. It is possible that this is the building referred to as "Pharaoh's palace," since all bureaucrats were extensions of royal power. The burial of the large stones at this point could easily symbolize a change of rulers, as the prophet lays the foundation in a clay-brick courtyard (the Hebrew word used occurs only here, and the translation is based on a related word appearing in 2 Sam 12:31 and Nah 3:14).

43:10. royal canopy. For King Nebuchadnezzar to sit in state, it would be necessary to construct a temporary throne, covered by a canopy. The latter served to shelter the king from the sun and also functioned as a symbol of his universal rule (compare God's glory manifested by a canopy of smoke and cloud in Is 4:5).

43:11-12. Babylonian invasion of Egypt. It was inevitable that Nebuchadnezzar would eventually invade and attempt to conquer Egypt. The Medes had united the territory east of the Tigris, effectively cutting Babylon off from direct trade with the east, and the Egyptians, with their Phoenician allies, were constantly causing political and commercial problems in the west and along the Arabian trade routes. An extended (thirteen years according to the fourth-century Greek historian Menander) siege bottled up Tyre and devastated much of Phoenicia (584-571). A fragmentary portion of Nebuchadnezzar's annals from his thirty-seventh year, Herodotus and Ezekiel 29:19-21 refer to the invasion of Egypt in 568, but no details are given other than victories over desert tribes. It is likely that some Babylonian garrisons were installed in the fortresses of the Sinai following this campaign.

43:13. temple of the sun. Jeremiah applies the Hebrew place name "Beth-Shemesh" (NIV: "temple of the sun") to designate the Egyptian city of Heliopolis in this instance. The usual name applied to this city located near Cairo is On (Gen 41:45), but the prophet apparently wishes to emphasize the worship of the sun god Amon-Re at this site.

43:13. sacred pillars. The Hebrew term used here refers to pillars or standing stones erected to commemorate an event, mark the concluding of a covenant agreement or the entrance to a sanctuary, or as an image of a god (see Gen 28:18-22; 31:49-52; 1 Kings 14:23). In the Egyptian context, these free-standing monumental stones are usually termed obelisks, and they were commonly erected to commemorate major victories or the dedication of a temple. For example, the procession way leading up to the temple of Amon-Re in Heliopolis was lined with two rows of obelisks.

44:1-30

Judgment in Egypt

44:1. geographical territory. Jeremiah's message to the Israelite settlements in Egypt encompasses the general area around Tahpanhes in the Delta region, including Migdol (located about twenty miles to the northeast; see Ex 14:2 and Num 33:7) and Memphis. Pathros (NIV: "Upper Egypt"), is a place name referring to the area south of the Delta in Upper Egypt between Memphis and Aswan. Assyrian inscriptions use similar terminology, and Egyptian terminology supports the identification. Excavations at a site now being identified with Migdol reveal Saite period pottery and a fortress whose walls stretch over six hundred feet on either side.

44:15. upper and lower Egypt. The geographical area where Judean refugees had established settlements are spoken of in general terms with this reference. They were primarily situated in the Delta and were not scattered throughout the full length of Egyptian territory. Since the Nile flows north, Upper Egypt is the southern portion. Lower Egypt, the north, includes the Delta region and extends to the region of Memphis.

44:17. Queen of Heaven. See comment on 7:18.

44:18. incense and drink offerings. Incense was valued in the ancient world as an accompaniment to sacrifice. Its sweet scent effectively masked any of the unpleasant odors resulting from the performance of the rituals. It was expensive (see comment on Lev 2:1) but was believed to be favored by the gods. In Mesopotamia, incense was used for dedicatory and propitiatory offerings. The people believed that the incense helped transport prayers to the deity, who would then inhale the incense (for more information see comment on Ex 30:7-8). Pouring out libation offerings is common throughout Mesopotamian history, including offerings of water, wine and blood (compare David's action in 2 Sam 23:16). Assyrian art stylized libation offerings into various classes depending on the type of liquid and where and on what it was poured.

44:19. cakes in her image. It is likely that the use of offering cakes shaped in the goddess's image is a practice borrowed from Mesopotamia. The Hebrew word *kawwanim* is a loan word from Akkadian *kamanu*, a type of sweet cake associated with the cult of Ishtar. They were baked in ashes and often were sweetened with honey or figs. The ritual texts describing *eshsheshu* festivals in Mesopotamian cities mention both meat and cake offerings.

44:30. Hophra's demise. As in Isaiah 7 the prophet Jeremiah offers a sign of God's intentions to a disobedient people. Hophra (known in Greek in Herodotus as Apries) was the fourth king of the Twenty-Sixth Dynasty, succeeding Psammeticus II in 589. He did send a relief army into Palestine during Nebuchadnezzar's siege of Jerusalem, but it quickly withdrew (see Jer 37:5). His naval expedition flanking the Babylonian land forces was partially successful, with Cyprus being conquered. After the fall of Jerusalem, Hophra provided for refugees to settle in the Egyptian Delta region. His eventual end came as a result of his overreliance on mercenary troops and his inability to control the Greek colony at Cyrene. Both Herodotus and a fragmentary stele from the period report that he was killed in a coup carried out by his successor, Amasis, around 570.

45:1-5

Rebuke to Baruch

45:1. chronology. The fourth year of Jehoiakim's reign would have been 605/604 B.C. It was the year in which Nebuchadnezzar defeated the Assyrians at Carchemish. At that point Jehoiakim is still a vassal of the Egyptians, but his political masters are soon to change. See comment on 36:1.

46:1-28

Oracle Against Egypt

46:1. oracles against foreign nations. There is a distinct literary genre within prophetic literature known as oracles against foreign nations. They are found in Isaiah 14—21, 23 and Ezekiel 25—30, Jeremiah 46—51, Amos 1—2, Zephaniah 2 and the books of Obadiah and Nahum. Although they are all condemnations of Israel's enemies, taunting them, their rulers and their gods, each is a distinct unit, free to accomplish its mission without being constrained to follow a set structure or outline. Because these oracles appear in chapter 25 in the Septuagint version of Jeremiah, it is often suggested that they were a distinct unit that circulated as an independent body of literature before being added to the book of Jeremiah. In most cases the oracles were not delivered to the countries they targeted, because their intended audience was Israel. There are short examples of the genre as early as the Mari texts. In one prophecy, the god Dagan delivers a message to Zimri-Lim, king of Mari, concerning his enemy Babylon: "O Babylon, what are you trying to do? I will gather you up in a net."

46:2. Necho. Ruling from 609 to 595 B.C., Necho II was a member of the Egyptian Twenty-Sixth Dynasty. As Assyrian influence waned, this pharaoh expanded his commercial dealing with Palestine and captured the former Philistine city of Gaza (see Jer 47:1-7). The Babylonian Chronicle describes how he took advantage of the mortally wounded Assyrian nation, allying himself with them just prior to the 605 Battle of Carchemish. His expedition to that northern Syrian battlefield to help Ashuruballit took him through Palestine. He defeated Judah's king Josiah in 609 at the Battle of Megiddo and subsequently claimed all the territory he had traversed going north (see comments on 2 Kings 23:33; 2 Chron 35:20; Dan 1:1-2). After the Assyrian defeat at Carchemish, the Babylonian Chronicle details how the Egyptian army was overtaken and utterly destroyed. Babylon extended its sovereignty over Judah in 604, confining the Egyptians to their own territory for the rest of Necho's reign.

46:2. Battle of Carchemish. After the destruction of Nineveh in 612 by a combined Babylonian and Median army lead by Nabopolassar, the last Assyrian dynast, Ashuruballit II,

moved his capital to Haran. This stronghold was then captured in 610. Ashuruballit was able to secure an alliance with Necho II of Egypt and continued to claim territory along the Upper Euphrates for the next several years. However, it was only the remnants of the once "invincible" Assyrian army that were defeated at the Battle of Carchemish in 605. The victory was achieved under the leadership of the crown prince, Nebuchadnezzar. Carchemish may be considered a major turning point in ancient Near Eastern history. It signals the final collapse of the largest empire to that time and set the stage for an even larger Persian empire that will succeed the short Neo-Babylonian period. While Egypt gained some temporary claim to Palestine and Phoenicia, Nebuchadnezzar's Babylonian armies quickly followed up the Carchemish campaign by establishing their hold over all of Syro-Palestine by 604.

46:3. large and small shields. Because most ancient Near Eastern warriors were not heavily armored, it was necessary to supply them with shields that would deflect arrows as well as the thrust of sword or dagger (see the equipment for Asa's army in 2 Chron 14:8). The small shield *(magen)* served as a buckler, either held in the left hand or attached to the left arm. Its maneuverability aided hand-to-hand combat. The larger shield *(ṣinna)*, which might be either oblong or a figure eight, made from heavier material—either metal, leather or wood—was designed to withstand thrown spears or arrows. However, it was cumbersome and might be difficult to carry into close combat. Some warriors were aided by a shield bearer (see 1 Sam 17:7).

46:4. use of cavalry in seventh-century Egypt. Since Egyptian art does not depict cavalry and no mention is made of cavalry in Egyptian texts from the period of the Battle of Carchemish, it is probably fair to say that this feature had not become an important part of the Egyptian army during this era. However, the Medes and Babylonians had been using horsemen as messengers, scouts and mounted warriors (archers as well as shock troops) for at least two centuries prior to Carchemish. For example, a tenth-century relief from the Syro-Hittite site of Tell Halaf depicts horse-men in battle dress. The mobility afforded cavalry, as opposed to the heavier chariots, would have given the Babylonians an edge in battle and in communications on the field. Jeremiah's remarks may then be as ironic as those of the Rabshakeh, who had offered Hezekiah two thousand horses if he had men to ride them (2 Kings 18:23). It is possible that the prophet is taunting an Egyptian army for its lack of men to "mount their steeds."

46:9. Cush, Put and Libya. The Egyptian army included contingents of mercenary and allied troops that evoke past political events in Egyptian history. The list included in this verse, and the order in which each name appears, can be compared to the list of the sons of Ham in Genesis 10:6. A Cushite dynasty ruled Egypt from 711 until 593 B.C. Its recent glory thus gives it prominence of place in the list. Put and Libya are synonymous and represent a much earlier foreign domination of Egypt during the Twenty-Second and Twenty-Third Dynasties (950-720 B.C.). Ionian Greek mercenaries were also part of the Egyptian host. A Greek shield is among the artifacts unearthed at the site of the Battle of Carchemish.

46:11. balm of Gilead. As part of Jeremiah's taunting of the defeated Egyptian forces, he suggests they salve their wounds with the medicinal balm of Gilead, though he gives them no hope of relief. The Hebrew word *ṣori*, based on the Septuagint Greek translation, *rhetine*, "pine resin," is apparently a healing salve made from this resin and mixed with olive oil. It is a product of the upper Galilee and Transjordan region and is referred to by the ancient Greek botanist Theophrastus (see Jer 8:22; 51:8). It remains a matter of dispute which tree or shrub was the source of the resin.

46:13. Nebuchadnezzar's invasion of Egypt. See comment on 43:11-12.

46:14. geographical territory. See comment on 44:1.

46:18. comparison to Tabor and Carmel. Perhaps playing on Egyptian art, which always depicted the pharaoh as much larger than all other men, the prophet now predicts the coming of one (Nebuchadnezzar) whose height and power is to be compared to the mountain peaks (Tabor—1800 feet; Mt. Carmel—1700 feet). This could also be a reference to the route of flight taken by the Egyptians. Mount Tabor is at the eastern end of the Valley of Jezreel, and Mount Carmel forms part of the range of hills that lead south down the Palestinian coast.

46:19. destruction of Memphis. During the seventh and sixth centuries B.C., Memphis (Hebrew: Noph, fifteen miles south of modern Cairo) was the cultural and political capital of Egypt. During the Assyrian period (674 B.C.), Esarhaddon had been successful in capturing Memphis (see comment on 2 Kings 19:9), but that was well before Jeremiah's time. Nebuchadnezzar had moved against Egypt in 601 but had not successfully invaded their ter-

ritory. The Babylonian forces were repulsed at the Egyptian stronghold of Migdol on the Gaza road and forced to retreat. There is some evidence of Nebuchadnezzar undertaking a second invasion, in his thirty-seventh year (568), but there is no information concerning what success he might have had or whether Memphis was involved. Memphis was captured by the Persian king, Cambyses, in 525, and the pharaoh, Psammeticus III, was taken captive.

46:20. gadfly metaphor. This insect occurs only in this passage, so any identification can only be made with the information provided by the context. With Egypt cast as a heifer in this metaphor, it is easy to see the applicability of the attacking Babylonians as the gadfly or some comparable stinging insect.

46:22. hissing serpent metaphor. The Hebrew text speaks of the snake's "voice" rather than mentioning hissing specifically. Nonetheless, one can imagine a snake hissing its warning at a would-be attacker. The snake is an important part of Egyptian religion and a symbol of royal authority.

46:22. axes, cutting down trees. Destruction by a conqueror often included cutting down trees or orchards (see comment on 2 Kings 19:28). In addition conquest at times had the objective of gaining access to natural resources (see comment on Is 14:8), though, of course, Egypt was not known for its forests.

46:25. Amon of Thebes. The Greek name "Thebes" referred to the city the Egyptians called Waset, about 325 miles south of Memphis. The great temple of Karnak at Thebes was dedicated to Amon-Re, the chief god of Egypt's pantheon beginning with the pharaohs of the Eighteenth Dynasty (sixteenth and fifteenth centuries). Associated with the wind or the "breath of life," Amon was combined with the sun god Re as his worship encompassed all of Egypt. This god's prominence increased as the fortunes of Egypt's empire expanded. As a result, he was credited with being the creator god and his city of Thebes as the site of creation. Thebes had been sacked by Ashurbanipal's Assyrian army in 663 B.C., and much of its wealth had been plundered. Like Memphis, it was also raided by Cambyses in 525.

47:1-7

Oracle Against the Philistines

47:1. Egyptian attack of Gaza. Nebuchadnezzar began his move toward invading Egypt in early 601. However, the investing of Palestine, including the acceptance of Jehoiakim's pledge of loyalty to Babylonian rule, required some delays that prevented any direct move against Egyptian territory until November of that year. Perhaps the king hoped to make as easy a conquest of Egypt as had Ashurbanipal in 663. Since that time, however, the Saite pharaohs of the Twenty-Sixth Dynasty had concentrated much of their efforts and wealth on building several lines of defense along the Gaza road as well as further south. This was designed to prevent an army from making either a direct march along the Sinai's Mediterranean coast or inland across the desert. When, according to Herodotus, Nebuchadnezzar's army was defeated at the Egyptian fortress of Migdol on the eastern branch of the Nile Delta, Necho II's forces pursued him north and captured Gaza. They held it for two years until Nebuchadnezzar once again campaigned in Palestine.

47:4. Philistine situation at end of seventh century. The Philistine city states had been subject to Assyrian rule for much of the seventh century. Ekron, for instance, served as a major olive oil manufacturing and distribution site, bolstering Assyrian fortunes in the region. With the demise of the Assyrians after the death of Ashurbanipal in 627, the Egyptian pharaohs Psammeticus I and Necho II moved into Philistia. Excavations at Ashkelon have revealed evidence (bronze statuettes of Egyptian deities, bronze weights, pottery) of an Egyptian enclave in this Philistine seaport city. Their sway only lasted a couple of decades until Nebuchadnezzar's fall 604 campaign. The Babylonian Chronicle describes a November-December drive to capture Ashkelon signaling a "scorched-earth" policy that eventually totally devastated Judah and Philistia, and was followed by the deportation of a large portion of their population. The Babylonians were primarily concerned with Egypt and did not want to have to deal with establishing a bureaucracy and presence in Philistia as the Assyrians had.

47:4. Philistine relations to Tyre and Sidon. While there may have been some political ties between Philistia and Phoenicia, most of their relations were based on trade and mutual economic interests. The Phoenician seaports of Tyre and Sidon sent their ships throughout the Mediterranean Sea. Their cargoes of "fine ware," ingots of metal and amphoras of oil and wine came from ports in Ionia, Greece and Cyprus. The Philistines, especially Ashkelon and Ashdod, served as one of the markets for these products as well as distributors to customers in Egypt, Arabia and Palestine. The Egyptians also exploited the Phoenician

seaports (see the comments on Jer 37:5-8), competing with Nebuchadnezzar for them. The competition eventually leaves Philistia in ruins and Tyre and Sidon in Babylonian hands.

47:4. coasts of Caphtor. This place of origin for the Philistines is most often identified with the island of Crete. The name *kftyw* appears in Egyptian, Ugaritic, Greek and Akkadian texts. While some attempts have been made to equate this with Cyprus, archaeological and geographical indications favor Crete.

47:7. attack on Ashkelon. The Babylonian Chronicle, although a fragmentary account, boasts that Nebuchadnezzar's Babylonian army attacked Ashkelon in the month of Kislev (November-December). This was unusual since it was during the rainy season, a time when most armies do not attempt major campaigns (compare 2 Sam 11:1). The Chronicle notes that not only the walls were breached and the city taken, but the soldiers burned and leveled the inner city as well, transforming the "city into a mound and heaps of ruin." Modern excavators have found ample evidence of this destruction in every part of the city. Among the artifacts are piles of smashed pottery, skeletal remains showing traumatic injuries, charred grain and collapsed houses.

48:1-47

Oracle Against Moab

48:1. Moabite situation at end of seventh century. Like Philistia, Moab was a vassal state of the Assyrians during the seventh century B.C. Assyrian texts list four Moabite kings who paid tribute down to the reign of Ashurbanipal. Herodotus notes that the Transjordanian kingdoms of Moab and Ammon then fell under the sway of the Babylonians shortly after the fall of Jerusalem. This was a further step by Nebuchadnezzar to exclude the Egyptians from Syro-Palestine and to control the important caravan route through Transjordan. The Egyptians had had a long history of economic and political activity in Moab, dating back to the reign of Thutmose III (c. 1479-1425) and reflected in the eighth-century Shihan Stele, depicting the god Chemosh wearing an Egyptian-style kilt.

48:1. Nebo and Kiriathaim. The site of the town of Nebo, identified with Khirbet el-Mekhayyat just over a mile from the highest peak of Mount Nebo, is mentioned in the Moabite Stele of King Mesha as a Moabite settlement and thus appropriate to this oracle. Mesha claims in his victory stele to have built Kiriathaim. Its exact location is still unsettled, although several sites have been suggested.

48:2. Heshbon. See the comment on Deuteronomy 2:26 for this Moabite city.

48:3. Horonaim. The strategic location of sites along the King's Highway that transverses the Moabite Plateau must have been a necessity for the Moabite rulers. The Mesha Stele mentions Horonaim as one of these important posts. It was probably located near the modern city of Kathrabba, on the southwestern portion of the plateau—with a clear view of both the Dead Sea valley and the King's Highway.

48:5. Luhith. Extrabiblical source material, including a Nabataean inscription from Madeba and a contract written in Hebrew dating to the Bar Kochba revolt (A.D. 132-135), indicates that Luhith was located in the southwestern section of the Moabite Plateau. There is a Roman road at this point that leads off the plateau and descends to the southern end of the Dead Sea. Surface surveys of pottery suggest occupation during the Iron Age and later at several sites southwest of Kerak and near the modern town of Kathrabba.

48:7. Chemosh. See the comment on Judges 11:24 for this principal deity of the Moabites. A dedicatory stele depicting Chemosh and dating to the ninth or eighth century B.C. has been found at Shihan. As this god is described in the Moabite inscription of Mesha, this meter-tall stele portrays Chemosh as a divine warrior, holding a spear and standing ready to defend the Moabite people.

48:8. valley and plateau, topography in Moab. The Moabite Plateau runs approximately sixty miles north-south as its ragged edge borders the Dead Sea valley on the west and the Arabian desert on the southwest. It then extends about fifteen miles east and west, with an elevation of about three thousand feet. Cutting through this plateau east to west is the Wadi el-Mujib, which has been created by the Arnon River. The southern border is marked by another deep canyon, the Wadi el-Hesa (Zered River). There is an extension of the plateau, known as the "tableland of Medeba" to the north that is more accessible since it does not contain the deep canyons demarking the south.

48:9. salting Moab. See the comment on Judges 9:45 when Abimelech salted the ground of the destroyed city of Shechem. The Annals of the Assyrian king Tiglath-Pileser I record how captured the enemy stronghold of Hunusa and sowed salt over its ruins while pronouncing a curse on anyone who dared to rebuild the town (compare Josh 6:26). The translation of Hebrew

ṣiṭṣ as "salt" is based on a Ugaritic parallel.

48:11. wine dregs. After the grapes have been trod, the resulting juice was poured into large storage jars (9 ¾ gallons), which were sealed with clay, leaving only a small vent hole to bleed off the fermentation gases. The fermentation process was allowed to continue for forty days, as the wine lay with its dregs or lees. Jeremiah's metaphor here relates to the fact that the Moabites had never suffered deportation and so their "processing" was not complete.

48:11-12. pouring from jar to jar. In order to complete the wine-making process, the fermented grape juice must be poured from its original jars into fresh ones. This also involved straining out the dregs so that the fermentation could be completed and the flavor of the wine could age in the underground storage cellars, where a constant 65 degrees Fahrenheit could be maintained. Wine cellars of this type have been discovered at Gibeon and Tell Qasileh. Finally, portions of the wine would be poured into smaller jars for immediate transport and consumption.

48:13. trusting in Bethel. It is likely that this reference is to the Northwest Semitic deity Bethel, attested in personal names and texts for over a thousand years, including the vassal treaties of Esarhaddon (c. 675 B.C.) and at the sixth century B.C. Jewish military colony of Elephantine. The comparison between Chemosh and Bethel adds weight to this being a citation of that god's name. However, it also provides a dual reference to Jeroboam's sanctuary at the city of Bethel (see 1 Kings 13:26-33; Amos 7:13).

48:15-16. invasion of Moab. The only source currently available for a Babylonian invasion of Moab is Josephus. He notes that five years after the destruction of Jerusalem, in the twenty-third year of Nebuchadnezzar's reign (582/581), the Babylonian king campaigned in Transjordan, subjecting both Moab and Ammon to his rule. Since hardly any of the Babylonian Chronicles are preserved beyond 594, this cannot be confirmed at this time.

48:18. Dibon. See comment on Numbers 21:30. This city north of the Arnon Gorge was the Moabite capital during the ninth century reign of Mesha.

48:19. Aroer. See the comment on Deuteronomy 2:36-37 for this city located southeast of Dibon and right on the lip the Arnon Gorge.

48:20. Arnon. See the comment on Deuteronomy 2:24 for this deep river valley that bisects Moab east-west.

48:21-24. towns of Moab. The tableland towns mentioned for destruction include unidentified sites (Holon) and some that are uncertain. Jahzah (most likely Khirbet Medeiniyeh, on the eastern edge of the Moabite Plateau), Beth Meon (Ma'in, four miles southwest of Medeba), Kerioth (possibly Khirbet Aleiyan, northeast of Dibon), Dibon, Kiriathaim (possibly el-Qereiyat, five miles northwest of Dibon), Beth Diblathaim (possibly Khirbet Libb, eight miles north of Dibon), Bozrah (possibly Umm el-'Amed, east of Heshbon) are all mentioned in the Mesha inscription. Beth Gamul only appears in this text and may be identified with Khirbet el-Jemeil, eight miles east of Dibon.

48:25. horn. In Mesopotamia the crowns of gods and kings often featured horns as a sign of their power and authority, particularly as it relates to ferocity in war. This would explain why the word horn is often synonymous with strength. Another explanation is that here the word means "bow." This is based on one of the materials used to construct the composite bow (described in the Ugaritic epic of Aqhat) and the phrase "to break the bow" found in Jeremiah 49:35 and Hosea 1:5. There is possible support for this usage in Greek and Egyptian literature.

48:28. dove behavior. The flight of the Moabites from danger is compared to the nesting habits of rock doves. These birds relied on placing their nests in fairly inaccessible cliff faces and the crevices along the sides of gorges like the Arnon to protect their young. The shade afforded would also aid the young birds until their plumage was complete.

48:31. Kir Hareseth. Identified with modern Kerak (seventeen miles south of the Arnon and eleven miles east of the Dead Sea), this was a major Moabite site. It guarded a portion of the King's Highway as well as caravans traveling east and west across the Moabite Plateau.

48:32. Jazer and Sibmah. See comment on Numbers 21:32 for Jazer. Sibmah has not been positively identified, although Khirbet Qarn el Qibsh and Bet Baal Meon have been suggested. It must have been within the region commanded by Heshbon and was apparently known for its vineyards (see Is 16:8-13).

48:34. cites of Moab. For Heshbon see comment on Numbers 21:25-28. For Jahaz see comment on Numbers 21:23. For Horonaim see comment on Jeremiah 48:3. Elealeh is located one and a half miles northeast of Tell Hesban at Khirbet el-'Al. Eglath Shelishiyah has not been identified (see Is 15:5). Zoar (possibly Safi, on the south bank of the Wadi Zered) is the most southern point in this oracle and would be near the Dead Sea. The waters of Nimrim are usually identified with the

Wadi en-Numeirah, a stream that flows into the Dead Sea at its southern end.

48:37. mourning practices. Each of the actions described here are common mourning practices in the ancient Near East. See the comments on Leviticus 10:6-7; Isaiah 15:2-3; 32:11; and Jeremiah 41:5 for further discussion of these rituals and clothing styles.

48:40. eagle metaphor. This is an image of an attacking bird of prey (Babylon), either an eagle or a vulture. The "swoop" is not an easy glide, but an all-out plunge to sweep up the prey (in this case Moab) and carry it away (compare Ezek 17:3-4).

48:41. Kerioth. This Moabite town is mentioned in the Mesha Inscription as well as in the oracle in Amos 2:2. Its exact location still has not been determined, although some possibilities are el-Qereiyat and Khirbet Aleiyan, both in the Moabite tableland.

48:45. Heshbon, Sihon. For Heshbon see the comment on Numbers 21:25-28, and for Sihon see the comment on Numbers 21:24-30. Since Sihon was an Amorite king of the Moab region and his capital was at Heshbon, the reference here must be to the territory he once ruled.

49:1-6

Oracle Against Ammon

49:1. Ammonite situation at end of seventh century. Although the Ammonite kingdom, centered around the capital at Rabbah, was to come under the control of the Babylonians, there is no record of a general exile of its people (v. 3). Inscriptional evidence from Tell el-'Umeiri and Heshbon shows that the Ammonite language continued to be used into the Persian period. There is also a continuity of architecture, with no major destruction levels and the existence of administrative facilities that show continuous use. In addition, there was no disruption in the Iron II style pottery produced even during the Persian period.

49:1. Molech. See comment on 1 Kings 11:5, 7 for this Ammonite god, written Milcom in the Hebrew, not Molech. Coming as it does from the word for "king," the name probably refers to this god as the head of the Ammonite pantheon. He is most often associated with child sacrifice but in this verse refers to the Ammonite takeover of territory once controlled by the Israelite tribe of Gad.

49:1. territory of Gad. See the comment on Numbers 32:34-42 for the extent of Gad's settlements in Transjordan. They are principally in Gilead and Bashan.

49:2. Rabbah. The capital city of the Ammonite kingdom was located at Jebel Qal'a. It presently is in the middle of the modern city of Amman but has been surveyed and partially excavated. Occupation at the site and in its vicinity goes back to Paleolithic times. Although it was occasionally subjected to Israelite rule (see 2 Sam 12:26-31), during the sixth century, the Ammonites attempted to expand their rule northward after the destruction of Jerusalem.

49:3. connection of Heshbon, Ai and Rabbah. The connection between Ammon and Moab in this oracle is clear: both kingdoms and their capital cities are put on notice of coming destruction. However, the mention of Ai seems out of place. The city of Ai (usually identified with et-Tell) is located near Bethel in Israel and has no direct relation to Heshbon or Rabbah. It is possible, since this city name means "the ruin," that another Ai is the subject of Jeremiah's warning.

49:7-22

Oracle Against Edom

49:7. Edomite situation at end of seventh century. Edom had become an Assyrian vassal state in the reign of Tiglath-Pileser III and continued under Assyrian rule until the death of Ashurbanipal a century later. It is likely that the Edomites submitted themselves to Nebuchadnezzar's rule in 605 B.C. Although some Judean refugees may have found shelter in Edom, they apparently remained passive as Jerusalem was destroyed (see Ps 137:7 and Obad 11). The Babylonian campaign against Ammon and Moab in 594 seems not to have affected Edom. It is likely that they remained unscathed until the time of Nabonidus's campaign in 552.

49:7. Teman. This is a geographical name synonymous with Edom (Obad 9) or with the northern section of that southern Transjordanian kingdom, with its capital at Bozrah (see Amos 1:12). It is likely that the nation of Edom originated in this region and eventually was able to expand to the south (see Ezek 25:13).

49:7. wisdom tradition in Teman. See the comment on Obadiah 8. While various types of wisdom are ascribed to ancient peoples, it is possible that that of the Edomites originated in their ability to adapt to their rugged physical environment (see the comment on Obad 3) or their facility in dealing with the caravaneers that regularly passed through their land.

49:8. Dedan. This northwest Arabian oasis (modern al-'Ula) served as a major caravan stop during the sixth century B.C. Although it

is mentioned in conjunction with Teman in Ezekiel 25:13, there is no clear evidence of Edom's control of territory that far south. However, inscriptional and pottery evidence do indicate that continual commercial activity, resident merchants and possible political ties may have existed. It is also possible that Edom and the Arabs were being mentioned collectively by the prophets (see Is 21:13).

49:13. Bozrah. Located just west of the King's Highway as well as by the western trade route to the Wadi Arabah, Bozrah (modern Buseirah) served as Edom's capital. Excavations confirm that there was no destruction during Nebuchadnezzar's reign, when Edom was able to stay out of the conflicts that destroyed Jerusalem. There is evidence, however, of a cultural transition after 550, due to Nabonidus's campaign and the shift to Persian rule.

49:23-27

Oracle Against Damascus

49:23. Damascene situation at end of seventh century. Following the collapse of the Assyrian empire, it may be assumed that Aram (Syria, of which Damascus was the capital) regained temporary independence. However, like all the other small states, it then would have had to submit to Babylonian rule after 605. There is no extrabiblical evidence concerning the role or status of Damascus or Aram during the subsequent period, and no large scale excavations have been possible in the modern city. The fact that only Syrian cities are mentioned in this oracle suggests that the nation had been fragmented and that contingents of troops from these sites have raised the prophet's and Yahweh's ire against them.

49:23. Hamath and Arpad. The site of Hamath is in central Syria on the Orontes River, about 130 miles north of Damascus. It has a long history, going back to the third millennium Ebla texts, as a commercial and administrative center. Arpad (Tell Rifaat), was a regional center in northern Syria, and like Hamath had a history of influence until the Assyrian conquest. Both sites are mentioned often in the Assyrian Annals, but their power and intermittent revolts were quenched by the end of the eighth century. For more information see comments on Isaiah 10:9.

49:27. fortresses of Ben-Hadad. As is the case with Omri for the kingdom of Israel (Mesha Inscription and Assyrian Annals) and David for the United Kingdom and later for Judah (Hazael Inscription from Tell Dan), Ben-Hadad's name is associated with the ruling house of Aram. No king bearing that name actually ruled during the seventh or eighth centuries. However, it was traditional to continue to use the founding ruler's name when referring to the nation or its resources.

49:28-33

Oracle Against Kedar and Hazor

49:28. Kedar. The Kedar are one of the north Arabian tribal groups. The name appears in Assyrian and Neo-Babylonian texts suggesting that this was a particularly powerful group. The reference here may be to Nebuchadnezzar's campaign into Arabia in 599-598 and may in fact refer as much to the geographical limit of his army's march as it does to the people they had to deal with.

49:28. Hazor. This refers to the country of the *ḥaṣerim* rather than to the city of Hazor in the upper Galilee region. The desert tribesmen, perhaps associated with those mentioned as inhabitants of the Negev in Joshua 15:23-25, would have been among the targets of Nebuchadnezzar's campaign to pacify and incorporate the northern Arabian area.

49:33. jackals. It is quite common, especially in Jeremiah (see 9:11; 10:33), for desolate or uninhabited places to be referred to as the lair of jackals (see Ps 44:19; Is 34:13). These scavengers would only frequent the desert wastes. What is particularly telling in this verse is that Nebuchadnezzar's campaign will transform these already desolate desert regions into totally uninhabitable places. Similar descriptions occur both in Egypt in the visions of Neferti, and in Mesopotamia, in the Sumerian *Lament over the Destruction of Ur.*

49:34-39

Oracle Against Elam

49:34. Elamite situation at end of seventh century. Occupying much of the Iranian Plateau east of the Tigris River, the Elamite kings allied themselves with the Babylonians for much of the seventh century, as they both fought the Assyrians. The Babylonian Chronicle details many examples of their help, starting with the reign of Merodach-Baladan. Ashurbanipal's annals describe the capture of the Elamite capital of Susa in 640, the systematic pillaging of its treasures and the seizure of their gods. The anger of the Assyrians is seen in the treatment of the Elamite king's body. It was preserved in salt and brought to Nineveh, where it was cremated and the ashes were scattered to the winds. Despite Assyrian hostility, another Elamite dynasty was established after the death of Ashurbanipal and continued to rule in Susa until the merging of

their territory with that of the Medes and Persians under Cyrus in the mid-sixth century. This latter situation was facilitated by Nabopolassar's alliance with the Medes prior to the Battle of Carchemish and a resulting deemphasizing of former ties with Elam.

50:1—51:64

Oracle Against Babylon

50:2. fall of Babylon. Jeremiah's predicted fall of Babylon did not actually occur until 539, when Cyrus the Persian king captured the city. Herodotus records that the Persians diverted the waters of the Euphrates and thus entered the Babylon by means of one of its many water channels. Even then the city was not destroyed or looted, since Cyrus was assisted in its capture by disaffected priests of the chief god Marduk and other Babylonian citizens who had become dissatisfied with Nabonidus's rule. (The Cyrus Cylinder preserves the Persian version of these events; see comments on Is 45:1; 48:14.) Since Jeremiah makes no direct mention of Cyrus in his oracle, it may be assumed that this material was written and edited prior to the actual fall of Babylon. He had certainly called for the destruction of the Babylonians and the return of the exiles on other occasions (see Jer 27:7; 29:10). It is therefore appropriate that in this current set of oracles against the nations that Babylon's demise be targeted as the greatest achievement of Yahweh and the greatest good for the people of Judah.

50:2. Bel and Marduk. The title Bel was applied to the supreme god of the Akkadian pantheon, which until the beginning of the second millennium B.C. was Enlil (the patron of the city of Nippur). After the emergence of Babylon as the chief city of Mesopotamia, the title was transferred to its patron deity, Marduk. Evidence of this succession to divine supremacy can be seen in Marduk's prominent place in the Babylonian creation epic *Enuma Elish* and in the prologue to the Code of Hammurabi. In both instances, Marduk is said to have achieved the rank of chief god through his combative powers and the will of the other gods. The name Bel Marduk then continues to be used by the Assyrians and the Neo-Babylonians, and his New Year's festival is the celebration of the renewal of fertility and life (see comment on Is 46:1). Even the Persian king Cyrus looked at his own accession to power and the capture of the city of Babylon as having been achieved through the assistance of Bel Marduk. Connections in the northwest Semitic pantheon with Bel are to be found in the name Baal, also translated as "lord."

50:9. alliance from the north. This is a piece of irony that harks back to Jeremiah's call narrative (Jer 1:14-15), where Babylon was the threat from the north that was destined to overwhelm Jerusalem. Now, in this oracle predicting Babylon's demise, they in turn are to be destroyed by an alliance of forces from the north. In fact this came in the form of the alliance between the Medes and the Persians that had been shaped over a period of twenty years by Cyrus.

50:19. geographical designations. The restoration of the exiles to Israel includes a resumption of their basic economic activities, herding and farming, and a restoration of the covenant promise of fertility within the promised land. Bashan and Carmel are both known for their grazing, while the hill country of Ephraim held rich vineyards and fields, and Gilead served as both a farming area and pastureland. The range of these place names fully encompasses the boundaries of the northern kingdom of Israel.

50:21. Merathaim. The term employed here by Jeremiah is a play on words for Babylon or Babylonia. It is based on an Akkadian term, *marratum*, which is used for the marshy area in southern Mesopotamia where the Tigris-Euphrates delta merges with the salt waters of the Persian Gulf. Thus this Akkadian word that actually means "bitter" fits well with the prophet's oracle of doom against a people who had made the Israelites bitter and now faced rebellion and bitterness themselves.

50:21. Pekod. Again, Jeremiah is using an Akkadian term as a synonym for Babylon. Among the Aramean tribal groups inhabiting Babylonia was one named the Puqudu. The prophet references this tie while employing a pun on the Hebrew word for "punish," *paqad.* It is possible that Jeremiah's choice of the Puqudu, who dwelt principally in the Sealands of southern Mesopotamia and east of the Tigris River, is a further taunt of a once powerful state that has become fragmented and subject to the rebellions of tribal groups within its domain.

50:38. idols going mad with terror. The theme of taunting worthless idols is found elsewhere in the prophets (see Is 40:18-20; Hos 8:4). However, personifying them to the extent of giving them emotions like fear and madness is less common (see Is 19:1). It may be that Jeremiah is drawing on allusions in the Gilgamesh flood epic, where the gods who were responsible for creating the flood waters became frightened by them and "cowered like dogs crouched against the outer wall."

50:39. history of Babylon after 539. After the capture of Babylon by Cyrus of Persia in 539,

the city's native dynasty headed by Nabonidus and his son Belshazzar was eradicated and a Persian administrator was appointed to rule there. Economic texts from the year of the takeover indicate little disruption of trade or normal activity, as the Persians made a smooth transition. Each successive Persian king included among his titles "King of Babylon" and used the city as one of their official residences (according to Xenophon). However, there were periodic revolts in Babylonia that had to be quelled (522-521 and again in 482-481). Fearing future uprisings, Xerxes removed the eighteen-foot golden statue of Marduk and destroyed the Esagila temple. The final insult came when the city was merged with the province of Assyria for political purposes. When Alexander seized the Middle East from Persian rule, Babylon was thrown open to the young conqueror and restoration of the Esagila Temple commenced. The city fared poorly under Alexander's successors. Seleucus had a new city, Seleucia on the Tigris, built north of Babylon. This new city competed with Babylon and in 275 B.C. was declared the royal city. The population of Babylon was forcibly removed to Seleucia, and Babylon became no more than an archaic sacred site. By the first century B.C., its desolation was complete.

50:43. Nabonidus in 540-539. Fearing the approach of the Persians, Nabonidus had returned to Babylon from his Arabian capital at Tema in 543. He gathered the images of the gods from his empire (reported on the Cyrus Cylinder) and for the first time in ten years conducted the New Year's festival honoring the god Marduk. According to his own Chronicles, Nabonidus also restored the temple of his personal god Sin. However, his long absence from the city and the neglect of its priesthood and gods by Nabonidus and his coregent Belshazzar had taken a serious toll. He could not prevent the fall of the city of Babylon. Cyrus advanced against Babylon in 539 B.C. and fought a victorious battle at Opis, about fifty miles north-northeast of Babylon on the Tigris in early October. On the eleventh of October, Sippar (thirty-five miles north of Babylon) surrendered, apparently without a battle. On October 13 the city of Babylon submitted, and the Persian army marched into Babylon peacefully. Persian reports claim that they were welcomed by the local populace and that when Cyrus himself entered the city on October 30, he was proclaimed its liberator. This, however, is standard conqueror's rhetoric and may obscure other facts. Classical sources suggest that after the city was captured, the king was taken away as a hostage and died in Persia.

51:1. Leb Kamai cryptogram. The phrase used here is a form of cryptogram known as an atbash. This literary device exchanges the letters of the intended word with corresponding letters counted from the other end of the alphabet (another example occurs in Jer 25:25-26, where Babylon, *bbl,* is replaced by Sheshak, *shshk).* In English this would require replacing A with Z, B with Y, C with X, etc. Thus New York might be referred to as New Blip. In this passage the name Chaldea is masked by using the consonants *lbqmy* (Leb Kamai) for *ksdym* (Caldea). Possibly this was done because of the dangers involved in speaking the name of the enemy, but more likely it is a form of taunting.

51:8. Balm as medicinal ointment. See the comments on 8:22 and 46:11. Akkadian prescription texts exist that take note of symptoms and provide a list of herbs to be used and instructions on how to administer them. The healing balms or resins Jeremiah refers to, however, may be a taunt of these medicines and a reference to God's healing power.

51:11. Medes. During the eighth and seventh centuries, the Median tribes began to organize as a result of their conflict with the Assyrian empire. Eventually, they were able to form an identifiable kingdom in northwestern Iran. The kingdom of Media, led by their king Cyaxares, then allied itself with the Neo-Babylonians to eliminate the Assyrian empire's last hold on Mesopotamia. This alliance allowed the Medes to expand their territory significantly. The Babylonian Chronicle and Herodotus record most of what is known about the conflict between the Medes and the Persians. It seems to have begun with a revolt by Cyrus against his lord, Astyages, king of Media. Once Cyrus had conquered the Median king in 550, he then was able to take advantage of Media's gains to create a much larger empire for the Persians almost immediately.

51:17. no breath in images. See comment on 10:14. Just as Isaiah taunts those who trust in images made my human hands of wood, gold or silver (see comment on Is 44:17-18), Jeremiah ridicules them as lifeless frauds. This is just the reverse of the Israelite God, whose breath brings humans to life and restores the nation from the "dry bones" of Ezekiel 37:5-10. Mesopotamian rituals to activate a cult image include the mouth-washing ritual, a reenactment of the birth of the deity and the use of holy water to open the mouth and eyes and allow the statue to move, but nothing that is intended explicitly to give it breath.

51:27. Ararat. The geographic region referred to here is Urartu, a large area in eastern Asia Minor

near Lake Van. It united into a kingdom starting in the ninth and continued to appear in Assyrian and Babylonian records until the sixth centuries. Its conflicts with the Assyrians were the result of Urartian attempts to expand to the southwest and enlarge its trading contacts as far as the Mediterranean. During most of the early period of the kingdom the Urartians built many cities, and their manufactured goods were transported as far away as Greece. They were finally overwhelmed by the coalition of Medes and Scythians in a campaign in 585 that swept through their territory. Subsequently their territory was added to the Persian empire.

51:27. Minni. This nation, summoned by Yahweh to punish Babylon, is the Manneans, who lived in the region just south of Lake Urmia in the northern part of western Asia. These people were caught between the territorial and economic ambitions of Urartu and Assyria. Assyrian texts mention them from the early eighth century onward. Because they were allied with Assyria at the time of the Battle of Carchemish in 605, their territory was given to the Medes and was eventually absorbed into the Persian empire.

51:27. Ashkenaz. The Ashkenaz are mentioned as the Ishkuza in the Assyrian Annals of Sargon II and thereafter, and are referred to by Herodotus as the Scythians. They occupied the region around the Black and Caspian Seas in northwestern Iran starting in the eighth century. These horse-riding pastoralists may be the most likely of the three nations to be a real threat to Babylon in the sixth century. They are mentioned in Babylonian and Persian texts as fierce, even savage, fighters, who occasionally allied themselves with the major powers but also raided them quite often. The excavation of their graves shows widespread contact with Near Eastern and Greek sources as well as a native art style known as "animal style."

51:28. Medes. See comment on 51:11.

51:32. river crossings seized. Military objectives always include control of the fords of streams and rivers (see Judg 3:28; 12:5). In this way, communication links are cut and armies can no longer take the most direct route and are prevented from flanking an enemy force. One of the major fords across the Tigris came under the control of the Persians when they took the city of Opis a few weeks before Babylon fell. They took Sippar on the Euphrates just a few days later. By the possession of these two cities the Persians could effectively cut off any supplies coming down either the Tigris or Euphrates. It would have been extremely demoralizing to the Babylonians to hear that they were becoming increasingly isolated from their allies as well as the towns and villages that supplied their food and raw materials. This report might well be compared to the progressively negative reports chronicled in the Lachish Letters during Nebuchadnezzar's 598 campaign in Judah.

51:32. marshes on fire. In addition to the wall systems, towers and other typical defensive installations, Babylon was also protected by a number of ditches and pools, designed to slow or stop enemy advance to the city. Within these pools or bordering them were canebrakes. If these were set on fire, they would have added to the sense of peril for the city's inhabitants, and the smoke would have masked enemy movements and intensified the breathing difficulties of people downwind. The fires would also have flushed out any sentries or advance troops that the Babylonians might have stationed along these water obstructions.

51:41. Sheshach. See comment on 25:26 for this cryptogram.

51:44. Bel. See comment on 50:2 for this divine title.

51:58. walls leveled, gates on fire. The main defenses of an ancient city were the walls and fortified gate area. Babylon had a defensive system consisting of two walls surrounding the city. The inner wall was twenty-one feet thick, while the outer wall was over twelve feet thick. Excavations have been unable to reveal evidence of the gates in the outer wall, but there were nine massive gates built into the inner wall, each with the name of a god. The Ishtar gate has been excavated and restored, and is now in the Berlin Museum. It is decorated with lions and dragons, and gives some idea of the grandeur of the ancient city. These walls and gates were constructed of a combination of stone and mud brick. However, in the gates there would have been rooms that required the use of timber as beams and scaffolding for the movement of troops. When submitted to fire, the stone would weaken and collapse (see Judg 9:42-49). With the walls breached and systematically leveled, and the gates in ruins, the physical and symbolic power of the city would evaporate. In the Persian conquest, however, the city was taken without a fight as the Babylonians submitted peacefully to the Persian army (see comment on 50:43).

52:1-34

The Fall of Jerusalem

52:1-27. the fall of Jerusalem. See comments on 2 Kings 25:1-26.

52:31-34. Jehoiachin. See comments on 2 Kings 25:27-30.

LAMENTATIONS

1:1-22

Despair and Distress: First Acrostic Lament

1:1. acrostics. "Acrostic" is a literary form in which the first letter in consecutive lines form a pattern. In alphabetic acrostics the pattern is the alphabet (the first line begins with the first letter of the alphabet, the second line with the second letter, etc). Other forms of acrostic might spell out a message or a name (for instance of the scribe who composed the work or of the deity being honored). There are a number of acrostics in the book of Psalms. Psalm 119 is the most complex in that each letter of the Hebrew alphabet is represented by eight consecutive lines. All Hebrew acrostics in the Bible are alphabetic acrostics. In Lamentations the first four chapters are all alphabetic acrostics. In chapters one and two each verse begins with the appropriate letter and contains three lines. In chapter three there are three lines that start with each letter. In chapter four each verse starts with the appropriate letter and contains two lines. Chapter five has the appropriate number of verses for an acrostic but does not contain one. The seven examples of acrostics in Mesopotamian literature are name/sentence acrostics (since Akkadian was syllabic, there was no alphabet and therefore no alphabetic acrostics) and generally date to the first half of the first millennium. Egyptian examples offer numerical sequences or complex messages that involve both horizontal and vertical patterns. They are more dependent on puns to accomplish their stylistic objective. Acrostics depend on writing and therefore would not be composed orally. They are intended to be read, not just heard, because of the importance of the visual element. This is especially clear in the Babylonian examples, where a variable sign needs to be read with one value in the poem but with a different value in the acrostic. Some of the Babylonian examples also contain a pattern in the last sign of each line. Another variation is found in those examples where the acrostic is repeated each stanza.

1:3. chronology. Although Judah's deportations had begun a decade earlier, the event that is the focus of the book is the destruction of the temple and the city of Jerusalem, along with the general deportation and exile that occurred in 586 B.C.

1:4. pilgrimage feasts. There were three pilgrimage festivals in the Israelite calendar: the Feast of Unleavened Bread, the Feast of Weeks and the Feast of Tabernacles. Under normal circumstances the roads would be filled with pilgrims traveling to Jerusalem during those times. They were occasions for joy and celebration. In troubled times, few would have taken the risk, and now there was no city or temple to come to.

1:10. pagans in sanctuary. There were very strict regulations about non-Israelites gaining access to the temple courts (see Deut 23). Only priests had any access to the sanctuary, and that was limited. The care taken to preserve the sanctity of God's dwelling place had been frustrated in desecration.

2:1-22

Yahweh's Anger: Second Acrostic Lament

2:1. footstool. The footstool of God's throne

LAMENTS OVER FALLEN CITIES IN THE ANCIENT WORLD

As the fall of Jerusalem became a pivotal point in the history, theology and literature of Israel, the fall of Ur (to an army from the east) at the end of the Ur III Dynasty (about the year 2000) served in the ancient Near East as an illustration of the divine abandonment of a city, resulting in its destruction. The lamentations that memorialize the weeping and the theological reflection on those two great falls are preserved in their respective literatures. Two separate works lament the fall of Ur (known as *The Lament over the Destruction of Ur* and *The Lament over the Destruction of Sumer and Ur*). Other city laments exist for Nippur, Uruk, Eridu and Ekimar (though the last three of these are fragmentary). These date to the twentieth century B.C. Unlike the biblical Lamentations, each of the ancient Near Eastern works includes a decision of the gods to restore the city. Literarily they played a role in the attempts to legitimize a new dynasty.

The major theme of these works is that the gods have abandoned the city, thus exposing it to destruction at the hands of the enemy. In poetic detail the distress of the population is described--loss of land and homes, death of loved ones, exile and captivity. This despair is reflected in the wondering questions of why they have been treated in this way by the gods and how long their condition will persist. When explanations are offered, the fall of the city is not blamed on offense but simply reflects the fact that change and the shifting of political power is inevitable.

was the cherished ark of the covenant (see comment on 1 Chron 28:2). As the most sacred relic of their faith, it was considered that which Yahweh would most jealously protect. If even that held no sway, nothing would be guarded from his anger.

2:3. horn. Horns symbolized strength, but they also represented leadership. The latter would fit better with the end of verse 2. It was common in Mesopotamia for kings and gods to wear crowns featuring horns. Sometimes the sets of horns were stacked one upon another in tiers. The winged lion from Ashurnasirpal's palace has a conical crown on its human head with three pairs of tiered horns embossed on it. In the Sumerian *Lament over the Destruction of Sumer and Ur* the description of the dismantling of the deity's throne includes the line "Its mighty cows with shining horns were captured, their horns were cut off."

2:8. measuring line of destruction. The measuring line was used to determine the area of landholdings, where boundaries were drawn, and what territory belonged to which landholder (private or city), but none of these explain the connection to the walls and ramparts in this verse. From the use of this metaphor in 2 Kings 21:13 and Isaiah 34:11, it can be assumed that it represents a typical action connected with military conquest. A besieging army would not have the leisure to do such measuring during the battle, so this must refer to the demolition phase. It was rare for city walls to be totally demolished, and from Nehemiah we know that Jerusalem's wall was not totally demolished. However, many sections of wall could have suffered damage due to siege machines, battering rams and sapping operations. Plumb lines would have been used to help determine segments of wall that were no longer stable, and the measuring line would have been used to delineate how much of which sections would need to come down.

2:9. gates and bars. In the Sumerian laments it is the gates and bars of the temple that are thrown down as part of the desecration of the temple. Here it is the city's gates and bars. For further discussion of the functions of bars in the gate structure see comment on Judges 16:3.

2:15. clapping hands. Gestures and body language take on different meanings in different cultures. In current Western society, clapping hands can be used to show appreciation, to summon subordinates or children, to get someone's attention, to accompany music or to express frustration (one clap). There were also several functions in the ancient world. Clapping could be used in praise (Ps 47:1) or applause (2 Kings 11:12), but in these verses a different verb is used. The verb used here designates a gesture of anger or derision (Num 24:10; Job 27:23). Variations may exist in the precise movement involved: compare the different significations in Western culture of (1) striking the palms together parallel to the body on a horizontal plain (applause); (2) slapping the palms together in a roughly vertical movement (frustration); and (3) striking the palms together perpendicular to the body while alternating which hand is on top and which is on bottom (as if knocking the dust off). It is unclear precisely what motion is conveyed here.

2:19. heart poured out like water. Their oppressors clap their hands *(spq kappayim,* v. 15), but here Israel is encouraged to pour out like water *(shpk kammayim)* their hearts. Pouring out water is an act of worship (libation).

2:20. cannibalism. Cannibalism is a standard element of curses in Assyrian treaties of the seventh century. It was the last resort in times of impending starvation. This level of desperation could occur in times of severe famine (as illustrated in the *Atrahasis Epic*) or could be the result of siege (as during Ashurbanipal's siege of Babylon, about 650 B.C.) when the food supply had become depleted, as anticipated in the treaty texts. Siege warfare was common in the ancient world, so this may not have been as rare an occasion as might be presumed.

3:1-66
Hope in God's Faithfulness: Third Acrostic Lament

3:15. bitter herbs and gall. Gall (wormwood) is a bitter-tasting shrub used for medicinal purposes and also occasionally to brew a strong tea. The word translated "bitter herbs" occurs only elsewhere in the Passover passages. It is related to an Akkadian word for lettuce, but since the noun is simply drawn from a word for "bitter" there are numerous other possibilities.

3:16. teeth broken with gravel. The second phrase would suggest that the teeth were broken by shoving the face hard into the gravel rather than forcing someone to chew gravel.

4:1-22
Sin's Results: Fourth Acrostic Lament

4:3. ostriches. There is still controversy over whether "ostrich" is the proper translation of this Hebrew word. Ostriches occur in hunting

scenes in Egyptian paintings as well as on cylinder seals, and inhabited many of the regions of the ancient Near East. The alternative translation preferred by some is "eagle-owl." The ostrich identification would correspond with the inattention to the young attributed to the ostrich (different word) in Job 39:16. Casual observation could make the ostrich appear heartless since it lays its eggs in the sand and often leaves the nest to hunt for food.

4:5. delicacies. With the rarity of this word, it must provisionally be concluded that it refers not to a specific food or dish but generally to the delicacies of any sort that would have graced the royal table.

4:5. nurtured in purple. Again the allusion is to royalty, as the color of the garment indicates. Blue/Purple dye was very expensive (see comment on Num 4:6 and Esther 8:15), and its use was restricted to the ceremonial garments of only the highest ranking civil and religious leaders.

4:10. cannibalism. See comment on 2:20.

4:17. expected help from allies. In 597 when Nebuchadnezzar undertook his punitive raid against Jerusalem, Egypt was the principle ally on whom Judah relied. Later that year, Nebuchadnezzar put Zedekiah on the throne. He almost immediately began meeting with a coalition of the small western states to stand together against Nebuchadnezzar (see comment on Jer 27:3). In 595 a new pharaoh, Psammeticus II, took the throne of Egypt. He enjoyed an early military success against the Nubians in the south, and one papyrus reports that his success was celebrated with a victory tour in Palestine. There was cause to expect his support against Babylon. It is uncertain which nations were actually part of the alliance when it finally took shape. As it turned out, Egypt's army was routed in its confrontation with the Babylonians in 588 (see Jer 37:5-7), and it would appear, based on Psalm 137:7, that allies such as the Edomites threw their support to Babylon when it became clear that Jerusalem was about to fall.

4:21. Edom's role. Edom had become an Assyrian vassal state in the reign of Tiglath-Pileser III and continued under this rule until the death of Ashurbanipal a century later. It is likely that they submitted themselves to Nebuchadnezzar's rule in 605. Although some Judean refugees may have found shelter in Edom, the Edomites apparently remained passive as Jerusalem was destroyed (see Ps 137:7 and Obad 11). The Babylonian campaign against Ammon and Moab in 594 seems not to have affected Edom. It is likely that they remained unscathed until the time of Nabonidus's campaign in 552.

4:21. Uz. Uz, the homeland of Job, is identified with Edom and northwest Arabia in Esau's genealogy (Gen 36:28).

5:1-22

Joy Is Gone: Nonacrostic Lament

5:6. Egypt and Assyria. From the beginning of the seventh century, Judah had been under Assyrian control. Manasseh was a loyal vassal for most of his fifty-five years. During the time of Josiah, Judah experienced a glimpse of independence as the mantle was shifting from Assyria to Babylon. During that interim, Egypt began to exercise more control in the region. Jehoiakim, son of Josiah, had been put on the throne by the Egyptians in 609 and remained loyal to them until Nebuchadnezzar's domination made that impossible. After the fall of Ashkelon to Nebuchadnezzar in 604 Jehoiakim paid tribute to Babylon for a few years. But when Nebuchadnezzar failed in his attempted invasion of Egypt in 601, Jehoiakim again sided with Egypt and stopped sending the yearly tribute east. Thus in 597 when Nebuchadnezzar undertook his punitive raid against Jerusalem, Egypt was the principal ally on whom Judah relied. It can fairly be said then that Judah had been totally dependent on Egypt and Assyria—and that goes back a century or more.

5:12. princes hung by their hands. The Hebrew text is ambiguous regarding whether the princes are hung "at the hands of the enemy" or are hung "suspended from their own hands." There is no precedent for the latter. Hanging implies execution and was generally used after the execution had taken place. Victims were usually hung by being impaled. The practice was most commonly used on rebellion leaders or members of the royal house (1 Sam 31:10). The practice of impaling the bodies of their defeated enemies was commonly used by armies in the ancient Near East. For instance, the Assyrians considered it a psychological ploy and a terror tactic (as depicted on the walls of their royal palaces). See also the comment on Esther 2:23.

5:13. toiling at millstones. Grinding grain into flour was usually done with millstones and was the job of the lowest members of society. One of the basic "appliances" of any ancient household would have been the handmill (called a saddle quern) with two stones for grinding: a lower stone with a concave surface and a loaf-shaped upper stone. The daily chore of grinding grain into flour involved sliding the upper stone over the

grain spread on the lower stone. Larger milling houses often served as prison workhouses in Mesopotamia, but each prisoner still used a handmill for grinding. The large rotary mill that could be powered by donkey or slave labor was not invented until after the Old Testament period. The palace at Ebla had a room containing sixteen handmills inferred to be a place where prisoners ground grain. Grinding houses would include prisoners of war, criminals and those who had defaulted on their debts.

5:13. loads of wood. Wood was a constant necessity for keeping the fires of the kitchens supplied. Palace, temple and the upper class employed the services of slave labor to man the system. Even children were capable of helping transport and distribute the wood.

5:16. crown. Crowns are worn by royalty as a symbol of their status and authority. As a result the word was extended to refer to the abstract concept of the dignity and honor that are the natural accompaniment of status and authority. In this passage the reference is not to an actual crown that Israel wore but to the dignity and honor.

EZEKIEL

1:1-28

The Chariot Throne Vision

1:1-2. chronology. The fifth year of Jehoiachin's reign would have been the year 593 B.C., at the end of the month of July (the fourth month). This chronology takes into account Jehoiachin's accession to Judah's throne during the siege of Jerusalem, which according to the Babylonian Chronicle began in November/December 598. There has been a great deal of speculation regarding the meaning of "in the thirtieth year," because 593 is not the thirtieth year of anything. A common suggestion is that this simply refers to Ezekiel's own birth date and qualifies him to speak on these matters since he has officially reached the age required for admission into the working priesthood (Num 4:30).

1:1. Kebar River. Rather than being an actual river, the Kebar was a canal that diverged from the Euphrates River north of Babylon and continued for sixty miles southeast until it rejoined the Euphrates near Erech. The network of irrigation and transport canals was known as the "waters of Babylon" (Ps 137:1). It served as a means of extending the arable land of southern Mesopotamia and provided water to small settlements along its course (see comment on 3:15).

1:1. apocalyptic visions. Apocalyptic literature is characterized by visions filled with the imagery associated with God's manifold powers as creator. A divine messenger usually interprets the message that is conveyed to the prophet (see Rev 1:1-3). There are some pieces of Akkadian literature that show prototypes of some of the characteristics of biblical apocalyptic, but nothing that is very close (for closest connection see sidebar on Akkadian apocalypses at Dan 11). Apocalyptic literature is most recognizable in its use of rich symbolism that draws heavily on mythological motifs. In prophetic literature the symbols are rarely interpreted. Often the visions themselves do not symbolically represent a foretold happening but serve as occasions for a message concerning what God is going to do. Most scholars now consider Ezekiel's prophetic visions as being influential on later apocalyptic literature (see Dan 7—12 and Zech 8—14). For instance, his vision of God enthroned in a shining chariot has been incorporated into Daniel 10:5-6 and the pseudepigraphal *1 Enoch* 14:18.

1:2. Jehoiachin's exile. Along with most of the royal court and many of the influential or wealthy members of Judean society, Jehoiachin was taken into exile when Jerusalem fell to Nebuchadnezzar's army in 597 (see 2 Kings 24:8-17). Babylonian ration lists include mention of quantities of oil being supplied to the "king of Judah" along with other high-ranking prisoners of war and dependents of the royal household. Eventually, in 561 B.C., during the reign of Nebuchadnezzar's successor, Amel-Marduk (the biblical Evil-Merodach), Jehoiachin was freed from his imprisonment (probably house arrest) and allowed the freedom of the king's court (see 2 Kings 25:27-30). He died in exile, bringing an official end to the Judean monarchy.

1:3. exilic community. The exilic community, of which Ezekiel was a member, was a relatively small group in 593 B.C.—perhaps ten

thousand persons. However, looking at Nebuchadnezzar's list of deportees in 2 Kings 24:14-16, it would appear that they comprised the military, political and religious leaders as well as craftsmen who could be employed in the Babylonian king's numerous building projects. The trained soldiers were also probably pressed into service in the Babylonian army. It was only after 587 that a large portion of Judah's population joined their fellows in Mesopotamia. This policy of deporting hostages and large segments of a rebellious nation was widely used by both the Assyrians and the Babylonians. The Babylonian practice of settling the exiles in self-contained villages is demonstrated in texts from Nippur. While it was a traumatic event for the people of Judah, they were encouraged to settle into their new situation (see Jer 29:4-23). Textual evidence from the Persian period (fifth century B.C. Murashu texts) suggests that they followed this advice, starting businesses, working farms and creating an identity for themselves in exile.

1:4. elements of theophany. A theophany consists of a manifestation of God's presence to a human (see the classic example in the Sinai theophany of Moses in Ex 3). This may occur in person, although God's person is never actually described in any detail, and there is always a great sense of dread on the part of the human involved (see Gen 28:16-17; 32:24-30). Fear is generated by the power evidenced in God's "glory" *(kabod),* a divine attribute also found in Mesopotamian epics (there called *melammu).* The purpose of a theophany is often to call a human to serve the deity. Thus Elijah, although already serving Yahweh as a prophet, is called to greater tasks during his meeting with God on Mount Horeb (1 Kings 19). The major prophets each have a theophany that marks the beginning of their ministry. For instance, Isaiah's vision (Is 6) encompasses the Jerusalem temple and harks back to Moses' experience, and Jeremiah's call narrative has coronation overtones (Jer 1). In Ezekiel's case the appearance of God is described as overwhelming and mysterious. There are symbols of God's power implicit in the divine chariot, the accompanying creatures and the dominance of all of nature's forces. Naturally, once chosen, prophets must ultimately accept their mission, although they generally try to provide excuses.

1:5. winged, upright creatures as throne guardians in ancient Near East. There are numerous examples from ancient Near Eastern art of winged creatures with human faces, especially from the Assyrian palaces and temples of Nimrud and Nineveh, but most of these are quadrupeds. Among these are the massive guardian figures uncovered in the remains of the Nimrud palace of the Assyrian king Sennacherib. One is a winged bull with a human head, and the other has the body of a lion with a human face. Ashurnasirpal's palace at Kalhu contains figures of this type strategically placed at the entrance to palaces and temples and in throne rooms. Their huge size (eight feet high) was designed to intimidate all who entered. Syro-Phoenician art contains similar images of winged sphinxes (lion's body, eagle's wings and human head). Upright (biped) composites are less attested. Four-winged, eagle-headed human figures are portrayed in the Ninurta temple at Nimrud. Achaemenid Persian iconography depicts upright creatures that have four wings, human heads and bull legs and hooves.

1:6, 10. four-faced creatures. There does not seem to be any exact Near Eastern parallels to these multifaced creatures. Though eagle, bull and lion faces are all common on composite creatures (in fact, these are the only beasts so featured in Mesopotamian art), there are few examples of multiple faces on the same creature. One example exists that has a lion head with a human head perched on top of it. Only the far-removed Roman god Janus provides an attenuated model, with one face looking forward and one backward. The purpose of these creatures is also multifaceted. By being able to look in all four directions, the creatures serve the same function as the wheels of the chariot (v. 17), which could travel in any of the four directions. Both represent the power of the deity to be present anyway and to be aware of all events on earth. In addition, the animal bodies represented here (lion, eagle, bull/ox) all have parallels in Near Eastern art, and each symbolizes specific powers or attributes that signify the omnipotence of God: the lion indicates strength (2 Sam 1:23); the eagle indicates speed and gracefulness (Is 40:31); the ox indicates fertility (Ps 106:19-20).

1:15-18. wheel technology. Naturally a chariot with wheels facing all four directions could not travel effectively in any direction. However, the purpose of the image is found in its symbolic value of attention to all of the corners of the world—God's omnipresence. In addition, the chariot is actually upheld on the outstretched wings of God's four-faced creatures and flies through the air. There is, however, a sense of motion implicit in having the wheels in place. This is based on a comparison with the winged-bull figures that guarded entranceways in Assyrian palaces. Many of them

have a fifth leg to suggest that though the figure is frozen in the relief, it is actually dynamic and in motion. Assyrian art also provides examples of wheeled chariots with high rims and multiple spokes that may be the origin of this image in Ezekiel. The wheels sometimes feature thick rims made up of concentric bands, as well as spokes. The depiction of a "wheel within a wheel" may thus represent greater stability for the chariot, as multiple axles and tires do for modern trucks. The description of "eyes" within the wheels finds its explanation in Babylonian terminology where the word "eyes" is used for oval gems. Semiprecious stones were embedded in the rims to sparkle and dazzle onlookers.

1:22. expanse over the heads. Above the heads of the four creatures is a platform sparkling like crystal or ice. Ancient Near Eastern glyptic art and sculpture contain images of winged creatures holding up a pillar, a throne or a platform. For instance, in the seventh-century Assyrian palace at Nineveh, miniature sphinxes served as column bases. Similarly, a twelfth-century Phoenician wheeled cult stand depicts a human-faced, lion-bodied, winged figure. Its wings and head appear to be holding up one side of the stand. More significantly, first-millennium Mesopotamian texts speak of three levels of the heavens, each of which feature pavements of different colored stone. The lower heavens are said to have a platform of jasper, usually associated with a glassy, translucent or opaque appearance. In these texts the pavement of the middle heavens is lapis lazuli (see comment on Ex 24:10) and holds up the dais of the god Bel (Marduk).

1:26. throne chariot. Since the gods in the ancient Near East often participated in processions, there were vehicles used for their transport. Engraved cylinder seals from the end of the third millennium show a deity standing in a four-wheeled chariot/cart drawn by a composite quadruped with a lion's head and wings. Assyrian reliefs show wheeled thrones for both kings and gods that also feature poles for bearers to use to carry the throne.

1:26-28. appearance of throne and figure. The dazzling character of this vision can only be compared to a rainbow or a fiery visage. This would be in keeping with the Mesopotamian concept of *melammu* ("clothed with power") as it regularly appears in the description of Mesopotamian gods (for instance, Marduk in the *Enuma Elish* creation story). In Mesopotamian texts of this general period, a platform in the middle heavens made of lapis lazuli (a better interpretation of the word translated sapphire in v. 26) supports a cella and dais of Bel. The cella is said to shine with the appearance of glass and crystal. The description of the elements of this vision conform to the conventions of the motifs familiar in Mesopotamia.

2:1—3:15
Ezekiel's Call

2:6. briers, thorns and scorpions. Call narratives for prophets generally follow a set pattern. When the chosen prophet makes excuses and shows apprehension, God provides reassurances (see Jer 1:7-8). In Ezekiel's case the use of unusual terms (these particular words translated briers and thorns appear only in Ezekiel) is somewhat confusing. However, what may be implied is that God is building a protective wall around the prophet made of stinging thorns. It has been plausibly suggested that "scorpion" here refers to a type of bush rather than the stinging creature.

3:1-3. eating a scroll. The imagery associated with Ezekiel eating the scroll presented to him by God is part of his call narrative and his acceptance of his mission. The words on the scroll must be internalized. They are also empowering in much the same way that God's touching Jeremiah's mouth empowered him to speak his prophecies (Jer 1:9). There are no direct ancient Near Eastern parallels. It is possible that consuming a piece of parchment or papyrus with an incantation or the name of a god was part of the ritual practices of either Egypt or Mesopotamia. The term *asakku,* meaning "set aside for the gods" or taboo, is used in the Mari texts and other Old Babylonian texts in reference to not "consuming" what belongs to the gods.

3:9. imagery of hard forehead. Comparison with Akkadian usage of the same term suggests that Ezekiel's forehead is being compared with the hardest of stones. It is unlikely to be a diamond since there is no attestation of diamonds in the ancient Near East for another century after Ezekiel.

3:14. transported by the spirit. In Hebrew the word for spirit can also mean wind. As early as Sumerian usage the word for wind/spirit was also used in connection with dreams and visions. The god of dreams was named "the winds." In Akkadian the name of the god who brought dreams was Zaqiqu, which is derived from the word for wind/spirit. Additionally, in a dream or vision, it was believed that the "spirit" of the person arises and may move around. In later literature the pseude-

pigraphal book of *1 Enoch* describes the antediluvian patriarch being transported by angels to the garden of Eden, where he served as a "watcher" of the doings of humanity and recorded them in a book.

3:15. Tel Abib. Technically, the name Tel Abib (Babylonian *til abubi)* means a place created by the flotsam and jetsam of a flood. A "tell" is the term used for any ruined city site. Thus the exiled families of Judah might have been set in a place that had been destroyed, either by war or flood, and expected to rebuild it and bring the Nippur area on the canal Kebar back into production. There is also an excellent dual meaning, since the people of Judah had been swept here by the tide of Babylonia's military victory.

3:16-27

Ezekiel the Watchman

3:22-26. results of Yahweh's hand (mute). Some have suggested physical ailments, from aphasia to schizophrenia, as the cause of Ezekiel's problems. Several commentators have also suggested either a conscious decision on Ezekiel's part to limit his role as mediator between the people and God, or a divine restriction on his speech (either one being divinely imposed). Ezekiel's experience is comparable to that described in Akkadian incantation texts, which speak of being "touched by a god" and struck dumb. This material would have been familiar to the prophet and provided him with an excellent parallel to the nature of his prophetic state rather than a physical diagnosis. The sense of paralysis (cf. 4:8) and the inability to speak were well-known symptoms of supernatural overpowerment in the ancient world. Incantations sought to impose such conditions, and demonic oppression was characterized by them. In one piece of Babylonian wisdom literature *(Ludlul Bel Nemeqi),* an individual who cannot understand why he is suffering describes his condition as including his lips being struck dumb and his arms and legs being stiff and paralyzed. His suffering is all attributed to the "heavy hand of Marduk."

4:1—5:17

Sign-Act Prophecies of Coming Destruction

4:1. sign acts. In the Mari texts from over a millennium earlier than Ezekiel, prophets were already using symbolic actions and wordplays as a medium for their prophetic message. In one instance a prophet devoured a raw lamb to announce an imminent danger that could devour the land. Forms of street theater are employed by Isaiah (Is 20—traveling naked) and Jeremiah (Jer 19—execration ritual following a procession) to engage their audience and demonstrate through their actions how serious the threat is to the people.

4:1. clay tablets used for maps. While it is rare to find a clay tablet that contains a map image, there is a Kassite period (fifteenth century B.C.) map of the city of Nippur. It shows canals radiating from the Euphrates River and suggests that these water channels into neighborhoods divided the city. The map shows two parallel lines and indicates three gates and the city walls. Temples and storehouses also are marked on the drawing. A world map was found near the site of Sippar dating to the seventh century B.C. A river surrounds the circular disk of the world, and mountains are drawn at the top of the image. Babylon, Assyria and other cities, regions and nations are identified on the map.

4:2. siege strategies. All of the strategies described here are typical of Assyrian and Babylonian siege engines and techniques. They are often depicted on palace walls in Nineveh and Babylon. See the comments on Jeremiah 6:6 and Isaiah 29:2 for siege works and ramps. Battering rams are sometimes attached to portable towers that are wheeled up to city walls or gates. The glacis, a slope built diagonally against the wall, was constructed to prevent effective use of the ram. Camps were erected all around a city to prevent the escape of the inhabitants. One of the most graphic examples of this still in existence is the remains of the Roman camps built all around the fortress of Masada during the revolt of A.D. 70.

4:3. function of iron pans. The Israelites baked their bread and prepared grain offerings on griddles laid over an open fire or placed into an earthen oven. The rich would have been able to afford copper or iron griddles, while the poor would have used ceramic disks.

4:3. symbolism of iron wall. Iron in earlier periods was counted among the precious metals. Although more commonly used in the sixth century B.C., it still would have been considered a prized object because of its strength and durability. Since Ezekiel is directing the symbolic siege, he must represent God. The iron wall is then understood to be the barrier between God and the people of Jerusalem. It signals that they may expect no help in the coming siege from the Divine Warrior Yahweh.

4:9. ingredients of bread. The items listed

here from which Ezekiel is to make his loaf of bread include some common grains (durum wheat, barley and emmer wheat). These grains were part of the diet of all the peoples of the ancient Near East, and there are cognate words in Akkadian and Ugaritic for each of them. Millet is a summer grain. The unusual items in this recipe are beans and lentils. While these vegetables were used for soups and occasionally ground up and mixed with wheat to make a crude bread, that would have been unusual. D. Block suggests plausibly that Ezekiel's mixture is symbolic of a siege bread made from whatever could be scraped from the bottom of all of the food bins.

4:10. amount of food. The fact that Ezekiel's food has to be weighed out and eaten at a particular time signals that this is the hard rationing that would have been necessary during a siege. Twenty shekels would be equivalent to eight ounces of food. That amount of calories would keep him alive, but it would also significantly weaken him. The weakness of a starvation diet mirrors conditions in Jerusalem.

4:11. amount of water. Water rationing would also be necessary during the siege, since the people would be dependent on the supply in cisterns (see the comment on Jer 38:6) and the pool deriving from the Siloam tunnel. Ezekiel's ration is one-sixth of a hin or two-thirds of a quart per day. The extremely hot conditions during the summer and fall of 588 would have severely taxed the besieged people of Jerusalem. Such a small water ration would have further contributed to their misery.

4:12, 15. fuel for fire. The typical fuel in areas like Mesopotamia and Palestine was dried animal dung or cakes made from the waste pulp of crushed olives. Trees were too precious to be cut for cooking and warming. Ezekiel, however, is horrified when God commands him to cook using human dung, an unclean substance that must be buried away from human habitation (Deut 23:12-14). He was a priest and this act would defile him; he simply cannot bring himself to obey. Thus God compromises by allowing him to cook over animal dung.

5:1. sword as razor. A sword would have been an awkward instrument to shave the beard and head. Though "sword" is the usual translation of this Hebrew word, it can be used for other sharp implements, including axes, daggers and chisels (cf. 26:9 and Josh 5:2). In Ugaritic, an implement described by this word is used to carve roast meat. A general-purpose translation like "blade" would be preferable. The choice of this word may have been dictated by the desired reference to the use of the sword by the Babylonians to shame and conquer Jerusalem.

5:2. use of hair in offerings. Cutting or shaving the hair is most often associated with rituals of mourning (see comment on Is 15:2). However, when a Nazirite vow has been completed, the law commands that the hair that has been dedicated during the period of the vow is to be cut and placed as a sacrifice in the fire (Num 6:18). In ancient thinking, hair (along with blood) was one of the main representatives of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of the presumed prophet's hair when the prophecies were sent to the king of Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid.

5:10. cannibalism. One of the terrible results of a long siege of a walled city was food shortage. It sometimes became so severe that the inhabitants of the city restored to cannibalism (see comment on 2 Kings 6:29). For instance, the Assyrian annals of Ashurbanipal describe his siege of Babylon 650-648 B.C. and the desperation of the starving people who were reduced to cannibalism. There are also a number of Mesopotamian treaties that contain a curse that calls for the violator of the treaty to feed on his own family or his own people (as in the Ashurnirari V's treaty with Mati'ilu of Arpad). Biblical versions of this type of curse can be found in Leviticus 26:29 and Deuteronomy 28:53-57.

5:17. famine and wild beasts. These two punishments are related only as part of a typical group of punishments that deity is inclined to send (two more, plague and bloodshed, occur in the second half of the verse). As early as the Gilgamesh Epic in Mesopotamia, the god Ea had reprimanded Enlil for not sending lions to ravage the people rather than using something as dramatic as a flood. The gods used wild beasts along with disease, drought and famine to reduce the human population. A common threat connected to negative omens in the Assyrian period was that lions and wolves would rage through the land. In like manner, devastation by wild animals was one of the curses invoked for treaty violation (see also Deut 32:24).

6:1—7:27
Prophecies of Judgment Against Israel

6:3. high places. See the comment on 1 Sam-

uel 9:12 for these local places of worship often associated with Canaanite or false religious practices.

6:5. bones scattered around altars. There are three significances that combine to give this action meaning. The first concerns the exposure of the corpses of the dead. For the importance of proper burial, see the comments on Joshua 8:29 and 1 Kings 16:4. The second concerns desecration of the holy sites. In Israelite thinking, contact with the dead rendered someone or something unclean. Sacred sites could therefore be permanently contaminated if they were made repositories for that which was unclean (see comment on 2 Kings 10:27). The third significance concerns assigning responsibility for the fate of the Israelites who have perished. Their death is on the heads of these idols and altars that did nothing to save them. For yet one more significance, see the comment on verse 13.

6:11. body language. Gestures and body language take on different meanings in different cultures. In current Western society, clapping hands can be used to show appreciation, to summon subordinates or children, to get someone's attention, to accompany music or to express frustration (one clap). There were also several functions in the ancient world. Clapping could be used in praise (Ps 47:1) or applause (2 Kings 11:12), or as a gesture of anger or derision (Num 24:10; Job 27:23). Variations may exist in the precise movement involved: compare the different significations in western culture of (1) striking the palms together parallel to the body on a horizontal plain (applause); (2) slapping the palms together in a roughly vertical movement (frustration); and (3) striking the palms together perpendicular to the body while alternating which hand is on top and which is on bottom (as if knocking the dust off). Ezekiel is instructed by God to perform a series of symbolic gestures (clapping, stomping his foot and uttering an exclamation) that display God's wrath. Stomping one's foot is often a sign of frustration or anger, as in the Ugaritic Epic of Aqhat. In that tale the hero refuses to give his bow to the goddess Anat, telling her hunting weapons are for men. She is so angry that she violently stamps her foot and goes off in a rush to seek revenge from the gods. The exclamation (NIV: "Alas") that is used indicates that someone will get what's coming to them ("you'll be sorry!"), reinforcing this scene of impending divine punishment.

6:13. slain around altars (provided no sanctuary). False altars can offer no right of sanctuary. Just as God scoffs at those who put their trust in other gods as if in a rock of "refuge," (Deut 32:37), now Yahweh denies them the safety ordinarily extended to those who approach or grab hold of the altar (compare 1 Kings 1:50-51).

6:13. spreading tree and leafy oak. The degree to which idolatry has spread is emphasized in this reference to cultic shrines beneath the branches of every spreading oak (see the comment on Deut 12:2-3 on Canaanite "outdoor shrines"). Hosea 4:13 also uses this image of hilltop and leafy glade as places of idol worship.

6:14. desert to Diblah. The geographic range here, like the more familiar "from Dan to Beersheba," expresses God's ability to punish the Israelites from one end to the other of their territory. The desert refers to the wilderness around Beersheba. Diblah appears in the Septuagint and is a variant of Riblah, which was in the land of Syro-Hamath just south of Kadesh (2 Kings 23:33). Its mention here may refer to the city's use by Nebuchadnezzar. It was the headquarters for his army's campaign during his siege of Jerusalem in 588-586 B.C.

7:2. four corners. The idea of the whole earth is implied by this reference to the "four corners" of the land. A similar expression is found in Malachi 1:11 and the royal Phoenician inscription of Azitiwadda (730-710 B.C.) from Karatepe. These texts express universal rule and power by referring to the land "from sunrise to sunset." The Assyrian annals of Shalmaneser III state that the "totality of the countries" have been placed in his hands. The phrase used here and elsewhere in Assyrian texts, as in Ezekiel, refers to the four corners of the earth as the king's domain.

7:13. seller will not recover land. The extent of the doom pronounced upon the nation is such that even the Jubilee year will not be celebrated (see the comment on Lev 25:8-55). Ordinarily, property that had been sold to satisfy debts could be redeemed during the Jubilee, thereby restoring the grants of lands that were first made after the conquest (the Code of Hammurabi contain similar clauses regarding redemption of land). Now the "divine lease" has been revoked, and there will be no economic advantage for buyer or seller in the age of destruction to come.

7:18. sackcloth. Sackcloth, one of the traditional signs of mourning and repentance, was made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. This custom

not only set a person aside with a mark of separation from normal life, but as the sackcloth chaffed the skin, it also served as a continual reminder of the pain of loss.

7:18. shaved heads. Although this practice is condemned in Deuteronomy 14:1 (perhaps as part of the ancestor cult—see the comment on Deut 14:1-2), shaving the head as a sign of mourning was very common (see Job 1:20 and Jer 48:37). It also occurs as part of the purification ritual for the diseased (Lev 14:8-9) and in the law of the Nazirite (Num 6:9). In Mesopotamia shaving off half the hair was used as a punishment intended to bring public humiliation.

7:23. chains. Captives are usually depicted in Egyptian and Mesopotamian art bound in chains. This is the case in a relief found in the Ramesseum at Thebes picturing Asiatic, Ethiopian and central African captives being paraded before Rameses II. A similar scene of captive Canaanite and Philistine prisoners is carved into the wall of the mortuary temple of Rameses III at Medinet Habu.

7:24. sanctuaries desecrated. Mention of the desecration of the temple in Jerusalem (Ps 74:7) and of Josiah's systematic destruction of the high places throughout his domain and at Bethel (2 Kings 24:8-15) indicates that sanctuaries were not safe from the hand of avenging or crusading rulers. Ancient texts from Old Babylonian Mari and the Persian period Cyrus Cylinder describe the destruction of temples and the taking of sacred images as "hostages." In Ezekiel's vision the false altars and shrines erected by the Israelites will now be swept away and destroyed by an avenging God.

7:26. vision, law, counsel as means of deliverance. The prophetic vision offered a message from God that might at times bring encouragement or hope of deliverance. The priest's instruction here is possibly ritual instruction intended to point the way toward appeasing divine wrath. The counsel of the elders was believed to be a channel for divine wisdom leading to proper decisions. In a time of upheaval and destruction, the land is left without direction from God or regarding God. All of the traditional means of providing guidance are lost or ineffective (see these groups of counselors in Jer 26:7-17). Just as the *Visions of Neferti,* a twentieth-century B.C. Egyptian seer, describe how "officials no longer administer the land" and "those who could speak have been expelled," now Judah faces a future without the counsel needed to plan and make decisions (compare Saul's dilemma in 1 Sam 28:6).

8:1—11:25

Transported to Jerusalem in a Vision

8:1. chronology. Fourteen months after his initial vision calling him to serve as a prophet, Ezekiel now experiences a new vision that will dramatically demonstrate the decadence of Jerusalem's religious state. Based on the calendar used for Ezekiel 1:1, the date of this vision would be September 17-18, 592 B.C.

8:2. figure of metal and fire. A divine apparition that confronts Ezekiel is similar in its brilliance to the one in his call narrative (Ezek 1:26-27). In both instances he uses qualifiers and the combination of blinding fire and shining metal or electrum. It is the magnificence of God's or a divine messenger's glory that is being conveyed here. This follows the pattern of the dangerous nature of contact with the divine found throughout ancient Near Eastern literature (see the comment on Ezek 1:26-28).

8:3. transported in visions. Since Ezekiel will not physically leave the exile, it is necessary for him to be transported in a vision to Jerusalem, where he can witness the city's abominations. There is little in the literature of the ancient Near East to provide information on visions or visionary experiences. In one interesting text, *A Vision of the Netherworld* (seventh century), an Assyrian prince sees Nergal, king of the netherworld, seated on his throne, with lightning flashing from him. The text does not say how the prince was transported, but it does mention that he is dragged by his hair to Nergal. A parallel to spiritual transport might be found in the Mesopotamian hero Adapa's appearance before the divine assembly. His patron god, Ea, causes him to "take the road to heaven," and Adapa has the opportunity to gaze from that vantagepoint "from the horizon of heaven to the zenith of heaven."

8:3-16. temple complex topography. The rectangular temple structure (facing east) is surrounded by a walled inner courtyard. Outside of this wall is the outer courtyard. The wall is lined with chambers used for various purposes. Ezekiel first is set down in his vision outside the north gate leading from the outer courtyard into the inner court. From this outer courtyard, Ezekiel could look through the gate at the altar that dominated the inner courtyard. The gates leading into the temple precincts were added after Solomon's original construction of the temple (2 Kings 15:35). The hole near the gateway (v. 7) area may have led into one of those chambers lining the courtyard wall, perhaps a storage room that had been transformed into a shrine where the sev-

enty elders stood in their own separate niches and worshiped idolatrous images. The next scene (v. 14) is outside a gate in the same wall further to the west, where women would be allowed. Then at verse 16 Ezekiel is led into the inner court of the temple where he will view a further abomination in the area between the porch of the temple and the altar.

8:5. idol of jealousy. The image of Asherah that Manasseh set up in the temple complex is referred to in a similar way (2 Chron 33:7, 15). Though this should not be considered the same image, it could easily be another Asherah. This is further suggested by the fact that the word used for "image" here is an unusual one that is thought to be a loan word from Phoenician or Canaanite. According to the second commandment of the Decalogue, any image that was the object of worship would provoke Yahweh's jealousy.

8:10. wall decorations as objects of worship. The text specifies these as images carved in relief on the walls. This art form was well known in Assyria and Babylon. Verse 12 additionally suggests that each of the seventy was worshiping in front of a separate niche where an image was engraved. The fact that these carvings were of animals suggests some connection to Egyptian mortuary practices. Animals were not typically the objects of worship in Canaanite or Mesopotamian practice. But the Egyptians used apotropaic rituals to ward off various creatures from the tombs of their ancestors, and incense was used throughout the ancient Near East in apotropaic contexts. The decoration of the walls of houses in Mesopotamia with images of ants and cockroaches may also have been apotropaic.

8:14. mourning for Tammuz. Like other fertility-oriented "dying gods," the Sumerian demigod Tammuz spent part of the year in the underworld (representing the dry, unproductive seasons) and then came back to life during the time of rains, planting and harvesting. The Mesopotamian ritual that formed part of his worship begged the gods to restore Tammuz and the land's fertility. It included a series of laments (based on those initiated in the epic story by his wife Inanna and his mother and sister). The women who performed these laments would wail and shed tears (a symbolic gesture of the need for rain). The fact that Ezekiel describes women performing this ritual before the gates of the temple in Jerusalem may reflect either the adoption of this fertility god as a substitute for Yahweh or wailing for Yahweh as a dying and rising fertility god using Tammuz lamentation liturgy. This adds a Mesopotamian heresy to the Canaanite- and Egyptian-style heresies in the two previous scenes.

8:16. sun worship. Evidence of official sun worship in ancient Israel seems to be tied primarily to the reign of Manasseh**.** The horses and chariots of the sun that he set up were destroyed by Josiah when he attempted to cleanse the temple complex of foreign religious influence (see comment on 2 Kings 23:11). Place names such as Beth Shemesh, Ein Shemesh and Mount Heres (Josh 15:7; Judg 1:35) also attest to the popularity of sun worship. Perhaps it is not coincidental that the chapter is dated to the time of the autumn equinox when the sun would be at the angle to shine directly into the temple at sunrise. While Egypt, Canaan and Mesopotamia all had sun gods (Amun-Re, Shemesh and Shamash respectively), it is more likely that this is syncretistic worship of Yahweh as a sun god. This would complete the series of scenes that portrayed Canaanite worship (v. 5), Egyptian worship (v. 10-11), Mesopotamian worship (v. 14) and syncretistic worship of Yahweh (v.16).

8:17. branch to the nose. There is an Akkadian expression *(laban appi)* that refers to a gesture of humility used to come contritely before deity with a petition. When this act is portrayed in art, the worshiper has his hand positioned in front of his nose and mouth, and is sometimes shown with a short cylindrical object in his hand. From the Sumerian tale called *Gilgamesh and the Land of the Living* there is some evidence that what is held is a small branch cut off a living tree. This would suggest that in Ezekiel the people are putting on a show of humility. It must be admitted, however, that these connections are very hazy and the significance may lie somewhere else entirely.

9:2. six slaughterers. While there is an obvious parallel between this vision of divinely directed executioners and the "Destroyer" in the Passover narrative (Ex 12:23), the motif of seven destroyers is best exemplified in the eighth-century Neo-Babylonian *Myth of Erra and Ishum.* In this ancient poem the god Anu begets seven deities (Sebitti, associated with Pleiades) and gives them to Erra to serve "as his fierce weapons." These merciless beings spare no one, killing all in their directed path and thus functioning as the tools of chaos and violence. The poem, like Ezekiel's vision, provides a religious explanation for the destruction and humiliation of a major city (Babylon), but here there are only six rather than seven, the seventh having been replaced by a scribe (see next entry).

9:2. record-keeper. The motif of a divine

record-keeper is found in the Gilgamesh Epic where Belet-Seri kneels before Ereshkigal (the queen of the underworld in Akkadian belief) and reads out the names of mortals who will die. But the scribal writing kit carried by the man here would evoke the image of Nabu, the god of scribes and scribe of the gods. Nabu was one of the most popular Babylonian gods of the period, as is demonstrated by his appearance in many of the names (e.g., Nebuchadnezzar). He is the one who keeps the accounts on the tablet of life, just as the scribal personage here in Ezekiel is doing.

9:2. writing kit. The ancient scribe typically carried a writing case that would serve as a palette when he was writing and also stored his pens and containers of ink (usually both black and red ink). In this passage, the term used for the writing kit included an Egyptian loan word *(qeset)* that identified it as a particular style of palette, with slots for the pens and two hollowed-out places to store ink. These palettes appear in numerous Egyptian tomb paintings. The pen was a rush or reed cut to a point that could serve as brush or point depending on the shape of the letter being drawn. Ink was made from a mixture of carbon and gum. Red ink had iron oxide added to produce the color needed for rubrics or the lines on the scroll. Completing his kit would be a knife to sharpen his pens (Jer 36:23).

9:2. bronze altar. The bronze altar was part of the furnishings of the original temple complex created by Solomon (see comment on 2 Chron 4:1). It had sat in front of the temple "between the new altar and the temple," and had then been moved to the north side to make room for the idolatrous altar erected by Ahaz (2 Kings 16:14).

9:3. glory of the Lord above the cherubim. There is an association between God's "glory" and the ark of the covenant as early as the Samuel narratives (see comment on 1 Sam 4:3-4). In Ezekiel God's presence is tied to the "glory"—a physical manifestation that also plays on the image presented of the ark of God enthroned between the wings of the cherubim (for the iconography of the ark, see comment on Ex 25:10-22).

9:4. marks on the forehead. The action of the scribe conjures up several parallels. The mark is the Hebrew letter *taw,* the last letter of the Hebrew alphabet, which was used as a signature in some periods of Israelite history (Job 31:35). In the script used during Old Testament times it was either an X shape or a + shape. It may represent God's ownership of the remnant of the people who deserved to survive the coming destruction (a sentiment also expressed in the Egyptian *Visions of Neferti*). Jewish tradition continued to employ this sign as a mark of the righteous from the Dead Sea Scrolls, through the intertestamental period and into rabbinic traditions. Certainly, marking those who will survive God's wrath is comparable to the blood on the doorpost during the Exodus event (Ex 12:11). The same mark used in Ezekiel was early associated with the blood mark on the doorposts at Passover, but its resemblance to a cross made that connection unpopular among the rabbis in the post-Christian era.

10:1. throne of sapphire (lapis lazuli). The mention of God's throne is a reiteration of 1:26. At least since Roman times, based on the writings of Pliny, *sapphire* has actually denoted lapis lazuli. It remained common until the end of the medieval period to employ the term *sapphire* when referring to the deep blue of lapis lazuli. The word *sapphire* comes from the Sanskrit and was borrowed into Latin. Lapis lazuli, a combination of minerals including felspathoid, sodalite and lazurite, comes from the mountains of Afghanistan. It is a brittle stone and has been used for jewelry, in mosaics and to decorate furniture. Its sparkling character, a desirable quality for decorative purposes, is the result of pyrite fragments blended with the stone. In Akkadian texts this stone was commonly associated with the dwelling place of the high god.

10:1. cherubim. See the comment on Exodus 25:18-20 and 26:1-6 for the decorative appearance of cherubim in the tabernacle and on the lid of the ark of the covenant. In the Jerusalem temple two cherubim were made from olive-wood and overlaid with gold (see 1 Kings 6:23-28). The significance of the iconography in each of these instances is to be found in the idea of God's presence being upheld on the wings of the cherubim. The close association of God and the cherubim may be related to the image of Canaanite and Mesopotamian gods riding or standing on the backs of animals (i.e., Baal astride a bull). It should also be noted that the winged beasts of Assyrian art may have also had some influence on the biblical depiction of the cherubim (see the comment on Ezek 1:5). In chapter 1 these creatures were not identified as cherubim, but here they are placed in that category. This is logical since cherubim were most commonly portrayed as the guardians of divine property or presence.

10:2. wheels. See comment on 1:15-18.

10:4. radiance of the glory of the Lord. See the comments on Ezekiel 1:4 and 1:26-28 for discussion of the *kabod* or "glory" of God and how it compares to the concept of *melammu*,

"divine brilliance," that appears in Mesopotamian literature. For a comparison with Egyptian and Akkadian religious texts dealing with the radiance of the gods and the danger to humans who see this divine light, see the comments on Exodus 13:21-22 and 33:18-23.

10:9. chrysolite. As in 1:16 the semiprecious stone mentioned is *tarshish.* Most interpreters identify it as either beryl or topaz, both of which would have reflected the light and provided the sense of translucent brilliance in this text.

10:12. full of eyes. See comment on 1:15-18 for the discussion of the wheels "full of eyes."

10:14. four faces. See comment on 1:6.

10:15. Kebar River. See comment on 1:1.

10:18. importance of the threshold. Entranceways have great symbolic significance in the biblical world. They serve as a place of judgment (Deut 22:20-21) as well as a legal site where acts of submission and worship may take place (1 Sam 5:4; Ezek 46:1-2). They also mark the point of entry and exit from a private home or, as in Ezekiel, from the realm of sacred space to the secular world.

10:19. east gate. This would be the gate of the outer court of the temple. While the temple complex had an east-west orientation, it is unclear how closely tied to this sacred precincts were the buildings and courtyards of the royal palace. It is possible that the gate Ezekiel is referring to in this case is one of those that connected temple and palace. If this is the case, then its significance is heightened as Yahweh prepares to abandon both the religious community and the secular authorities to their fate.

11:1. leaders. All of these names appear on seals from this period, but with the exception of Pelatiah, it is unlikely that the seals should be related to the individuals named in this verse. The Pelatiah seal possibly refers to this individual, but there can be no certainty. For more about seals and persons named on them, see the sidebar in Jeremiah 32.

11:3, 7, 11. metaphor of cooking pot and meat. Ezekiel refutes the claims of Jerusalem's new rulers that they have created a safe haven in the city for the people. He turns this around, transforming the pot (Jerusalem) from a tightly sealed storage jar into a cooking pot in which the people (see Mic 3:3) and their false rulers will be broiled over the flame of Yahweh's anger (compare Ezek 22:18-22).

11:18. images and idols. See the comments on images in 8:5 and 8:10.

11:19. heart of stone. The concept of a heart of stone would have had a couple of associations in the ancient world, mostly from Egypt. First of all, in Egyptian beliefs it was the heart that was weighed in judgment to determine whether or not the afterlife could be attained. If it was weighed down with guilt and sin, the results could be disastrous (see comment on Ex 8:11). A heart of stone would be a heavy heart. More important is the imagery connected to the mummification process. From New Kingdom times on, the heart was removed from the mummy and placed in a canopic jar, as the other important organs were. This was done because the Egyptians believed that the heart might betray the individual when he came to judgment and thereby jeopardize the afterlife. The heart was replaced with a stone carved in the shape of a dung beetle. In Egypt this insect was the symbol of eternal life. By transplanting it inside the mummy in place of the heart, they believed they were securing the renewal of the person's life and vitality. In contrast, Yahweh is going to bring his people back to life by returning to them hearts of flesh that will not betray them. The imagery of an unhardened heart would be apt in that verses 17-20 suggest a new exodus and a new covenant.

11:23. mountain east of the city. The mount to the east of the temple complex would be the Mount of Olives. From here one can look down on the temple mount and the city. From a vantagepoint in Jerusalem, this would be the limit of how far one could look to the east. Whether the implication is that God is going to sit outside the city and watch (compare Jon 4:5), or whether it is from here that he returns to heaven (it is the traditional site of the ascension of Christ as well, though New Testament support is slight).

12:1-28

Prophecy of the Exile

12:5. digging through the wall. As depicted in Assyrian reliefs, a number of different measures were used to breach the defenses of a city under siege. Among these was undermining or drilling through the city walls. Ezekiel, since he was digging from the outside of his wall inward, therefore took on the role of the Babylonians, who were working, at God's command, to break through into the city.

12:6. covering the face. There were occasions when the face was covered in mourning or shame, but those use a different verb than the one used here. It is likely that covering the face here symbolizes the fate of the king he is representing (vv. 12-13).

12:6. sign to Israel. Ezekiel's enacted prophecy provided God's sign of the coming destruc-

tion of Jerusalem and the exile of the people. By performing this set of actions, Ezekiel became the message. Sign-acts often go even further, as the prophet's life itself becomes a sign (see Is 8:18; Jer 16:2; Hos 1).

12:10. prince in Jerusalem. At the time Ezekiel was speaking, Zedekiah was the ruler of Jerusalem. He was the third son of Josiah to sit on the throne, although his power to rule was strictly curtailed and under the supervision of Nebuchadnezzar (see 2 Kings 24:15-17). The fact that Ezekiel refers to Zedekiah as "prince" (Hebrew *nasi')* instead of as king (Hebrew *melek)* is an indication that he does not consider him the true successor of David.

12:13. net, snare. The image of God snaring his enemies in a net is a common one in ancient Near Eastern art. Among the most graphic is the Stele of the Vultures, which depicts the Sumerian god Ningirsu holding a net of woven reeds in his left hand. Imprisoned within the net are the soldiers of Umma who had attacked Eannatum, the king of Lagash. Egyptian art from the reign of Necho II portrays the pharaoh gathering his foes in a gigantic net (see Hab 1:14-15).

12:13. land of Chaldeans. The Chaldeans are first mentioned in Mesopotamian sources in the ninth century B.C. Although related ethnically to the other Aramean tribes of southern Babylonia, they had a distinct tribal structure. As the Assyrian empire began to weaken, Chaldean leaders, including Nabopolassar and Nebuchadnezzar, eventually gained their independence and established the Neo-Babylonian dynasty after 625 B.C. The areas that they controlled and within which they settled the exiles from Judah ranged from all of southern Mesopotamia to the region west of Haran on the upper reaches of the Euphrates River.

12:13. will not see it, there he will die. This statement was fulfilled in the blinding of King Zedekiah after the capture of Jerusalem by Nebuchadnezzar's troops. Although he would be taken into the exile and would spend the rest of his life a prisoner, Zedekiah's eyes were destroyed after he was forced to witness the execution of his children (see 2 Kings 25:7). The practice of gouging out a prisoner's eyes appears in the Assyrian Annals of Ashurnasirpal II in the ninth century and those of Sargon II in the eighth century. This was simply one of several terror tactics employed to frighten and humiliate their enemies.

12:18. anxious eating and drinking. Since eating and drinking are the most basic activities of daily life, the mood at the table often reflects current conditions. At the Passover, the Israelites were to eat their meal "in haste" as a reflection of their readiness to leave. Here the anxiety betrays the threat they are living under.

12:24. flattering divinations. The task of the diviner was to determine the will of a god or gods through various ritualized actions—the examination of sheep entrails, consultation with the dead (1 Sam 28:8) or the study of the astrological configurations. All of these practices were forbidden by Israelite law (see the comment on Deut 18:10-13) because of their association with false gods and false religions. Naturally, a diviner would wish to please his paying clients and thus might be inclined to flatter or seduce them with his manner and statements (compare Prov 26:24-26). Such desirable predictions were out of place and to be considered similar to those condemned by Jeremiah (see Jer 27:9-10).

13:1-23

False Prophets

13:10. flimsy wall covered with whitewash. Ezekiel uses an analogy similar to that in Jeremiah 6:14 and 8:11. In both prophets reality is covered up and people delude themselves into believing that a wound is not serious or a wall is sturdy. It reflects the tendency to hide structural problems with cosmetic solutions. Mesopotamian law codes also deal with unscrupulous builders and homeowners who neglect repairs or attempt to hide unsafe workmanship (see both the Laws of Eshnunna and Hammurabi's Code).

13:11. God's destructive forces. The flimsy walls, held together by layers of plaster, cannot withstand the forces of nature unleashed by God. As in Isaiah 28:2 and 30:30, rain with accompanying high winds and destructive hailstones was to be considered God's voice, thundering out an answer and indictment on Judah. A similar image is found in the Sumerian *Lament over the Destruction of Ur.* In this recitation of misery, the poet describes how the god Enlil withheld the gentle winds that bring the rains needed for their crops. In their place were the desert winds (sirocco) that evaporated all the moisture from the ground and raging storm winds that collapsed buildings and whistled alarmingly through the gates of abandoned cities.

13:14. foundation laid bare. God's wrath is so strong that the symbolic wall constructed of deceptive prophecy is to be totally razed to its bare foundations. Its foundation will be seen

for what it is: self-interest and self-advancement rather than the word of God. Foundations usually consisted of a few courses of stone laid in trenches.

13:18. sewing magic charms on wrists. The practice described here is a bit uncertain since the Hebrew term *kesatot* only appears in this chapter (vv. 18 and 20). It is possible that it is related to the Akkadian *kasitu,* "binding magic." Babylonian incantation texts describe how persons wishing to bind others to their will made bands that they wore on their arms or wrists, empowering them with an oath. Perhaps these false female prophets were employing something similar, or perhaps Ezekiel was simply comparing their influence to a practice known to him from Babylonia.

13:18. various length veils. Again, an Akkadian word, possibly *sapaḫu* ("to loosen"), may be the basis for the item mentioned here. If it is a parallel to the wristbands previously mentioned, then the "veil" might have been worn around the neck as another magic device to bind people to the woman's will. Certainly, a form of "attachment" is intended. Whatever paraphernalia are referred to in this verse, it is generally accepted that it indicates the presence of a familiar type of witchcraft that attempts to control its victims.

14:1-23
Judgment Against Idolatry

14:1-3. elders coming to inquire. The elders served as the authorities for the exiles. They came to Ezekiel as supplicants seeking counsel and an oracle. The gesture of sitting before him (at his feet) indicates his role as teacher and spokesperson for God. There is some question whether they sincerely accepted his authority or were simply curious about what he could offer as a word of God.

14:14. Noah, Daniel, Job. While Noah and Job are easily identified as righteous sages of antiquity, it has seemed unlikely to many interpreters that Ezekiel would place a contemporary prophet, Daniel, in this group. This chapter, however, likely dates from the late 590s. By that time Daniel had been in Babylon for almost fifteen years and would have been in his late twenties or early thirties. His success had come early (see comment on Dan 2:1), so he had been in a high position in the court for a decade. Nevertheless, Daniel does not mesh easily with the profile of the other two. First, both of them are non-Israelites. Noah lived during the flood and prior to Abraham. Job was from Uz, usually located around Edom. A Babylonian wisdom document that contains arguments on suffering similar to those in the book of Job suggests a long tradition for his character. Seeking a highly reputed character from antiquity, some interpreters have considered it possible that the Daniel mentioned here refers to Danil, the wise king of ancient Ugarit who was the father of the hero Aqhat. Like Deborah (Judg 4:5), Danil sat beneath a tree hearing the cases of his people, dispensing justice to widows and orphans. Since he is not associated with Yahweh worship, however, it would be difficult to envision Ezekiel giving Danil such an elevated status. As in the case of the marking of the innocents in Ezekiel 9, these three great wise men, known for their individual righteousness, could only save themselves during the coming catastrophe. The implication that a certain number of righteous persons is necessary to save a city from God's wrath (see Gen 18:23-32; Jer 5:1) is thus set aside in the face of Judah's violations of the covenant.

14:15. wild beasts as judgment. In the passage from verses 15-20, God posits a variety of means to punish the people of Judah for their crimes and thus cleanse the land of its impurity. With respect to using wild beasts as the instrument of God's wrath, see the comment on 5:17.

15:1-8
Analogy of the Vine

15:2-7. vine parables and metaphors. Like Isaiah in the "Song of the Vineyard" (Is 5:1-7), Ezekiel uses the vine as a metaphor for Judah (see also Ezek 17:5-10). In each case the uselessness of the vine versus a branch or a tree well rooted is the justification for its destruction. A similar image appears in an Egyptian wisdom piece, the *Instruction of Amenemope.* There too a plant that serves as the metaphor for fools who speak without thinking is uprooted, burned and destroyed because it soon withers and has no value once uprooted. The metaphor of a city as an unproductive plant is known from the *Myth of Erra and Ishum* (known copies date to the eighth century) in which Marduk laments Babylon. He says that he filled it with seeds like a pine cone, but no fruit came from it, and he planted it like an orchard but never tasted its fruit.

16:1-63
Analogy of the Discarded Woman

16:3. ancestry in land of Canaanites. Biblical references to Jerusalem describe it originally as a Jebusite city (Josh 18:28). David captured

it and transformed it into the Israelite capital (2 Sam 5:6-10). Mention of Jerusalem is also found in nineteenth- and eighteen-century B.C. execration documents from Egypt and the fourteenth-century El Amarna texts. By making this identification, Ezekiel attempts to set aside the people's pride in Jerusalem as their city as God begins to lay out the indictment against Judah.

16:3. father an Amorite, mother a Hittite. This passage operates on two levels. First, it is correct to tie Jerusalem, at least the Jebusite city, to Amorite and North Syrian Hittite political origins. This is established by its mention in the El Amarna texts. However, on a symbolic level, in confronting Jerusalem with its mixed ancestry (tying it to three of the seven major inhabitant groups of Canaan listed in Ex 3:8), God identifies the place and the people as utterly corrupt. When the land was conquered, it was the responsibility of the Israelites to purify it of its idolatrous traditions (Deut 7:1-5), but instead the people became just like the nations they were supposed to displace.

16:4. treatment of a newborn. All of the actions described here would ordinarily be those of the midwife. She would cut and tie off the umbilical cord, rinse the placenta off the newborn, clean the baby's skin with salt water and finally wrap it in a blanket. The child would then be presented to the parents to be named. However, in this case the child is not accepted as a member of the household and instead is abandoned in a field, where its fate is left up to God. In the ancient world the role of the midwife in preparing the birthing room and caring for the newborn is often attributed to deity, especially in metaphors. In a segment of the Babylonian *Atrahasis Epic* the fertility goddess Mami is the midwife of the gods who brings humanity into being. In the Egyptian *Hymn to the Aten,* the sun god presides as midwife over the lands of Egypt each morning. The midwife rituals involved provide for the physical needs of the child as well as making a symbolic transference from the realm of the womb to the living world.

16:5. child exposure. Both classical and ancient Near Eastern sources make mention of infanticide. Graphic evidence of this from the Roman-Byzantine period has been found in recent excavations at Ashkelon, where the remains of a hundred infants who had been disposed of in a sewer drain were uncovered. Infanticide was usually employed to get rid of female or malformed children. This was done as a means of either population control or economic necessity, since many villages were barely able to feed and care for healthy children and adults. The fact that the infant's parents "cast it out" into a field has legal implications as well. They are renouncing all legal claims to the child and leaving it up to God and/or another person to "adopt" and thus save the child's life. Among the examples of this practice are Moses' exposure in the Nile (though this was not total abandonment; his sister was instructed to watch and see what would happen; Ex 2:1-10) and the birth legend of Sargon of Akkad.

16:8. covering nakedness with corner of garment. This is a legal and symbolic gesture by the husband that he intends to provide for the needs of his wife. It is further confirmed by the taking of an oath *(berît).* Another example of the practice is Boaz's expansive covering of Ruth on the threshing floor when he agrees to serve as her advocate before the village elders (Ruth 3:9).

16:9. ointments. As part of the marriage ritual, a "day of bathing" and anointing occurred that symbolized the transference of care of the young woman from her parents to her husband. Old Babylonian documents attest to this ceremony, and it may also be at the heart of a Middle Assyrian law in which a man pours oil over the head of a woman who is about to become a part of his household. This gesture stands in stark contrast to the lack of care given the infant child in Ezekiel 16:4.

16:10. embroidered dress. Among the bridal gifts is embroidered cloth for her gown. Only the finest cloth was embroidered, and it was considered a prize in war (Judg 5:30) as well as a luxury item suitable for trade with other countries (Ezek 27:16). On a more practical level, both Hammurabi's Code and the Lipit Ishtar Code from Mesopotamia list oil, grain and clothing as the items that husbands are required to supply their wives.

16:10. leather sandals. Ordinary sandals were made from woven fibrous material, secured with leather thongs (Is 5:27). For footwear to be entirely made of leather would be a luxury and a signifier of both wealth and power. Fine leather sandals are represented on Shalmaneser III's Black Obelisk panels (ninth century B.C.) and on wall paintings from the time of the Assyrian king Sargon II (721-705 B.C.).

16:11-12. jewelry. The full array of jewelry provided by the husband consists of many of the types of jewelry regularly used to adorn a woman's body and head (compare the more complete list in Is 3:18-23). Like the bride gifts for Rebekah (Gen 24:22), there are arm bracelets, possibly with animal heads at each end. The necklace may have been a strand of beads or linked metal rings similar to those in Assyr-

ian reliefs or the Nimrud ivories depicting royal Assyrian women. The nose ring again follow the style of Rebekah's adornment (Gen 24:22), and the earrings were probably ovoid loops inserted into pieced ears. Most striking of all is the golden crown or tiara that completes the ensemble of a ruler's wife and has parallels in both Egyptian and Assyrian art.

16:13. fine foods. Just as Yahweh has provided the Israelites with food throughout their history, now, in this marriage metaphor, Yahweh as the bridegroom and husband provides Jerusalem the bride and wife with the very best quality flour, honey and olive oil. These staples are listed in the Mesopotamian law codes as the items due a wife for her daily maintenance. In this case, however, special provision is made to insure that she receives the very best with which to make her bread—something that will then serve as a charge against her when she offers these items to other gods (Ezek 16:19).

16:15. prostitution in the ancient world. In ancient Mesopotamia a distinction can be drawn between commercial prostitution and "sacral sexual service" (as G. Lerner terms it). The term *ḫarimtu* is used for both in cuneiform texts (for instance it is a *ḫarimtu* who "civilizes" Enkidu in the Gilgamesh Epic), but there is a difference in social status as well as purpose. The sacral sexual service provided at the temple was tied into the sacred marriage ritual that insured fertility for the land. There were various levels of priestesses, from the high priestess, who represented the goddess Ishtar/Inanna and was said to be "visited" by the god Marduk each night, to cloistered female orders and more public figures like the *naditu,* who could own property, conduct business and even marry. The fact that commercial prostitution occurred near temples is based on the same considerations that brought prostitutes to frequent taverns and the city gate—high traffic areas mean more customers. Both temple sacral servants and prostitutes accepted payment, but the former were expected to dedicate these offerings to the gods. What is particularly incongruous about the bride Jerusalem is that she is said to pay her lovers for their favors, an obvious reference to idolatry and the rejection of the covenant with Yahweh. For further discussion see comment on Deuteronomy 23:17-18.

16:16. garments used to make high places. Once again the double meaning in the text refers both to the high places *(bamôt)* where idolatrous worship took place as well as to the gaudily decorated beds of prostitutes on raised platforms. Similarly, Isaiah 57:7 describes making one's bed on a lofty hill where sacrifice is made to idols. Proverbs 7:16-17 warns that the harlot's bed is covered with enticingly colorful and expensive garments (compare Ezek 23:17)—choice colored linens like those that God had given to the bride Jerusalem in Ezekiel 16:10.

16:17. male idols. Mesopotamian sacred texts contain exact descriptions for fashioning an image of the god. There were additional rituals, including the "opening of the mouth" ceremony, which animated the image so that it could serve as a repository of the god's power and presence. Since this is specifically a male idol in Ezekiel, it is possible that an exact replica of a god is meant (usually featuring a crown or raised spear). However, it is also possible that a bull (compare the golden calf in Ex 32:2-4) or a phallic symbol was created. Using precious metals to create an idol is also found in the story of Micah in Judges 17:4-5.

16:20. human sacrifice. For previous discussion of child sacrifice to Molech, see the comments on Leviticus 18:21 and Deuteronomy 18:10. In this instance, children, the gift of Yahweh as part of the covenantal agreement, are being "fed" to the gods who have become Jerusalem's "lovers." This follows the line of reasoning that had begun with creating the image, dressing and anointing it, and then providing it with meals. All of these rituals have Mesopotamian counterparts in descriptions of their temple service, where two meals a day were served to the images of the gods. It was more specifically Phoenician and Canaanite practice, however, to offer children as sacrifices to the gods.

16:24. built a mound. To demonstrate her desire to play the role of the prostitute, Jerusalem constructed mounds (Hebrew *geb)* in prominent places. These may have been stylized representations of the harlot's bed (see Prov 7:16-17) that served as the prostitute's "shingle," advertising her presence and her profession.

16:24-25. shrine in every square. The term employed here, *ramâ,* is not the usual one for shrine. It appears elsewhere as a platform (1 Sam 22:6), and like *geb,* may have simply been the symbol used to advertise the presence of a prostitute in that place. The fact that it is constructed in a public square simply makes good business sense. The woman would have wanted as high a traffic flow as possible in order to insure her commercial success. Taking it back to the metaphor of Jerusalem's idolatry recalls the multiple altars and shrines erected by Solomon for the

gods of his foreign wives (1 Kings 11:4-8). For shrines on every street corner see the comment on 2 Chronicles 28:24.

16:27. territory reduction. When the treaty obligations of an ally or vassal are not fulfilled, it is the prerogative of the overlord to take punitive action. For instance, when Hezekiah of Judah refused to pay his annual tribute to the Assyrian king, Sennacherib, the latter states in his Annals that Hezekiah's territory was reduced and given to other vassal kings to administer. In this passage, a double meaning is expressed in the use of the word *ḥoq* for "territory." It usually refers to a regular allotment of food (Prov 30:8), but here in a covenant context it connotes that portion which the nation assumes belongs to it but is in fact a gift of God.

16:26-29. Egypt, Assyrian, Babylonia. As Ezekiel expounds on the theme of the evil that comes from foreign entanglements, he cites, in chronological order, countries that have seduced Judah away from Yahweh. These alliances have subsequently brought ruin upon the nation. It was Egypt's political meddling that the Rabshakeh (NIV: "field commander") chided Hezekiah about in Isaiah 36:6. More recently, Zedekiah's apparent alliance with Psammeticus II had brought Nebuchadnezzar's armies to besiege Jerusalem (see the comment on Jer 37:5-8). The Assyrians had imposed vassalage on Judah, but Ahaz had freely submitted himself, providing even more political and social assistance to the Assyrian cause (see 2 Kings 16:3-9). Finally, in Ezekiel's time the king of Judah continued the long-standing relationship with the Chaldeans that had begun in Hezekiah's time with the envoys of Merodach-Baladan (2 Kings 20:12-19). The reference to a "land of merchants" may be Ezekiel's astute judgment that Judah once again was simply a pawn in the economic and political game of the Near Eastern superpowers.

16:36. children's blood. This is a reiteration of the charge made in verse 20 that Jerusalem has sacrificed her children on the altars to other gods. As is noted in Psalm 106:38-39, not only is this considered an abomination, but it also would be considered the shedding of "innocent blood," one of the worst possible sins (see 2 Kings 21:16; Jer 26:15).

16:45. father an Amorite, mother a Hittite. See the comment on Ezekiel 16:3. Ezekiel's reference is not only to these Canaanite peoples but also to the intermarriage that must have taken place over the centuries between them and the Israelites.

16:46. Samaria and Sodom. The warning is quite clear here. Both Samaria, the capital of the northern kingdom of Israel, and Sodom were destroyed, having been judged corrupt by God (see Gen 19:12-25 and 2 Kings 17:5-18). The reference to Samaria as the older or "big" sister may refer to its relative importance as the capital of ten tribes. It was constructed by Omri (1 Kings 16:24) in the ninth century and thus was much "younger" than even David's Jerusalem. God may have chosen Sodom simply because of the tradition of its destruction (Amos 4:11). As a city, it probably predated Jerusalem's founding, but it was probably smaller in terms of size, given the ease with which it is said to have been captured in Genesis 14:8-11.

16:57. Edom and Philistia. Given the apparent alliance between the Edomites and the Chaldeans at the time of Jerusalem's siege (see Ps 137:7), they would be in a position to gloat over or even loot Judah once the Babylonians had conquered the capital (see the comment on Jer 49:7). Philistia during the seventh century vacillated between antagonism and alliance with the Babylonians. Ashkelon, for instance, was sacked and burned by Nebuchadnezzar in 604 B.C. In any case, Jerusalem's capture in 597 and destruction in 587 would have been the basis upon which other states could chide the people of Jerusalem, considering that city to be the new Sodom and evidence of God's righteous anger against a corrupt and disobedient nation.

17:1-24
Eagles and the Vine

17:1. allegories and parables in ancient world. It was a common rhetorical device in ancient storytelling to use allegories and parables to make a point or create an image that would be more understandable or expressive to the audience. This is especially true in ancient wisdom literature and in prophetic texts. For instance, in the twentieth-century B.C. Egyptian *Dispute Between a Man and His Ba* a despondent man's soul tells him a parable about death and its unpredictability. Another Egyptian text, the *Instruction of Ankhsheshonqy* (eighth century B.C.), uses a vacant house and an unmarried woman as allegories for waste. The Egyptian Love Songs (thirteenth century B.C.) are filled with allegories comparing the various attributes of a beautiful woman to a lush marsh, a lotus bud and mandrake blossoms. In the prophetic visions of the Egyptian sage Neferti (twentieth century B.C.), he describes the invasion of Egypt as marked by the nest of a "strange bird" in the marsh and the

appearance of desert herds drinking from the Nile. The images conjured up by these short tales and wordplays enhance enjoyment and drive home the author's point.

17:3. animal and tree fables. Among the most popular types of fables were those in which an animal talks (see the comment on Num 22:28-31) or trees have a conversation or perform some action (see comment on Judg 9:8). There are several examples of this in ancient Near Eastern literature. For example, there is a dialogue between a thorn bush and a pomegranate tree in the Assyrian *Words of Ahiqar* (eighth century B.C.) over their relative merits. In the thirteenth-century Egyptian *Tale of Two Brothers* his cows warn the younger brother, Anubis, that his jealous brother Bata planned to kill him.

17:4. land of merchants. See Ezekiel 16:29 for the previous reference to the "land of merchants" as equivalent to Babylonia. King Jehoiachin, perhaps the "topmost shoot" in this allegory, had been taken into exile in 597 along with his royal court. Babylonian ration lists show that they were held under house arrest in the city of Nippur.

17:4. city of traders. Although the Phoenicians are more often associated with trade, their role was actually more as "middlemen," while the bankers and merchants who supplied the goods for transport were based in the cities of Mesopotamia (see Is 23:8). It was the Chaldean commercial empire that had, through the military efforts of the king, been able to absorb all aspects of business into their control. This is a theme that is found in many Mesopotamian annals in which a king makes an expedition "to the sea" and gains control of the "Cedars of Lebanon."

17:6-7. vine parables. See the comment on Ezekiel 15:2-7. The initial efforts of the gardener to care for his vine, planting it near abundant water in fertile soil, are rewarded by lush growth. However, at the appearance of the second eagle, the vine seems to reject the gardener's attentions and loses its purpose. It sends out tendrils toward the second bird as if seeking another, unnecessary, water source. This failure to respond as expected makes the parable similar to the "Song of the Vineyard" in Isaiah 5:1-7.

17:12. deportation of king and nobles. The interpretation of the parable of the eagle and the vine is the taking of Jehoiachin and his royal court as hostages by Nebuchadnezzar after the city of Jerusalem was captured in 597 B.C. (2 Kings 24:6-17). Like the well-cultivated vine, Jehoiachin is treated with dignity, and the ration lists from Nebuchadnezzar's official records prove that he was well fed. If the model of Daniel and his three friends could be used here, it seems likely that Jehoiachin and his advisers were being assimilated into Babylonian culture so that they could eventually be restored to Jerusalem to serve as the king's loyal administrators (Dan 1:3-5).

17:13. member of royal family. After capturing Jerusalem in 597 B.C., the Babylonian Chronicle records that Nebuchadnezzar took King Jehoiachin, son of Jehoiakim, as his hostage. Nebuchadnezzar then installed Jehoiachin's uncle, the third son of Josiah, on the throne of Judah. His name was originally Mattaniah, but the Babylonian king renamed him Zedekiah as a gesture demonstrating his puppet status (2 Kings 24:17).

17:15. Zedekiah's rebellion and deal with Egypt. Despite the example of 597 and the deportation of Jehoiachin, Zedekiah entertained ideas of rebellion against the Babylonians. He met with envoys from Edom, Moab, Ammon, Tyre and Sidon early in his reign (Jer 27:3) and apparently had dealings with Pharaoh Psammeticus II (see the comment on Jer 34:21). See the comment on Jeremiah 37:5-8 for discussion of the troop movements of the Egyptians. Pharaoh Apries made at least a brief response to Zedekiah's plea for help, but it did not prevent the fall of Jerusalem.

17:17. ramps and siege works. Although the portion of the Babylonian Chronicle that has survived does not contain a description of the siege of Jerusalem (see 2 Kings 25:1), a similar operation is described in Sennacherib's Assyrian Annals from 701 B.C. It may be assumed that plans were laid for a long siege, since a great deal of time-consuming labor went into the construction of ramps and towers. See the comments on Jeremiah 6:6 and Ezekiel 4:2 for discussion of siege technology.

17:18. oath and covenant. Zedekiah's fate is attributed to his failure to honor his oath or treaty obligations. Treaties between nations typically contained a list of curses that will be inflicted on the party that violates the covenant between them. These treaties were signed under oath to the respective deities. That way, if the treaty were violated, it would become the responsibility of the country's own god(s) to punish the oath-breaker.

17:22. planting a cedar sprig. Just as the great eagle first plucked the topmost shoot from the cedar in verse 4, now Yahweh (identified as the eagle) will take a tender sprig and plant it on a high mountain. Following this line of reasoning, the Davidic house will be allowed to continue through the line of Jehoiachin. Similar horticultural metaphors for the revival of

the Davidic House are found in Isaiah 11:1 and Jeremiah 23:5.

17:23. cosmic tree where animals find shelter. The concept of the cosmic tree or the "one tree" is common to many peoples and traditions. It stands as a representation of beauty and fertility, drawing its sustenance from the waters of the earth and providing shelter and food to all creatures that shelter under its bows. In ancient Near Eastern sources its symmetry and stability provide a check against death and a promise of the continuance of existence. Thus in Assyrian art is found a stylized tree of life that may have represented the role of the king to care for his people (see comment on Dan 4:10-12).

18:1-32

Responsibility for Sin

18:5-9. negative confession from the Book of the Dead. Since the soul or *ka* of the dead Egyptian was to be examined by Osiris, the god of the underworld, a primer to prepare a person for this "final exam" was created, entitled the Book of the Dead. Its form, often painted on or carved into tomb walls, has its origins in early dynastic periods (2500 B.C.), and it continued to be refined at least until 500 B.C. One of the most popular sections was a declaration of innocence in the form of a negative confession. Examples include "I have not sinned against my neighbors" and "I have not mistreated cattle." A similar document appears in Job 31.

18:6. eating at mountain shrines. Presumably this is a charge of idolatry at local high places *(bamôt).* However, there is no parallel from biblical or ancient Near Eastern law to help illumine this practice. It might be compared to the giving of Jerusalem's children as food to the gods in 16:20 and to the charge that the people of Judah are willing to "worship on every high hill" throughout the land. A similar condemnation of the use of hilltop shrines can be found in Hosea 4:13.

18:6. idols of the house of Israel. It would appear that Ezekiel is using a stock phrase coined during the late monarchy or perhaps during the exile to refer to the extreme impurity associated with idol worship. His language is intentionally vulgar and characterizes the idols in the crudest possible way—they are best likened to feces or stools of excrement.

18:8. usury in ancient Near East. Consistent with biblical law, Ezekiel considers the practice of charging interest on a loan an unrighteous act. See the comment on Exodus 22:25 for further explanation of money lending practices in the ancient Near East and the comment on Deuteronomy 15:1-11 for discussion of the financial systems that existed in these areas of the ancient world.

18:20. individual responsibility in the ancient Near East. While the social structure of the ancient Near East was primarily oriented toward the group (tribe, clan, family), there is a strand of individual responsibility that appears in literary and philosophical works. Among the examples of this is a statement in the Gilgamesh Epic. The Mesopotamian god Ea berates the chief god Enlil for bringing on the great flood without just cause: "On the sinner impose his sin, on the transgressor impose his transgression."

18:31. new heart, new spirit. See comment on 11:19.

19:1-14

Lament over the Princes of Israel

19:1. laments in ancient Near East. Laments may be personal statements of despair, such as that found in Psalm 22:1-21, dirges following the death of an important person (David's elegy for Saul in 2 Sam 1:17—27) or communal cries in times of crisis, such as Psalm 137. The most famous lament from ancient Mesopotamia is the *Lament over the Destruction of Ur,* which commemorates the capture of the city in 2004 B.C. by the Elamite king Kindattu. It contains eleven stanzas, each describing a facet of the city's demise and the end of the ruling dynasty (compare Lam 2:9). Subsequently the work would have been employed prior to and during the rebuilding of the city's walls and public buildings. For more information see the sidebar in the book of Lamentations.

19:1-9. lion hunting, lion symbolism. Because of the many references in Israelite (Is 5:29; Nah 2:11-12), Egyptian and Assyrian texts to the royal associations of lions, it is not surprising to find Ezekiel employing this image. There are numerous examples of lion hunting. It was a royal sport as well as a necessity when a beast became a man-eater (as on the ninth-century Assyrian plaque of Ashurnasirpal II depicting a Nubian being devoured) or a threat to villages (as in one Mari text, where a pit was used to trap the animal). The symbolism in this "lament" refers to two of the last kings of Judah (most likely Jehoahaz and Jehoiakim). This is probably a play on Jacob's blessing of his son Judah in Genesis 49:8-12, in which he refers to him as a "lion cub."

19:10-14. vineyard analogy. There is a strong parallel between this symbol in Ezekiel and

the "Song of the Vineyard" in Isaiah 5:1-7. In both instances God's wrath against the vineyard is the result of failed expectations. Neither plant performed its proper role. Isaiah's vineyard produced "bad fruit," while Ezekiel's vineyard grew "high above the thick foliage," but there is little mention of fruit. All of its energy had gone to extending its branches farther and farther, a symbol for the hubris of the nation of Judah and her kings (Jehoiachin and Zedekiah). The fate is the same for these vineyards. They both become wastelands, dried by the winds, broken down with no root or branch remaining. Ezekiel in this way provides the basis for a lament over the end of the nation's independence and the setting aside of God's covenant with the House of David. See the comment on Ezekiel 15:2-7.

20:1-49
Indictment, Judgment and Restoration

20:1. chronology. Based on the year in which Jehoiachin and his court were taken into Babylonian exile, this date formula would correlate to August 15, 591 B.C. It is possible that it could refer to 593 if one were counting from the beginning of the year when Jehoiachin became king in Jerusalem.

20:1. inquiring through a prophet. Oracles were sought in troubled times. In Babylonian religious practice the occurrence of an omen might lead someone to go to a prophet or priest to ask for an interpretation. At other times a historical event would have made it desirable to have a word from God. It may be that the elders hoped to demonstrate their trust in Yahweh by this act. However, there is also evidence in Jeremiah of representatives of the king (Jer 21:1-2) seeking out the prophet and virtually ordering him to speak an oracle of salvation for Jerusalem. There is no indication in the text of what may have motivated this visit to the prophet. Since the speech of Ezekiel goes back to the wilderness situation and makes frequent reference to Israel's early history with Egypt, it may well be a potential agreement between Egypt's pharaoh, Psammeticus II, and Judean king Zedekiah that prompted concern among the elders. It is believed that Psammeticus made overtures to Zedekiah in 592.

20:5. swearing with uplifted hand. There are many references in the Bible to taking an oath by raising up a hand to heaven (see Deut 32:40; Dan 12:7). Ezekiel uses the phrase ten times, with God being the one to take an oath by raising the hand. Among the extrabiblical examples of this gesture are Mari texts that refer to "touching the throat" and an eighth-century Aramaic inscription of Panammu I in which an accused person is commanded to take an oath and lift both hands up to god.

20:6. milk and honey. This description goes back to Exodus narratives and refers to the bounty of the Promised Land for a pastoral lifestyle, but not necessarily in terms of agriculture. Milk is the product of herds, while honey represents a natural resource, probably the syrup of the date rather than bees' honey. Egyptian texts as early as the Story of Sinuhe describe the land of Canaan as rich in natural resources as well as in cultivated produce.

20:12. Sabbaths as a sign. While the individual's sign of participation in the covenant was circumcision, the sign of Israel's corporate participation in the covenant was the keeping of the Sabbath. Like circumcision, the keeping of the Sabbath was a continuous obligation required of each generation. Unlike circumcision, it was not an individual's one-time act but an attitude to be consistently maintained and periodically expressed in action. Instead of repeating the reasoning of the ten commandments—the Sabbath was to be celebrated as a commemoration of God's creation—the Sabbaths (the plural perhaps signifying all of the sacred holidays of Israel) are here cited to remind the people that they are the chosen. No other people have received this sign, and thus, with the laws, they become both gift and insignia of membership in the covenant community as established in Exodus 31:13.

20:25. statutes and laws that were not good. The Hebrew terms used here are extremely important to a proper understanding of Ezekiel's controversial statement. This is not a reference to the Law given at Sinai, and the word "Torah" is not used. The word NIV translates as "statutes" is the same word that in verse 24 is translated "decrees," except that there it is feminine (as usual) rather than masculine (as here). The word NIV translates "laws" is the word for God's judicial decisions. The consequence of Israel's unfaithfulness, then, was that God decreed events that were not in their favor, and he made judicial decisions that threatened their survival. This resulted in God's use of forces that devastated Israel, such as war, famine, plague and foreign armies.

20:26. sacrifice of firstborn. Following Ezekiel's theme of the indisputable power of God to command creation, the decree to sacrifice the firstborn here plays off of the statement in Exodus 13:2 that all firstborns, human and animal, belong to God. This is

demonstrated by the tenth plague in Egypt (Ex 13:14-16) but is mitigated or "redeemed" through sacrifice (Ex 34:20) and by the sacrificial act of circumcision (Gen 17:9-14; Ex 22:29). Within Phoenician and Canaanite religion, however, the sacrifice of the firstborn is a common practice (see the comment on "passing children through fire" as part of Molech worship in Deut 18:10). Closer to Ezekiel's time, kings Ahaz and Manasseh are both accused of child sacrifice (2 Kings 16:3; 21:6). Since these men as descendants of David and participants in the "everlasting covenant" with Yahweh (2 Sam 23:5) were the guardians of the Law and the enforcers of divine and civil decree, their detestable actions in this regard could easily fit the image of "bad laws" in Ezekiel 20:25.

20:28-29. illicit worship. Ezekiel continues to contrast God's adherence to the covenant promise of "land and children" with the Israelites misuse of these gifts. Each of the four worship practices listed here, with the possible exception of offering libations, reflects activities associated with Yahweh worship. However, they are described as illicit because they clearly are aimed at "feeding" other gods, a regular aspect of Mesopotamian and Canaanite religion. Instead of making offerings that create a "pleasing aroma" (see Gen 8:21) and demonstrate proper action toward God, this food and drink is tied to the belief that the gods require regular meals (seen in the famished gods in the Gilgamesh flood epic). See the comments on Ezekiel 6:13 for other condemnations of idolatrous worship practices and the use of high places and sacred groves.

20:32. serving wood and stone. The prophets regularly taunt other nations as well as the Israelites for serving gods made of metal, wood and stone (see Jer 51:17-18; Hos 8:4). Archaeologists have discovered stone molds in which molten metals were poured to mass-produce idols. The assumption is that these images then took on the presence of the gods they represented through rituals such as the "opening of the mouth" incantation found in Babylonian religious texts.

20:46. forest of the southland. The term for south or southland used here is *Negev,* usually associated with the desert region to the south of Judah. In this case, Ezekiel seems to simply be using it as a direction marker (see Ezek 40:2; 46:9 for other examples of this). Since the area of the Negev is unforested, the suggestion that the "forest" mentioned here is Jerusalem makes good sense.

21:1-32

Yahweh's Sword: Babylon

21:3. enemy armies as divine punishment. As early as the end of the third millennium, the invasion of armies is interpreted as the intentional actions of a patron deity who has been angered by the behavior of the people (the Gutian invasion that brought an end to the empire of Agade in the *Curse of Agade).* In Mesopotamia this traditional theology is represented also in Cyrus's rhetoric concerning the overthrow of the Babylonians because of Marduk's displeasure with Nabonidus.

21:18-20. roads to Rabbah and Jerusalem. The movements of the Babylonian army are discussed in this command to draw a map in the sand. Ezekiel traces the troop movements to a crossroads, most likely Damascus, and from there the decision has to be made on whether to divide the army into two groups or proceed together. If the omens suggest it, they will travel south on the King's Highway (Num 20:17) to the Ammonite capital city of Rabbah (twenty-three miles east of the Jordan River). Given other portents, they may turn west through the Golan region north of the Sea of Galilee. The army may travel south to Beth Shan, then west through the Valley of Jezreel to Megiddo and then south along the coastal highway. Or they may take a more direct route south along the Jordan River to Jericho before turning west into the Judean Hill Country to besiege Jerusalem.

21:21. travel omens. Given the gravity of the situation, Nebuchadnezzar's decision to seek guidance from the gods is easily understood. Standing at the crossroads, a significant spot for divine action (see Jer 6:16), he employs various means of divination, casting lots to determine which enemy city (Rabbah or Jerusalem) should be attacked first. Each technique is designed to determine the god's will. One remarkable parallel appears in a Mari text in which an inquiry is made to determine which of three routes should be taken.

21:21. arrow omens and liver omens. Nebuchadnezzar employs belomancy, shaking up a group of arrows and then choosing one. He also consults the images of the household gods that he has brought with the army. The text here refers to *teraphim,* which are now considered to be images of the ancestors rather than images of deities (see comment on Gen 31:19). Finally, he has his diviner priests examine a sheep liver (hepatoscopy). This practice was so common that clay models of the livers were created as teaching tools by apprentice priests.

21:22. battering rams, ramps and siege works. See the comment on Ezekiel 4:2 for the use of these engines and methods of siege warfare.

21:26. king's headgear. Based on descriptions in Mesopotamian texts and artistic renderings on Assyrian palace walls, it seems that the "crown" of a king was in fact more like a turban. A cloth was wound around the head several times, and it in turn was encrusted with jewels and golden ornaments and elaborately embroidered with symbols of the king's majesty. Ezekiel, in calling for Zedekiah to remove his headgear, is commanding the king to relinquish his primary symbol of power because he no longer deserves to wear it.

21:28. Ammonites. Like Judah, Ammon had been engaging in anti-Babylonian activities, probably at the urging of the Egyptians. The omen mentioned in 21:20 directed Nebuchadnezzar to attack Jerusalem first instead of the Ammonite capital of Rabbah, modern Jebel Qal'a. It presently is in the middle of the modern city of Amman but has been surveyed and partially excavated. Occupation at the site and in its vicinity goes back to Paleolithic times. Although it was occasionally subjected to Israelite rule (see 2 Sam 12:26-31), the Ammonites attempted to expand their rule northward after the destruction of Jerusalem. Josephus notes that five years after the destruction of Jerusalem, in the twenty-third year of Nebuchadnezzar's reign (582/581 B.C.), the Babylonian king campaigned in Transjordan, subjecting both Moab and Ammon to his rule. Since hardly any of the Babylonian Chronicles are preserved beyond 594, this cannot be confirmed at this time.

22:1-31

Indictment Against Jerusalem

22:6-12. list of crimes. The bill of indictment read by Ezekiel condemns the people of Judah and their leaders for a set of crimes that violate the basic elements of the Holiness Code in Leviticus 18—20. These range from failure to honor one's parents to profaning the Sabbath and exhibiting various lewd behaviors. Lists such as this are also found in Jeremiah's temple sermon (Jer 7:6-11) and in Amos's oracle against the nation of Israel (Amos 2:6-12). This theme of moral and religious corruption also is found the twentieth-century B.C. Egyptian *Dispute Between a Man and His Ba*, which charges that "everyone is a thief, there is no love among neighbors . . . everyone chooses evil." Many similar offenses also occur in the listing in Babylonian absolution rituals *(shurpu).*

22:18. dross in the furnace. In the smelting process, silver is separated from lead and other alloyed metals (copper, tin and iron) through a two-stage process. During the second stage, after all vestiges of sulfur have been removed, the silver is liquefied, while the lead dross floats on the surface and can be skimmed off. Ezekiel's metaphor suggests a further purification of Judah is necessary (the exilic experience) so that the dross of its lawless, covenant-breaking nature can be removed by God's hot wrath (see Mal 3:1-4). See comment on Jeremiah 6:28.

22:20. metallurgy. The refining process continues with God placing several metals, including the silver that represents Judah, into the furnace. Divine breath is used instead of bellows to increase the oxygen level and thus the heat of the fire. The fact that the blacksmith does not always use bellows can be seen in an Egyptian painting depicting a metalworker blowing air through a pipe into a furnace. While each metal is in the furnace, it, like the exiles, exists in an intermediate state, being transformed, purified or alloyed with another metal. The furnace here and elsewhere is thus a crucible of social and religious change designed to be God's vehicle to purify a wayward nation. For more information about furnaces of this period see comment on Daniel 3:6.

22:28. false visions and lying divinations. As in his previous condemnation of the false prophets (Ezek 13:6-9), Ezekiel charges them with fabricating visions and divinatory revelations for their own purposes. Jeremiah makes the same indictment of prophets who prophesy lies in Yahweh's name (Jer 29:8-9). See the comment on Ezekiel 13:10 for another example of prophets "whitewashing" the truth with their false statements. Babylonian *baru* priests were in charge of reading omens, but they could be shamed or dismissed for making a false prediction. Failures, however, could also be blamed on failure to follow proper ritual procedures.

23:1-49

Lewd Sisters

23:3. prostitution in the ancient Near East. See the comment on Ezekiel 16:15 for discussion of prostitution in the ancient world. The comment on Deuteronomy 23:17-18 provides a fuller description of cultic prostitution. Ezekiel's references, however, are to the idolatry of Israel and Judah, as they took "lovers" (i.e., other gods) in Egypt and from the Assyrians (compare Hosea's marriage metaphor

with his wife Gomer in Hos 1-3).

23:3-5. Egypt and Assyria historical references. The political jockeying for power between Egypt and Assyria meant that both Israel and Judah had to maintain contacts with these superpowers. The flirtations that Ezekiel condemned were reflections of the political accommodations forced on the smaller states. There were numerous contacts between Israel, Judah and the pharaohs of the Twenty-Fifth Dynasty in Egypt, including diplomatic exchanges and possible alliances (such as the one that temporarily brought Egyptian troops to the aid of besieged Jerusalem in 597). Evidence of Israel's ties with Assyria can be found in the portrayal of Jehu bowing before Shalmaneser III on the Black Obelisk and an inscription from the annals of Tiglath-Pileser III in which Menahem pays tribute. Judah also had to submit to Assyrian power, as in Ahaz's cry for help during the Syro-Ephraimitic War (2 Kings 16:7-9) and Hezekiah's ransoming of Jerusalem from Sennacherib's army (2 Kings 18:13-16). Additionally, most of Manasseh's fifty-plus years of reign were spent in submission to Assyrian overlords.

23:6. clothed in blue. Archaeological evidence has demonstrated that the murex snail was collected in great quantities off the coast of Phoenicia as a source of a prized purple dye (see Ezek 27:7). Since large numbers of snails were necessary to extract enough dye from their hypobranchial glands to make it a commercial enterprise, the cost of the dye would have been high (for more information see comment on Num 4:6). Thus the fact that these military officers were clothed in blue suggests both high rank and wealth.

23:6. mounted horsemen. Cavalry units were employed by the armies of Assyria and Babylonia (mentioned in the ninth-century Assyrian annals of Tukulti-Ninurta II). However, the Hebrew term used here is more suggestive of charioteers because of its parallel Akkadian word (Heb. *parašim* and Akk. *Paraššannu).* Note the contribution of King Ahab's two thousand chariots to the force that met the Assyrian king Shalmaneser III at the Battle of Qarqar in 853 B.C.

23:14. men portrayed on a wall. One of the standard means of decorating the walls of Mesopotamian palace gates and walls was with the figures of soldiers, kings and symbolic beasts (such as the dragons on the Ishtar Gate in Babylon). For instance, the Assyrian palace in Nineveh has preserved scenes of siege warfare, hunting and royal and divine figures. Much of what we know about the appearance and clothing of the soldiers and military techniques and weapons come from these reliefs. Although much of the paint has now worn away, it is evident that these figures were once brightly colored, in some cases larger than life, and undoubtedly intimidating to subject peoples. Such power by association might have also been enticing to the leaders of Judah, as Ezekiel suggests.

23:14-15. Chaldean dress. It is unfortunate that most of the wall paintings and reliefs are either Assyrian or Persian, thereby leaving us less informed on the details of Babylonian dress. Working from the drawings we do have, these men must have been clothed in embroidered and ornamented belts (see Is 5:27). Babylonian soldiers are portrayed with caps or headbands with long tassels at the ends.

23:15. chariot officers. Assyrian and Babylonian chariots generally carried three men: a driver, the commander who wielded bow and spear, and a shield bearer, who also handed weapons to the commander as needed. The Akkadian term for this individual was *šalšu,* and this may be a cognate for the Hebrew *šalîšîm* used here (the Hebrew root makes it likely that there is some connection to "three"). An alternative suggestion has been that the term refers to an officer of the third rank.

23:15. Chaldea. Babylon during the sixth century was ruled by a non-native dynasty of Chaldeans. They had first appeared in the ninth century in the areas south of Babylonia. While their tribal structure was similar to that of the neighboring Arameans, they were a distinct group. By the time of Ezekiel, to name a person a Chaldean *(kasdim)* was to acknowledge that person's high social status.

23:23. Pekod, Shoa and Koa. While these ethnic names refer to Babylonian allies inhabiting the Trans-Tigris region, they also have a chilling meaning: "Punishment, War Cry and Shriek." Pekod is an Aramean tribe (see Jer 50:21) mentioned in Tiglath-Pileser III's annals. Shoa probably refers to the Suti, prominent as a difficult tribe to manage for the Amorite kings of Mari. Koa is presently unknown, although some equate them with the Guti.

23:24. armor and equipment. Charioteers, as portrayed in Assyrian reliefs, wore pointed helmets or turbans and chain mail over their upper torso, and were protected by round shields. Infantry, while not as heavily armored due to the need for greater flexibility and speed, carried large round shields. Their clothing was girded with a cross belt and they protected their heads with conical-shaped hel-

mets. Each warrior fought with spears, swords, axes or maces (see the list for Uzziah's infantry in 2 Chron 26:14).

23:25. face disfigurement. While it was not uncommon for conquerors to disfigure some of their captives, it is also possible that the marriage metaphor is extended here to the punishment for the unfaithful Oholibah/Jerusalem. Ezekiel may have been familiar with the Middle Assyrian Law Code or some similar legislation regarding the husband's rights to punish his wife. According to these Assyrian laws, the husband may cut off his wife's nose and mutilate the adulterer's face and turn him into a eunuch.

23:37. child sacrifice as food. On this charge of human sacrifice, see the comment on Ezekiel 16:20.

23:38. defiling sanctuary. Child sacrifice, the shedding of innocent blood, had defiled the hands of the people of Jerusalem and yet they have the temerity make these offerings to other gods and then enter Yahweh's sanctuary (compare Jer 7:9-11). Sanctuary defilement was a very serious charge. It brought jeopardy to the individual and the city (since they risked destruction by an offended deity), but more significantly, it could drive the deity away. By bringing their impurity there they have defiled God's holiness, making it impossible for the divine presence to remain (see Ezek 10).

23:38. desecrated sabbaths. See the comment on Ezekiel 20:12 on the significance of the sabbaths as a sign of the covenant relationship. Just as the violation of the temple's sacred space could result in the loss of God's presence, the violation of sacred times could jeopardize the equilibrium that God's presence maintained. The temple was the place for God to take up his repose. It was a place of perfect equilibrium. The sabbath of the people was set aside for them to mirror this equilibrium in their lives and reflect on the source of this equilibrium. To fail to keep the sabbath was to threaten to undo the equilibrium and move toward chaos. Desecration of these holy days and events violates the heart of the covenant agreement and, as with any treaty in the ancient Near East, makes the penalty or curse clause operative.

23:40. painted eyes. Women throughout the ancient Near East regularly enlarged and darkened their eyes with a mixture compounded of olive oil mixed with malachite (green) or galena (black; see comment on 2 Kings 9:30). Babylonian sources mention eye paint that included stibnite, antimony trisulphide. Decorated palettes were used to grind the ore and mix it for application. These palettes have been found at many Iron II sites in Israel, including Megiddo.

23:41. elegant couch. The adulteress Jerusalem is portrayed in much the same light as the prostitute in Proverbs 7:10-23. Both seduce their lovers with an inviting couch, incense and persuasive words. Prior to the Hellenistic period, all references to the couch are associated with a sleeping chamber (see 2 Sam 4:7; Ps 6:6), not the banqueting room.

23:41. incense and oil on table. As part of the anticipated sexual activity, the adulteress Jerusalem has perfumed her bedchamber with incense (see Song 1:3; 4:10) and has sweet-smelling oils at hand for anointing her hair and bodies (Esther 2:12). Similar images are found in the Egyptian love songs discovered by archaeologists in the Karnak temple complex in Luxor.

23:42. Sabeans. Whether the text refers to the Arabian tribal group known as the Sabeans (see Job 1:14-15; Joel 3:8), or to drunk leaders of small nomadic tribes, the point is to highlight the indignity of an adulteress whose lovers are ruffians and foreigners.

24:1-27

The Cooking Pot

24:1. chronology. Basing his dating scheme on the accession year for Zedekiah (596 B.C.), then the date for the beginning of siege of Jerusalem by Nebuchadnezzar's army would be January 5, 587 B.C. (the tenth day of the tenth month [Tebet] of Zedekiah's ninth year; alternatively, this has been reckoned at January 15, 588).

24:3. cooking pot. The pot is usually a wide-mouthed ceramic jar, though here it is made of copper (v. 11). When manufactured for temple use, the vessel would be made of silver or gold. Available in various sizes, they could be used over a fire if placed on a platform or tripod of stones as in the narrative in 2 Kings 4:38. For the use of a cooking pot as part of a prophetic oracle, see Jeremiah's "boiling pot" in Jeremiah 1:13.

24:6. pot and the lots. Ezekiel probably describes the contents of the pot (choice pieces of meat, v. 4), rather than the pot itself, as tainted or diseased. The casting of the lot would be done to decide which pieces would be reserved for special use (perhaps to be gifts to the temple). But in this analogy, though they were choice pieces of meat, they had gone bad and were not eligible for holy use.

24:7. pouring out blood. Because blood was the essence of life, it was not to be consumed

by the Israelites. See comments on Deuteronomy 12:16 and Leviticus 17:11,12. Here, however, the issue is not the consumption of blood, but the exposure of blood. When the blood of an animal was shed and poured out, it was to be covered with earth (Lev 17:13). Exposed blood would "cry out" for vengeance (Gen 37:26).

24:10. spices. In recipes from eighteenth-century B.C. Babylonia, seasonings for meat dishes and stews included salt as well as onions, leeks, mint and garlic. In these ancient preparations, the cooks added distinctive flavor with anise, coriander, cumin and dill. Given the metaphorical nature of this meal, the well-cooked meat may even refer to bodies being prepared for burial with spices.

24:10. charring bones. The meat is cooked so thoroughly that it easily comes off the bones. The bones then are broken so that the marrow will mix with the other ingredients and add flavor to the broth. Once this has been poured off, what remains is a virtually useless mass of carbonized bits. For easy disposal they will be burnt so completely that they literally fall apart and can be scattered over the refuge heap (compare Ezek 22:15). A thorough job of purification or destruction could be drawn from this metaphor.

24:17. acts of mourning. For other examples of mourning practices, see the comments on Leviticus 19:28 and Deuteronomy 14:1-2. Like Jeremiah (Jer 16:5-7), Ezekiel is commanded not to engage in the usual expressions of mourning. In fact, he is told to put on a festive turban and wear his sandals as if nothing unusual had happened.

25:1-7

Oracle Concerning Ammon

25:1. oracles against foreign nations. See comment on Jeremiah 46:1.

25:2. Ammonites in early sixth century. Although Ammon felt free to taunt Jerusalem over its siege and destruction (see Ezek 21:28), Nebuchadnezzar did eventually turn his forces against this Transjordanian kingdom. According to Herodotus, the campaign against Ammon occurred in 582 B.C. and resulted in widespread devastation of the area. Whether there was a significant deportation of its population has now come into question because of the discovery of seal impressions dating to the Persian period. They indicate a continuity of the Ammonite culture and political existence as late as the fourth century B.C. See the comment on Jeremiah 49:2.

25:4. people of the East. As in Jeremiah 49:28, this nomadic group is associated with the peoples of the Midianite desert region (see Judg 6:3). Their caravans carried goods from the various states of Transjordanian and Palestine, and they were a target of invading armies (Is 11:14). In this case, however, these tribal people will now inhabit the lands of the Ammonites. This is reminiscent of the Egyptian *Visions of Neferti*, which also mentions "desert herders" settling in formerly populated areas.

25:4. fruit and milk. The standard benediction is that one should enjoy the fruit of one's own labors/vineyards (Ps 128:2; Is 3:10). In this case, however, what has been worked for will become the property of invaders (compare Ezek 23:29). Both agricultural and herding products will be confiscated and the full range of the economy shattered.

25:5. Rabbah. See comments on Jeremiah 49:2 and Ezekiel 21:18-20.

25:8-11

Oracle Concerning Moab

25:8. Moab in the early sixth century. Moab was among the states represented at Zedekiah's strategy meeting in 597 B.C. (Jer 27:3). Although it apparently survived and served as a place of refuge for Judeans fleeing Nebuchadnezzar's destruction of Jerusalem in 587, its role as a potential troublemaker in the region was not forgotten. Josephus records a later campaign by the Babylonian king in 582-581 to reduce both Ammon and Moab. There is not sufficient evidence to demonstrate how effective this campaign actually was, but, like Ammon, the nation of Moab probably survived to become a part of the Persian empire at the end of the sixth century.

25:9. towns. Each of these towns were part of Moab's western line of defense. Beth Jeshimoth (Tell 'Azeimeh) lies in the Shittim Valley north of the Dead Sea. Baal Meon, mentioned in the Mesha Stele, is generally identified with Khirbet Ma'in, four miles southwest of Madaba and thirteen miles southeast of Beth Jeshimoth. Kiriathaim is also listed in the Mesha Stele and presumably is located on the Moabite Plateau (Josh 13:19). It has been identified with several sites, including el-Qereiyat and Jalul, but there is no consensus on its location.

25:12-14

Oracle Concerning Edom

25:12. Edom in the early sixth century. Edom apparently stayed neutral or pro-Babylonian (Ps 137:7) during the conflicts that led to the

destruction of Jerusalem. Jeremiah 40:11 indicates that Edom did accept Judean refugees after 587 B.C. Nebuchadnezzar apparently did not extend his Transjordanian campaign of 582 as far as Edom, but his successor, Nabonidus recorded in his Chronicle a siege of the Edomite city of Bozrah in 552 B.C. Archaeological excavations at Buseira and at Tell el-Kheleifeh indicate destruction levels during this period followed by a quick rebuilding and a resumption of economic activity along the southern range of the King's Highway.

25:13. Teman and Dedan. For descriptions of these cities see comments on Jeremiah 49:7 and 49:8.

25:15-17

Oracle Concerning Philistia

25:15. Philistia in the early sixth century. The omission of the cities of Philistia from the list of states represented at Zedekiah's meeting in 597 (Jer 27:3) suggests that this area was firmly in the control of the Babylonians at that time. This region had been badly weakened by the late-seventh-century campaigns of Pharaoh Psammeticus I as Assyrian control waned there (see Jer 25:20; Zeph 2:4). The sons of the king of Ashkelon are recorded in Babylonian ration lists dating to 592, indicating their hostage status. When the Philistine states joined in the Judean revolt of 588, Nebuchadnezzar deported them and apparently settled them near Nippur. By the Persian period, little of the indigenous Philistine population remained in Philistia.

25:16. Kerethites. Ezekiel creates a poetic parallelism between Philistines and Kerethites, while it is still unclear whether these two peoples are actually related ethnically or historically. The Kerethites are most often associated with the island of Crete, and it would appear these people became mercenaries shortly after their migration to the southern coast of Palestine near Gaza (see 1 Sam 30:14; 2 Sam 8:18).

26:1—28:19

Lament and Oracles Concerning Tyre

26:3. Tyre in the early sixth century. After Egypt's defeat in 605 B.C., Tyre was the main foe of Babylon in western Asia. It was the leading city in Phoenicia and renowned for its maritime trade. Standing out from the coast approximately six hundred yards from the mainland, the island city of Tyre and its harbor were secure from anything but a sustained siege. The waters were also deep enough to allow for heavily laden ships to approach and offload their cargoes. Dedicated to commercial activity, Tyre was supplied with food and other essentials by its sister city of Ushu. Tyrian fleets established colonies around the Mediterranean, including those on Cyprus and the North African city of Carthage, to draw on the resources of these areas, especially metals, and to funnel goods back and forth between the eastern and western Mediterranean. Throughout this region there is archaeological evidence of Phoenician metalwork and pottery, indicating the extent and longevity of trade relations. The principal exports were cedar wood, fabrics and dyes, and glasswork. According to Josephus, Tyre and its king, Ethbaal III, were involved in numerous coalitions and conspiracies against the Babylonians.

26:7. Nebuchadnezzar's siege of Tyre. According to Josephus the Babylonian siege of Tyre lasted thirteen years (c. 586-573 B.C.). A Babylonian text claims that Nebuchadnezzar was present during the siege. Apparently the long siege ended with a treaty stipulating that the Tyrian royal house was to be deported to Babylon. Although the king of Tyre was allowed to stay, he was under the control of a Babylonian commissioner. Tyre's power was effectively exhausted by the long siege.

26:8. siege works and ramps. The writer has an intimate knowledge of siege warfare. One constructed siege mounds and ramps up against the city wall of the city to be besieged. There is plentiful evidence of siege ramps on Assyrian wall reliefs, and a siege ramp has been uncovered at the city of Lachish that was used by the Assyrians in their successful conquest of the Judean fortress. Tyre was especially difficult to conquer because much of the city was on an island near the coast.

26:8. raising shields. A roof of shields was constructed over the battering ram to protect the attackers when the ram was brought up to the city walls.

26:9. battering rams. Battering rams were often depicted by the Assyrians as large wooden wheeled machines used to break apart the city gates.

26:10. Babylonian use of cavalry and chariotry. The Chaldeans were renown for their use of cavalry and chariotry, inheriting the use of both from the Assyrians (see comment on Jer 6:23). The Assyrians often depicted horse-drawn chariots in the midst of battle on wall reliefs.

26:11. strong pillars. The strong pillars are probably a symbolic expression signifying the end of resistance. However, Herodotus mentioned emerald and gold pillars that adorned

the Heracles (Melqart) temple at Tyre. Assyrian wall reliefs depict two external pillars on a Tyre temple.

27:3. Tyre's merchant city status. Tyre had two major sea ports, a natural harbor to the north and an artificial one to the south. By this time, Tyre served as a middleman for the Mediterranean world, transferring products to and from distant ports for at least half a millennium.

27:5. pine trees from Senir. The type of the tree mentioned is probably of the juniper variety, the eastern savin. According to Deuteronomy 3:9, Mount Senir was the Amorite name for Mount Hermon in the southern portion of the Anti-Lebanon range east of the Baka Valley. The Assyrians called it Saniru.

27:5-7. shipbuilding materials. The shipbuilding materials listed here were of the highest quality in the eastern Mediterranean. Pine and fir were preferred by the Egyptians for masts and yards. The hardwood oars lining both sides of the Phoenician biremes (ships with two racks of oarpullers on each side) were of the most durable wood. Inlaid ivory came from Kittion on the island of Cyprus. Variegated linens from Egypt were in high demand throughout the region. The dyes used for the awnings were the most expensive.

27:7. Elishah. The location of the islands of Elishah is uncertain. Elishah was a son of Javan (Gen 10:4). The name was applied to a Tyrian colony famous for its dyes. Elishah is probably the Alashiya of the Amarna tablets, usually designated as Cyprus. Seven Amarna tablets mention a king of Alashiya, who wrote letters to the Egyptian monarchs in the thirteenth century B.C.

27:8. Sidon and Arvad. Sidon and Arvad were Phoenician cities that lay on the Mediterranean coast north of Tyre. Arvad was about 110 miles north, while Sidon was about 25. They appear at this time to have been subordinate to Tyre. Both cities were often mentioned in the Amarna letters and Assyrian annals.

27:9. Gebal. Like Sidon and Arvad, Gebal (or Byblos) was a Phoenician city on the Mediterranean coast north of Tyre, about sixty miles away. It was apparently in a subordinate position to its southern neighbor. Byblos was a trading partner with Egypt in the third millennium B.C. and figured prominently in the Amarna texts and Assyrian annals.

27:10. Persia, Lydia, Put. In listing Persia, Lydia and Put, Ezekiel was signifying the peoples living at the outermost parts of the known world. Persia was in western Iran and Lydia in central Turkey, while Put may referred to the Libyans west of Egypt.

27:11. Arvad, Helech, Gammad. The city of Arvad has already been encountered in verse 8. *Helech* (Hebrew, "your army") is unattested elsewhere in the Old Testament as a toponym. It has, however, been associated with Hilakku (Cilicia in southeastern Turkey) in the Assyrian annals. The location of Gammad is uncertain, but it may be equated with Qumidi in the Amarna tablets, possibly north of Tyre on the Mediterranean coast.

27:12. Tarshish. Tarshish was associated with metal industries. The annals of the Assyrian king Esarhaddon associate a place called Tarsisi with Cyprus and other islands. There was also a Tartessus mentioned in classical sources as a Phoenician colony in western Spain.

27:13. Greece, Tubal, Meschech. Javan (or Ionians) was the biblical designation for the Greek world. Tubal (Taballu) was the Assyrian designation for a central Anatolian kingdom. Like Tubal, Meschech (Mushku) was listed as a central Anatolian kingdom in the Assyrian annals. Both Anatolian states had bad relations with Assyria.

27:14. Beth Togarmah. Beth Togarmah was most likely the capital city of Kammanu, a central Anatolian kingdom. It was known in Hittite sources as Tegaramara, and in Assyrian sources as Til-Garimmu.

27:15. Rhodes. The mention of Rhodes here is problematic in the earliest manuscripts of the Old Testament. Others read Danuna, a region north of Tyre mentioned in the Amarna letters.

27:16. Aram. Aram refers to the Syrian hinterland from Upper Mesopotamia in the north to Damascus in the south.

27:17. Minnith. Minnith was an Ammonite region in the Transjordan mentioned in Judges 11:33. Eusebius, the fourth-century A.D. church historian, identified it with the town Maanith, four miles from Heshbon.

27:18. Helbon, Zahar. Helbon is identified with the Assyrian Hilbinu, modern Helbun, ten miles north of Damascus. Zahar (or Sahar) was probably the wilderness of es-Sahra, northwest of Damascus.

27:19. Greeks from Uzal. Uzal is probably equated with Izalla, a site in the Anatolian foothills of Cilicia. Greeks (or Ionians) may have had a relationship with the town, but this is otherwise unattested.

27:19. Cassia and Calamus. The city of Damascus traded in *qiddu* (probably cassia), a costly perfume native to east Asia. Calamus was an aromatic grass used in perfume, cosmetics, flavoring and medicine. This particular type of calamus probably came from India.

27:20. Dedan. Dedan was a central Arabian oasis where Tyre received its special riding gear. It is identified with the modern site of al-Ula, which is situated on the frankincense road from Yemen to Palestine.

27:20. saddle blankets. The term here translated as "saddle blankets" is probably derived from an Akkadian root referring to "a covering for a horse."

27:21. Kedar. See comment on Isaiah 42:11.

27:22. Sheba and Raamah. For Sheba, see comment on Isaiah 60:6. Raamah is mentioned in the Old Testament only in conjunction with Sheba. It may be associated with Rgmt (the vowels of the ancient name are not certain), a city in the district of Najran in central Arabia.

27:23. Haran, Canneh, Eden, Sheba, Ashur, Kilmad. All these areas were to the north and east of Tyre. Haran was situated on the Balikh River in Upper Mesopotamia. Canneh is probably Assyrian Kannu, the location of which is unknown. Eden is Bit Adini, an Aramean state west of the Balikh River in Syria. Ashur was the name of the old capital city of Assyria, as well as the name of the primary god of Assyria. Kilmad is otherwise unknown.

27:24. merchandise. The merchandise listed here is very rare and exotic. Many of the words are *hapax legomena,* that is, words that occur only here in Scripture. Cognates with Akkadian have helped somewhat in shedding light on their meaning. The "choice garments" are specially crafted garments of some type. They are accompanied by expensive blue-purple and embroidered cloaks. They are followed by a coat or mantle, woolen garments, and a multicolored coat.

27:25. ships of Tarshish. Although verse 12 denotes a specific region for Tarshish (i.e., Spain), the designation "ships of Tarshish" seems to imply a Phoenician provenance similar to what is found in Isaiah 23:1-18. Thus they may have been ships bound for Tarshish.

28:2. ruler of Tyre. The king of Tyre at this time was Ethbaal III, although nothing in this oracle is known to be specifically about him. The text claims that the prince is claiming equality with the patron deity of Tyre, Melqart, a fact unattested in extrabiblical literature.

28:3. Daniel. Some perceive this person to be a famous extrabiblical character known from the Ugaritic Epic of Keret. But the Ugaritic Danil was not particularly known for great wisdom. The biblical Daniel was probably well known to Ezekiel because of his exceptional gifts. For more information see the comment on 14:14.

28:12. lament. There are numerous laments or funeral dirges in the Old Testament and in ancient Near Eastern literature. They are often directed towards cities or nations, but there are also laments concerning the death of individuals. In this case the "lament" is a sarcastic piece of mocking literature. See comment on 19:1.

28:12. seal of perfection. Assyrian royal epithets included the titles "perfect man" and "perfect king." The term was also used in divine attributes. Here the king is likened to a finely carved stamp seal (see sidebar in Jer 32). These were often made from semiprecious stones and served both as a mark of identity and a protective amulet.

28:13. list of precious stones. In Exodus 28:17-20 and 39:10-13 the high priest's breastplate contains twelve precious stones, many of which are repeated here. A gem-studded garment would be a very clear indication of his grandeur, but there is no indication here that a breastplate is intended. Kings sometimes wore gem-encrusted headbands. Jeweled pectorals or breastplates are known from the ancient world as well. The identification of a number of these gemstones is problematic. Thus modern translations have not agreed on the nature of the nine gems. Carnelian is preferable to ruby; topaz is possibly the yellow-green olivine called peridot; the third is not diamond (NASB) or emerald (NIV), but it is a hard stone of some sort; the fourth is likely a yellow stone (D. Block suggests Spanish gold topaz); for the fifth, onyx is normal and probable; the sixth is commonly regarded as some sort of jasper; the seventh is lapis lazuli (with the NIV note); the eighth is very uncertain; and the last is believed by most to be emerald.

28:14. cherub. The term *cherub(im)* occurs over ninety times in the Old Testament in reference to heavenly creatures. They appear to be winged beings but are greatly varied. There are examples of cherubim with many faces, bovine faces, aquiline faces and human faces. They are described in a way to correspond to various forms of composite beasts depicted in ancient Near Eastern art, especially in Assyria. Because of their composite animal and human features, they were apt symbols of divine presence, both in Israel and in surrounding regions. Here it is undoubtedly a reference to the guardian of the tree of life in Genesis 3:24 (see comment there). Likening the prince of Tyre to a cherub suggests that he was entrusted with the stewardship of divine property. The natural resources of this region, especially the cedar forests, were often considered the property of the gods in Mesopotamian sources (for instance, the Gilgamesh Epic). Artifacts

also support the picture presented here. Cherubim are frequently depicted on the carved ivories of this period, and at times the king is portrayed as a cherub. The carvings can be jewel-studded, and decorations feature flowers and mountains. For more information on cherubim, see comments on 10:1 and Exodus 25:18-20.

28:14. holy mountain. The concept of holy mountains was common in the ancient world. Ancient Near Eastern thought, not unlike that familiar from Greek mythology, visualized a mountain height as the dwelling place of deity. There would have been little difference in their minds between the tops of mountains and the heavens. Baal's home was purported in Ugaritic literature to be Mount Zaphon. In Israelite terms the two most significant sacred mountains were Mount Sinai and the Temple Mount in Jerusalem. While there is no parallel in ancient Near Eastern thinking suggesting a paradise on a mountain, the garden of Eden functions as a paradise largely because it is the place of God's presence, a cosmic Holy of Holies. The holy mountain is then very appropriate as a parallel to Eden, for both concern God's presence. In Ezekiel 31:16 the forests of Lebanon and the garden of Eden are again associated.

28:14. fiery stones. There are numerous connections possible for understanding the "fiery stones." In the realm of iconography they are represented as the decorative ornamentation on some of the ivory pieces (see comment on "cherubim" above). In mythology, it should be noted that there is a palace of fused gemstones described in Ugaritic texts. In legend, Gilgamesh encounters on his journeys a grove where the trees and bushes are full of precious stones. Any of these could offer a context for the picture given here by the text.

28:16-17. Satan connection. From early on in church history there has been an interpretive tradition understanding this passage as an account of the fall of Satan. Though this same type of interpretation in Isaiah 14 was fervently denied by well-respected exegetes such as John Calvin (who bluntly ridiculed it), it has persisted into modern times. From a background standpoint, it must be noted that Satan is never portrayed as either being a cherub or being with the cherub in the garden in any passage of Scripture. Furthermore, Israel's understanding of Satan was far more limited than that found in the New Testament. Even in Job, Satan is not a personal name but a function (see comment on Job 1:6). "Satan" does not become identified as the personal name of the chief of demons until about the second century B.C., and he does not take up his position as the source and cause of all evil until the unfolding of Christian doctrine. Consequently, the Israelites could not have understood this passage in this way, and no New Testament passage offers a basis for departing from the Israelite understanding of it. In the context, it is a metaphorical description of the high stewardship entrusted to the prince of Tyre (as significant as the cherub's role in the garden). Rather than treating this sacred trust with reverence and awe, he exploited it to his own benefit—as if the cherub of the garden had opened a roadside fruit stand. He was therefore discharged from his position, relieved of his trust and publicly humiliated.

28:18. desecrated sanctuaries. In Ezekiel, the temple of Israel is desecrated when it is despoiled by the Babylonians (Ezek 7:21-22). Something can also be "desecrated" by failing to treat it as holy. Since it is unlikely that Ezekiel would consider the sanctuaries of Tyre as holy, it is more likely that in this passage the prince is charged with pillaging sanctuary treasuries or misappropriating temple funds.

28:20-26

Oracle Concerning Sidon

28:21. Sidon in the early sixth century. The great trading city of Sidon had been defeated by the Assyrian king Sennacherib in 701 B.C., who deposed Luli for joining an anti-Assyrian coalition. Under Abdimilikutti, Sidon again revolted against Esarhaddon of Assyria in 677 B.C. The city was destroyed to its foundations and its king was beheaded. The Assyrians rebuilt the city and named it Kar-Asarhaddon, and it became the center of Assyria's administration of the area. In Jeremiah 27:3 envoys from Sidon were included in the conspirators that met in Jerusalem in 594. A few years later Sidon was forced to submit to Nebuchadnezzar of Babylon, and many of its people were deported. There is no account of the details, but some Sidonian exiles are known from the city of Uruk in Babylonia in this period. Herodotus reports that in 588 the Egyptians fought against Sidon in an attempt to gain control of the Phoenician coast, but it is likely that Sidon was already a Babylonian vassal at this time.

29:1—32:32

Oracles and Laments Concerning Egypt

29:1. chronology. Though compared to the date given in 24:1 this appears to be one year later, it has often been concluded by commen-

tators that the notation in 24:1 was made in accordance with an nonaccession year system rather than an accession year system (see comments on 24:1; Jer 26:1; and Dan 2:1). If this is so, this oracle was given only two days after the siege of Jerusalem began. This is more likely, because the Egyptian response to the siege took place that first summer.

29:2. Egypt in the early sixth century. In the early sixth century B.C. Egypt was under the Saite or Twenty-Sixth dynasty. With the fall of Assyria, Egypt attempted to control the Levant as it had done in previous centuries. However, Nebuchadnezzar of Babylon was able to fill the power vacuum in the area, decisively defeating Egypt at the Battle of Carchemish in 605 B.C. The Egyptian pharaoh Psammeticus II (595-589) had spent much of his reign attempting to regain the territory in Phoenicia and Palestine that Nebuchadnezzar had taken away from Necho II (610-596) at Carchemish. Apries (Hophra) came to the throne in 589. During the early summer of the first year of the siege of Jerusalem, he dispatched an army into Palestine. This required the Babylonians to temporarily lift their siege. This, plus an Egyptian fleet that sailed to Tyre and quickly took control there (mentioned by the Greek historian Herodotus), forced Nebuchadnezzar to withdraw from Jerusalem. The Egyptians, however, were quickly defeated (possibly near Gaza) and the siege resumed by late summer.

29:3. identity of pharaoh. The reigning monarch in Egypt at this time was Apries (Hophra), who ruled 589-570 B.C. However, Ezekiel is most likely addressing the office of pharaoh in general, rather than any particular monarch.

29:3. monster among the streams. For the metaphor of Egypt as a monster of chaos see comment on Isaiah 30:7. More concretely, the word used here could easily be used in reference to a crocodile. There are probably elements of both intended here.

29:4. fish metaphor. The Greek historian Herodotus described the procedure of catching crocodiles in the Nile. The hunter baited a hook with pork, letting it float in the middle of the river. On the banks of the river, the hunter began to beat a live pig. Upon hearing the cries of the pig, the crocodile went after the sound, meeting the pork, which it swallowed. In the meantime the hunter pulled the line, which included the hook and crocodile.

29:6. staff of reed metaphor. Whether used as a cane or a crutch, the reed will only collapse and cause physical damage rather than offering reliable support. The Assyrians claimed the same about Pharaoh in Isaiah 36:6. The prominence of reeds in Egypt made this a very apt metaphor for depending on Egypt. More specifically, the pharaoh held several scepters that represented his power and office. The *was* scepter was forked at the bottom, and the top handle was carved in the shape of a dog's head. The *heqa* scepter was shaped like a shepherd's crook. Though these were generally not made of reed, tomb discoveries have confirmed that at least in one instance a reed staff was included among the staffs of Pharaoh.

29:10. Migdol to Aswan. Migdol ("tower") was the name of several military stations in Egypt's northeastern frontier. Although we cannot be certain just which one is mentioned here, the term marks the northeastern border of Egypt. Syene (modern Aswan) was just north of the first cataract of the Nile, the traditional southern border of Egypt (the border of Cush/Nubia). Thus, Migdol to Aswan was the entire length of Egypt.

29:11-12. forty-year desolation and exile. Forty years was the period in which one generation flourished and died off. Thus it was a period of temporary national punishment. In a Moabite inscription, Mesha of Moab claimed that Israel occupied his land for forty years. There is some evidence of Nebuchadnezzar undertaking an invasion of Egypt in his thirty-seventh year (568), but there is no information concerning what success he might have had or whether there was any deportation of the population. Memphis was captured by the Persian king Cambyses in 525, and Pharaoh Psammeticus II was taken captive. Egypt then came under Persian control through most of the Achaemenid empire, with a brief period of revolt and independence around 460.

29:14. Upper Egypt. Upper Egypt (or the land of Pathros) designated all of Egypt south of Memphis. An ancient Egyptian tradition asserted that the nation had originated in the south in Upper Egypt. Esarhaddon of Assyria claimed to be the king of Musur (north Egypt) and Paturisi (Pathros).

29:14-15. lowly and weak kingdom. The term "lowly and weak kingdom" appears to denote that Egypt will be relegated to vassal status. Although we are not told to whom the nation will be subject, the historical record is clear enough. Conquered by Cambyses in 525, Egypt became a Persian vassal for the next two centuries.

29:17. chronology. The date is April 26, 571, one or two years after the end of the siege of Tyre.

29:18. Nebuchadnezzar's siege of Tyre. See comment on 26:7.

29:18. head rubbed bare, shoulder raw. Nebuchadnezzar's soldiers will have bare heads and raw shoulders because of the burdens put upon them in order to throw up earthworks to attack the city of Tyre. The siege ramps used to build a slope up to the walls required tons of dirt. Additionally, there was an attempt to build a causeway out to the island portion of the city. Dirt would have been carried in baskets on the head and on the shoulder.

29:18. no reward. Soldiers usually received booty in the form of persons, animals and possessions. However, Tyre was able to get an exemption from destruction by yielding to Babylon. Thus there was no pillaging of the city.

29:19. Nebuchadnezzar and Egypt. It was inevitable that Nebuchadnezzar would eventually have to invade and attempt to conquer Egypt. The Medes had united the territory east of the Tigris, effectively cutting Babylon off from direct trade with the east, and the Egyptians, with their Phoenician allies, were constantly causing political and commercial problems in the west and along the Arabian trade routes. An extended (thirteen-year according to the fourth-century Greek historian Menander) siege bottled up Tyre and devastated much of Phoenicia (584-571). A fragmentary portion of Nebuchadnezzar's annals from his thirty-seventh year, Herodotus and Ezekiel 29:19-21 refer to the invasion of Egypt in 568, but no details are given other than victories over desert tribes. It is likely that some Babylonian garrisons were installed in the fortresses of the Sinai following this campaign.

29:21. horn metaphor. The horns of an animal were considered tokens of their power and thus were a figure of strength. Many of the deities of Mesopotamia were depicted with horns. Thus, making a horn to sprout signifies a return of Israel's power. Additionally, it must be noted that the crowns of kings also often featured horns, and a horn could therefore refer more specifically to a king (see comment on Dan 7:7).

30:4. Egypt connected to Cush. Cush, the neighboring country to the south of Egypt, known as Nubia, had had relations with its northern neighbor since the beginning of recorded history. Egypt had a dominant trading relationship with Cush for many centuries and occasionally conquered the area. By the mid-eighth century, however, the Cushites had been successful in conquering Egypt, and they ruled the land for nearly a century.

30:5. geography. The first three areas listed (Cush, Put and Lud) are also mentioned in Ezekiel 27:10. Cush (Nubia) was adjacent to Egypt on the south; Put (Lybia) was adjacent to the west. Lydia was to the north across the Mediterranean and was a frequent ally of Egyptians against various enemies to the east. Arabia could refer to the Arabian peninsula to the southeast, but it would be unusual for this Hebrew word to be used that way. It is more frequently used to refer to a mixed assortment of ethnic groups. It is known that the Egyptians during this period used mercenaries from throughout western Asia and the eastern Mediterranean. Kub (NIV: Libya) is an unknown area probably also within modern Libya. The "land of the covenant" is a reference to soldiers of an unnamed country, probably Judah, which had a military relationship with Egypt at this time and probably supplied mercenaries, as did all of these other lands. Jeremiah is aware of a Jewish settlement in Egypt (see comment on Jer 44:1).

30:6. Migdol to Aswan. See comment on 29:10.

30:9. messengers to Cush in ships. The term here for "ships" (an Egyptian loan word) refers to military boats rather than reed boats or merchant ships. Nubia felt that having Egypt as a buffer zone offered a certain amount of protection from any of the powers from the east that would arise. Though the Egyptian pharaoh Psammeticus II campaigned against Nubia in 593, it is not attack from Egypt that is threatened in this passage. The Persian king Cambyses invaded Nubia in 525, and from that time it was counted as part of the empire. Nubians served as mercenaries in the Persian army.

30:10-11. Nebuchadnezzar and Egypt. See comment on 29:19.

30:12. sell land. In the ancient world the concept of selling something did not emphasize "getting money" as it might in today's economy. Rather the emphasis was on the transfer of ownership. In Akkadian the word for sell is also the word for give. Ruth 4:3-5 shows that flexibility in the Hebrew term used here as well. As a result, it is not pertinent to ask what Yahweh is receiving in return. That is not the issue. He is transferring possession of the land from Egypt to Babylon.

30:13. images of Memphis. Memphis was the royal residence during this period and the center of the cult of the god Ptah. It was the city in which kings were enthroned. Ptah was one of the few deities that did not have an animal head. He was a creator deity and patron of the craft guilds.

30:14. Pathros. This is a reference to Upper Egypt; see comment on 29:14.

30:14. Zoan. Zoan (Hellenized as Tanis) was a town in the eastern Nile Delta, an important administrative center in the eighth and seventh centuries B.C.

30:14. Thebes. Thebes (or No-Amon in Egyptian) was the main city of Upper Egypt and had been the capital of the nation for centuries during the New Kingdom. It was surrounded by a spectacular array of monumental sacred precincts.

30:15. Pelusium. Sin was an important fortress town in the northeast frontier of the Delta region usually identified with Pelusium. It held a strategic position in Egypt's defense against invaders from Western Asia.

30:17. Heliopolis. Aven (Hellenized as Heliopolis, "city of the sun god") was at the apex of the Nile Delta region, just north of the city of Cairo. It normally appears in Hebrew as On (see Gen 41:45, 50).

30:17. Bubastis. Pi-Beset (Hellenized as Bubastis) was a town in the Nile Delta region. It is modern Tell Basta, located thirty-five miles north of Cairo on the Tanitic branch of the Nile. It was the residence of Sheshonq (Shiskak), a powerful monarch of the Twenty-Second Dynasty in the tenth century B.C.

30:18. Tahpanhes. Tahpanhes was an outpost in the eastern Delta region of the Nile, bordering the Sinai. It was later known as Daphne by the Greeks, who inhabited the outpost as mercenaries by the seventh century B.C. The Greek historian Herodotus states that Daphne was one of three outposts set up by the Egyptians to stop the Assyrian invasion. The Israelites in flight from the Babylonians may have stopped there in the early sixth century B.C.

30:20. chronology. The date is April 29, 587 B.C., just a few months after the date given in 29:1. The Egyptian interference is imminent, but Ezekiel warns that nothing will come of it.

30:21. the arm of Pharaoh. In Scripture the arm is the symbol of aggressive power, and thus the breaking of the arm signifies that the individual in question has been rendered impotent (see Ps 10:15; 37:17). The image of an outstretched or mighty hand or arm is common in Egyptian inscriptions to describe the power of Pharaoh. It is used throughout the Exodus narratives to describe God's power over Pharaoh. In the fourteenth-century B.C. Amarna letters, Abdi-Heba, the governor of Jerusalem, refers to "the strong arm of the king" as the basis for his government appointment. Similarly, the Eighteenth-Dynasty Hymn to Osiris equates his growing to majority with the phrase "when his arm was strong," and Haremhab's Hymn to Thoth describes the moon god as guiding the divine bark through the sky with "arms outstretched."

30:23. scattering Egyptians. See comment on 29:11-12.

31:1. chronology. The date is June 21, 587 B.C., nearly two months after the date mentioned in Ezekiel 30:20. Since there is no firm information concerning the date of the Egyptian interference, it is difficult to relate this oracle to the timing of the event.

31:2. identity of Pharaoh. As in 29:3 Ezekiel is probably addressing the office of pharaoh in general. Hophra was the reigning monarch in 587 B.C. (see the note on 29:3).

31:3-17. extent, duration and power of Assyria. The power of the Assyrian state waxed and waned for nearly three centuries (c. 900-612 B.C.). At its height its geographic range was enormous, ranging from Iran in the east to central Egypt, central Anatolia and Cyprus in the west. It covered much of the Arabian desert in the south and ranged as far north as modern Armenia. In Ezekiel's time it had passed off the scene rather recently (about twenty years earlier), so it served as a perfect image of a long-standing superpower that had crumbled to nothing.

31:3-14. tree metaphor. The tree used for the metaphor here is the cedar, a well-known ancient Near Eastern symbol of majesty. It was used for the construction of many important palaces and temples. Egyptian, Assyrian and Babylonian kings all recount how they cut down the cedars of Lebanon in order to construct their mighty edifices. The myth of a cosmic tree is also found in Mesopotamian contexts. Its roots are fed by the great subterranean ocean, and its top merges with the clouds, so that it binds together the heavens, the earth and the netherworld. The Sumerian account of the Epic of Gilgamesh has a motif of a great tree offering shelter to animals. The Sumerian goddess Inanna discovered the sacred cosmic tree on the banks of the Euphrates and transplanted it into her sacred garden at Uruk (biblical Erech), where it attracted the mythical Anzu (a bird deity), a snake and Lilith (an evil demon). In the *Myth of Erra and Ishum,* Marduk speaks of the *meshu* tree whose roots reach down through the oceans to the netherworld and whose top is above the heavens. In Assyrian contexts the motif of a sacred tree is also well known. Some have called it a tree of life, and some also associate it with this world tree. It is often flanked by animals or by human or divine figures. A winged disk is typically centrally located over the top of the tree. The king is represented as the human personification of this tree. The tree is thought

to represent the divine world order, but textual discussion of it is lacking. As is often the case in Ezekiel, this mythical motif is transformed to a political image.

31:8-9. garden of God. The garden of God in Ezekiel is identified as Eden. Here, however, it is not invoking the image of a utopian home from which humans have been driven. Unlike the paradise motif in the Bible, the Mesopotamian garden of the gods was the beautiful protected property of the gods that humans trespassed at their peril. Such was the cedar forest to which Gilgamesh and his companion Enkidu gained access when they defeated the divinely appointed guardian of the forest, Huwawa. These gardens, like the royal gardens of this period, were wooded parks featuring beautiful and exotic trees. This description is also appropriate for the biblical Eden.

31:12. Assyria's fall. The Assyrian empire was at its height in the early seventh century B.C., as it was successful in conquering Egypt. However, a great civil war in 652-648 B.C. showed the inherent weakness of the huge state. After the devastation of the civil war Assyria quickly weakened. By the end of Ashurbanipal's reign (either 631 or 627 B.C.) all economic and other textual sources disappear from Nineveh, the Assyrian capital. By 626 B.C. the Chaldeans of Babylonia had declared their independence. Within fourteen years all of the major Assyrian cities had been destroyed, the monarchy had fled to Harran in Syria, and the army was in chaos. The Assyrians may have participated in the Battle of Carchemish against Nebuchadnezzar, but they were never heard from again. Thus in the forty or so years after the great civil war, Assyria had been consigned to oblivion.

31:16. comparison of Eden to Lebanon. This comparison draws together the biblical motif of Eden as the protected property of Yahweh and the Mesopotamian motif of the cedar forest as the protected property of the gods. See comment on 31:8-9.

31:18. uncircumcised. There is evidence that Egypt's priests and kings endured some form of circumcision. In general, the Israelites disdained the uncircumcised, and possibly the Egyptian royalty felt the same way. Contempt of the uncircumcised appears in both the Egyptian and Israelite practice of cutting off the uncircumcised penises of enemies.

32:1. chronology. The date is March 3, 585 B.C., a few months after the report of the fall of Jerusalem had reached Ezekiel.

32:2. monster in the seas. The monster in this case is not located in the Nile River but "in the seas." This reference is probably to the cosmic monsters destroyed by God (see Is 51:9-10; Ps 74:13). In the Bible as well as in the ancient Near East, the sea represents chaos and disorder, as do the sea monsters that live there. The obvious physical struggle between the sea and the land as well as the fierce, seemingly unstoppable energy displayed by the savage sea gave rise to cosmic myths in the ancient Near East. The *Enuma Elish* creation epic from Babylon describes how Marduk vanquished Tiamat while this goddess of watery chaos was in the form of a dragon. Much of the cycle of stories about Baal in Ugaritic legend involves Baal's struggle against his rival Yamm, the god of the sea. Similarly, the Ugaritic epic has both Anat and Baal claim to have conquered Litan, the seven-headed dragon, and thus gained mastery over the seas. In Psalm 104:26, Yahweh is said to play with Leviathan, and in Job 41:1-11, God challenges Job to show his control over Leviathan as God does. The kingdoms represented by these beasts are therefore associated with the forces of chaos that bring disorder to God's world and need to be overcome (see comments on Dan 7).

32:2. lion/monster. The parallel between lion and monster (dragon) seems strange to us but was not at all unusual in Ezekiel's world. The famous Ishtar Gate in Babylon and the procession way leading up to it used glazed bricks to create alternating images of lions and dragons. Additionally, in the mythological traditions of Mesopotamia a composite creature that combined lion and dragon features was common. This is especially true of Labbu in the Labbu Myth. From as early as the beginning of the second millennium, kings used lion and dragon in parallel to describe themselves.

32:2. churning, muddying waters. This description indicates a typical mythical scene in which the churning of the cosmic ocean disturbs the creatures (often sea monsters) who represent the forces of chaos and disorder. In *Enuma Elish* the sky god, Anu, creates the four winds that stir up the deep and its goddess, Tiamat. Here it is the monster who churns up the sea with the threat that chaos will bring disorder to the world.

32:3. capture with net. In both the Erra Epic and *Enuma Elish* the creature representing the forces of chaos (Anzu and Tiamat respectively) is captured in a net.

32:4. huge carcass devoured by birds and beasts. In the Labbu Myth, Labbu is described as a monster fifty miles long and a mile wide.

32:6. drenched with blood. In the Labbu Myth the blood of the slain monster is said to flow for three years and three months.

32:7-8. cosmic effects. These cosmic effects reflect the world-upside-down motif that is well known in the ancient world (see comment on Jer 4:23-26). It additionally strikes at the heart of the Egyptian religion, which featured the sun god most prominently.

32:11. sword of the king of Babylon. See comment on 29:19.

32:14. streams flowing like oil. The muddy waters have settled at the bottom of the river and have given way to clear, smoothly flowing rivers that run like oil. Similar phraseology ("heavens raining down oil") is found in the Ugaritic Baal texts, but there, as elsewhere in the Bible, it is an image of prosperity. In the contrast presented here, flowing like oil means that it is undisturbed, and it is undisturbed because the land is desolate.

32:17. chronology. The date is March 17, 585 B.C., two weeks later than the date mentioned in 32:1.

32:21-22. Assyria with her dead in Sheol. The nations listed in 22-30 all suffered significant devastation. Ezekiel probably has in mind the final defeat and destruction of the Assyrian empire at the end of the sixth century B.C. Her armies were probably finally destroyed at the battle of Carchemish, where Egypt (and probably Assyria) was decisively defeated by Nebuchadnezzar of Babylon. Thus, the imagery sees that the final end of Assyria is in Sheol, the abode of the dead.

32:24. Elam. Elam was an important state in southwestern Iran (modern Khuzistan). Its main city was Susa, which had a very ancient history and is mentioned in Sumerian and proto-Elamite records from the outset of the third millennium B.C. Elam was devastated by the Assyrians in the late seventh century B.C. It was invaded by Nebuchadnezzar in 596 and was taken over by the Medo-Persians later in the sixth century B.C.

32:26 Meschech and Tubal. At the end of the eighth century, these two Anatolian kingdoms were ravaged by internal warfare, conquered by Sargon II of Assyria and invaded by the Cimmerians from southern Russia. Unfortunately, little of their history survives from the seventh and early sixth centuries. It is thought that they were incorporated under Lydian control after the conclusion of the Cimmerian wars. In the spring of 585 the Lydians are at war with the Medes (see chronology in v. 1 above and comment on 38:1). They are mentioned again in the Persian period as separate ethnic identities. They are known to the Assyrians as Mushku (central Anatolia) and Tabal (eastern Anatolia), and to Herodotus as the Moschi and Tibarenoi (subject states of the Persian empire). At the end of the eighth century the king of Mushku was Mita, known to the Greeks as Midas, the king with the golden touch. His tomb has been identified at Gordion and excavated.

32:29. Edom. Edom was a Semitic-speaking neighbor of Judah, south and east of the Dead Sea. In the eighth century B.C. Edom fell under the control of the Assyrians, as noted in the annals of Tiglath-Pileser III (r. 745-727 B.C.), and continued under their rule until the death of Ashurbanipal a century later. During that time the Edomites were often conscripted into the Assyrian armies and thus figure often in the annals. During the Babylonian period Edom evidently sided with the great empire, although there are no extrabiblical records to verifying this. It is likely that they submitted themselves to Nebuchadnezzar's rule in 605 B.C. Although some Judean refugees may have found shelter in Edom, it apparently remained passive as Jerusalem was destroyed (see Ps 137:7 and Obad 11). The Babylonian campaign against Ammon and Moab in 594 seems not to have affected Edom. It is likely that they remained unscathed until the time of Nabonidus's campaign in 552 B.C.

32:30. princes of the north. The princes of the north are most likely Aramean rulers or sheiks. There were a number of hostile Aramean kingdoms north of Israel/Judah, the largest centered in Damascus.

32:30. Sidonians. See the comment on 28:21.

33:1-20

Ezekiel's Role as a Watchman

33:2-6. role of watchman. The watchman stood at the place in the city where he would have the most strategic view of the surroundings and watched for any approaching enemy army. He reported either by word of mouth or by trumpet. His task was simply to sound the alarm of the approaching enemy. He was absolved of responsibility if the city dwellers refused to heed his call. The watchman is found throughout the ancient Near East. The spiritual sense used here is not found in the ancient Near East but is picked up (probably from Ezekiel) in the Dead Sea Scrolls sectarian documents, where the leader of the community is on the lookout for the judgment of God.

33:3. trumpet signal. The trumpet here is the ram's horn, which had a limited musical range. The term (Hebrew, *shopar)* is likely be related to Akkadian *shapparu,* which is in turn a loan word from Sumerian denoting a wild goat or ibex. It was significant not only for its

use in war (to proclaim victory, announce the disbanding of the army and call troops to arms) but also for the cultic rites of Israel (see Ps 81:4 and Lev 25:9). In fact, it is the most frequently named musical instrument in the Old Testament. For more information see comment on Joshua 6:4-5.

33:7. prophet as watchman. Ezekiel's portrayal of himself as prophetic watchman is similar to the charge given to Isaiah (21:6-9) and Jeremiah (6:17). Though no similar label has been found attached to prophets in the ancient Near East, the concept is familiar enough. The prophets were expected to warn the king of impending situations (in military or cultic realms) that might jeopardize his person or the stability of his kingdom.

33:15. pledge for loan. Pledges for loans were customary throughout the ancient Near East. Thousands of loan contracts uncovered from Mesopotamia show that it was quite an ordinary procedure. For example, at Terqa in Middle Bronze Age Syria, a certain Puzurum made a loan at the local temple of the sun god Shamash. He retained one-half of a cuneiform contract, while the temple (functioning in this case as a bank) retained the other. Thus the two halves functioned as a receipt. When Puzurum paid off the loan, the temple returned to him the remaining portion of the contract. The return of a pledge by a repentant wicked person suggests that an oppressive debt situation was resolved with the debt being forgiven.

33:21-33

Jerusalem's Fate

33:21. chronology. The date is January 19, 585 B.C. It is about five months after the fall of Jerusalem. Most commentaries agree that this is not a fugitive or even a refugee, but one of the survivors who has been brought captive to Babylon with the first wave of exiles from the destruction.

33:25. eating meat with blood. The phrase literally is "eating over blood." Leviticus 19:26 associates this with banned forms of divination. Medieval rabbinical texts identified this with a practice of the Sabians, a north Arabian sect that had a communal meal in which humans ate meat whose blood was poured on the ground to attract spirit beings. Similar practices were done throughout the entire Near East. The land of Israel was understood theologically as the camp that surrounded the temple. The violations listed are the sort that would result in the person being sent outside the camp.

33:27. wild animals as punishment. Wild beasts were a constant source of fear for city dwellers throughout the ancient Near East. In Assyrian texts and reliefs of this period the kings are seen hunting lions to symbolically rid the city of the scourge of wild beasts. It has been suggested that the killing of eighteen lions represents the eighteen gates of Nineveh and the roads leading out of them. See comment on 5:17.

33:32. love songs for entertainment. Love (or erotic) songs had long been sources of entertainment for city dwellers. The itinerant singer of songs traveled from town to town, entertaining the people. Many of these songs were written down in the cuneiform record. For example, portions of the Epic of Gilgamesh may well have been sung to the city dwellers in Sumer in much the same way that Homer's *Iliad* and *Odyssey* were sung by traveling poets before being written down centuries later. Love songs are connected to Ritual Marriage texts (the Tammuz liturgy) in Sumerian times and were popular in Egypt during the second half of the second millennium (Eighteenth and Nineteenth Dynasties). It is a severe indictment that the people have reduced the role of the messenger of God to mere entertainment.

34:1-31

Oracle to the Shepherds

34:3. perquisites of leaders. The three staple byproducts of sheep and goats (goats' milk/curds, sheep's wool, meat) are used here to extend the metaphor of the leaders gleaning all the benefits but not fulfilling their responsibilities. Royal and priestly administrations were of necessity supported by the population through taxations of various sorts, but it was expected that the population would in turn benefit rather than be exploited.

34:3-4. shepherd tasks. As the previous metaphor concerned the privileges of the shepherd, attention now turns to the neglected responsibilities. The metaphor goes beyond the normal responsibilities of making sure that the sheep were protected and fed. Instead it focuses on the remedial duties, caring for the sick and finding the lost. These would equate to the need for kings to bring about justice for alienated and disenfranchised people (such as the widow and orphan).

34:7-16. shepherd/king metaphor in ancient Near East. The ideology of the king as a shepherd to his people is found with Lugalzagessi of Sumer as early as around 2450 B.C. The contemporary king Urukagina of Lagash claimed

that the god Ningirsu owned his state and that the king had been chosen as a shepherd to administer the city on behalf of the gods and the people. Gods responsible for maintaining justice (Shamash in Mesopotamia, Amun in Egypt) are likewise represented in this way. This ideology continued in the ancient Near East into the monarchy period, occurring in reference to Ashurbanipal of Assyria (seventh century) and Nebuchadnezzar (sixth century).

35:1-15

Oracle Concerning Edom

35:2. Mount Seir. Mount Seir was the ancient name of the mountainous region south of the Dead Sea on both sides of the Rift Valley running south to the Gulf of Aqaba. The name Seir is found in the Amarna texts from Egypt in the fourteenth century B.C. According to Scripture the mountains of Seir were occupied first by the Horites (Deut 2:12, 22), who were later displaced by the Edomites. Seir became synonymous with the entire country of Edom.

35:5. Edom's role in fall of Jerusalem. This verse addresses the long-standing dissension between Edom and Israel. We are told elsewhere in Scripture that the Edomites cheered when Nebuchadnezzar II destroyed Jerusalem (e.g., Ps 137; Joel 3:19; Obad 1-14). This is the only text that implies that they played an active role in the conquest.

36:1-38

Oracle of Restoration

36:5. Edom's conduct. See comment on 35:5.

36:25. sprinkled with clean water. While sprinkling with water for purification was a part of the ritual ablutions used by the priests, the term "clean water" is not used anywhere else in the Old Testament.

36:26. metaphors. The heart was considered the seat of the mind and its will, or inclinations. For more information concerning a heart of stone or a heavy heart see comments on 11:19; Isaiah 6:9-10; and Exodus 8:11.

37:1-28

Valley of Dry Bones

37:1. transported in visions. See comment on 8:3.

37:2. valley full of bones. The large amount of bones described here implies that this was the scene of a major catastrophe. The depiction of a large number of corpses that had been denied a proper burial is reminiscent of many battle scenes and descriptions of battle scenes found in the earliest periods of Mesopotamian and Egyptian history. Furthermore, the Assyrian annals describe the destruction of their enemies in similar terms. A typical ancient Near Eastern curse has the corpse of the cursed victim exposed to the elements.

37:12-13. resurrection in ancient Near East. The concept of resurrection was known in some parts of the ancient Near East. The Egyptians believed that some of the deceased rose as stars and took their place in the heavens. However, in general the only awakening that was part of the ancient worldview was the calling up of spirits of the dead (which is not permanent and not a bodily presence) or the awakening of the fertility gods of nature cycles. These died annually when the agricultural cycle came to an end and "wintered" in the netherworld. Then they were ritually awakened in the spring. None of this bears any resemblance to a theological doctrine of resurrection. Occasional revivifications or indications of national return to life as found in this passage are not representative of a doctrine of resurrection. See comment on Isaiah 26:19. Some have suggested that there is a greater likelihood that Ezekiel is transported east this time. Zoroastrian practice was to leave bodies unburied with the hope that they would someday be reassembled and revived. A drawback to this is that the spread of Persian culture and ideas dates to some decades after Ezekiel, and Zoroastrianism does not take hold in the Persian empire until the end of the sixth century.

38:15-16. writing on wood. It is likely, since this wood is being written on, that Ezekiel is using two wooden tablets. It was a common practice to use wooden boards coated with a beeswax concoction for the writing of messages that were formal but did not need to be archived and preserved.

38:1—39:29

Gog and Magog

38:2. Gog. The identification of Gog has perplexed commentators for centuries. The most likely explanation is that the name is a derivative of Gyges, who was a Lydian king mentioned in Assyrian and Greek sources. In the former he is called Gugu and he rules over *mat Gugu,* which is Akkadian for the "land of Gugu." His reign, however, is fifty or more years prior to the time of Ezekiel, so some have argued that the name became a dynastic title used by his royal descendants. The king of Lydia at the time of Ezekiel is Alyattes. There is no evidence that Lydia ever threatened Judah, but the Lydians were involved in

a serious war against Cyaxares and the Medes in 585. Gog looks similar to the names Agag and Og, two famous enemies of Israel.

38:2. Magog. Magog is likely a Hebrew form of Akkadian Mat Gugu, "the land of Gog," which Josephus identified as Lydia in western Anatolia.

38:2. Meschech and Tubal. At the end of the eighth century, these two Anatolian kingdoms were ravaged by internal warfare, conquered by Sargon II of Assyria and invaded by the Cimmerians from southern Russia. Unfortunately, little of their history survives from the seventh and early sixth centuries. It is thought that they were incorporated under Lydian control after the conclusion of the Cimmerian wars. In the spring of 585 the Lydians were at war with the Medes. They are mentioned again in the Persian period as separate ethnic identities. They are known to the Assyrians as Mushku (central Anatolia) and Tabal (eastern Anatolia), and to Herodotus as the Moschi and Tibarenoi (subject states of the Persian empire). At the end of the eighth century the king of Mushku was Mita, known to the Greeks as Midas, the king with the golden touch. His tomb has been identified at Gordion and excavated.

38:4. hooks in your jaws. The Assyrians typically put hooks in the jaws of defeated enemies, either for the purposes of humiliation or to deport them to other lands. This practice is often described in their annals and graphically depicted in their wall reliefs. Esarhaddon is depicted on a stele from Zinjirli in Syria as leading Baal of Tyre and Tirhakah of Egypt by a rope tied to a ring through their lips. Ashurbanipal claims to have pierced the cheeks of Uate' (king of Ishmael) with a sharp-edged tool and put a ring in his jaw.

38:4. large and small shields. These were body shields and hand shields respectively. See comment on 23:24.

38:5. Persia, Cush and Put. See comment on 27:10.

38:6. Gomer. Gomer has been equated with the Gimirrai of the Assyrian annals and the Cimmerians of Greek sources. In Homer's *Odyssey* they lived on the north shore of the Black Sea. They attacked the kingdom of Urartu from the north and caused problems for the Assyrians in the eighth century. Sargon died in battle against them in Tubal. They appear to have been driven through the Caucasus mountains into Anatolia according to Herodotus. They came to be involved with the Anatolian kingdom of Lydia in the seventh century B.C. They overran the Phrygians and sacked the capital at Gordion, the royal seat of the famous King Midas, in 676. In 644 they overthrew Sardis, the capital of the Lydian state. This was when Gyges met his death. During Ezekiel's time the Cimmerians had been driven out of Lydia by Alyattes. They later came under the control of the Medes.

38:6. Beth Togarmah. Beth Togarmah was most likely the capital city of Kammanu, a central Anatolian kingdom. It was known in Hittite sources as Tegaramara and in Assyrian sources as Til-Garimmu.

38:11. unwalled villages. The unwalled villages (mentioned here and in Zech 2:8 and Esther 9:19) have normally been defined as rural settlements without walls, bars or gates, in contrast to fortified cities. They were defenseless and vulnerable.

38:13. Sheba and Dedan. The kingdom of Sheba was a great trading center in southwestern Arabia that exported precious stones, gold and incense. This kingdom is known as Saba in native sources and in the Assyrian annals. It had a very advanced urban civilization in the first millennium B.C. For more information see 2 Chronicles 9:1. Dedan was a central Arabian oasis where Tyre received its special riding gear. It is identified with the modern site of al-Ula, which is situated on the frankincense road from Yemen to Palestine.

38:13. merchants of Tarshish. In this context the merchants of Tarshish appear to represent merchant peoples who did their trade on the overland routes across the Arabian Desert to Sheba and Dedan, and on to the Mediterranean Sea.

38:14. Gog. See comment on 38:2

38:19. earthquakes in Israel. This appears to be a cosmic earthquake, similar to ones described in Exodus 19; Judges 5:4-5; Isaiah 30:27-28; Habakkuk 3:3-7; and Psalms 68:8-9 and 114 (see comment on 1 Sam 14:15). This type of imagery is also found in the annals of Esarhaddon of Assyria. The Levant was prone to earthquakes, but Israel is on the edge of the zone that has its center in Anatolia. The well-known historical quakes occurred in 760 and 31 B.C. In the Christian era the region has averaged about one major quake per century.

38:22. hailstones and burning sulfur. The occurrence of hailstones as divine judgment in conquest accounts is not unique. In a letter to his god (Ashur), Sargon of Assyria reports that in his campaign against Urartu (714 B.C.) the god Adad stormed against his enemies with "stones from heaven" and so annihilated them. This battle included a coalition that fled through the passes and valleys pursued by Sargon, with the enemy king hiding at last in the clefts of his mountain. Burning sulfur

("brimstone") is a yellow crystalline substance that ignites in air, often found in volcanic regions. It has no connection with hailstones except they were both calamities that would befall the area.

39:1. Gog. See comment on 38:2.

39:4. food to the birds and wild animals. To be left unburied, vulnerable to the elements and beasts, was the worst curse imaginable. Furthermore, as there was no clear distinction between body and soul in the Hebrew mentality, death was not regarded as the separation of those two elements. Thus one who had no burial was still believed to be conscious (in some form) of his fate. In the ancient Near East those who were left unburied were thought restless until a proper burial had been performed.

39:6. Magog. See comment on 38:2.

39:9. weapons used for fuel. Passages that speak of the destruction of weapons of war usually focus on using them for practical and beneficial purposes. The wooden parts could be burned in place of firewood as here (this sometimes extended even to the clothing, as in Is 9:5), and the metal parts could be recycled into agricultural use (Is 2:4 and Mic 4:3).

39:11. burial place. The burial place *('oberim)* has defied an absolute identification. Scholars have identified it as the "Valley of Travelers" or, based upon an Ugaritic parallel, "those who have passed on." The latter makes more sense. Gog has desired to be identified with the great kings of old, and now he is, since they are all dead. Ugaritic texts refer to a group called the Rephaim, who are beings of the netherworld (see comment on Is 14:9-11).

40:1—48:35
Restored Temple and Land

40:1. tenth day of the first month. The time of the year is described as the "head of the year," similar to an Akkadian equivalent. The present vision is thus dated to 10 Nisan in the twenty-fifth year of the exile or April 28, 573 B.C. In the Israelite calendar this was the beginning of Passover activities. The lamb was to be chosen on this day and slaughtered on the fourteenth.

40:3. linen cord and measuring rod. The linen cord may be similar to the measuring line that was used in Zechariah 2:1 to measure the city. It appears that it was used for extremely long distances. The measuring rod was for short distances. Some have argued that the stele of Ur-Nammu of the Sumerian city of Ur shows a similar representation.

40:5. long cubit, length of rod. The normal cubit (six handbreadths) has been estimated at 17.6 inches and the long cubit here at about 20.5 inches. The rod mentioned by Ezekiel was about six cubits or ten feet long.

40:6. significance of east gate. The east gate was the gate through which Yahweh's glory would make its entry (Ezek 43:1-5). God's glory had left the temple through the same gate (10:19). Since temples tended to be oriented toward the east, this would be the most important gate.

40:7-16. gate architecture. The size and design of the gateway show its great importance in the temple complex. The jambs were decorated with palm fronds, presumably similar to those in the Solomonic temple (1 Kings 6:29-36). These types of fortified installations were built for military and not religious purposes. Later in Ezekiel we are told that the gates were to be manned by the Levites, who guarded the sacred places in the temple. The overall design of the gatehouse is typical of a number of preexilic Palestinian city gates from Megiddo, Hazor and Gezer. While these gates are typical of city gates, they are much more extensive than would be usually found with temples.

40:7-16. measurements compared to archaeologically known gates. This structure is clearly a guardhouse and measures fifty by twenty-five cubits (eighty-six by forty-three feet). It compares to the guardrooms of Solomon's temple (1 Kings 14:28), although their size is not mentioned. Of nearly twenty Iron Age gate systems excavated in Israel, this would be larger than most. The gates at Dan, Megiddo and Lachish were between eighty and one hundred feet wide (compared to the forty-three feet of this gate). But they are larger than most, and the average runs closer to the width of the gate described here. The depth of this gate, however (eighty-six feet), is on the large size. One of the deepest excavated gates is at Lachish, which is nearly eighty-two feet. The descriptions and measurements of the chambers are comparable to Iron Age gates.

40:17-19. outer court description and size. With the addition of information from Ezekiel 42:6 the outer court had a group of rooms that may have been used by worshipers as eating and meeting places during the periods of religious events. The rooms were pillared porticos. The number of rooms and their size is not given. The area did contain a raised pavement of about one hundred cubits. The term for pavement is a rare word. In Esther 1:6 the term represents a mosaic floor inlaid with precious stones.

40:20-27. north and south gate dimensions and description compared to east gate. The north and south gates have the same features as the east gate: recesses, jambs, niches, a vestibule and palm decorations. The measurements of the three gates are also identical.

40:26. palm tree decorations. The palm tree decorations were not only artistically beautiful but were reminiscent of the Solomonic temple (1 Kings 6:29-36). These types of decorations were common in Iron Age Palestine, particularly in connection with temple facades.

40:28-37. inner court gates (and absence of west gates). The inner court gates were mirror images of the outer gates. The inner courtyard backs up to the wall on the western side, with a structure between the wall and the back of the temple. That is why there were no western gates.

40:39. offerings. For discussion of the various types of offerings, see the comments in the early chapters of Leviticus.

40:43. function of double pronged hooks. The double-pronged hooks on the walls have traditionally been interpreted as being used to hang utensils. A more recent interpretation argues that they were niches or ledges for the storage of the utensils, much like what is described in the Temple Scroll (30:13).

40:47. inner court size. The inner court was a perfect square, one hundred cubits, or about 170 feet, on each side. This is about two-thirds of an acre.

41:1. outer sanctuary description and size. The outer sanctuary shows vague Babylonian influences and specific parallels to the older city gates of Megiddo, Hazor and Gezer, structures which may have been built by Solomon (1 Kings 9:15). For example, the north gate at Megiddo had in the passageway of the gate the identical three gate recesses described in Ezekiel. Here in 41:1 is described the great hall, the room between the vestibule and the Holy of Holies. Numerous Mesopotamian temples were constructed with this model (see comments on Ex 26 and 1 Kings 7).

41:5-11. architectural design. Ezekiel describes here the auxiliary structures of the temple. There are a number of technical architectural expressions discussed in this section, many of which have uncertain meanings. Much of the description, however, is reminiscent of that found in 1 Kings 6:5-8 concerning the Solomonic temple. Although Ezekiel sketches the auxiliary structures around the temple, he does not describe their function, nor does the author of 1 Kings. Similar single and multistoried rooms from Egyptian religious centers imply that they were used as storehouses for temple treasures. For example, temples built by Merenptah and Rameses II (thirteenth century B.C.) had storage spaces three to four times larger than the temple itself. This was also common in Mesopotamia.

41:13-14. dimensions compared to Solomon's temple. Both the Solomonic temple and the temple of Ezekiel consisted of three rooms. The dimensions of the holy room and the great hall in both temples are identical.

41:15. identification of second building and galleries. The identification and function of the second building mentioned here is primarily determined by understanding the obscure term used for "galleries" or "ledges." These galleries appeared on the outside of the structure. They either came in threes or were three levels. They could be seen from both the inner and outer courts. Some have concluded that these functioned as galleries or walkways (or both).

41:16. narrow windows. The narrow windows were probably set high in the walls above the level of the annex rooms, similar to Solomon's temple (1 Kings 6:29-35). They correspond to the triple rabbeted design in the "Lady at the Window" carving found at the Assyrian site of Nimrud, dating to the early first millennium B.C.

41:17-20. palm and cherub imagery. The palm and cherub imagery is clearly reminiscent of the Solomonic temple (1 Kings 29-36). However, these cherubim have only a human and a lion head, unlike the four for the Solomonic temple. These were no longer free-standing structures but were carved into the walls, which is most likely why there were fewer heads. The figures were flanked by the palm imagery, a common motif on ivories and other art forms. The same imagery is seen on ivory carvings from Arslan Tash in first millennium B.C. Syria and on a scene painted on storage jars from Iron Age Kuntillet 'Arjud in Palestine.

42:13-14. provision of priest's rooms in temple. Though little is known of priest's rooms in the Solomonic temple, they were well known in Babylonia. The *bit pirishti* was a room in the Babylonian temple complex in which the priestly vestments and the costly garments of the statues of deities were stored.

42:14. holy garments. The Babylonian *bit pirishti* was associated with the wardrobe of the priests, at least during the Seleucid era (after 330 B.C.). These vestments were highly valued because of the gold and silver objects used to decorate the garments. Goldsmiths received official permission to enter into these rooms in

order to work on the vestments of the priests and the divine images.

43:3. Kebar River. See comment on 1:1.

43:7. lifeless idols of kings. These "lifeless idols" are probably not corpses but refer to a pagan cult of the dead, similar to that of Leviticus 26:30. Ezekiel probably had in mind a veneration of the spirits of Israel's royal ancestors, much like a cult of the royal dead at Ugarit. Whether the kings were considered deified at either place is not clear.

43:8. thresholds and doorposts. The statement here in verse 8 corresponds with the description of the Solomonic temple in 1 Kings 6—7. The original temple was built as one element of the entire Solomonic palace complex. Only a wall separated the temple and palace, and they bordered "threshold to threshold, and doorpost to doorpost."

43:13. long cubit. See comment on 40:5.

43:13-17. altar architecture. Although the technical vocabulary for the altar is similar to that found in Akkadian, the altar of Ezekiel is most similar to the Solomonic Temple (2 Chron 4:1; 1 Kings 2:28). The length of the sides is similar in both cases, while horns were a common motif in altars in the Levant. Though the altar is large, it is not as large as Solomon's and is comparable to those uncovered by archaeologists.

43:19. family of Zadok. Zadok was the representative of Aaron's line who served as high priest during the reigns of David and Solomon. In the postexilic community the sons of Zadok had the altar duties reserved for them, while the Levites had less significant duties than before. The Zadokites held the high priesthood until the time of the Greek ruler Antiochus IV (175-163 B.C.). In fact, some have supposed that the Dead Sea community may have been formed in response to the end of the Zadokite priesthood.

43:24. salt. The reference here is to a "covenant of salt" (see comments on Lev 2:13 and Num 18:19). The preservative qualities of salt made it a symbol of the permanence of the covenant relationship. Thus, the addition of salt was a reminder of God's covenant.

43:25-26. seven-day dedication. In the ancient Near East generally and in Israel particularly, seven-day installation and dedication services were the norm.

44:1-2. east gate permanently shut. The Sacred Gate of the city of Babylon was the gate through which the procession of Marduk (the primary god of the city) and other deities passed and returned again. Like the east gate described by Ezekiel, the Sacred Gate was apparently opened for the deity to pass through and was shut at all other times.

44:3. prince. The prince in this context is a religious figure who is responsible for eating his sacrificial meals before the Lord in the sacred gate. Earlier in Ezekiel the term was used for a Davidic figure (e.g., 34:24; 37:25). Here he has no royal or political role to play, only a role inside the temple precincts. He has no access through the east gate that is reserved for divine use; he only has an act to perform there. It is clear that he is not serving a priestly function, for he is not allowed to actually step inside the inner court.

44:3. portico of the gateway. The prince was able to enter the gate structure through the portico (or vestibule) of the gateway, meaning that he had already come into the courtyard through another gate and entered the eastern gateway from the inside. He stood by the post of the gate, which enabled him to see the cultic activity of the priests.

44:8. others in charge. Foreigners had been recruited for temple service probably as temple guards perhaps since the time of Manasseh and Amon. Furthermore, Neo-Babylonian and Phoenician records appear to affirm the probability of the installation of foreigners in this type of temple service.

44:14. duties of the temple. The duty of guarding the gates of the house implies more than just the temple but the entire temple complex. The Levites were also responsible for caring for the temple and grounds, and supervised activities on the temple grounds. For more information on the importance of this task see the comment on 1 Chronicles 9:22-27.

44:17. linen, not wool. One possible reason for the prohibition of wool may be a practical one. Wool was more likely to cause one to sweat. Since many bodily excretions caused defilement, steps needed to be taken to prevent their occurrence in the temple complex. This appears also to be the case in Egypt, where, according to Herodotus and the Roman writer Lucian, linen was used in the material for priestly garments. Herodotus adds that the Egyptian priests were constantly washing their linen garments.

44:19. sacred rooms. See comment on 42:14.

44:20. hair regulations. Shaving the head bald or letting the hair grow very long was most likely forbidden because of the pagan customs associating it with Canaanite cults of the dead. The taboo has its inspiration in Leviticus 21:5 (see comment there).

44:21. wine prohibition. This prohibition has its parallel in Leviticus 10:9. Though ritualized intoxication was well known, for example, from the Babylonian creation epic, *Enuma*

Elish, it is most likely that the prohibition was to make sure that the priest had control of his faculties (see comment on Is 28:7).

44:22. marriage regulations. The explicit prohibition concerning the priest and marriage comes from Leviticus 21:7, 10-14 (see comments there). There, it appears that the concern was for maintaining the purity of the priestly line, although Ezekiel does not mention the reason for the prohibition.

44:29-30. priest's portions. Although these verses provide the physical sustenance for the priests, there is more. The priests were actually invited to eat Yahweh's food. For more information see comments on Numbers 18:12-19. They were also authorized to eat the *ḥerem* or "every irredeemable devoted thing." These items were evidently those designated for any use, except that which was prescribed for the cult.

45:1. concept of sacred district. The sacred district was land reserved for use by the God of the temple area. Ezekiel portrays the land as a gift that was returned to the divine benefactor. As early as the early fourth millennium B.C., the city of Uruk in southern Mesopotamia had sacred districts in the center of its town. In ancient Mesopotamia either the sacred districts were separated by retaining walls for the structure, or a large citadel wall surrounded the entire sacred precinct. Access to sacred precincts was limited, and strict standards were maintained regarding who could enter and on what occasions. This is a continuation of the sacred compass idea that was established in Israel when the tabernacle was set up in the wilderness period (see comments on Lev 10:10 and Num 18:1-7).

45:2-6. dimensions of sacred district. The larger consecrated area was about eight miles long and six and a half miles wide, an area of over 50 square miles. This could be compared to the approximately 620 square miles of the entire district of Yehud under Persian rule. One half of this area was reserved for the priests and sanctuary, which was in the center of this area. One other area, eight miles by more than three miles, was reserved for the city, which was most likely Jerusalem, although the name is not given. If this design were superimposed on the land of Israel, it would encompass a large central segment of the tribal allotment of Judah. The territorial scheme shows the relative importance of the officials of the state, depending upon their placement near the center where there was the closest access to God.

45:7. prince. See comment on 44:3.

45:10. accurate scales. In an economy that did not have standardized weights and measures, traders were often tempted to cheat by falsifying the balances and measurements, often by using improper weights and false bottoms and other ways to alter the sizes of vessels.

45:10-12. measures. The two-armed balance scales were used to weigh out goods in Israel. The ephah was a dry standard used in measuring grain and equaled about half a bushel. The bath was a liquid measure of about six gallons. It was used for the measure of oil, wine and water. Both an ephah and a bath are one-tenth of a homer.

45:17. prince's contributions. Here the prince is seen in a royal role. Typically in the ancient Near East the king was the one who provided the sacrifices for the festival rituals. This can be observed in biblical texts as well as in the nations surrounding Israel. At the large public festivals the general population often played the role of audience, while the leaders of the people (court and temple) took center stage. The pageantry could be grandiose, and the largesse of the king was made evident.

45:18-20. inaugural festival. The ritual described here has all the earmarks of a purification ceremony to dedicate the new sanctuary. These were typically seven-day affairs that ensured that the holy place and holy objects were ready for use. It marked the beginning of the operation of the sanctuary.

45:21-25. new Passover. In Ezekiel's formulation, Passover takes on a different look than the traditional observance established in Exodus 11—12. Originally it had been established as a family-oriented festival in which the head of the household served a priestly role and the home was the location of the festivities. The related Feast of Unleavened Bread had gradually merged with Passover, as is indicated here as well. In the Passover celebrations carried out by Hezekiah (2 Chron 30) and Josiah (2 Chron 35), there was a more national and centralized aspect to the observance, but that is even more the case here in Ezekiel.

46:1. New Moon significance. Keyed to their use of a lunar calendar, ancient Israel marked the first day of the month, with its "new moon" phase, as a festival day (every twenty-nine or thirty days). As on the Sabbath, all work was to cease (see Amos 8:5), and there were sacrifices to be made (Num 28:11-15). In the monarchy period the king became a prominent figure in these celebrations. The festival continued to be observed in the postexilic period (Ezra 3:5; Neh 10:33). New Moon festivals were also prominent in Mesopotamia from late in the third millennium down to the Neo-Babylonian period in the middle of the

first millennium B.C. The cult of the moon was widespread throughout the ancient Near East, and the moon deities figured prominently in mythological texts. Although the Israelites were forbidden to worship any heavenly bodies (including the lunar cult: e.g., Deut 23:5, and Jer 8:2), they were allowed to celebrate the first of the month with trumpets and burnt offerings.

46:2. prince's entrance. See comment on 44:3.

46:3. worship on the sabbath at the gateway. This is one of the few explicit references in the Old Testament to worship on the sabbath, which is usually only spoken of in terms of prohibited activities. Many of Israel's festivals featured "holy convocations," but such are never mandated for the Sabbath. Here it is also interesting to note that the temple is the focal point for this Sabbath worship. Temples served as gathering places when public sacred rituals were being performed (at events designated as holy convocations). One must be careful not to associate too closely our worship in church on Sunday with Israel's acts of worship at the temple on the Sabbath. The differences are both profuse and profound.

46:9. entrance and exit by opposite gates. This prohibition appears to simply regulate the congestion on occasions of great crowds in the temple and ensuring the orderly flow of people. The temple area is to represent the epitome of orderliness, including even the traffic pattern. Anything that is uncontrolled or reflects confusion has no place.

46:19-24. kitchens for offering preparation. A good number of temples in the ancient Near East were attached to kitchens. These have been found at Ur, Tell Asmar and Terqa in Mesopotamia, and at Karnak in Egypt. Many of the kitchen complexes were larger than the temple it serviced. Second Chronicles 35:11-13 implies the existence of kitchens associated with the Solomonic temple.

47:1. water flowing out of temple. The association between ancient Near Eastern temples and spring waters is well attested. In fact, some temples in Mesopotamia, Egypt and in the Ugaritic myth of Baal were considered to have been founded upon springs (likened to the primeval waters), which sometimes flowed from the building itself. Thus, the symbolic cosmic mountain (temple) stood upon the symbolic primeval waters (spring).

47:8. sea water becoming fresh. The seawater in the Dead Sea becoming fresh is a miraculous transformation. The Dead Sea is 1,296 feet below sea level, the lowest point on earth. The high mineral content of the Dead Sea is a result of the fact that it has no outlet. Waters flow in through a number of sources carrying their various minerals at a rate of seven million tons per day. Then the water evaporates, leaving the minerals behind. Total salinity is 26-35 percent (compared to 18 percent for the Great Salt Lake in Utah and 3.5 percent for the average ocean salinity).

47:15-17. north border. Although the north border is described in great detail, none of the place names can be identified with any certainty. Thus, it is not possible to draw any boundary lines for Israel's northern frontier. There are, however, some affinities with the list in Numbers 34:7-9, a border that coincided with the northern limits of the land of Canaan, which was the name of the Egyptian controlled area of Syro-Palestine. Ezekiel uses general terms here to describe a territory rather than a boundary line.

47:18. east border. Like Numbers 34:10-12 Ezekiel excludes in his description of the east border the Transjordanian regions that had been occupied by Gad, Reuben, and one-half of Manasseh. Thus, the main border was the Jordan River running south from the Sea of Galilee until the Dead Sea.

47:19. south border. The southern border begins at Tamar, the final point of the eastern boundary, to Mount Halak to Meribah Kadesh, or Kadesh Barnea (modern 'Ain el-Qudeirat), a fertile oasis on the southern border of the desert of Zin. From there, the border line follows the Wadi of Egypt (not the Nile), which drained the northern Sinai Desert and formed a natural boundary between Egypt and Palestine.

47:20. west border. The western border, as in Numbers 34:6, is the Mediterranean Sea.

48:1-7. tribal allotments compared to historical. Israel's tribal allotments here in Ezekiel follow the premonarchical order of excluding the Levites and cutting the tribe of Joseph in half (Ephraim and Manasseh) in order to keep the number of allotments of twelve. However, they show little concern for historical realities. As with Ezekiel 47 the territory east of the Jordan is overlooked. Further, the east-west boundaries run in contrast to the natural physical landscape, which is defined by north-south lines. The tribal allotments are identical to one another in size and also respect the traditional genealogical relationships among the tribes, discriminating between the descendants of Jacob's wives and handmaidens. Judah and Benjamin, however, retain their close proximity to the sanctuary.

48:9-14. size of allotment for priests and Levites. The portion of land for the Levites has become smaller, showing their decline in im-

portance. Both the Zadokite and Levitical priests receive identical plots of about eight by three-plus miles.

48:15-20. size of allotment for the people. The city is given walled space of about one and a half miles square. It is flanked on either side by open rectangular spaces of about five square miles each.

48:21-22. prince's allotment. The prince's land lies on either side of the central square. The width of both is twenty-five thousand cubits (about eight miles), and the land is considered separate from the public and the Levites.

48:23-28. remaining tribal allotments compared to historical. See comment on 48:1-7.

48:31. gates named after tribes. In cities of the ancient world such as Babylon the gates were often named after the gods. It was not unusual, however, for gates to be named for where they led to. This was the more common practice in Israel.

DANIEL

1:1-21

Daniel and His Friends Arrive at Nebuchadnezzar's Court

1:1. Nebuchadnezzar. Nebuchadnezzar II (r. 605-562 B.C.) was the second ruler of the Chaldean kingdom centered at Babylon that ruled the ancient Near East for nearly a century. He was the son of Nabopolassar, a Chaldean who declared independence from Assyria in 626 B.C. In his forty-three-year reign, Nebuchadnezzar pacified Egypt (though he was unsuccessful in conquering it) and literally rebuilt Babylon. In fact, most of the city of Babylon that has been uncovered by modern excavators dates from Nebuchadnezzar's reign. Thus the Chaldean kingdom was primarily his creation, and it crumbled only a generation after his death. This great king was remembered in many cultural traditions, including sources from Greece (who knew him as a great builder), and Israel (not only the biblical material, but later rabbinic sources).

1:1-2. chronology. The third year of Jehoiakim was 606-605 B.C. (calculating on a Tishri calendar, see comment on Jer 32:1, and an accession year system, see comment on 2:1). At this point Nebuchadnezzar is still crown prince conducting campaigns for his father, Nabopolassar, who dies in mid-August this same year. Early in the summer of 605, Nebuchadnezzar, along with his allies, the Medes, conquered the last bastion of Assyrian strength at Carchemish. The Babylonians and the Medes then proceeded to divide up the Assyrian empire between them. Nebuchadnezzar staked a claim to Syria and set up his base at Riblah (see comment on 2 Kings 23:33), where he began to collect tribute from his new subjects. Judah fell within the territory allotted to the Babylonians, and Nebuchadnezzar was back in the area at the end of 604. There is no record of any direct siege of Jerusalem by the Babylonians until 597, but the language in this verse is general enough to admit a number of possibilities.

1:1-2. Jehoiakim. Jehoiakim was a son of Josiah who was put on the throne by the Egyptian pharaoh, Necho, as he attempted to exercise control over Syria-Palestine. When Josiah was killed in battle, the people had enthroned his son, Jehoahaz, who represented an anti-Egyptian faction. This situation lasted for three months (while Necho was busy at Haran). Then Necho deposed Jehoahaz and sent him off as a captive to Egypt. Pro-Egyptian Jehoiakim was then placed on the throne with the expectation that he would be a loyal Egyptian vassal. The situation changed dramatically when Nebuchadnezzar gained control of the region following the fall of Carchemish. Jehoiakim played the role of reluctant Babylonian vassal for several years, but after Nebuchadnezzar's failure to invade Egypt in 601, he again broke with Babylon and sought the support of Egypt in his rebellion. This disloyalty eventually proved fatal and led to the Babylonian siege of Jerusalem in 597 (see comment on 2 Kings 24:10-11).

1:2. articles from the temple. These articles would have been attractive booty not only because they were made of precious metals, but because they had been dedicated to the God Yahweh for use in the rituals of the temple. Power was demonstrated over the deity by taking those things that were most significant to him. For descriptions of some of these articles see comments in 2 Chronicles 4.

1:2. carried off to temple. As we know from

references in the Mari texts as well as the Cyrus Cylinder, sacred objects, including idols and the many types of vessels used in worship, were taken hostage when a people was conquered. A way of demonstrating the power of one's own god over the gods of conquered peoples was to desecrate their sacred objects or place them in a position of submission.

1:2. his god. Marduk was the chief god of Babylon, its patron deity and the head of the pantheon. The Babylonian creation epic, *Enuma Elish,* is actually a myth recounting his elevation to that position, believed to have taken place at the end of the second millennium. He was considered to be the son of one of the members of the most august ancient triad, Enki, the patron of Eridu. Though we often see Baal in the Bible as the principal rival of Yahweh, no deity in the first millennium had the political clout that was connected to Marduk. His renowned temple, Esagila, along with its ziggurat, Etemenanki, were the most dominant buildings in the beautiful city of Babylon.

1:3. Ashpenaz's office. The title translated "chief of the court officials" is also assigned to one of the three representatives of Sennacherib who are sent to confront Hezekiah (see comment on 2 Kings 18:17). The Hebrew term translated "court official" sometimes refers to eunuchs (see comment on Is 56:4-5), though it is difficult to tell when it is that specific.

1:4-5. serving in king's palace. The training the young men were scheduled to receive was intended to prepare them for royal service. As courtiers, they might serve as scribes, advisors, sages, diplomats, provincial governors or attendants to members of the royal household. In seventh-century letters to Assyrian kings the five principal classes of scholarly experts serving the king are mentioned as being astrologer/scribe, diviner, exorcist (this term is used to describe those compared to Daniel and his friends in v. 20), physician and chanter of lamentations. It would not be unusual for an individual to be trained in a number of these disciplines. Training foreigners for these positions was expected to result in the assimilation of the best and brightest of the next generation. Their skills would then benefit the Babylonians rather than their enemies.

1:4. language of Babylonians (Chaldeans). The traditional language of Babylon was Akkadian, a complex and ancient language written by means of a cuneiform script (using a stylus to make wedge-shaped characters), in which each symbol represented a syllable. Much of the canonical literature of the Babylonians was written in Akkadian. Scholars therefore had to receive training in that language. Additionally, there were numerous dialects of Akkadian, though perhaps many of the ancient documents had been reworked into the current dialect. The reigning dynasty, however, was not native Babylonian, but ethnically Chaldean (see comment on Is 13:19). Their language and the diplomatic language of the time was Aramaic. This used an alphabetic script similar to that used by Hebrew. The widespread use of Aramaic in the world of this time makes it possible that Daniel and his friends already had some fluency in it. Alternatively, it is possible that in referring to the language of the Chaldeans, the text is not speaking of the ethnic Chaldeans but of the priestly guild of diviners who, at some point, had become known as the Chaldeans. In the book of Daniel the term is used both ways (ethnic group and professional guild).

1:4. literature of Babylonians (Chaldeans). It is difficult to be certain whether the training involved a wide range of literature, as scribal training and general education would, or whether the training focused on the specialized literature used by the diviners. The diviners' principal literature was embodied in the omen texts. The credentials listed for various scholars indicates that they have mastered the omen series. This literature represented over a millennium of observations of various phenomena along with the favorable or unfavorable events they portended. In addition there are instruction manuals and correspondence in which the reports of these specialists are given to the king. Some of the recorded omens, such as dreams or astronomical observations, are simply observed and preserved in writing. Other times some mechanism might be used to generate the omen (divination by means of the entrails of sacrificed animals) or a human medium may be involved. The omens themselves began to be collected as early as the Old Babylonian period (early second millennium) and were generally presented in an "if-then" form. The exorcists (see comment on 1:20), with whom Daniel appears to be classified and compared, had their special literature as well. These professionals specialized in recognizing the danger of various portents (astronomical happenings, dreams, birth anomalies) and providing the rituals to protect against them. The literature of this defensive magic is represented in the *namburbu* texts.

1:5. rations from king's table. There were many individuals who were given the right to receive rations from the king's table. The classification does not suggest enjoying the privi-

lege of cozy, intimate soirees with the king, but simply that they were made dependents of the state. Those who received such rations in the Neo-Babylonian period included certain ranking members of the administration, craftsmen, artisans (native or foreign), diplomats, businessmen and entertainers, as well as political refugees and members of royal families who had been deported to, or were being held hostage in, Babylon. Depending on their status, these individuals could receive barley and oil rations or much more luxurious fare. Clothing and housing could also be included in their maintenance.

1:5. royal food. The term *(patbag)* used here (and throughout the chapter) is known in Persian and is thought to be a loan word. It refers to food portions sent by the king to friends of the crown. There is no reason to think of it as a meat dish. When later Greeks referred to descriptions of this fare in the Persian literature they had available to them, it is identified as a baked bread product made of barley and wheat, accompanied by wine.

1:5. three-year training. The normal training period for a scribe was three years. In the literature available from the Old Babylonian period, training included the language and literature areas mentioned above as well as mathematics and music. It is probable that the training period for a diviner was longer, but precise indications in the literature are lacking.

1:7. new names. To change someone's name is to exercise authority over them and their destiny. Foreign rulers showed this propensity throughout the biblical period. Since assimilation was ostensibly one of the objectives of the whole procedure in which Daniel was involved, a Babylonian name would be appropriate. Likewise, since names often made statements about deity, Babylonian names would impose at least a subtle level of acknowledgment of the Babylonian gods on the young men.

1:8. defilement from royal food. There have been extensive discussions and a variety of suggestions regarding the reasons why Daniel and his friends refused the king's food. Most work on the assumption that the contrast is between meat and vegetables (see comments on 1:5 and 1:12 for the problems). It is true that sharing the king's food implied some level of allegiance to the king, but that would hold no matter what the young men ate. Jewish dietary laws (kosher) would likely have rendered meat unclean, but improper storage or preparation could render other food unclean as well. Furthermore, the Jewish dietary laws did not prohibit wine. The finest meats were undoubtedly supplied to the palace from the temples, where they had been offered before idols (and the wine poured out in libations before the gods), but any food could easily have come through the same route. The decision certainly has nothing to do with vegetarianism or avoidance of rich foods for nutritional purposes (see 10:3). There are numerous examples in intertestamental literature of Jews seeing the necessity of refraining from the food served by Gentiles (Tobit, Judith, Jubilees). It is not so much something in the food that defiles as much as it is the total program of assimilation. At this point the Babylonian government is exercising control over every aspect of their lives. They have little means to resist the forces of assimilation that are controlling them. They seize on one of the few areas where they can still exercise choice as an opportunity to preserve their distinct identity.

1:12. vegetables. The word used here generally refers to the seeds used for animal feed, fodder or planting. In neither Akkadian nor Hebrew is it used to describe human food. But the text does not suggest that they are being provided with a restaurant-style prepared and served meal. As explained above (1:5), to eat from the king's table meant only that they were provided rations at the expense of the royal budget. Military rations, for example, consisted of measured amounts of grain that the soldiers then used to prepare their meals. Cereal grains could be ground, mashed and cooked in water to produce a porridge. This could therefore involve the same amount of ration as referred to in 1:5 but prepared by themselves rather than in the king's kitchens.

1:17. visions and dreams. Dreams were believed to have importance for revealing the work of the gods as early as the third millennium B.C. They were considered to be communications brought from the gods by a spirit messenger. In Akkadian this messenger was named Zaqiqu. Sometimes information was sought through dreams (see comment on 2 Chron 1:7-12).

1:20. magicians and enchanters. The first term used here refers to Egyptian dream interpreters. It is the same word used in Genesis 41:8 and Exodus 7:11. The Babylonians were known to include Egyptian dream interpreters among their court advisors. The second term refers to the Mesopotamian specialist in exorcism: defending against threatening messages in the omens or in dreams. The latter's skills include identifying the threatening sign, determining a course of action to avert the evil, and performing apotropaic rituals and

reciting incantations to turn aside the danger. Sickness was often included in the group of threatening signs, so the exorcist was counted among the "health care professionals" of Babylonian society. The use of the two terms clarifies that Daniel's skills exceeded those of the foreign specialists as well as the native practitioners.

1:21. first year of Cyrus. This is most likely a reference to the first year of Cyrus' reign over Babylon, which began in October 539 B.C. This would mean that Daniel's tenure of service extended over a sixty-five-year period.

2:1-49

A Troubling Dream

2:1. chronology. In Babylonian reckoning, from the time the king took the throne until New Year's Day (in Nisan, March-April) was counted as an "accession year." His first year began with the start of the first full year. Nebuchadnezzar came to the throne on September 6, 605. His first year was from spring 604 to spring 603. The dream of this chapter, then, would have taken place sometime between spring 603 and spring 602. The Babylonian Chronicle for this year is broken in crucial places but is sufficient to show that Nebuchadnezzar faced some significant military challenges. His fourth year brought the famous, though unsuccessful, attempt to invade Egypt.

2:1. assortment of advisors. Akkadian literature refers to this general class of experts as *ummanu mudu,* masters of esoteric knowledge. The first two terms are the same as those used in 1:20. The third term is used in the Old Testament as a general term for the practice of magic and for practitioners labeled "sorcerers." In Babylonian usage the term refers specifically to those who cast spells. The fourth term, "astrologers," is the word usually rendered "Chaldeans" and here refers to the priestly guild of diviners. In later times they specialized in astrology.

2:1. dreams that trouble. See comment on 1:17. Since dreams were considered to be messages from the gods, they often caused concern, if not alarm. The very nature of the king's dream would have suggested that the news was not good news. He feels the type of apprehension that an employee feels being called in to the boss's office when reorganization is taking place in the company.

2:4. Aramaic. It is normal that the experts would address the king in Aramaic, because that was the language of the realm. From this point in the text through the end of chapter seven, the book of Daniel is in Aramaic rather than Hebrew. The two languages use the same letters, so the page in the original languages would look no different to the English reader.

2:4. dream interpretation. Dream interpretations were usually carried out by experts who had been trained in the available dream literature. More information is available from Mesopotamia than from Egypt. Both the Egyptians and the Babylonians compiled what we call dream books. They contained sample dreams along with the key to their interpretation. Since dreams often depended on symbolism, the interpreter would have had to have access to these documents that preserved the empirical data concerning past dreams and interpretations. Typically, however, it was only the central theme of the dream that was significant for interpretation, rather than all the details. Interpretation of dreams included identifying the meaning of the symbols in the dream, declaring its meaning, consequences and the timing of the events it addresses, and composing an appropriate response to the dream. The response could include apotropaic rituals to defend against the portents or actions that the king should take.

2:5-9. the king's demand. If the king had forgotten the dream, he would not want to admit it, because forgetting a dream was a bad omen indicating that his god was angry with him. Furthermore, such forgetfulness would logically result in the request that the gods send the dream again. Important dreams were often repeated two or three times (notice that v. 1 suggests more than one dream by the use of the plural). An alternative is that Nebuchadnezzar felt that the dream was so ominous that it could too easily be used as a mechanism for subversion against the throne. Divine utterances had long served the purposes of conspirators and usurpers (see 2 Kings 8:8-15 and comment on 2 Kings 9:6-10). He sought evidence that the interpretation represented the gods' message rather than human agenda by requiring that the gods reveal the dream to the interpreter.

2:11. the wise men's claim. It was believed that the gods communicated through dreams, and the experts believed that the gods would reveal to them the interpretation of the dreams through their use of the resources available to them. There was nothing in their resources that would enable them to discern what the dream was. There was no precedent for the gods revealing that sort of information.

2:12. annihilation of the wise men. The annihilation of entire groups suspected of conspiracy or incompetence is all too familiar in the

ancient world. Herodotus records a couple of instances during the Persian period. One involves the magi, one of whom had actually usurped the throne, being executed by Darius I. A second is the execution by Xerxes of the engineers who had built a bridge that collapsed in a storm. A biblical example occurs during the reign of Saul, who almost wiped out the priesthood when he suspected them of collusion with David (1 Sam 22:13-19).

2:14. commander of the king's guard. This is the official title of an important functionary whose duties were sometimes unsavory. When Jerusalem fell at the hands of the Babylonians, the commander in charge of methodically destroying and dismantling the city and disposing of captives either by execution or deportation carried this title. It is similar to the title held by Potiphar in Genesis 37:36. The terminology suggests something like "chief cook," but like some of our government titles (such as "party whip") the office must be understood by examining its function, not its title.

2:19. "God of heaven." This became a popular title for deity in the sixth century. In Persian documents it was commonly used for Ahura Mazda, the chief deity of Zoroastrianism (see comments on Ezra 1:2 and Neh 1:4). The Israelites also found it a usable title for their God, Yahweh.

2:31. statue in a dream. The Egyptian pharaoh Merenptah (thirteenth century B.C.) reports seeing a huge image of the god Ptah in a dream. The god gave him permission to go to war against the Libyans. In a dream reported during the reign of Ashurbanipal, an inscription on the base of a statue of the god, Sin, forecast the failure of the rebellion in Babylon.

2:32. statues of mixed elements. Statues of mixed elements were not uncommon. Since the images of the gods were generally clothed, more care and expense was afforded to the portions that would show. So, for instance, in a mid-second millennium Hittite prayer a promise is made to supply a life-sized statue of the king with head, hands and feet of gold, the rest of silver. Another example of how various metals could be used is the small bronze calf figurine found at Ashkelon. After the body was cast in bronze, forged copper was used for some of the extremities, and the whole image was overlaid with silver. Numerous second-millennium divine images have been uncovered that are likewise made of bronze and covered with gold or silver. Even small figurines were often not cast in one piece but made in parts and joined together with tenons or rivets. Most of the features in the dream are realistic, not surreal. The head is the most important part of the image and would logically have gold plating over the bronze cast. Parts of the arms and chest would at times be visible, thus silver overlay would be appropriate. The torso would need no overlay attached to the bronze, since it was always covered. Iron was not yet being cast at this period, though one Egyptian papyrus mentions iron statues (probably wrought iron). The only way of actually mixing clay with iron would be if the clay were being used as a flux, but the word used in the text for the clay favors baked clay. One suggestion has been that the iron feet would have featured terra cotta inlays. Statuary from both the Neo-Babylonian and Persian periods is nearly nonexistent, and no major divine images from first-millennium Mesopotamia have been recovered. The Assyrian king Esarhaddon boasted of a statue that he had made of himself of silver, gold and copper that was to be placed before the gods to present petitions on his behalf.

2:34-35. rock not cut by human hands. The only incidence of anything even vaguely similar to this appears in the Gilgamesh Epic. Gilgamesh reports a dream about the coming of Enkidu in which Enkidu is represented as a meteor that lands at Gilgamesh's feet. But here there is no destruction by means of the rock.

2:36-40. four kingdoms. The kingdoms are not identified in the text except for the equation that Nebuchadnezzar is the head of gold. Some have suggested a sequence of Babylon, Media, (Medo-)Persian, Greek, while others prefer Babylon, (Medo-)Persian, Greek, Roman. Most of the evidence that would point to one scheme over another comes from Daniel 7 and is examined there.

2:36-40. four-kingdom patterns. The idea of presenting history in terms of four empires or ages has several parallels in ancient and classical literature. In Akkadian literature the *Dynastic Prophecy* (Seleucid period, third century B.C.?) refers to four successive kingdoms (Assyrian, Babylonian, Persian, Greek) in a very broken text. The *Sibylline Oracles* (whose source dates to the second century B.C.) contain a four-empire scheme (Assyrians, Medes, Persians, Macedonians; a number of examples in the Roman period add Rome to the list to make five empires). The fifth-century A.D. Roman author Servius says that Sibyl portrayed the ages by comparing them to metals, but no such comparison is preserved in currently known Sibylline Oracles. The characterization of ages by metals has been thought to cor-

respond to the Zoroastrian representation of four periods of human history. Zoroastrian Avestan texts identify ages (not empires), sometimes as branches on a tree respectively of gold, silver, steel and iron-mixed (an obscure designation). The texts in which this material is recorded are late but preserve material that some believe date back to the second or third century B.C. Perhaps the most significant comparison of ages to metals is found in the early Greek author Hesiod (*Works and Days*, eighth century B.C.), who identifies five ages, four of which are represented by metals (gold, silver, bronze and iron).

2:44. kingdom enduring forever. In a work known as the *Uruk Prophecy* from the twelfth century B.C., there are four kings who arise and do poorly, followed by a king who will restore the statue of Ishtar to Uruk from Babylon. The prophecy says that his son will succeed him and that his kingdom will be established forever (an alternative interpretation dates it to the seventh century and identifies the son as Nebuchadnezzar).

2:46. Nebuchadnezzar's treatment of Daniel. The verb NIV translates "presented" is usually used in Hebrew for pouring out libations. But neither the (grain) offering nor the incense that are mentioned here can be poured out in libations. The text here, however, continues to be in Aramaic, in which the verb means "to provide." This makes Nebuchadnezzar's treatment of Daniel a bit more understandable, as he provides Daniel with the materials with which Daniel can make an appropriate offering to his God.

2:47. revealer of mysteries. The role as a "revealer of mysteries" is highlighted here as Daniel has exceeded what could normally be accomplished by the wise men of Babylon. The gods were believed to have revealed themselves when omens (such as dreams) were given, and they were believed to offer revelation of the interpretation of the omens through the interpretive wisdom they provided to the sage as he used the resources and literature at his disposal. But Daniel had received the additional revelation of the contents of the dream, enhancing his reputation.

2:48. ruler over province of Babylon. The empire was divided into provinces, or satrapies, of which Babylon was one. Daniel is exalted to high office in the province, but that vague description finds definition in the next statement that clarifies the nature of this high office: he is made prefect over the wise men. This is more likely ranking within his guild rather than a administrative position in the civil government.

3:1-30

The Fiery Furnace

3:1. image of what. The image is never positively identified as the image of a deity, though verse 28 could easily suggest it. If the image were a divine image, it would be odd for the name of the deity not to be given and even more unusual for it to be set up in an open area rather than associated with a temple. Part of the care of the gods was to house and feed them, and such maintenance could not easily be kept up in an open location. If it is not the image of a god, it becomes more difficult to understand the three friends' refusal to participate (for an understanding of the thrust of the second commandment see comment on Ex 20:4). The other main alternative is to see it as an image of the king. But there was no prohibition against bowing down before kings as an act of respect. Additionally, images of kings during the Assyrian and Babylonian periods were usually made to be put in temples to stand before the deity requesting the well-being of the king. Typically, then, they represented the king to the god, not to the people.

Perhaps the best alternative is to understand the event in the context of the Assyrian practice of erecting stelae or statues (often in inaccessible places) that commemorated their rulers. While these were intended to exalt the king, the reliefs on the Balawat gates demonstrate that offerings were made before these representations. In the scene portrayed on the gates the king himself is present, but the offerings are made to the stele. In this way the king is given the honors that are generally given to the gods, but by personally distancing himself he avoids making himself equal to the gods. Such rituals were used as occasions for provincial territories to take a loyalty oath. This would make sense here in light of the suggestion in the dream of Daniel 2 that the Babylonian kingdom would have a limited time of rule. In Assyrian practice the weapon of Ashur (perhaps even a battle standard) was set up for ceremonies in which vassal kings entered into loyalty oaths. Failure to participate would suggest insubordination, whereas participation would signify the acceptance of the deity's (and king's) sovereignty. The three friends are not being asked to worship a deity, but they are being asked to participate in rituals that honor the king in ways similar to how the gods were treated, even though the king is not being viewed as a deity. Daniel's absence could be explained easily by the occasion's setting in only a single province.

3:1. dimensions. Herodotus describes two large statues in Marduk's temple in Babylon, both of solid gold. One is Bel seated on a golden throne. The image and the golden table next to it were reported to have used twenty-two tons of gold. The second is described as the statue of a man. Herodotus says it is fifteen feet high, though other accounts put it at eighteen feet. The Persian king, Xerxes, melted it down in 482 B.C., and the resulting bullion weighed eight hundred pounds. The Colossus at Rhodes was reported to be just over one hundred feet tall, so a ninety-foot-tall statue is not out of the realm of possibility, though it is also possible that the ninety feet includes a pedestal. The unusual thing is that the width is only ten percent of the height. The width of a properly proportioned human figure would normally be about twenty-five percent of the height. If this statue is human shaped and nine feet wide, we would expect the statue to be thirty-five or forty feet tall. This would then require a pedestal of fifty-plus feet. Even so, imagine the instability of something ten stories tall and only nine feet wide.

3:1. Dura. There are several towns named Der, and Dura (=walled area) is a common element in place names (e.g., Dur-Kurashu, Dur-Sharruken, Dur-Kurigalzu, Dur-Katlimmu). It is therefore impossible at present to locate this plain with certainty (the reference is as unclear as talking about a place named "San" in California).

3:2. occasion. As mentioned in 3:1, it is likely that the occasion for this gathering was the taking of a loyalty oath. A century earlier it is known that Assyrian king Ashurbanipal gathered his chief officials together in Babylon to take a loyalty oath. A letter has been preserved from one of the officials who was out of town and therefore made arrangements to take the oath in the presence of the palace overseer. The letter specifically mentions that when he took the oath he was surrounded by the images of the gods.

3:2. attendees. The list of officials includes two Semitic titles (prefect, governor), with the remaining five being Persian titles. The list appears to be in rank order. The first three terms are well enough known, the first being a Persian term borrowed into Aramaic as early as the sixth century for the ruler of the province. The next two are good Semitic terms for the next two levels of subordinates. The last four are Persian loan words whose translation is very tentative.

3:5. musical instruments. The names of several of these instruments are Greek, but there had been enough contact with Greece by the sixth century that this is not unusual. Nebuchadnezzar was known to make use of foreign musicians, as shown in the rations lists. These lists also attest to the presence of some Greeks in Babylon. The first two instruments are wind instruments. Judging by the word used for the horn, it is an animal's horn rather than a metal trumpet. The flute is of the variety that is played by blowing through the end. The next three in the list are stringed instruments. Two of them have names borrowed from Greek, and the middle one occurs as a foreign word in Greek. The first is known from Homer's writings (eighth century B.C.) and is a type of lyre. There were a wide variety of lyres in the ancient world, but no early attestations of the zither or dulcimer. The second in the list is probably a harp, and the third is most likely a different style of lyre. The last is the most difficult. Suggestions have ranged from bagpipes to double flute to percussion. It is a Greek loan word into Aramaic, and it happens also to come into English as "symphony."

3:6. furnace. Furnaces were used for baking pottery or bricks for construction projects, as well as for metalwork (forging, smelting and casting). There is not a lot of information about furnaces in the ancient Near East, but many early furnaces were enclosed and domed with side doors for ventilation. They were built of clay or brick, though the inside chamber was often lined with specially selected types of stone. It is logical to assume that the furnace was in this location serving a purpose (perhaps in the manufacture of the image) rather than having been set up to use as an instrument of punishment. There is little in the ancient literature to suggest that furnaces were specifically used for punishment. One possible exception is from around 1800 B.C., when Rim-Sin ruled that someone who had pushed a slave into a kiln should have one of his slaves thrown into a furnace. In general, however, burning was used as a form of execution as early as the Hammurabi Code. In fifth-century Persia (during the reign of Darius II, son of Artaxerxes), and in the second century (2 Macc 13:4-8), there are examples of execution by pushing into a bin of ashes.

3:19. seven times hotter. Blast air from a bellows was usually used to raise the temperature in the furnace. "Seven times hotter" is just an expression. Depending on what the furnace was being used for, the temperature would be maintained at between nine hundred and eleven hundred degrees centigrade. With their technology they were not able to exceed fifteen hundred degrees centigrade.

3:25. son of the gods. This phrase comes from Nebuchadnezzar's lips, so we do not expect him to be representing any deep insight or sophisticated theology. The phrase "son of the gods" represents a common Semitic expression for identifying a supernatural being.

4:1-37

The King's Illness

4:1-2. royal proclamations. A proclamation such as this would typically be recorded on a stele and set up in a prominent place. Sometimes copies would be made to be circulated, as was done with Darius' Behistun Inscription. Many of the elements of this proclamation are common to royal inscriptions or to Aramaic letters, though it is unusual for a king to be so vulnerable as here.

4:10-12. world tree. The concept of the cosmic tree in the center of the world is a common motif in the ancient Near East. It is also used in Ezekiel 31. The roots of the tree are fed by the great subterranean ocean, and its top merges with the clouds, thus binding together the heavens, the earth and the netherworld. In the *Myth of Erra and Ishum* Marduk speaks of the *meshu* tree whose roots reach down through the oceans to the netherworld and whose top is above the heavens. In the Sumerian epic *Lugalbanda and Enmerkar* the "eagle-tree" has a similar role. In Assyrian contexts the motif of a sacred tree is also well known. Some have called it a tree of life, and some also associate it with this world tree. It is often flanked by animals or by human or divine figures. A winged disk is typically centrally located over the top of the tree. The king is represented as the human personification of this tree. The tree is thought to represent the divine world order, but textual discussion of it is lacking.

4:13. watchers. The watchers are a well-known class of supernatural being in a wide range of the intertestamental literature, especially the books of *Enoch,* as well as in the Dead Sea Scrolls. Though the term is often used in that literature in reference to fallen angels, it is not limited to that group. There is so far no attestation of the term being used in this specialized way prior to the third century B.C., but the Mesopotamians did recognize a variety of protecting spirits and demons. Perhaps the closest parallel would be found in the occasional references to the seven ancient sages as watchers. Additionally, they are sometimes portrayed as caretakers of the sacred tree, so they would fit well in this context.

4:15. binding a stump. It is difficult to determine whether it is a part of the tree that is bound with iron, or whether it is the king. If it is the tree, the text indicates that its taproot should be bound (not the stump). While trees are sometimes gilded with metal bands in ancient Mesopotamia, there is no case of treating a stump that way, much less a taproot.

4:15. dew of heaven. In Babylonian texts, dew was considered to come down from the stars of heaven and was sometimes seen as the mechanism by which the stars brought either sickness or healing.

4:16. seven times. It should not be assumed that the condition lasts for seven years. The Aramaic word "times" is interesting here. The cognate in Akkadian means "specified periods" and can refer to stages of a disease or to periodic sequences. When omens occurred, they often had a set time over which their effects could take place. Some "times" such as phases of the moon, or favorable days, might occur monthly. Others occur annually. Still others, such as equinoxes or solstices, occur a couple of times a year. Many possibilities exist here.

4:16. the king's malady. See comment on 4:33.

4:29. royal palace of Babylon. Nebuchadnezzar's building projects in Babylon were magnificent. The Euphrates was channeled into a number of canals that passed through the city. His palace, on the north side of the city near the Ishtar Gate, was luxuriously appointed with all the finest materials. The palace gardens were terraced and gained international reputation, eventually being named one of the seven wonders of the ancient world. It was a parklike enclosure with an arboretum of exotic trees. Additional building projects included the temples and the streets.

4:33. Nebuchadnezzar's condition. Interpreters seeking illnesses to which these symptoms might apply have identified conditions such as lycanthropy, a depressive illness in which the patient thinks of himself as a beast. But the characteristics also coincide with the typical description of primitive or primordial man, who lacks good sense (compare NIV: "sanity" vv. 34, 36) and has an animal-like nature and habits (v. 16). In older myths this condition is characteristic of precivilized man. It later is applied to Enkidu, the uncivilized creature of the Gilgamesh Epic. It is then used of those who are driven away from civilization after their city has been destroyed. From the early texts about the Sumerian adventurer Lugalbanda to the late texts concerning the Assyrian courtier Ahiqar, individuals are also described as having developed some of these

characteristics while cut off from society. As a result, it is possible that at least some of Nebuchadnezzar's symptoms describe not a psychological illness but exile from civilization (only food gathered wild, no home, no personal hygiene). A fragmentary cuneiform text suggests the possibility that Nebuchadnezzar had some problem that caused him to become disengaged from his responsibilities for a time, during which his son, Amel-Marduk, was perhaps in control. But the text is too uncertain to draw any firm conclusions.

4:34. Prayer of Nabonidus. One of the documents found at Qumran (4Q242 or 4QPrNab) is entitled The Prayer of Nabonidus. In this piece it is the last king of Babylon, Nabonidus, rather than his more famous predecessor, Nebuchadnezzar, who is afflicted. Similarities include the seven-year illness and restoration by a Jewish diviner (unnamed). A dream is involved and worship of the correct deity is the result. The scroll preserves no mention of comparison to a beast, though some interpreters have reconstructed a line to include such a reference. The scroll connects the seven-year illness with Nabonidus's well-known stay in Teima.

5:1-31

Belshazzar's Feast

5:1. Belshazzar. Belshazzar was the son and coregent of Nabonidus, the last king of Babylon. Nabonidus spent ten years in Teima while his son was carrying out all the royal duties in Babylon. A number of documents have been found that mention him by name. About thirty years have passed since the last chapter. Nebuchadnezzar died in 562, and the banquet of this chapter takes place in October 539.

5:1. the banquet. The banquet is taking place in mid-October (15 Tashritu) 539. In the past few days the Persians have taken the city of Opis (fifty miles north on the Tigris) in a bloody battle and then crossed over to the Euphrates, where the city of Sippar surrendered without a fight on the fourteenth of Tashritu. It is likely that Babylon has received word of these events and that Belshazzar knows that the Persian army is on the march toward Babylon. Nabonidus had been with the army at Opis and fled when the city fell. When he was captured, it was in Babylon, but the texts are unclear about when he arrived. Berossus (third-century B.C. Chaldean historian, quoted by Josephus) claims that he was trapped in the city of Borsippa (about seventeen miles south of Babylon). In light of all of this, it appears that the banquet represents one final gathering before the momentous events that are about to transpire. Herodotus refers to a festival celebration that was taking place when the city fell. There is no reason to think, however, that the banquet reflects Belshazzar's pessimism about the outcome. Babylon was a defensible city, and they believed their gods to be strong.

5:2. vessels from Jerusalem. See comment on 1:2. Everyone in the ancient world understood the significance of sacred vessels. The fact that these had not been melted down suggests that they had been preserved because of their sacred character. Since the god of Babylon was seen as the conqueror, the things that belonged to the "conquered" gods would have been taken as booty into the temple of Marduk. Perhaps the use of the vessels was a way of calling to remembrance the god's previous victories (see comment on 5:4).

5:2. relation to Nebuchadnezzar. Belshazzar was known to be the son of Nabonidus, the last king of Babylon, with whom he was coregent. Nabonidus has no firmly established relationship to Nebuchadnezzar. As early as Herodotus (fifth century B.C., see sidebar at Esther 1), Nebuchadnezzar and Nabonidus had the same name (Labynetos) and were at times confused. Additionally, however, in the ancient world, successive monarchs were often identified as sons of famous predecessors even when there was no dynastic or genealogical connections. So, for instance, on the black obelisk of Shalmaneser III, Jehu, king of Israel, is identified as "son of Omri," even though he had been responsible for wiping out the line of Omri and was no relation (a fact probably well known to the Assyrians).

5:4. praised the gods. Belshazzar and his administration are well aware that the empire hangs by a thread and that the next several days will be of utmost significance. They are hoping that their gods will bring victory for them as they had in the days of Nebuchadnezzar's great conquests. To that end they are "toasting the gods" and celebrating their past victories. It is also possible, though not explicitly stated, that libations were poured out to the gods from these vessels. They are not only making their supplications to Marduk, the patron of Babylon, but to the gods of other cities of the region whose images had been gathered into Babylon during these troubled times.

5:5. the hand. A lifeless, detached hand would have suggested a defeated enemy. Casualty counts were made by cutting off the right hands of all of the dead (recall the broken-off hands of Dagan in 1 Sam 5:3-4). By drinking from the vessels the Babylonians were recall-

ing the defeat of Yahweh (perhaps along with other gods and nations), but this is no lifeless, severed hand of a dead god at all. It is quite animated and has a message to give. The effect might be similar if the head of a decapitated victim began to speak.

5:5. location of the writing. The statement that the writing was on the plaster wall near the lampstand is a curious detail since one might have expected plaster all around the room, which would be illuminated by many lampstands. The excavation of the throne room in Babylon can offer some explanation. It was a 170-by-55-foot hall entered through three spacious courtyards that led from the entrance just inside the Ishtar Gate. Some of the wall space was covered with blue enameled brick, while other parts were plaster. The word used for lampstand is an unusual one and may be a Persian loan word. As such it likely represents a distinct, singular lampstand, perhaps of a special type.

5:7. rewards offered. The purple clothing was made using expensive dye (see comment on Num 4:6 and Esther 8:15) and was worn only by royalty. The gold chain would have been an insignia of office. These are seen as royal gifts in Herodotus, where Cambyses sends them to the Ethiopian king. Being made third in the kingdom may be intended to rank Daniel only behind Belshazzar and his father, Nabonidus.

5:8. could not read the writing. Though some have suggested that the inscription was written in an obscure language (such as Old Persian cuneiform), there is no indication in the text that it is written in anything other than the native Aramaic. Aramaic, like Hebrew, is written without vowels and at times without word divisions, yielding מנאתקלפרס *(mnʾtqlprs).* Confusion over where to make the word divisions and which vowels to supply was sufficient to undermine their confidence in reading the words and offering an interpretation. In another case of an inscribed and perhaps cryptic message, the seventh-century Lydian king Gyges saw the name "Ashurbanipal" written out in a dream that was accompanied by a voice urging him to battle against the Cimmerians.

5:10. queen mother. Nabonidus's mother, Adad-Guppi, was a very influential person and the quintessential queen mother. Her 104 years, however, had come to a close about 546, so she was no longer alive at this time. Nabonidus's wife, Belshazzar's mother, identified by Herodotus as Nitocris, is more likely referred to here.

5:25-28. the inscription. The words can be taken as verbs for weighing and assessing, or as nouns for the various weights that are used with the balance scales that were the ancient cash registers—necessary at every place of business. Archaeologists have discovered many such weights, sometimes inscribed with these Aramaic labels. Scales and weights were also used to depict divine evaluation and judgment (as in the Egyptian Book of the Dead). Daniel appears to have used both noun and verb forms in his interpretation. Wordplay was a common means used to interpret omens in this period. An example of this is Nabonidus's interpretation of a lunar eclipse as a directive to install his daughter as a priestess.

5:27. scales. A. Wolters has pointed out that the imagery of the scales may also find an astronomical connection to the constellation Libra, represented in Babylonian astronomy as scales. Babylon fell on the sixteenth of Tashritu (September-October), October 12 or 13, 539, so the banquet took place the evening of Tashritu 15/October 11 or 12. The Babylonians traditionally related the month of Tashritu to the constellation Libra, and the annual rising of Libra was associated in the manuals with the fifteenth of that month. This would have been well known to the astrologers of Babylon's court, specialists in celestial divination, who were counted among the wise men. This would have importance since the Babylonians often sought linkage between classes of omens to confirm a message.

5:30. fall of Babylon. There are several ancient traditions concerning the fall of Babylon represented in Persian and Greek sources. Herodotus (see sidebar on Esther 1) tells of a siege of Babylon by the Persians that ended when Cyrus diverted the Euphrates and sent a company inside the wall where the river had flowed through. Cyrus's account in the Cyrus Cylinder reports that Marduk allowed him to enter Babylon without a battle, where he was received as a liberator. The *Chronicle of Nabonidus,* a pro-Persian contemporary account, offers a similar view.

6:1-28

Daniel and the Lions

6:1. Darius the Mede. There is no known historical character named Darius prior to Darius the Great, who is too late to fit in here. Since Cyrus became ruler when Babylon fell, some have identified Darius the Mede and Cyrus as one and the same (see 6:28). Others suggest that Darius is an alternate name (or a throne name) for Ugbaru, the commander who led

the Persian army into Babylon. He was governor of the Gutium and thus could easily be connected with the Medes (though he died just three weeks after the fall of Babylon). One named Gubaru was appointed the governor of Babylon and is also named by some as a candidate. There is reason to question that anyone but Cyrus could be called the king (v. 6), and he was about sixty-two when Babylon fell. But Cyrus was a Persian, not a Mede, and was the son of Cambyses (not Ahasuerus, see 9:1). Further information will need to become available before a firm identification can be made.

6:1. 120 satraps. The primary administrative geographical division in the Persian empire was the satrapy. The number of these varied between twenty and thirty-one, so the text must be referring to lower-level administrative governors (for whom this term is used in Greek historical sources).

6:7. the king's edict. Persian kings were not at all inclined toward self-deification. Furthermore, the gods were considered too important to be ignored. Even in the traditional Iranian religion, prayer three times a day was the norm, and Zoroastrianism increased it to five. Alternatively, it is likely that Darius was persuaded to issue the decree to address some religious/political problem without ever intending to prohibit what Daniel (and most of the population of the empire) was doing. Herodotus describes Persian ritual by reporting that no altar nor fire is used. Most importantly, he says that when the offering is made, the worshiper is not permitted to pray for anything personal but can only invoke blessings on the king or community.

6:7,17. lions' den. It is known that lions were captured and kept in cages so that they could be released for hunting, but there are no examples in currently known Persian literature that feature the punishment of being thrown into a den of lions. In earlier Assyrian texts, oath-breakers were put into cages of wild animals set up in the city square to be publicly devoured. Additionally, in seventh-century Assyrian literature, the lions' pit occurs as a metaphor for vicious and antagonistic courtiers of the king. In one piece of Babylonian wisdom literature, Marduk metaphorically closes (muzzles) the mouth of the lion (the oppressor) to put an end to his devouring tactics.

6:8. laws of the Medes and Persians. No concept of "laws of the Medes and Persians that cannot be changed" has been documented outside of the books of Daniel and Esther. Nonetheless, a tradition at least as early as the time of Hammurabi (eighteenth century B.C.) recognized that a judge could not change a decision that had been made. In this sense we may be dealing with a ruling rather than a law. Greek sources conflict with one another, as Herodotus indicates significant freedom on the part of Persian kings to change their minds, while Diodorus Siculus cites an instance where Darius III could not. Certainly no lower official could countermand the decrees of the Persian king, and the king himself may have thought it humiliating to go back and reconsider something he had already decreed. Royal code of honor would have made it out of the question for the king to rescind an order.

6:10. prayer three times a day toward Jerusalem. Prayer toward Jerusalem had been established practice as early as the building of the temple by Solomon (1 Kings 8:35). The frequency of prayer in Israelite practice had not been established in law. Neither the Old Testament nor the Dead Sea Scrolls show any norms other than the pattern established by the morning and evening sacrifice regularly offered in the temple. As mentioned in the comment on 6:7, normal Persian practice called for three or five daily prayers.

6:17. signet ring. Current evidence suggests that the early Persian kings used cylinder seals for empire business and stamp seals or signet rings for personal business, though the latter were growing in usage through this period. A signet ring held the official seal of the king by which he authorized the business of the empire. Only a few of these have been found by archaeologists. The seals were typically made of chalcedony and featured pictures of the king doing heroic acts (like killing beasts) under the protection of the winged sun disk (representing Ahura Mazda). Many of the Persepolis fortification tablets contained stamp seal impressions.

6:19-23. innocence by ordeal. "Ordeal" describes a judicial situation in which the accused is placed in the hand of God using some mechanism, generally one that will put the accused in jeopardy. If the deity intervenes to protect the accused from harm, the verdict is innocent. Most trials by ordeal in the ancient Near East involved dangers such as water, fire or poison. When the accused was exposed to these threats, he or she was in effect being assumed guilty until the deity declared otherwise.

6:24. wives and children included in punishment. This is more severe than any of the legislation found in the legal collections in Mesopotamia. In the Old Testament when the family is included in the punishment, it usual-

ly reflects that the family line is being wiped out. This extends the punishment beyond life to legacy (see comment on Josh 7:25). Herodotus tells how during the reign of Darius, a high-ranking official and close associate of the king was judged to be involved in a revolt. As a result most of his family was executed.

6:28. Darius/Cyrus. For those who identify these two as the same, the translation "the reign of Darius, that is, the reign of Cyrus the Persian" is acceptable (see comment on 6:1).

7:1-28

Vision of the Four Beasts

7:1. chronology. This vision takes place before the events of both chapters five and six. It is difficult to tell what the first year of Belshazzar was. It should not be equated with the first year of his father, Nabonidus (556), but more likely with the beginning of his coregency when Nabonidus set up his royal residency in Teima (552). It is unknown, however, whether Belshazzar was immediately made coregent. The Nabonidus Chronicle first notes Belshazzar's coregency in Nabonidus's seventh year (549), but the Chronicles for years four, five and half of six are not available. It is in Nabonidus's sixth year, 550, that the empire succession takes shape as Cyrus defeats the Medes and the Medo-Persian empire is formed. As a tangential note of interest, a dream text of Nabonidus is preserved from *his* first year, in which it was foretold that Cyrus would conquer the Medes.

7:2. winds of heaven on the great sea. This description indicates a typical mythical scene in which the churning of the cosmic ocean disturbs the creatures (often sea monsters) who represent the forces of chaos and disorder. In *Enuma Elish* the sky god, Anu, creates the four winds that stir up the deep and its goddess, Tiamat. There, as here, it is a disruptive wind bringing unrest.

7:3. beasts with odd characteristics. In the Babylonian omen series called *Shumma Izbu*, with which Daniel would have been well acquainted from his training, various birth abnormalities are recorded along with what sort of event they forecast. Several of the descriptions of the beasts in Daniel's visions can also be found in the *Shumma Izbu* series. Some of the common elements in the descriptions include the creature being raised up on one side and having multiple heads or multiple horns. Most of the observations of abnormalities were made of domesticated species, a large proportion being sheep and goats. Some of the abnormalities are described by comparison to various wild beasts. There are examples of sheep giving birth to lambs that (in some way) resemble a wolf, a fox, a tiger, a lion, a bear or a leopard. In this chapter, Daniel is not observing these abnormalities in reality but in a dream, thus combining two important omen mechanisms (dreams and odd births). The dream books often feature ominological information (celestial or extispicy omens) being viewed in dreams and carrying the same significance as if they were viewed in reality. Being familiar with both literatures, Daniel would have been inclined to interpret the dream along the lines suggested in the *izbu* omens. The omen interpretations often concerned political events such as "the prince will take the land of his enemy." Nevertheless, Daniel's dream goes well beyond the *izbu* omens. The descriptions suggest that he does see fearsome chaos beasts rather than simply sheep or goats with odd characteristics. Additionally, many of the features of Daniel's beasts are neither found nor expected in *izbu* omens, like wings and iron teeth. For this reason it is also important to understand the nature of some of the mythological imagery that pertains to the dream.

7:3. beast imagery. A number of different mythological sources offer similarities to the beast imagery used by Daniel. A seventh-century Akkadian piece called *A Vision of the Netherworld* includes fifteen divine beings in the form of various hybrid beasts. Following that, Nergal, king of the netherworld, is seen seated on his throne, and identifies himself as the son of the king of the gods. There are many significant differences between this vision and Daniel's, but the similarities in imagery are helpful background.

7:3. out of the sea. In the Bible as well as in the ancient Near East, the sea represents chaos and disorder, as do the sea monsters that live there. The obvious physical struggle between the sea and the land as well as the fierce, seemingly unstoppable energy displayed by the savage sea gave rise to cosmic myths in the ancient Near East. The *Enuma Elish* creation epic from Babylon describes how Marduk vanquished Tiamat, goddess of watery chaos, while she was in the form of a dragon. Much of the cycle of stories about Baal in Ugaritic legend involve Baal's struggle against his rival Yamm, the god of the sea. Similarly, the Ugaritic epic has both Anat and Baal claim to have conquered Litan, the seven-headed dragon, and thus gained mastery over the seas. In Psalm 104:26 Yahweh is said to play with Leviathan, and in Job 41:1-11 God challenges Job to show the same control over

Leviathan that God has. The kingdoms represented by these beasts are therefore associated with the forces of chaos that bring disorder to God's world and need to be overcome.

7:4. symbol of lion with wings. Winged figures are common in the art and sculpture of Mesopotamia. The winged bulls and winged lions, both with human heads, flanked thrones and entryways in Assyria, Babylon and Persia. Winged human figures (wearing headdresses with horns) are known as early as the eighth century and stood guard at Cyrus's palace in Pasargadae. Winged creatures also figure in dreams. Herodotus reports a dream that Cyrus had just a few days before his death, in which he saw Darius (then a young man) with wings that overshadowed Asia and Europe. In the *Anzu Myth* (see next entry), Anzu is defeated by having his wings plucked. This motif is also significant in the story of Etana, who helps an eagle whose wings have been plucked.

7:7. the fourth beast. In the *Anzu Myth* a composite creature (Anzu) steals the Tablet of Destinies, which comprised a sort of constitution of the cosmos. The goddess Mami is called forth, who created all the gods, the most ancient of deities. She is asked to send her son, Ninurta, to battle Anzu. The god Ninurta defeats the monster and recovers the tablet. Ninurta (who is also known for his defeat of other beasts such as the bull-man in the sea, the six-headed ram and the seven-headed serpent), is then granted dominion and glory. There are certainly many differences with Daniel 7, and there should be no thought that the *Anzu Myth* figures prominently here. Those who would have been familiar with the *Anzu Myth,* however, would likely have seen echoes of it in this vision. The tale has roots as early as the beginning of the second millennium but is principally known from mid-first millennium Babylonian texts. One ninth-century relief inscription from Nimrud pictures Ninurta fighting a beast with lion's legs but standing upright on eagle's feet. It is feathered and has two wings, lion paws for hands with sharp, extended claws, a gaping mouth with fierce teeth and two horns. It is thought to be a depiction of Anzu.

7:7. ten horns. It was common in Mesopotamia for kings and gods to wear crowns featuring protruding or embossed horns. Sometimes the sets of horns were stacked one upon another in tiers. The winged lion from Ashurnasirpal's palace has a conical crown on its human head with three pairs of tiered horns embossed on it. Another interesting connection is that in *Enuma Elish* Tiamat is the fearsome beast that the hero of the gods has to defeat. To help her she creates eleven monsters that must also be defeated. Here also the fourth beast is associated with eleven horns (the ten plus the little horn).

7:9. Ancient of Days. In Canaanite mythology the head of the pantheon is El, an aged deity addressed by the title "father of years." In the Mesopotamian *Anzu Myth* the ancient one is a goddess, Mami, whose son defeats the monster (Anzu) and is granted dominion.

7:9. throne with wheels. A wheeled throne flaming with fire is also described in Ezekiel's throne vision (Ezek 1, 10). The prototypes of wheeled thrones go back to the end of the third millennium as pictured on cylinder seals. These were simply chariots or carts used for processions for the image of the deity. Some seal impressions even picture composite creatures drawing the vehicle. Continued use of thrones with wheels can be seen in reliefs down into the ninth and eighth centuries.

7:10. books opened. Every royal court in the ancient world kept records of day-to-day activities and detailed accounts of the events that transpired. The actions of the beast/king would have been logged, and that record is now brought out to provide evidence as he is brought before the divine court for judgment.

7:13-14. son of man. The phrase "son of man" is simply a common Semitic expression to describe someone or something as human or, at least, humanlike. In Israelite theology, Yahweh is the high God and also is portrayed as the rider on the clouds. In Canaanite mythology, the roles described here are filled by the god El, the high god of great age (see comment on 7:9) and his son, Baal, the rider on the clouds. In one of the Baal myths, Yamm, who represents the chaos of the sea, is defeated, and Baal is declared king and granted everlasting dominion. In the cosmic conflict myths of Mesopotamia (such as *Enuma Elish* or the *Anzu Myth)* a deity (Marduk and Ninurta respectively) defeats the threatening chaos and regains authority and dominion for the gods and for himself. Daniel has been trained in such literature, and his revelations build on that familiarity, though the common motifs are entirely repackaged. Intertestamental literature such as the book of *1 Enoch* as well as New Testament and early Christian literature identifies the son of man with the Messiah.

7:16. one standing there. Interpreting angels were present in Ezekiel and Zechariah, and are common in apocalyptic literature from the Old Testament period on. No such figure is known in Mesopotamian literature.

7:17. the four kingdoms. For information on

the four-kingdom pattern in ancient literature, see comment on 2:36-40. The identification of the four kingdoms has occasioned much controversy. The text offers no interpretation of any of the characteristics of the dream beasts, except that the horns are kings. It is difficult to know whether the characteristics (e.g., three ribs in the mouth) symbolize historical events or whether they serve another purpose, such as offering omen insight (see comment on 7:3). Alternatively, they may serve only to give flavor to the imagery. If they do represent historical realities, still only speculation can suggest associations. Are the three ribs in the mouth of the second beast representative of Lydia, Babylon and Egypt, the three major conquests of the Medo-Persian empire? Or are they the Urartians, Manneans and Scythians conquered by the Medes (Jer 51:27-29)? Are the four heads and wings of the third beast the four generals who divided Alexander's empire among them? Or are they the four kings of Persia alluded to in Daniel 11:2? Are the ten horns of the fourth beast a kingdom still future? Or are they the ten independent states that Alexander's empire becomes by the end of the third century B.C.? The text does not answer these questions, nor can background information resolve them.

7:18. saints. The text refers to "holy ones" who are not only the eventual recipients of the kingdom (vv. 18, 22, 27) but also the victims of the oppression (vv. 21, 25). While many interpreters think this refers to godly people, the term is most frequently used to describe supernatural beings (this is also true in the use of the equivalent term in Ugaritic and Aramaic, as well as in the Dead Sea Scrolls literature). This would receive further support since it is the host of heaven that is under assault in the related vision of next chapter (8:10).

7:24. the ten kings. At least on this point the text makes it clear that the ten horns represent ten kingdoms/kings. The ten kingdoms that spring from Alexander's empire are Ptolemaic Egypt, Seleucia, Macedon, Pergamum, Pontus, Bithynia, Cappadocia, Armenia, Parthia and Bactria. Yet others believe that the ten are successors to the Roman empire and as such, may be still future.

7:25. change set times and laws. In Mesopotamian thinking the times and laws are governed by the cosmic decrees embodied in the Tablet of Destinies. They are normally entrusted to either the assembly of the gods or to the head of the pantheon. In a number of ancient tales they are misappropriated. In *Enuma Elish* Kingu, Tiamat's sidekick, has them. In the *Anzu Myth* (see comment on 7:7) a monster (Anzu) stole them and threatened to wield them, thus putting everything in the cosmos in jeopardy.

7:25. time, times and half a time. The word "time" used here is the same as that used in 4:16 (see comment there). The word "times" is simply a plural and does not necessarily suggest two times. The Babylonians were very sophisticated mathematicians, and early on the gods had been represented numerically (Sin = 30; Ishtar = 15). Furthermore, the gods, with their numerical valuations and planetary associations, figured in the astronomical terminology by which the cyclic movements in the heavens were used in calendrical calculations. All of these factors make it very difficult to unpack the significance of this phrase.

8:1-27

Vision of the Goat and the Ram

8:1. chronology. Determination of what year this refers to shares the same difficulties as mentioned in the comment on 7:1. Belshazzar's third year is likely either 550 or 547. In the vision of chapter seven, only one empire (Babylon) was identified by name. Now, two years later, two more empires are named.

8:2. geography. The Ulai Canal is in the vicinity of Susa, the capital of the territory of Elam, some two hundred miles from Babylon. The city will later become the royal residence of the Achaemenid kings of Persia, so it is a suitable locale for the vision. The canal is an artificial one on the north side of the city that was closely associated with Susa both in cuneiform and classical sources. Daniel could have actually made the journey, but it is more likely that he is transported in a vision as Ezekiel sometimes experiences.

8:3. ram as astral sign of Persia. In later literature (first several centuries A.D.), the signs of the zodiac are associated with countries, and the ram is associated with Persia. There is no evidence, however, that such an association was made as early as the book of Daniel. The concept of the zodiac has its origin in the intertestamental period.

8:9. small horn. This appears to be a reference to the Seleucid king, Antiochus IV Epiphanes, whose activities in the second century will be detailed in the next several entries.

8:9. Beautiful Land. From 11:16, 41, it is clear that this is a reference to the land of Israel. Antiochus III marched east against Parthia, Armenia and Bactria from 212 to 205, and in 200 gained control of Palestine at the Battle of Panium. Both he and his son, Antiochus IV, were

frustrated in their attempts to gain control of Egypt (to the south). Antiochus IV also had campaigns to the east (against Armenia and Elam) and was well known for his actions against Judah and Jerusalem (see comments on below and on 11:21-39).

8:10. starry host overthrown. The host of heaven in the ancient Near East referred to the assembly of the gods, many of whom were represented by celestial bodies (whether planets or stars). The Bible sometimes uses the phrase to refer to the illegitimate worship of these deities (see comment on Deut 4:19). On other occasions, the phrase is used for Yahweh's angelic council (see comment on 2 Chron 18:18). A third type of usage treats the term as a reference to rebel angels (perhaps in Is 24:21; commonly in the intertestamental literature). Finally, it can refer simply to the stars with no personalities behind them (Is 40:26). In the destruction described in *Erra and Ishum*, Erra says that he will make planets shed their splendor and will wrench stars from the sky. Here the starry host represents one side in the cosmic battle and falls temporarily victim to the evil horn, thus suggesting they are some of God's minions.

8:11. daily sacrifice. The daily sacrifice was a burnt offering occurring every morning and evening (see comments on Ex 29:38 and Num 28:1-8). It represented the most basic maintenance of the sanctuary and was foundational for preserving the presence of Yahweh in their midst.

8:14. 2,300 evenings and mornings until reconsecration. If 2,300 sacrifices will be missed, and two are offered each day, 1,150 days will pass (roughly three years and two months). Antiochus IV Epiphanes instituted sacrifices to his gods in the temple on the twenty-fifth of Kislev (December) in the year 167 B.C., but he had put a stop to the Jewish rituals some time earlier that year (reported in 1 Macc 1:44-51), and the exact date of the proclamation and its enforcement is not known. The rededication of the temple in the aftermath of the Maccabean revolt took place three years to the day after the desecration on the twenty-fifth of Kislev, 164.

8:16. Gabriel. This is the first reference to the name of an angel in the Bible. The only other angel named in the Bible is Michael (see 10:13). In intertestamental literature *(1 Enoch)* Gabriel is in charge of Paradise. In the War Scroll from Qumran he is one of the archangels who surround the throne of God. He is the one who brings the message to Mary of the impending birth of Jesus (Luke 1:19). Angels not only delivered messages from deity, but they explained those messages and answered questions concerning them. Thus Gabriel is seen here as one who can interpret the vision. In the ancient world's polytheistic context, the messengers of the gods were generally gods themselves (of lower rank). In Mesopotamia we find individuals such as Nuska and Kakka, while Hermes serves the function in Greek mythology. In a dream of Nabonidus a young man appears to offer an interpretation of a celestial omen that has been observed.

8:22. the kingdoms. The king represented by the large horn is undisputed: Alexander the Great, whose Greek army swept away the Persian Empire between 335 and 331 B.C. When Alexander died suddenly in 323 at the age of 33, the two who could claim ancestral rights to the kingdom (his illegitimate half-brother, Philip Arrideus, and the son of Alexander and Roxane, Alexander IV, born two months after his father's death) were installed as figureheads while the operation of the kingdom was entrusted to three experienced officers, Antipater (viceroy of Macedon), Perdiccas (head of the armies) and Craterus (in charge of the treasury and advisor to Arrideus). By 321 these three regents had sufficiently antagonized one another that a battle was instigated by a fourth player, Ptolemy, who had been given a position of authority in Egypt. Craterus was killed in battle, and Perdiccas was assassinated in a mutiny by several of his generals, one of whom was Seleucus. Meanwhile Antipater took the lead and placed a friend, Antigonus, in Perdiccas's position. In 319 Antipater died an old man, and despite his appointment of another, within two years his son, Cassander, had gained control of Macedonia and most of the territory of Greece. In the summer of 317, those opposing Cassander executed Philip Arrideus. Alexander IV and his mother Roxane were placed under house arrest and effectively deposed, though they were not executed until 310. The three who ruled were now Cassander in the west, Ptolemy in Egypt and Antigonus in the east. As Antigonus sought to solidify his control of the east, he attempted to dominate Seleucus (now governor of Babylon), who in 315 exposed Antigonus's schemes for power to the other leaders, Ptolemy, Cassander and Lysimachus (governor of Thrace). Battles continued to be fought until 311 when Antigonus parleyed for peace with Ptolemy, Cassander and Lysimachus, leaving Seleucus isolated but in control of Babylonia. By 309 Ptolemy decided to move against Antigonus but pushed too far and ended up in 306 under the attack of Antigonus and his son, Demetrius. Antigonus's invasion of

Egypt failed, and in 305 Ptolemy, along with Cassander, Seleucus and Lysimachus (most likely to be identified as the four horns), declared themselves the successor kings to Alexander. Yet it was still four more years until Antigonus was killed in the Battle of Ipsus, 301. Cassander died only three years later (298), and Demetrius continued to cause trouble, but the division of the empire into four parts represents the fallout of this twenty-year succession struggle.

8:25. stern-faced king. The description in verse 23-25 pertains to Antiochus IV Epiphanes, who reigned from 175 to 164 B.C. His wisdom was corrupted for use in hypocrisy, intrigue, double-crossing and treachery. For summary of his actions see comments on 11:21-39.

8:26. seal up the vision. See comment on 12:4.

9:1-27
Seventy-Sevens

9:1. chronology. Assuming Darius the Mede's reign coincides with that of Cyrus, his first year would be 539. Again, the timing is significant as a major change of empires is in process (see comment on 7:1).

9:2. Jeremiah's prophecy. In 597 the prophet Jeremiah wrote a letter to the exiles (Jer 29) informing them that the length of the exile would be seventy years. This is most likely the subject of Daniel's interest as he ponders whether the time might be right for the return.

9:3. fasting, sackcloth and ashes. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). The practice of putting dirt, dust or ashes on one's head was a typical sign of mourning throughout the Old Testament and into the New Testament period. It is a practice also known from Mesopotamia and Canaan. Many mourning rites originated as a means for the living to identify with the dead. It is easy to see how dust on the head and torn clothes would be symbolic representations of burial and decay. Sackcloth was made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering.

9:17-18. desolation of city and sanctuary. The city of Jerusalem had been destroyed by the Babylonians in 586 and was little more than a desolate ruin. Fifty years had come and gone since the temple had been dismantled and razed.

9:21. Gabriel. See comment on 8:16.

9:21. swift flight. In Isaiah 6 the creatures called seraphim fly, and in Zechariah 5 there is a vision of women with wings who fly, but this is the only occasion when a being identified as an angel flies. Though other supernatural creatures (the ones listed earlier, as well as cherubim) are portrayed with wings, angels (messengers) are not, despite the artistic renditions of the past fifteen hundred years. In Mesopotamian art protective genies are portrayed with wings, as are a variety of demons. In intertestamental literature the earliest reference to flying angels is in *1 Enoch* 61:1 (though cherubim and seraphim are by then included in the category). The Hebrew construction used is a complex one, and many commentators have concluded (with good cause) that the text expresses weariness (*y'p)* rather than flight (*'wp).*

9:21. time of the evening sacrifice. From the Israelite perspective the day ended about six o'clock in the evening (rather than our midnight). As a result the evening sacrifice was offered late in the afternoon, between three and four o'clock.

9:24. seventy sevens. A period of seven years was the sabbatical year cycle (see especially Lev 26:34-35 and the reference to it in 2 Chron 36:21). Seven sabbatical year cycles constituted a Jubilee cycle, at the end of which slaves were set free and land was returned to its proper owner (Lev 25). Seventy sabbatical cycles equal ten Jubilee cycles. The first Jubilee cycle is distinguished here (seven sevens in v. 25), and the last sabbatical cycle is distinguished (the seventieth week). It is clear, then, that these numbers are laden with theological significance that give them a schematic appearance. In Mesopotamia the numbers seven and seventy represent a full measure of time. Schematic usage of the term "weeks" can be seen in Jewish literature in the book of *1 Enoch* (in the Apocalypse of Weeks), and the period of seventy weeks is also found at Qumran. The schematic use of time has been referred to as "chronography," which is to be differentiated from "chronology."

9:24. seal up vision and prophecy. See comment on 12:4. Sealing concerns authentication. The authentication of Jeremiah's prophecy and Daniel's vision will only be accomplished when the designated period of time passes.

9:24. anoint the most holy. The consecration ceremony that involves anointing and purification of the Holy of Holies in Exodus 29 (es-

pecially vv. 36-37) is sufficient background for understanding this statement. The desecration of the holy place requires its purification. Assyrian temple inscriptions also refer to the anointing of a temple that is to be repaired and restored by a future prince.

9:25. word to restore and rebuild. The NIV translates this as "decree," but in its note indicates that it is a "word"—and this usually refers to a prophetic oracle, not a royal decree. In fact the same combination of verb and noun ("word going out") has just been used in verse 23. This identification of the "word" is even more likely in light of the fact that Daniel is reflecting on the writing of Jeremiah, who proclaimed the prophetic oracle concerning return and restoration in his letter to the exiles (see comment on 9:2). Notice especially Jeremiah 29:10. The "going forth" of this word would then be dated to sometime between 597 and 594.

9:25-26. anointed one. It is important to note that the noun here is indefinite, thus *a* messiah (*an* anointed one, as in the NIV note), rather than *the* Messiah. The prophetic literature had not yet adopted this term as a technical term for the ideal, future Davidic king (besides this chapter, the term is used only in the prophets in Is 45:1, referring to Cyrus, and Hab 3:13, in a generic way). Priests and kings were both anointed to their tasks in Israel. Some have maintained that the two references to anointed individuals require two different anointed individuals: one after the first cycle of forty-nine years (plausibly Cyrus, since he has already been given anointed status in the prophets, though leaders of the return such as Zerubbabel or Joshua would not be impossible); the second to be cut off before the last week. This view is favored by the Hebrew punctuation that suggests a period should be placed between the two numbers (as reflected in the RSV) rather than after the sixty-two sevens. It was forty-nine years between the fall of Jerusalem (586) and the decree of Cyrus (538).

9:25. streets and a trench. "Streets" refers to the city squares and plazas that are the major features of city planning. This is where the public functions of the city take place, from government to merchant activities. "Trench" can only refer to the dry moat that was a common element of a city's defenses. The combination indicates that Jerusalem will again be a place of security and prosperity, providing all of the civic functions of a smoothly operating urban center.

9:26. anointed one cut off. The most common identification of the cut off anointed one is Onias III, the high priest murdered by Antiochus Epiphanes in 171 (referred to in 11:22). Many find this an irresistible option because it initiated a seven-year period of persecution in Jerusalem that included the desecration of the temple in 167.

9:27. abomination of desolation. The consistent use of the noun translated "desolation" (*shmm,* see also 8:13) is quite intentional. The Syrian Baal Shamem ("Lord of Heaven") was the deity whose worship was instituted in the temple on the altar of sacrifice by the Syrian citizens who were brought into Jerusalem by Antiochus and his military commander, Apollonius. Antiochus worshiped this deity as Olympian Zeus. This desecration perpetrated by Antiochus served as a prototype for all future desecrations. Even in the sixth century, however, this concept had precedent. In a work called *The Verse Account of Nabonidus* the priests of Marduk list the offenses of Nabonidus that purportedly led Marduk to dethrone him in favor of the Persian king Cyrus. Among the accusations are that he built an abomination, a work of unholiness (a statue of the god Nanna placed in the temple of Marduk), and ordered an end to the most important rituals.

10:1-21

The Final Vision

10:1. chronology. The third year of Cyrus's rule in Babylon was 537/536. This is very close to the time when the first wave of Jews are returning from captivity and beginning the rebuilding of the temple (recorded in the first chapter of Ezra). Verse 4 indicates that the vision took place on the twenty-fourth day of the first month (Nisan). This would be in early April. The celebration of Passover and the Feast of Unleavened Bread (14-21 Nisan) would have come and gone during Daniel's three weeks of preparation.

10:1. Cyrus. Cyrus of Persia was one of the greatest conquerors in world history. He inherited the throne of Persia from his father, Cambyses I, in 559. In 556 the Babylonian king, Nabonidus, motivated by a dream, abandoned the treaty that his country had maintained with the Medes for over half a century and made a treaty with Cyrus. This gave Cyrus the freedom to move against the Medes (ruled by his grandfather, Astyges), whom he conquered in 550. The new Medo-Persian empire was thus formed, with control over the entirety of Iran. By 546 he defeated the Anatolian kingdom of Lydia and Ionia. For the next five years he consolidated his control over the tribes in northeastern Iran.

All of this paved the way for his crowning achievement, the conquest of Babylon in 539 B.C. The whole of the Near East (excluding Egypt) was under control of the Persians when Cyrus was killed in battle in 530. For more information see comments in Ezra 1.

10:3. choice food. In extrabiblical Jewish apocalyptic literature, fasting is often essential preparation for receiving a vision. Daniel is not undertaking a total fast but abstaining from pastry, meat and wine—thus returning to a more spartan diet. It should be noted that while this verse does not use the same terminology as the text at 1:5, it is now clear that Daniel had not made a lifelong commitment to bland food.

10:3. lotions. In the absence of showers and deodorants, personal grooming involved the use of perfumed oils. Inattention to such amenities was characteristic of mourning (2 Sam 12:20; 14:2).

10:5-6. description. White linen is the typical clothing for priests as well as for supernatural operatives (Ezek 9-10). The gold waistband is lavishly impressive, but most of the description focuses on the physical features of the man (usually identified as Gabriel). The five features described ([1] body/chrysolite; [2] face/lightning; [3] eyes/torches; [4] limbs/bronze; [5] voice/multitude) can also be found in the descriptions of the creatures that bear the chariot throne in Ezekiel 1. The general appearance of the vehicle is compared to a torch and lightning, the wheels by which the creatures stand are compared to chrysolite, and the legs of the creatures are like burnished bronze. All of the same Hebrew terms are used. In Ezekiel 1 the sound of the creatures' wings was like an army, whereas the angel in Daniel has a voice that sounds like a multitude. Daniel is clear, however, that his visitor had the appearance of a man rather than the composite beasts seen by Ezekiel. In the Babylonian wisdom composition entitled *Ludlul Bel Nemeqi* the sufferer, after a long period of suffering and mourning, has a dream in which he sees an impressive young man (both in physique and attire) standing over him, resulting in his body being numbed. The individual's message is not preserved, but it is generally assumed that it had to do with approaching deliverance.

10:13. prince of the Persian kingdom. The context demands that this antagonist be considered a supernatural being rather than a royal human individual. The literature from Qumran also uses the title "prince" as a reference to chief angels. There is no clearer evidence than this chapter on the biblical concept that conflicts in human history are paralleled by conflicts in the supernatural realm. Indications of this concept are already evident in the concept of the divine warrior (see comments on 1 Sam 5:2; 17:37; 17:45-47). Just as the Israelites had a divine assembly filled with angels instead of gods, so they eventually exchanged the concept of national patron deities for a concept of supernatural creatures who represented the interests of a nation. This reflects the ongoing process of emptying the heavens of competing deities while retaining a supernaturalist view of reality.

10:13. Michael. As indicated with the name Gabriel (see comment on 8:16), there are no names given for angels in earlier literature. Michael becomes a much more familiar figure in the Qumran literature and in the intertestamental literature, primarily the book of *Enoch.* He is considered the guardian of the people of Israel.

10:20. Persia, Greece. As in chapter 8, reference is made here to the sequence of empires in which the Greek empire of Alexander will supersede the Persian empire.

10:21. Book of Truth. This book has been compared to the Babylonian Tablet of Destinies, which was considered to contain and dictate the course of history and the cosmos (see comment on 7:25). This not only fits with the nature of the material that is revealed in chapter 11, but it accords with the introduction to that material in 11:2, where the information is specifically categorized as "the truth."

11:1-45

Kings of North and South

11:2. four Persian kings. Cyrus is already king when this is taking place, so he would not be counted among the four. His immediate successors were Cambyses, Smerdis (Bardiya/Gaumata), Darius, Xerxes and Artaxerxes. Seven more kings followed in the royal line before Alexander the Great brought about the fall of the empire. The last was Darius III. Xerxes was arguably the richest of the kings and was the one who was most involved with battles against the Greeks. This spans about seventy years of Persian history.

11:3. mighty king. The mighty king is none other than Alexander the Great. The text skips about 130 years from the end of Xerxes' reign to 336, when Alexander took the throne of Macedon. Within five years his military prowess had toppled the Persian empire and ushered in the Greek.

11:4. division to four winds. Alexander died in 323, and a twenty-year struggle for succes-

sion ensued that eventually led to a four-way division of the empire (see comment on 8:22). Two of those divisions were in the Aegean region (Cassander had Greece and Macedonia; Lysimachus had Thrace), while the other two divided up the Near East (Ptolemy had Egypt and Palestine; Seleucus had Syria, Mesopotamia and Persia). The Ptolemaic line is going to represented by "the king of the South," while the Seleucid line will be represented by "the king of the North."

11:5. Ptolemy I Soter (305-285). The text will now focus on the two kingdoms (Ptolemaic Egypt and Seleucia) that flanked Palestine. Ptolemy was a power broker and instigator during much of the twenty-year succession struggle (playing a significant role as early as 321), but Seleucus emerged as the stronger party with the largest kingdom. Ptolemy's military action in 321 broke up the original group that had assumed power after Alexander's death. One of his few failures came in 309, when he attempted to move against Antigonus (Seleucus's predecessor). By 306 it was clear that he had overextended himself, and he had to fall back and regroup. Still in 306 he was able to declare himself king of Egypt.

11:5. Seleucus I Nicator (312-280). After Alexander died, Perdiccas became head of the armies, and Seleucus was one of his generals. He was among the group that assassinated Perdiccas. Seleucus briefly gained control of Babylon, but was forced to flee when Perdiccas's successor, Antigonus, moved against him in 316. He then served as a general for Ptolemy from 316 to 312. They fought together against Antigonus at the Battle of Gaza. After Antigonus's defeat at Gaza, Seleucus regained control of Babylon, which became the center of his power. Verses four and five cover the period from Alexander's death through the reigns of the first kings of the two empires, about forty years.

11:6. failed alliance of Ptolemies and Seleucids (246). The text now moves forward about forty years. These years had witnessed the first and second Syrian wars (274-271; 260-253), mostly over the control of the trade routes, ports and natural resources of Syria. In the aftermath of the second war there was interest in peace, and the text now focuses on this pivotal moment in history. About 252, Ptolemy II Philadelphus (285-246) sent his daughter, Berenice, with her entourage to marry the Seleucid king, Antiochus II Theos (261-246), and thereby to establish an alliance between their kingdoms. The alliance would give Ptolemy control of Syria and Antiochus control of Asia Minor. The fragile relationship held for a couple of years, and Berenice had a child, but a former wife of Antiochus, Laodice, whose sons had been cut off from succession, allegedly poisoned Antiochus and consequently had Berenice and her son (along with many from her entourage) murdered. Ptolemy II also had died in that year. Needless to say, the alliance crumbled and the next fifty years are full of tumultuous warfare between the two kingdoms.

11:7. Ptolemy III Euergetes (246-221). Upon hearing of the death of Antiochus, Berenice summoned her brother (who had acceded to the throne in Egypt) to intervene in Syria in order to support her son's claims to the throne. He was unable to secure control of Syria before the murder of his nephew and sister. In 245 (Third Syrian War) he pressed his invasion of Seleucia and successfully attacked the Syrian capitals of Antioch (on the Orontes) and Seleucia (this is Seleucia Pieria in Syria) and took much plunder. The cities were quickly recovered by Seleucus II after Ptolemy re-

AKKADIAN APOCALYPSES

In Akkadian literature there are a few pieces (dating from the twelfth century to the third or fourth century) that have been labeled apocalypses (the Marduk Prophecy, the Shulgi Prophecy, the Uruk Prophecy, the Dynastic Prophecy, and Text A). It has been demonstrated that there is a literary relationship between some of these works and the (astrological) omen texts, thereby placing them in Daniel's area of specialty. One prominent feature of these is that they ostensibly predict a series of unnamed kings who will arise, summarizing a couple of their deeds. Often these deeds are of a negative sort and the intention of the literature is to condemn those kings. Invariably the sequence ends with a king who will arise and set things right (the Dynastic Prophecy may be an exception, but the end is so fragmentary that it is difficult to be certain). These have been recognized as pieces of propaganda composed during the reign of the last king listed, who is using this genre to indict his predecessors and legitimate his own reign. As such they could be called "pseudoprophecies," because their "predictions" in actuality occur after the fact. Chapter 11 of Daniel undeniably shares some common characteristics with this genre as it presents a sequence of unnamed kings and a summary of some of the events of their reign. Daniel, however, has no king at the end of the sequence to promote. The opposite is true, as the last, Antiochus Epiphanes, is the worst of the lot. As throughout the book, then, Daniel uses a recognized motif but totally repackages it for his own distinctive use. For more information on apocalyptic literature in general see the sidebar at Zechariah 1.

turned to Egypt.

11:9. Seleucus II Callinicus (246-226). Laodice's son, Seleucus II, emerged the beneficiary of all of the treachery and intrigue of his mother. In 243 he attempted to gain control of southern Syria and Palestine. Not only was he unsuccessful, but the momentum turned against him and he ended up losing territory.

11:10. Seleucus III (226-223). For the last fifteen years of his reign, Seleucus II was engaged in an ongoing struggle with his brother, Antiochus Hierax. Both died about the same time, and Seleucus III came to the throne. Verse ten telescopes the events of the next ten years. Seleucus III was killed in a campaign against Pergamum in Asia Minor. He was succeeded by his brother, Antiochus III, who began mustering troops for the Fourth Syrian War (221-217) against Ptolemy IV.

11:10. Antiochus III the Great (223-187). The next nine verses are occupied with the deeds of Antiochus III and cover about thirty years. His reign is considered significant for the text of Daniel because he is responsible for taking Palestine out of Ptolemaic control and incorporating it into the Seleucid kingdom, ending a century of Ptolemaic rule over Israel. This began in 218, when he successfully penetrated Galilee and Samaria.

11:11. Ptolemy IV Philopator (221-203). For most of the years of the Fourth Syrian War, Ptolemy IV had little success militarily against Antiochus the Great and only forestalled his progress south through repeated diplomatic initiatives. Many of Antiochus's successes were carried out with the help of traitors rather than through military power or genius. In fact his lackadaisical tactics allowed Ptolemy to gather, train and field a significant armed force by 217.

11:11-13. Fourth and Fifth Syrian Wars. In 217 Ptolemy IV engaged Antiochus III at the Battle of Raphia for what would turn out to be the climactic battle of the Fourth Syrian War. Raphia was a traditional dividing line between Palestine and Egypt, about twenty miles southwest of Gaza on the Mediterranean coast. Antiochus claimed an army of seventy thousand, but even with the superior size of his armies he was beaten badly by the Egyptians. This victory restored Syro-Palestine to the control of the Ptolemies. This status was maintained until the death of Ptolemy IV in 204. The suspicious circumstances of the death of Ptolemy IV (still in his thirties) brought his six-year-old son, Ptolemy V Epiphanes (204-180), to the throne of Egypt. Antiochus took the opportunity of conflict over who was in charge to initiate the Fifth Syrian War (202-200), allied with Philip V of Macedon.

11:14-16. Antiochus III's occupation of Palestine. The Battle of Gaza in 201 gained Antiochus temporary control of Palestine, but he was pushed back again by Egyptian forces under the command of Scopas. In the next year, however, at the Battle of Panion (at one of the sources of the Jordan; the New Testament Caesarea Philippi, modern Banias), Antiochus defeated the Egyptians and took control of Palestine from them for the last time. At the same time, the Romans were getting a foothold in Greece in the Second Macedonian War.

11:14. violent men. The book of 3 Maccabees records a visit of Ptolemy IV to Jerusalem after the Battle of Raphia in which he was treated very badly when he wished to enter the temple. There is a question concerning the historicity of the account. There were pro-Seleucid (led by Onias II, the high priest) and pro-Ptolemaic factions (from the powerful Tobiad family, competitors for the office of high priest) within Judea at this period. Sources do not provide enough information to determine which party might be alluded to in this verse.

11:17-19. Antiochus III's defeat by Rome, Scipio (191, 190). The increasing Roman control in Greece was established by a peace accord in 196. The Greeks who were unhappy with this new state of affairs made contact with Antiochus, urging him to come to their aid. By this time, Antiochus, anticipating that he would need to neutralize Egypt, had entered a marriage alliance, sending his daughter, Cleopatra, to be Ptolemy V's bride. He expected her to also be a useful spy, but in this he was disappointed as her loyalties turned to her new husband. Nevertheless, he made his move toward Greece in 192. Constantly shifting alliances eventually worked against him, and he lost a large portion of his ten thousand troops at Thermopylae in 191. Antiochus then resorted to sea battle to try to keep the Romans out of Asia Minor but was again unsuccessful. By 190 the larger Seleucid army of seventy-thousand men had arrived to reinforce Antiochus's positions. Roman troops under Scipio were only half this strength when the forces met at Magnesia (about fifty miles north of Ephesus). Yet due to lack of training and tactical errors on the part of the Seleucid army, Antiochus was defeated and much of his army slaughtered. The terms of surrender were humiliating, devastating and accepted without argument.

11:20. Seleucus IV Philopator (187-175). This son of Antiochus III had a relatively peaceful reign and appeared to have maintained favor-

able relations with Jerusalem. The exception alluded to in this verse was when he dispatched one of his chief officials, Heliodorus, to Jerusalem to seize funds that were reported to be either in excess of what was needed or hoarded by anti-Seleucid factions. Before the high priest, Onias III, could get to Antioch to appeal the decision and offer explanation, Seleucus was assassinated in a plot carried out by Heliodorus, with Antiochus IV suspected by historians of complicity.

11:21. Antiochus IV Epiphanes (175-164). Antiochus IV, the brother of Seleucus, had been in Rome as a political hostage and was just returning (he had got as far as Athens) when the assassination of his brother took place. His goals included converting Jerusalem into a center for Greek culture and helping the Jews to make the transition to becoming Greek citizens with Greek ways. The intrigues that he became involved in were many, but certainly the main one concerning Jerusalem was how he handled the high priesthood (see next entry). The text calls him contemptible, and indeed he was. His title "Epiphanes" means "god manifest"—but the people preferred "Epimanes"—"madman." While he was certainly a member of the royal line, the throne should have gone to Seleucus's son, Demetrius (who instead was taking Antiochus's place as hostage in Rome). Another intrigue concerned the throne. He set up a coregency with his nephew (a minor), who a few years later was murdered.

11:22. prince of the covenant. Onias III was detained by Antiochus, and in the interim Jason, his brother, conspired to usurp his position. He paid a considerable sum to Antiochus and offered to be cooperative in the Hellenization of Judea (promotion of Greek culture at the expense of Jewish practices). Three years later Menelaus, with the probable support of the Tobiads, paid a larger sum and, the precedent having been established, was awarded the office over Jason. According to 2 Maccabees, Onias was murdered about 171. Many identify him as the prince of the covenant referred to in this verse, but others attach that title to Ptolemy VI (see below). The overwhelming army in some way represents the opponents to Antiochus's reign. This could include internal political opponents, Jewish antagonists or foreign opposition such as that which develops in Egypt.

11:25. First Egyptian War, 169. Antiochus's dreams of adding Egypt to his kingdom were finally acted on in 169. His invasion was prompted by Egypt's growing animosity and may even have been in response to Egypt's military action, since the first encounter (November 170) was between Pelusium and Gaza. Nonetheless, Antiochus succeeded in capturing the city of Memphis and securing the surrender of Ptolemy VI.

11:26-28. Ptolemy VI Philometor (181-146). Ptolemy VI was young when he came to the throne and was aided by two officials, Eulaeus and Lenaeus, who stirred up antagonism against Syria. The humiliation of Ptolemy in the First Egyptian War is thought to have been the result of bad advice given by his two advisors with the intention of undermining him.

11:27. unsuccessful siege of Alexandria. After his successful siege of Memphis, the citizens of Alexandria defied him by making Ptolemy's younger brother king. Antiochus took immediate steps to break their revolt but was unable to take the city. As soon as he had returned to Syria, Ptolemy VI disavowed any loyalty to Antiochus and his coregency with his brother was reinstated.

11:28. action against the holy covenant. Roman, Greek and Jewish sources differ with regards to the details at this point. There is no question that on his return from Egypt, Antiochus raided the temple treasury, most likely to secure additional funds for his continuing military activities. The sources disagree about whether this incident took place after the First Egyptian War (September 169) or after the Second.

11:29-30. Second Egyptian War, 168. In the spring of 168 Antiochus again had to besiege Memphis, and he did so successfully, taking control of lower Egypt. As he again prepared to lay siege against a weakened Alexandria, he actually had himself crowned king of Egypt. But there was a difference this time. Egypt had appealed to Rome for help, and their ships arrived as he approached Alexandria. Roman consul Gaius Popillius Laenas met him by the walls of Alexandria and commanded Antiochus to leave Egypt. When Antiochus replied that he had to consult with his advisors, the Roman consul drew a circle in the dirt around the king and insisted that he give his answer before stepping out of the circle. A humiliated Antiochus conceded to Roman authority and straggled toward home looking for a way to vent his misery. This was probably in July 168.

11:30. fury against the holy covenant. There was a rumor in Jerusalem that Antiochus had been killed in battle. Jason, who had been ousted as high priest, took the opportunity to lead a rebellion against Menelaus, who at this time was high priest (see comment on 11:22). When Antiochus heard of trouble, he may

have come himself to Jerusalem to put down the rebellion. In the process tens of thousands of Jews were massacred, and the temple was looted (Menelaus apparently cooperating in the plundering). Another report (perhaps of a subsequent action) says that Apollonius with a contingent of soldiers was sent by Antiochus to subjugate the riotous citizens of Jerusalem. According to the books of Maccabees this was accomplished through pretending to be peaceful but then slaughtering many. This may be a separate occasion, and the relationship of these events to those reported in the comment on 11:28 are difficult to determine. It is probably at this time that a citadel (the Akra) of Syrian soldiers was set up at the edge of the Temple Mount.

11:31. desecration of sanctuary. According to the book of Maccabees, an individual named Geron was sent by Antiochus to dismantle Jewish religious practice. It is possible that the Syrian military contingent, seeking accommodation for their own worship practice, was partially responsible for some of the changes described in the temple. In December 167 a systematic program of instituting Greek religious practices at the expense of Jewish ones began in earnest. The sacrificial system and the Sabbath and festival observances were halted. Worship sites were set up around the country and circumcision was forbidden. The temple was consecrated to Zeus and became a center of polytheism and prostitution.

11:31. abomination of desolation. This is usually taken as an idol of Olympian Zeus that was set up in the temple. Antiochus had identified this favorite god of his with the Syrian Baal Shamem, the chief deity of the Syrian portion of the population (see comment on 9:27).

11:32. flattery of covenant breakers. There were many Jews who favored the Hellenization process and therefore, if promised personal benefit, would gladly side with the new policies. Foremost among these was Menelaus, the high priest, who was totally dependent on Antiochus for his lucrative office.

11:32-35. Judas Maccabeus. In contrast, many of the Jews fought vigorously against the Hellenization of Judea—with many suffering martyrs' deaths. The major organized revolt was led by the Hasmonean family, initiated by its patriarch, Mattathias, a priest. In early 166 when Antiochus's envoy came to their town to enforce the new regulations, Mattathias and his five sons, John, Simon, Judas, Eleazar and Jonathan, responded with armed force and killed him. The family then fled the town and the rebellion was begun. With Judas as the military commander, they began seizing control of small towns, intending thereby to cut off all the roads to Jerusalem. This created an effective blockade that eventuated in the retaking of Jerusalem and the purifying of the temple in December 164, exactly three years after the desecration, but Daniel 11 does not report this event. There is continued controversy over whether in this section the Maccabeans are referred to favorably or unfavorably.

11:36-39. If Antiochus IV is still in sight in these verses, they offer a general description of the difficult period surrounding the desecration. References to Antiochus's arrogance, his lavish support of some temples and his redistribution of land to those who support him are easily recognized as characteristic of this period.

11:37. the gods. Antiochus's Seleucid predecessors had elevated the god Apollo, while the Ptolemies had shown preference for Adonis (possibly referred to here as the one desired by women). Antiochus neglects them (though by no means rejects them) in favor of Olympian Zeus. The fact that he designated himself as God Manifest on his coins is sufficient to explain the comment in this verse.

11:38. god of fortresses. The fortress referred to here is usually considered to be the Akra, the garrison for Syrian soldiers that was adjoined to the Temple Mount.

11:40-45. final battle. There is no known historical sequence corresponding to that which is laid out in these verses. Antiochus IV was killed in battle in Persia in December 164. Many interpreters of Daniel consider this section (perhaps starting as early as v. 36) to contain a reference to a much more distant future.

12:1-13
Hope for the End

12:1. Michael. See comment on 10:13.

12:1. the book. This appears to be a reference to the book of life. In Exodus 32:32-34 Moses is willing to be blotted out of the book, an action that would result in his death. Yahweh replies that the one who sins is wiped out from the book. The metaphor is of a ledger that contains a list of the living. This is comparable to the book that contains the names of those destined for death that Enkidu sees in his dream of the netherworld. When someone's sins mandate judgment, their name is blotted out, thus leading to their death. This draws a connection between the book of life and the book of judgment (see comment on 7:10). Here the book still pertains to continued life, because those recorded will be delivered from the per-

secution. It is not yet conceived of as a book of eternal life.

12:2. resurrection in the ancient Near East. There are several different concepts of afterlife that are evidenced in the ancient Near East. The most fundamental concept is continued existence in a gravelike netherworld where there is no differentiation in the treatment of the righteous and wicked. The Israelites called this place Sheol (see comments on Is 14:9), and they believed that it allowed for no interaction with God. In Canaan and Mesopotamia netherworld deities governed this realm. In Egypt the netherworld existence is more congenial for those who pass the judgment and enter its confines. Those who are not approved are devoured. None of these concepts include the idea of resurrection out of the netherworld. In general, in the ancient worldview the only awakening that took place was the calling up of spirits of the dead (which was not permanent and not a bodily presence) or the awakening of the fertility gods of nature cycles. These died annually when the agricultural cycle came to an end and "wintered" in the netherworld. Then they were ritually awakened in the spring. None of this bears any resemblance to a theological doctrine of resurrection. Likewise not comparable are the occasional revivifications (when an individual is restored to life) or the indications of national return to life (Ezekiel's dry bones). A fully developed doctrine of resurrection in the modern sense includes six elements: (1) it is individual, not national; (2) it is material, not spiritual; (3) it is universal, not isolated; (4) it takes place outside the netherworld; (5) it leads to permanent immortality; and (6) it involves distinctions between the righteous and the wicked. Zoroastrianism appears to have all of these elements, but the nature of the sources makes it difficult to determine how early the Persians developed these concepts (for further discussion see comment on Is 26:19).

12:3. shining like the stars. Stars and angels are associated by the fact that both are referred to as the host of heaven (see comment on 8:10). Contemporary Greek thinking and intertestamental apocalyptic literature indicated that the righteous become stars or angels. Daniel only speaks of comparison, not identification.

12:4. seal the words. Already in the eighth century Assyrian texts of an esoteric nature were being preserved. The scribal notations (called colophons) at the ends of such works indicated that they contained secret lore to be shared only with those who were initiates. Scrolls could be sealed either by tying a string around them and sealing the knot with clay, or by placing them in a jar and sealing the cover. The clay or the seal around the lid would be impressed with the owner's seal. Mesopotamia used cylinder seals, Egypt used scarab seals, and Syria-Palestine used stamp seals. Tablets would be sealed inside a clay envelope, which would be impressed with the owner's seal. The seals were intended to vouchsafe the integrity of the contents. They warned against tampering and, if intact, attested to the authenticity of the document. For more information see Nehemiah 9:38.

12:7. time, times, half a time. See comment on 7:25.

12:11-12. 1,290/1,335 days. A lunar calendar was in use through most of the ancient world that resulted in years of 354 days. It had long been recognized that the solar year was 365 days, so periodic adjustments were made by adding months of a determined number of days. Greek practice used standardized thirty-day months that were also regularly adjusted to the solar cycle. Twelve hundred and ninety days is three years and seven months of thirty-day months.

HOSEA

1:1-11
Hosea's Family

1:1. chronology. Hosea's prophecies span the eighth century, from the beginning of Uzziah's reign in Judah to the completion of Hezekiah's. The only king of Israel in this superscription is Jeroboam II, who roughly covers the first half of that century. Most of Hosea's message deals primarily with events in the chaotic period after Jeroboam's death when there are a whole succession of weak and ineffective kings just prior to the Assyrian conquest of Israel and the destruc-

tion of Samaria in 721 B.C.

1:2. divine command to take wife. Marriage by divine command is a metaphor for Israel's covenant with Yahweh. Ezekiel demonstrated this in his oracle of the "foundling child" (Israel) who eventually became Yahweh's unfaithful wife (Ezek 16:1-43). An extrabiblical example of a marriage commanded by a god is found in the Hittite Annals of Hattusilis, many centuries before Hosea. Hattusilis declared that the goddess Ishtar appeared to him in a dream and instructed him to take Puduhepa, a daughter of Ishtar's priest, as his wife. This divine endorsement would have silenced any critics of this match and given the wife a right to participate in cultic as well as royal activities.

1:4. Jehu's massacre at Jezreel. Elisha had originally sanctioned the political revolution that brought Jehu to the throne (see 2 Kings 9:6-10). The speech made by the "son of the prophet" who anoints Jehu calls on him to avenge the blood of slain prophets by exterminating Ahab's entire house, including his wife Jezebel. Jehu does this, first killing King Joram in battle (2 Kings 9:24) as well as King Ahaziah of Judah (2 Kings 9:27). After marching on the city of Jezreel, he calls on the populace to choose sides, and Jezebel is thrown from a balcony to her death (2 Kings 9:32-33). A general purge of Ahab's "house," which is a euphemism for his political supporters and government officials, then takes place. At Jehu's orders the terrified officials in Jezreel behead seventy "sons of the house of Ahab" (2 Kings 10:6-8). The next day Jehu publicly denied any responsibility for the deaths of these seventy men and used this as a pretext to have all of the officials executed (2 Kings 10:9-11). It is this mass bloodletting, which swept away the dynasty and supporters of Ahab, that is the basis for the symbolic name for Hosea's first son. The name thereby becomes a reminder to the current ruler, a descendant of Jehu, that his dynasty will be held accountable for Jehu's murderous activities. It may also be forecasting a similar bloody end to that dynasty in the face of Syrian encroachment and the expansion of Assyrian hegemony in the region.

1:5. Valley of Jezreel. This extremely fertile (the name means "God sows") and strategic valley allows for movement east and west through the hill country of northern Samaria and the lower Galilee from Beth Shan on the east to Acco on the Mediterranean coast. Omri and Ahab had established a second capital at Jezreel because of its strategic and economic importance. Naturally the valley also became the battleground for armies that wished to control the region. A number of famous battles were fought here, the first of which is recorded in the annals of Pharaoh Thutmose III (1504-1450). For more information see comment on Judges 6:33.

2:1-23

Israel as Wife and Mother

2:3. stripped naked and turned out. Several documents, including wills found in the town of Nuzi, refer to this type of treatment of a wife who abandons her husband to live with another man. It is typically the children who perform this legal act. It is intended to humiliate and perhaps served as an instrument of divorce, though in cases where the husband has already died, it is related to property rights.

2:5, 8. staple products and fertility. Both Hammurabi's Code and the Middle Assyrian Law Code contain lists of items that a husband must by law supply his wife for her daily maintenance. These include grain, oil, wool and clothing. These staples formed the basis of the economy of the ancient Near East and were the symbols of fertility granted to the people by God (see Jer 31:12). Thus within the marriage metaphor employed by Hosea, the providing of these items represented God's fulfillment of the covenant agreement. However, Israel's choice is to take "lovers" (other gods), worship them and give them presents of gold and silver instead of acknowledging Yahweh's gifts (compare Ezek 16:13-19). Israel credited the fertility gods such as Baal for the provision of these needs.

2:8. Israel's Baal worship. Agricultural villages, whose produce fed themselves and the urban centers like Jerusalem, dominated the world of ancient Israel. The Mediterranean climate brought rain only during the winter and early spring months (October—April), and a drought meant that their fragile hold on life was severely threatened. It is no wonder, therefore, that the Canaanite storm god Baal was so pervasive a figure in ancient worship as well as in the ancient religious texts from Ugarit and Phoenicia. Rain meant life, fertility, economic prosperity and power for those blessed by it. The task for the Israelite prophets thus became an effort to demonstrate that Yahweh was the provider of fertility, including rainfall, and that Baal was a false god (see Jer 2:8; 23:13). More often than not, however, local villagers chose to combine Yahweh and Baal worship in order to maximize their chances of a good harvest (see Judg 2:11; 6:25-32). Similarly, the kings of Israel, like Ahab, in making diplomatic marriages, ac-

cepted the introduction of Baal and Asherah alongside Yahweh in the official worship centers (see 1 Kings 16:31-33). Only after the exile would Baal worship be supplanted by faithful Yahweh-only worship among the Israelites.

2:11. festival functions and Baal. The syncretistic religious practices of the Israelites are exposed here as they revel (part of the metaphor of Gomer's unfaithful behavior) in worship of Baal during the harvest and new moon festivals (see the similar list of cultic celebrations in Ezek 45:17). Passover, the Feast of Booths and the Feast of Weeks were the annual celebrations marking the agricultural year (see the comments on Ex 12:19 and 23:15-16 for a description of these festivals). The New Moon festivities seemed to be tied to the sabbaths in the sense that family celebrations occurred (see 1 Sam 20:5), and there was a cessation of work (see Amos 8:5). There was no distinction drawn between the gifts of Yahweh and the supposed gifts of the Canaanite god of fertility and rain, Baal. As a result, the true provider of their bounty would now withdraw his largesse so that the Israelites could see their error.

2:12. vine and fig payment from lovers. The Egyptian love songs of Papyrus Harris 500 mention the giving of a jug of sweet mandrake wine as a lover's present. Such gifts would have been common as an expression of endearment or affection, but the term for pay here is the one used to mean the fee of a prostitute rather than the offering to a lover. This draws the metaphor of Israel/Gomer's infidelity back into focus. The use of vines and fig trees also strikes at another source of wealth and festivity in ancient Israel. There could be no celebration without these important products that were harvested in August and September. God's threat to turn the place into a wilderness is similar to that expressed in Isaiah 5:6.

2:12. punishment by wild animals. The eighth-century Aramaic inscription from Deir'Alla that contains the prophecy of Balaam and the twentieth-century Egyptian *Visions of Neferti* both describe an abandoned land in which strange and ravenous animals forage for food. Ravaging wild beasts were considered one of the typical scourges that deity would send as punishment. As early as the Gilgamesh Epic in Mesopotamia (c. 2000) the god Ea had reprimanded Enlil for not sending lions to ravage the people rather than using something as dramatic as a flood. The gods used wild beasts along with disease, drought and famine to reduce the human population. A common threat connected to negative omens in the Assyrian period was that lions and wolves would rage through the land. In like manner devastation by wild animals was one of the curses invoked for treaty violation The image here is one of chaos when civilization falls apart. See the comment on Deuteronomy 32:23-25 for another example of God cursing the land and its produce.

2:13. incense to Baal. Given the large number of small incense altars discovered by archaeologists, such as those from Lachish and Tel-Miqne/Ekron, it is apparent that burning incense as an offering to Yahweh or other gods was common in individual homes as well as in official cultic settings (see Is 17:8; Jer 19:13). The Israelites had been commanded to burn incense before Yahweh's altar (Ex 30:7-8), but that proper form of worship was corrupted when the offering was made to Baal instead. Incense was typically used to accompany petition.

2:15. Valley of Achor. When Achan violated the *ḥerem* during the capture of Jericho, he and his entire family were stoned to death in what came to be known as the Valley of Achor (Josh 7:25-26). The site is located on Judah's northern tribal border (Josh 15:7), modern El Buquê'ah. Hosea's mention of the "Valley of Trouble" is an attempt to demonstrate that if even such an ill-fated place can be transformed, then so can Gomer/Israel's relationship with Hosea/Yahweh.

3:1-5

Hosea Reclaims His Wife

3:1. sacred raisin cakes. See the comment on Jeremiah 44:19 for the offering of sweet cakes (made from figs or dates) to the gods of Mesopotamia. There is some uncertainty in translating the Hebrew word here. Some commentators suggest that jars of wine are meant rather than compressed cakes of grapes or raisins. In either case it is the produce of the grape harvest that is being used as an offering.

3:2. purchase price details. Given the value of the barley added to the fifteen shekels of silver, one estimate would make Hosea's total outlay approximately thirty shekels. This amount is equal to the amount due as compensation for the loss of a slave in Exodus 21:32. Since Gomer's situation is unclear, it is not possible to make a definite determination of why Hosea would pay out this amount. Based on Middle Assyrian Law, however, he may be redeeming her from a legal situation from which she could not extricate herself (such as paying a debt she owed).

3:4. sacrifice or sacred stones. See the com-

ments on Exodus 23:24 and Deuteronomy 7:5 for the use of sacred stones and Asherah poles as part of Canaanite worship and Israel's idolatrous practices. Sacred stones did serve as a legitimate part of Yahweh worship, at least through the time of the divided monarchy (see Is 19:19). In the time of destruction to come, however, these cultic symbols as well as the kings will receive no word or support from Yahweh (see Deut 16:22).

3:4. ephod or idol. Sacrifice and sacred stones represent means of worshiping the deity; ephod and idol refer to means of consulting the deity. An ephod was part of the priestly wardrobe (see comment on Ex 28:6-14) and in both Egypt and Mesopotamia was reserved for clothing images of deity and for high-ranking priests. See the comment on Exodus 28:6-14 for a description of the appearance and use of the ephod as a device for divining God's will. People who wanted to ask information of deity would come (pay their fee) and receive an answer (through the mediation of the specialists. The teraphim idols referred to here (see comment on Gen 31:19) were among the tools or surrogates for consulting the gods in the ancient Near East. As with the pillars and sacrifices, however, God would not provide these diviners with any answers.

4:1-19
Indictment of Israel's Unfaithfulness

4:10, 14. prostitution. In ancient Mesopotamia a distinction can be drawn between commercial prostitution and sexual service for the temple. The term *ḫarimtu* is used for both in cuneiform texts (for instance it is a *ḫarimtu* who "civilizes" Enkidu in the Gilgamesh Epic), but there is a difference in social status as well as purpose. The sacral sexual service provided at the temple was tied into the sacred marriage ritual that insured fertility for the land. There were various levels of priestesses, from the high priestess who represented the goddess Ishtar/Inanna and was said to be "visited" by the god Marduk each night, to cloistered female orders and more public figures like the *naditu*, who could own property, conduct business and even marry. The fact that commercial prostitution occurred near temples was based on the same considerations that brought prostitutes to frequent taverns and the city gate—high traffic areas meant more customers. Both temple sacral servants and prostitutes accepted payment, but the former were expected to dedicate these offerings to the gods. Additionally a distinction could be made between "sacred" prostitution and "cultic" prostitution. In "sacred" prostitution, as just mentioned, the proceeds go to the temple. It was quite possible for prostitutes to be employed by temples as a means of raising funds without their having any official status as priestesses. In "cultic" prostitution, the intent was to insure fertility through sexual ritual. We must also differentiate between occasional sacred/cultic prostitution (as in Gen 38) and professional sacred/cultic prostitution (as in 2 Kings 23:7). The evidence for cultic prostitution in ancient Israel or elsewhere in the ancient Near East is not conclusive. Canaanite texts list prostitutes among the temple personnel, and Akkadian literature attests those who were dedicated for life to serve the temple in this way. Furthermore, since women often did not have personal assets, sometimes the only way of earning money by which to pay a vow appeared to be prostitution. The injunction against bringing the wages of a prostitute to the temple may, however, be a reaction against practices like that of the Ishtar temple in the Neo-Babylonian period to hire out female members of their community as prostitutes.

4:11. old wine, new wine. The terms used for wine in this instance are in parallel, but they represent different degrees of fermentation. In the Ugaritic Tale of Aqhat (VI:7-8) the same terms are used in parallel, but the text is very broken and offers no further information. The sense of the phrase is to demonstrate how overindulgence in drinking wine befuddles the mind. These people's minds are clouded by their false religious practices as those of drunkards are by their wine (see comment on Is 28:7).

4:12. wooden idol. Although it is possible that Hosea is referring to the practice of rhabdomancy (divining the will of the gods by casting rods or wands; see the comment on Ezek 21:21 for a variety of forms of divination), this is more likely a reference to sacred groves or Asherah poles (see Ex 34:13). Idols were often carved from wood (see Jer 10:3-5; Hab 2:18-19), and this practice was so common in Mesopotamia that Sumerian texts refer to certain types of wood as the "flesh of the gods."

4:13. worship on mountains. High places and mountaintops have long been associated with divine worship (see the comment on 1 Sam 9:12). For instance, some of the most important events in Israelite history are associated with mountains (Moses at Mount Sinai; Elijah at Mount Carmel). Likewise, Mount Zaphon was identified as the home or seat of power

for the Canaanite gods Baal and El in the Ugaritic epics. Since the Israelites seemed so prone to blending Yahweh worship with that of other gods, Hosea condemned the sacrificial activities at these outdoor shrines (just as they are condemned in Deut 12:2-3), seeing them as breeding grounds for corrupting succeeding generations.

4:13. sacred trees. From earliest times, trees have served as landmarks and have been associated with popular justice and religious activity (see the comment on Gen 35:4). Among the references to sacred or significant trees are Deborah's palm in Judges 4:5 and the tree under which the Ugaritic king Danil heard the cases of his people. These individual trees or sacred groves were also associated with the worship of Asherah (see the comment on Deut 12:3), and as such were a trap for the Israelites. Asherah is pictured in Israelite iconography as a stylized tree.

4:15. Gilgal. The exact location of this site near Jericho has yet to be determined (see Josh 4:19). Among the most likely suggestions, based on Iron Age deposits uncovered in survey work, are sites near Khirbet el-Mefjir, a little over a mile northeast of Jericho. Its name, meaning "ring of stones," suggests its importance as a cultic center. Both Amos (4:4; 5:5) and Hosea (9:15; 12:11) condemn Gilgal for the religious transgressions and inappropriate sacrifices made there. The nature of these religious activities is not spelled out, but it may be presumed that they involved the worship of gods other than Yahweh.

4:15. Beth Aven. Although it is not possible to determine whether Hosea himself was a Levite, his knowledge of wisdom themes and priestly matters at least suggests close ties with a Levite family. This may explain his ridicule of the royal sanctuary at Bethel and this pun on the place name (see Amos 5:5). He refers to the Ephraimite city of Bethel ("house of God") as Beth Aven ("house of wickedness"), pronouncing it an illegitimate place of worship and a source of evil within Israelite society (compare his usage in 5:8).

5:1-15
Continued Indictment

5:1. snare and net. The very familiar image of fowlers trapping birds in nets and snares may be the origin of this common metaphor (see Josh 23:13; Ps 69:22; Is 8:14). There are numerous examples of this activity from Egyptian tomb paintings, and it also provides the basis for the Sumerian Stele of the Vultures (see the comment on Ezek 12:13).

5:7. New Moons. While Hosea may be referring once again to the New Moon festivals that had become corrupted by Baal worship (see Hos 2:11), the term used here can simply mean the arrival of a new phase of month in the cycle of the year. It is therefore possible that the prophet is denouncing in general terms the continuous (cycle to cycle) self-destructiveness of the Israelites.

5:8. Gibeah, Ramah, Beth Aven. There is an allusion here to a military confrontation between the northern and southern kingdoms (Ephraim and Judah) concerning the border between the two. The reference to the three cities in Benjamin (Gibeah = Jeba'; Ramah = Er-Ram; Beth Aven = Khirbet el-'Askar) suggests either that they are being invaded by Ephraim (perhaps the beginning of an attack on Jerusalem) or that their men are being called to battle by Judah (perhaps to invade Ephraim). Each of these sites guards the northern track to Judah's capital. The alarm being raised is most likely associated with a phase of the Syro-Ephraimitic War of the 730s (see comments on 2 Chron 28:5 and Is 7:1).

5:10. moving boundary stones. See the comment on Deuteronomy 19:14 for discussion of this crime.

5:13. Ephraim turned to Assyria. The destructive effects of the Syro-Ephraimitic War will leave both Israel (Ephraim) and Judah exhausted and even more vulnerable to the political hegemony of the Assyrians. Realizing that their status as vassals was deteriorating, two Israelite kings— Menahem in 738 (2 Kings 15:19-20) and Hoshea in 732—were forced to pay large sums to keep the Assyrians from further ravaging their country. The Assyrian Annals of Tiglath-Pileser III record these tribute payments, along with those of many other small nations being economically drained by the empire's need for funds.

6:1—7:16
Turning Away from Repentance and Restoration

6:3. winter rains, spring rains. Based on the Mediterranean climate of the Middle East, Israel receives its rains twice during the year. The "winter" rains fall from December to February. As noted in the tenth-century Gezer calendar, this moisture softens the earth and prepares it for plowing and sowing of wheat, barley and oats. The "spring" rains come during March and April and provide the life-giving water needed for the sowing of millet and vegetable crops. It is the timing of these rains that makes the difference between a good har-

vest and famine. Tying Yahweh to the rains supersedes Baal's role as the rain and fertility god, and tying him to the sun supersedes the sun gods who were often associated with justice.

6:7. Adam. Since the end of the verse suggests a place ("there") and since there is a parallel to Gilead, most modern commentators assume this refers to a city rather than the first man. This site is generally identified with Tell ed-Damiyeh in Transjordan just south of the Jabbok River and north of the Wadi Far'ah, at a point that dominates the fords of the Jordan River. It is mentioned as one of the cities captured by Pharaoh Shishak during his tenth-century campaign into the region.

6:8-9. violence at Gilead and Shechem. The event chronicled here may be Pekah's rebellion against the Israelite king Pekahiah in 736 (2 Kings 15:25). Apparently the fighting began at Adam with the aid of a group of Gileadites and spread west along the Wadi Far'ah road into Israel as far as the city of Shechem. Apparently Pekah's supporters were aided by priests from Bethel in their efforts to eliminate the king's officials.

7:4-8. baking metaphors. In the light of the tumultuous nature of Israel's political scene in the 730s, these baking metaphors are quite apt. The oven depicted here was made of clay and was cylindrical in shape. Examples of this device have been excavated at Taanach and Megiddo. It may have been embedded into the floor or lay on it. The domed roof had a large hole covered by a door through which the baker would first add fuel (wood, dried grass, dung or cakes made from olive residue). Flames would escape through the hole until a hot bed of coals remained. The heat would be captured as the door was closed and would remain for many hours (enough for the bread to be kneaded and allowed to rise). Then the baker would place the slightly raised flat bread on the inner walls of the oven or amongst the coals. The metaphor plays on these mundane tasks and well-known images. The rebel forces of Pekah fiercely "flamed" within the oven of Israel's political affairs and destroyed Pekahiah's regime in 735. The resentment caused by this action smoldered like an oven holding its heat and waiting to burn those in charge. Then in 732 Hoshea assassinated Pekah and immediately reversed Israel's political alliances (2 Kings 15:30), shifting to Assyria for help and then three years later once again seeking an Egyptian alliance (see Hos 7:11). This muddled policy left Israel "half-baked," like a loaf left on the wall of the oven that had never been turned. It was burnt on one side and doughy on the other.

7:11. dove behavior. The vacillating political policy of the kings of Israel is compared to the gullibility (see Prov 14:15 for this applied to fools) of doves, who are an easy prey for the fowler's net. In addition, the dove's lack of concern over lost chicks may be compared to Israel's political amnesia with regard to Assyrian policies (see Hos 5:13).

7:11. Egypt/Assyria. Throughout much of his brief reign, Pekah practiced an anti-Assyrian policy and sought aid from the Egyptians. This had led to the campaign of Tiglath-Pileser III described in 2 Kings 15:29 that resulted in the capture of much of the Galilee region and a deportation of Israelites to Assyria (see the comment on 2 Kings 15:25-31). Once Hoshea had come to the throne, he initially had to pay tribute to the Assyrians, but then sent envoys to Egypt (see the comment on 2 Kings 17:4). Such duplicity enraged the Assyrian king Shalmaneser V, and he besieged Samaria for three years. His successor, Sargon II, then took the city in 721 and deported much of the Israelite population (see the comment on 2 Kings 17:6).

7:12. bird hunting. There were a number of different techniques used to snare birds. Although hunters might simply use a sling, throwing stick (as in the Beni Hasan tomb painting) or a bow to take down individual fowl, the majority of instances in the biblical text and in ancient art depict large flocks of birds being captured in nets or cages. For instance, the tomb of Ka-Gemmi at Saqqarah (Sixth Dynasty Egypt) portrays the fowler using a net. Apparently some fowlers also used decoys in their snares to attract the birds along with bait food (attested in Ecclus 11:30). Clearly, Israel's kings have been snared in the net of political ambitions cast by both of the ancient super powers, Egypt and Assyria.

7:16. faulty bow. The composite bow, made from a combination of wood, horn and animal tendons (indicated in the Ugaritic Tale of Aqhat), was subject to changes in weather and humidity. If it was not kept in a case, it could loose its strength and be described as unreliable or slack (see Ps 78:57). The Assyrian wisdom sayings of Ahiqar speak of the arrows of the wicked being turned back on them, and this may also be part of Hosea's condemnation of the Israel's leaders (see Ps 64:2-7).

8:1-14

Continued Indictment

8:1. trumpet signals. As in Hosea 5:8, the sounding of the trumpet or ram's horn is a

signal of approaching danger. This would have set the people in motion, driving their animals into the protection of city walls (see Amos 3:6). For more information concerning trumpet signals see comments on Numbers 31:6 and Joshua 6:4-5.

8:1. eagle (vulture). Hosea employs an image of a bird of prey swooping down on its victim. It seems most likely that he is referring to Assyria, once again being used as a tool of God's wrath. The hunting eagle or vulture would have been a familiar sight, and they were often used in Near Eastern epic and myth (as in the Ugaritic Tale of Aqhat and the Akkadian myth of Etana; see comment on Deut 32:11).

8:5-6. calf idol. There is ample evidence of the association of Baal worship with bovine cult images or pictures of bulls (such as the zoomorphic depiction from Tell el-Asch'ari). See the comments on 1 Kings 12:28-30 for a full discussion of King Jeroboam's attempts to create his own shrines at Dan and Bethel as rivals to Jerusalem, with golden calves serving as representations of God's throne. Hosea now condemns the golden calves placed in these shrines as a source of false worship and a reflection of the syncretism of Baal and Yahweh worship in Israel. By Hosea's time only Bethel remained, since Tiglath-Pileser III had conquered Dan in 733 and presumably destroyed the shrine there.

8:6. calf of Samaria. The use of Samaria instead of Bethel as the site of the calf is a euphemism for all of Israel (see Hos 10:5). It was common practice in the Assyrian Annals to refer to an entire province by listing the name of its capital city (see 2 Kings 23:19).

8:14. palaces. The Hebrew term *hêkal,* perhaps a cognate of Akkadian *ekallu* (from Sumerian *E.GAL),* "big house," may mean either temple or palace. At least during Jeroboam II's early reign there was an effort to build fortified cities and monumental buildings in Samaria and other major cities (see 2 Chron 26:9-10 for similar construction in Judah). Efforts such as these can be taken as a symbol of royal power and thus worthy of Hosea's charge that they had "forgotten" God (see Deut 32:15-18).

9:1—10:15
Judgment on Israel

9:1. prostitute at threshing floor. One of the essential installations within the farming areas of Israel was the threshing floor. Harvested grain was brought here for processing and distribution (see Ruth 3:2, 7). It would also be the likely site for public gatherings (see the confrontation in 1 Kings 22:10) and for harvest celebrations (Deut 16:13). However, Israel is enjoined to rejoice no longer since the people have demonstrated their infidelity by expressing their faith in Baal's ability to provide their abundance (see Hos 2:7-8). Apparently common prostitutes as well as cult prostitutes frequented the areas where harvest and shearing festivals took place (see the comment on Gen 38:15-23). Thus Israel plays the prostitute amidst the grain, taking her hire from those gods she credited with the harvest rather than acknowledging Yahweh's role.

9:4. bread of mourners. A house in mourning, having had contact with the dead, was considered unclean for seven days and had to be ritually purified in order to resume normal social and religious activity (see the comment on Num 19:11). During the period of their impurity, all their food, by extension, was equally contaminated. While it could be used to nourish their bodies, these meals were joyless and none of the food was to be offered as a sacrifice to God (see Jer 16:7; Ezek 24:17). This is how Hosea characterizes life in the coming exile.

9:6. Memphis. During much of Egypt's history, Memphis (modern Mitrahineh) served as the capital of Lower Egypt. It was located about thirteen miles south of modern Cairo on the west bank of the Nile River.

9:7. prophet a maniac. There was sometimes a very fine line drawn between a person invested with the Spirit of God (1 Sam 9:6) and one considered to simply be insane (see 1 Sam 21:13-15; 2 Kings 9:11). In this case, however, Hosea's enemies attempt to discredit him by claiming his prophecies are actually just the ravings of a madman (compare the similar charges made in Amos 7:10 and Jer 29:25-28).

9:9. days of Gibeah. For a description of the heinous events that took place at Gibeah see the comments on Judges 19:12-14 and 19:25. Clearly this story was well known in Hosea's day, since he merely has to mention the name of the city to raise the specter of lawless and scandalous behavior.

9:10. fruit metaphors. There is a sense of unexpected pleasure to be found in grapes growing in the desert or ripe figs in the early part of the summer. Evidence of "grape cairns" in the Negeb indicate that viticulture is possible here and the small bunches are said to be particularly sweet. This is also the case of the small figs that ripen in May-June. They are considered such a delicacy that they are to be eaten immediately after picking (see Is 28:4; Nahum 3:12).

9:10. Baal Peor. See the comments on Numbers 25:1-18 for the incident at Baal Peor when

the Israelite men were tempted into idolatry by the women of Moab near Shittim.

9:13. children to the slayer. It is possible that this is an allusion to the political turmoil in which the leaders of Israel have embroiled the people and thus laid their families open to the rampaging Assyrian armies (see the comment on Hos 7:11). The Sumerian *Lament over the Destruction of Ur* describes similar events during times of siege when parents abandon their children. Another possibility is that the "slayer of children" is a demon. Among the Babylonian demons was Pashittu, who was considered a baby snatcher. This would be another way of referring to child exposure. For more information on child exposure, see comment on Ezekiel 16:5.

9:15. wickedness in Gilgal. See the comment on Hosea 4:15. While Hosea's condemnation may be based on events during the conquest period or at the time of Saul's inauguration as king (1 Sam 11:12-15), it is also possible that he is referring to a contemporary event that is not recorded elsewhere and is now unknown.

10:1. sacred stones. See comment on 3:4.

10:4. poisonous weeds. The Hebrew term *rosh* may be in this instance the veined henbane *(Hyoscyamus reticulatus),* which occurs in plowed fields, especially those near steppe and desert regions. It grows to a height of two feet, with hairy foliage and a yellowish, pink-veined flower. Another candidate is the Syrian scabious *(Cephalaria syriaca),* which has poisonous seeds. Shallow planting actually helps spread these plants, since only the stalks are cut while their deep roots lie untouched (see Job 31:40).

10:5. Samaria, Beth Aven. See comment on 4:15.

10:11. threshing, plowing metaphor. It may be that young oxen were first trained to accept the yoke by putting them to work on the threshing floor. This relatively simple task, during which they had the opportunity of the reward of grazing (Deut 25:4), made them more docile (see Jer 50:11). Once they had achieved the stage when direction was easy, then a sledge could be added that would get the animals used to pulling a load (2 Sam 24:22). This in turn prepared them for the more disciplined task of plowing a furrow in a virgin field (1 Kings 19:19; Jer 4:3). In like manner, God chooses to use the docile and strong Israel to fulfill the divine plan.

10:14. Shalman at Beth Arbel. This event is unknown to modern historians. Hosea uses it as the measure of total destruction in much the same way that Jeremiah directs the people's attention to Shiloh (Jer 7:12-14; 26:6). There have been several suggestions made on the name Shalman, including either Shalmaneser III, who may have campaigned as far as Israel during his 841 excursion against the Syrian capital of Damascus, or Shalmaneser V, who besieged Samaria in 722. Another possibility is the ancient Moabite king Salmanu, who is listed as one of the petty monarchs paying tribute to the Assyrian king Tiglath-Pileser III in the mid-eighth century. The mention of Moabite raiding parties in Israel in 2 Kings 13:20 may bolster this identification. As for Beth Arbel, the site of this horrendous destruction, it has been identified with Irbid, near the Decapolis city of Pella and just across the Jordan River from Beth Shan.

11:1-11

God's Historical Love for Israel

11:6. bars of gates. Two gate doors were generally set into stone sockets buried just under the ground. The posts flanked the gate on either side. They were made of wood and joined to the wall. The Iron Age outer gate excavated at Tell en-Nasebeh has slots in the stone beside the gate, where bars would have been placed. They would lock the gates by sliding the bars into sockets in the wall.

11:8. Admah and Zeboiim. These two cities, neither of which have been positively identified by archaeologists, are traditionally tied to Sodom and Gomorrah as sites of utter destruction and evidence of God's judgment (see comment on Gen 19:1). These cities are generally located in the Jordan Valley southeast of the Dead Sea. Among the more prominent sites discovered in this area are the Early Bronze cities of Bab edh Dra' and Numeira.

12:1-14

Continued Indictment

12:1. Assyria treaty. Like his predecessor Menahem, Hoshea was initially forced to pay tribute to the Assyrian king Tiglath-Pileser III. The Assyrian Annals even boast that when Hoshea assassinated Pekah to take the throne of Israel that the Assyrian king "placed Hoshea as king over them." It also notes that Hoshea paid "ten talents of gold [and] a thousand (?) talents of silver" as tribute, probably to confirm his position as king in 732.

12:1. oil tribute to Egypt. Shortly after Hoshea had accepted the role of Assyrian vassal king in Israel, he then shifted his allegiance by sending a large quantity of olive oil (one of Israel's major forms of wealth) to Egypt. This would have been a valuable commodity, espe-

cially in Egypt where olives were not grown. Playing to both superpowers and their factions, however, would soon draw Assyrian ire and lead in 722 to the invasion of Israel by Shalmaneser V.

12:4. struggled with angel. See several comments on Jacob's wrestling match with an angel in Genesis 32 (though the term for angel is clearly used here, it does not occur in Gen 32). Hosea recounts the patriarch's reputation for ambition and deceit. It is clear that the prophet believes Jacob overstepped the bounds that humans are supposed to have when dealing with God. This theme of placing limits on human behavior can also be seen in the story of Adapa, an ancient Sumerian hero and priest of the god Ea. He is brought before the divine assembly because he had had the effrontery to break the wing of the south wind and thus cause a drought.

12:7. dishonest scales. This same charge is made against unscrupulous merchants in Amos 8:5. The word translated "merchant" is the Hebrew word "Canaan," which at least evokes the idea of Canaanite influence. The indictment seems to be based on the idea that Israel and its economic community have been corrupted by the immoral practices of its neighbors. In an economy that did not have standardized weights and measures, traders were often tempted to cheat by falsifying the balances and measurements, often by using improper weights and false bottoms and other ways to alter the sizes of vessels.

12:10. prophets' parables. One of the ways that the prophet is able to convey God's message is through the use of analogies or comparative stories. The parable thus can provide a dual meaning, using scenes or images from everyday life and then providing an interpretation of God's will or judgment. For examples of this, see the comment on Isaiah 5:1-2 and Nathan's parable of the ewe lamb in the comment on 2 Samuel 12:2-4.

12:11. Gilead, Gilgal. For Gilead's association with Pekah's revolt see comment on 6:8-9. For an cultic activities at Gilgal see comment on 4:15.

12:11. altars as stone piles on plowed land. The piles of stones haphazardly scattered on the plowed fields could offer a picture of altars that have been knocked down. But since it is in the middle of an indictment, the context might rather lead to the picture of altars as numerous as piles of stones in a plowed field. There is additionally a play on words here in that the Hebrew word translated "piles" is *gallim,* sounding similar to elements in both city names.

12:12. Jacob's flight. Hosea returns to a theme he first used at the beginning of chapter 12, drawing on the traditions about Jacob and using them to parallel the nation of Israel's coming plight and possible redemption. So, just as the unscrupulous Jacob was forced to flee from Palestine to Haran to escape Esau's wrath (see the comments on Gen 27—28), now Israel will once again be forced to "live in tents" (Hos 12:9). The new life and family Jacob/Israel finds in Aram, however, led him back to Palestine and served as the origin of the Israelite people.

13:1-16

God's Anger

13:2. idol manufacture skills. See the comments on Judges 17:3; Isaiah 40:19; 44:17-18 for discussion of the manufacturing techniques employed in the creation of idols in the ancient Near East. The acquisition and use of the skills necessary to fashion these images is simply a further example, according to Hosea, of Israel's intent to syncretize or corrupt its worship with false gods.

13:2. kiss calf idols. On the black stele of Shalmaneser III the Israelite king Jehu is portrayed kissing the ground before the Assyrian king. In *Enuma Elish* the tribunal of gods kisses the feet of Marduk after he has put down the rebellion and established himself as head of the pantheon. This was the common act of submission offered to kings and gods. Likewise the kissing of the idol involved kissing its feet in an act of homage, submission and allegiance. In the Mari letters the governor of Terqa, Kibri-Dagan, advises Zimri-Lim, king of Mari, to come to Terqa to kiss the feet of the statue of the god Dagan.

13:3. chaff on threshing floor. Once again Hosea uses a series of images that would easily conjure up pictures in his audience's minds—scenes from everyday life. Among them is the threshing floor where farmers bring their grain to be crushed under the feet of the oxen or by a threshing sledge (see the comment on Hos 10:11). The worthless residue that remained on the surface of this installation would swirl about as the winds blew it about. This illustration, combined with the morning mist and wisps of smoke, speaks of the short-term aspects of life—an apt comparison between the eternity of Yahweh and the ephemeral character of other gods and their idols.

13:7. leopard. The idea of the leopard as a silent, stalking hunter fits God's role as the destroyer of the unprepared and the unvigilant Israel (see Jer 5:6). The cunning leopard ap-

pears in wisdom literature as well. For instance, there is a short fable about the leopard in the Assyrian *Words of Ahiqar.* In it the leopard attempts to trick a goat by offering to lend the goat his coat to shelter itself from the cold. The goat escapes and calls back that the leopard was merely hoping for its hide. Leopards still inhabit some regions of Israel (En Gedi) but in antiquity were not as common as lions.

13:16. gruesome punishments. Hosea forecasts that the warfare to come will destroy the town and villages of the Israelites, and not even women and children will be spared from the rampaging army as it pillages and rapes. It would appear that this phrase is a standard description of warfare's devastation. Ninth-century Assyrian conquest accounts speak of burning the young boys and girls. The practice of ripping open pregnant women is mentioned very rarely. It is a practice attributed to Assyrian king Tiglath-Pileser I (about 1100) in a hymn praising his conquests. It is also referred to in passing in a Neo-Babylonian lament.

14:1-9
Offer of Hope

14:5-6. plant metaphors. Yahweh's relationship with Israel is likened to dew that provides the only moisture available to flowers and trees during the dry months of summer (see Is 26:19). The lily is not common in Palestine today, though it can be found in some areas. There is dispute whether it was more common in antiquity or not. In addition, God's life-giving essence insures the fertility and virility of the nation so that it continues to grow and expand, like the massive root system of the olive tree. Comparison is also made to the great cedars of Lebanon—considered the most useful of the large growth trees in the ancient Near East. It was prized for its lumber (1 Kings 6:9-10), a source for construction and a symbol of wealth in Mesopotamian literature, including the Gilgamesh Epic and the annals of many kings from the Sumerians through the Assyrians.

JOEL

1:1-12
Locust Invasion

1:2. address to elders. The fact that elders are addressed here has led many interpreters to infer that there was no king at this time. Some have therefore dated the book to the middle of the ninth century, when Judah was ruled by wicked queen Athaliah (see comments on 2 Chron 22—23), and the righteous of the land would have refused to recognize the legitimacy of her reign. The problem with this view is that the book of Joel clearly represents classical prophecy, which did not begin until the eighth century (see comment on 2 Kings 14:27). If the address to elders indeed does suggest there was no king, it is likely that the book should be dated to the postexilic period. This is further supported by 3:3, which speaks of the dispersion in the past tense. Nonetheless, the dating of the book is very controversial and complicated.

1:4. locust swarms. Locusts were all too common in the ancient Near East and were notorious for the devastation and havoc they brought. The locusts breed in the region of the Sudan. Their migration would strike in February or March and would follow the prevailing winds either to Egypt or Palestine. A locust will consume its own weight each day. Locust swarms have been known to cover as many as four hundred square miles, and even one square mile could teem with over 100 million insects. If the locusts laid their eggs before being blown out to sea, the problem would recur in cycles. A single female laying her eggs in June could potentially result in eighteen million offspring within four months.

1:4. locust terms. Since locusts were very familiar to the agricultural economy of the Near East, the various languages are full of precise vocabulary. The four different terms in this verse (nine terms in the entire Old Testament) pale beside the eighteen terms known from Akkadian. Interpreters are divided on whether these four words refer to four different stages of development in the life cycle of the locust ([1] larval stage: black, hopping, wingless; [2] black and yellow with wings and jaws; [3] yellow and fully developed; [4] sexually mature adult), or whether they refer to different species *(gregaria* and *solitaria).*

1:6. locust metaphors. It is not uncommon in ancient Near Eastern literature for armies to be pictured as locusts. Such metaphors are found in Sumerian texts such as the curse of Akkad, in Ugaritic in the Tale of Aqhat, in Nineteenth-Dynasty Egyptian texts, and in Neo-Assyrian texts. Here it is the other way around as the locust swarm is metaphorically described as an invading army (as becomes clear in 2:4-5). The comparison to a lion is common in ancient Near Eastern literature because of the coloring of the locust and the shape of its face and mouth.

1:7. vine and fig. Locusts do not favor the trees mentioned here, so they only attack them when everything else is gone. This is an indication of the extent of the damage. Additionally, the vine and fig are signs of security and prosperity, so their devastation is symbolic of the mood among the population. The idyllic image of peace and prosperity in the ancient Near East was to be able to sit under one's own vine and fig tree. Egyptian tomb paintings, Assyrian reliefs and the biblical writers commonly use the phrase to refer to a people who control their own lives, without foreign interference, and are able to cultivate the land which the gods/God has given to them (1 Kings 4:25; Is 36:16). The vine and fig provided some shade as well as fruit, and enjoying them indicated some long-term prospects as each took several years to become productive.

1:7. stripping of bark. Locusts are known not only to devour plant life but also to break off branches and strip off bark. If there is significant damage to the bark the tree may not survive, and even if it does, the healing process will greatly reduce its fruitfulness.

1:8. virgin metaphor. The word translated "virgin" here refers to a woman who has not yet officially left the house of her father. She may have a "husband" by contract if the bride price has been paid, even if the marriage has not yet been consummated. The metaphor here then refers to the mourning of a woman who had been betrothed and very close to marriage when she lost her husband.

1:9. offerings cut off. An Assyrian hymn from the time of Sargon II (end of the eighth century) asks the deity (Nanaya) to bring an end to a locust plague. Like Joel, the prayer mentions several categories of locusts and laments that they are cutting off the offerings of the gods.

1:10-12. impact of army invasion on agriculture. The ecological destruction could cripple the economy for years. Sometimes fields would be so damaged as to have greatly reduced fertility. The destruction of trees would have even more devastating effects on the ecological balance. Not only would shade and wood supply be lost, but topsoil erosion would increase and the loss of forestation's contribution to the environment would accelerate the development of wasteland conditions. Some fruit trees (such as the date palm) take twenty years of growth before they become productive. Agricultural devastation and deforestation were typical tactics of invading armies seeking to punish those they conquered and as an attempt to hasten their surrender. The Assyrian records and reliefs detail punitive measures that include felling trees, devastating meadowlands and destroying canal systems used for irrigation.

DAY OF YAHWEH

Each year in Mesopotamia (often twice a year) there was an enthronement festival for the king of the gods. During the course of this *akitu* festival, the deity determined the destiny of his subjects and reestablished order, as he had done long ago when he defeated the forces of chaos. In fact, the creation account *Enuma Elish* that recounts Marduk's defeat of Tiamat and his elevation to the head of the pantheon was read during the course of the festival. Though the texts never refer to the *akitu* festival as the "Day of Marduk" there are some similarities. The Day of Yahweh refers to the occasion on which Yahweh will ascend to his throne with the purpose of binding chaos and bringing justice to the world order. The destinies of his subjects will be determined as the righteous are rewarded and the wicked suffer the consequences of their rebellion and sin. For Israel there is no firm evidence that this was represented in a regular ritual, but it is rather reflected in a historical expectation. As is often the case, then, to the extent that there is a connection, Israel appears to have historicized that which elsewhere is in the realm of myth and ritual. The Day of the Lord also has elements of theophany, usually connected with the divine warrior who defeats the disruptive powers (see comment on 1 Sam 4:3-7). Such theophanies often are accompanied by cosmic effects (see comment on 1 Kings 19:11-13). The cosmic effects often depict a world upside down (see comment on Jer 4:23-26). The Day of Yahweh was a momentous day, and these are the kinds of occurrences that characteristically accompany momentous days. All of this helps our understanding of the Day of Yahweh by showing us that Israelite thinking and the prophets' communication intersected with a wide spectrum of ideas current in the culture. The originality in the Israelite literature is not that whole new matrices are being created but that known ideas are being combined and applied in unique ways.

1:13-20

Call to Repentance

1:13. sackcloth. Sackcloth is made of goat or camel hair, and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. The sarcophagus of Ahiram depicts mourning women with what is likely sackcloth wrapped around their hips over their skirts.

1:14. holy fast. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). In connection with the call to repentance, Joel calls for a fast in order to remove any sin or other obstacle that may have led to the devastation they have suffered.

1:14. sacred assembly. Sacred assemblies were occasions for corporate worship. They often accompanied regular annual festivals but could be called for in times of need. In this context it appears to be a convocation of the elders and perhaps involved some decision-making as well as ritual acts.

2:1-27

Locust Army and Repentance

2:17. between the temple porch and the altar. The area between the porch and the altar is a place of limited access. Only the priest would have reason to proceed beyond the altar toward the temple. But it was also used to stage important public acts. In Ezekiel 8:16 this is the area where syncretistic sun worship was being carried out by twenty-five men. In 2 Chronicles 24:21 this is the area in which the prophet Zechariah, son of Jehoiada, was stoned to death (see Mt 23:35).

2:20. northern army. The north was often a symbol of dark powers. Enemies often had little choice but to come at Jerusalem from the north because of the way the major routes went.

2:20. eastern and western sea. The eastern sea would be the Dead Sea that served as a border on the east side of the land. The boundary on the west side was the Mediterranean.

2:23. autumn and spring rains. Israel has a rainy season (winter months) and a dry season (summer months). The rainy season begins with the autumn rains ("early rains," October-November) and ends with the spring rains ("latter rains," early April). These are important for what they contribute to the overall moisture levels in the earth and for softening the ground for plowing. Grain is harvested in the spring (barley in May, wheat in June), and the summer months (July and August) are for threshing and winnowing. Grapes are harvested in the fall, while the olive harvest stretches into the winter.

2:28-32

The Day of the Lord

2:28. pouring out of the Spirit resulting in prophecy, dreams and visions. In Israelite practice anointing was a sign of election and often closely related to endowment by the Spirit. Therefore one could speak of being anointed with the Spirit, or the Spirit being poured out. In Mesopotamia the king was seen as being endowed with the *melammu* of the gods (the visible representation of the glory of deity). In Hebrew the word for spirit can also mean wind. In the ancient Near East the word for wind/spirit was used in connection with dreams and visions as early as Sumerian times. The god of dreams was named "the winds." In Akkadian the name of the god who brought dreams was Zaqiqu, which is derived from the word for wind/spirit. Thus there is a long tradition of association between spirit and revelation through dreams and visions that often leads to prophecy.

2:30. blood, fire, billows of smoke. These are the normal accompaniment of the horrors of war. Blood flows in the streets, houses burn, and smoke rises from the city that can be seen for miles. These are the signs of crisis and judgment on earth just as the next verse speaks of the signs of crisis and judgment in the heavens.

2:31. sun dark, moon to blood. This is the description of solar and lunar eclipses. In a solar eclipse the sun is darkened as the moon passes between it and the earth. This can only occur at the phase of the new moon. In a lunar eclipse the moon is obscured by the earth passing between the sun and the moon. In a total lunar eclipse the moment of the most complete interference results in all but the red spectrum of light being blocked so that the moon glows with an eerie red-orange color rather than being blackened. This can occur only in the full moon phase.

2:31. eclipses in the ancient Near East. In Neo-Assyrian times, eclipses represented the

most powerful and deadly omens, being considered the "prime revealer." They were the most frequent cause for the substitute king ritual being invoked (see comment on Is 53:4-10). The nature of the threat they signified was judged by the precise time of their occurrence, the position in the sky at the time of the eclipse and the direction from which the eclipse took place. The combination of signs in heaven and on earth would bring further confirmation of the sign and would suggest a more drastic consequence.

3:1-21

God's Judgment and Blessing

3:2. Valley of Jehoshaphat. There is no valley with this name known in Israel from the Bible or from other sources, or even from tradition. The alternatives are (1) that reference is being made to a valley that had something to do with the ninth-century king of Judah by the name of Jehoshaphat (the only mention of a valley in his account is in 2 Kings 3); or (2) that the valley's name accords with what takes place there (the name Jehoshaphat means "Yahweh judges"). If the latter is the case, as many commentators have concluded, the location would likely be one of the valleys surrounding Jerusalem.

3:3. slave trade. One of the most lucrative aspects of warfare and border raiding was the slave trade. Captives were sold to dealers, who would transport them far from their homeland. The actual number of such persons does not compare to the huge numbers of slaves found in Greek and Roman cities. The slave trade existed from earliest times in the ancient Near East. Slaves were generally war captives or persons taken in raids. Traders often accepted slaves, which they transported to new areas and sold. These persons seldom obtained their freedom. The vast majority of persons who ended up on the slave block were either sold to the slavers by their own families or were prisoners of war.

3:4. Tyre, Sidon, Philistia as oppressors. These coastal regions of the eastern Mediterranean provided the ports through which sea trade passed. From the next few verses one might infer that these cities acted as middlemen for handling captives (in this case from Judah) who were to be sold as slaves. A certain percentage of those taken in battle may have been considered not worth the trouble or expense of deporting. A quick solution was to pass them on to slave traders, who would handle all the details.

3:6. Greeks. The Hebrew term used here, "Javan," was probably the Greek name Ionia, the Greek region of the western coast of Turkey and the Aegean islands. Ionian Greeks settled this area just before the first millennium B.C. There is evidence of contact between them and the Assyrians by the eighth century B.C.

3:8. Sabeans. There are three groups of Sabeans in Scripture. One group is from Sheba, present-day Yemen, an area which was highly urbanized and had achieved a complex degree of civilization by this period (1 Kings 10). Many inscriptions have been found from the Sabeans in this area. There are also Sabeans in Ethiopia (Is 43:3). In Job 6:19 the Sabeans are equated with Tema in north Arabia and are probably identified with the Saba of the Assyrian inscriptions of Tiglath-Pileser III and Sargon II in the late eighth century. It is difficult to determine which is referred to here, though most commentators favor the first option.

3:10. conversion of metals. Rather than "plowshares" that turn over the dirt as they plow, this may refer to the metal tip of the plow that breaks up the earth and scratches out a furrow. This tip is about seven inches long. However, this same Hebrew word is used in 2 Kings 6:5, where it appears to refer to some sort of axe. Pruning hooks are the small knives used to remove leaves and new shoots from the grapevines. Archaeological samples found are simply thin, short pieces of metal with a curved hook at the end sharpened on the inside edge, as a sickle would be. The shape is reminiscent of the tang type spearheads that had been popular during the Bronze Age. These farm implements could be melted down in time of war and reforged for weapons.

3:15. sun, moon and stars darkened. By declaring that on the day of Yahweh the heavens and all of its celestial bodies would be damped out, Isaiah had claimed that the glory of Yahweh would outshine and mask the brilliance of all other supposed gods (Is 13:10; see also the language of Ps 104:19-22, in which Yahweh controls the moon and sun). Since Assyria and Egypt both worshiped the sun god (Shamash and Amon respectively) as their primary deity, and the moon god Sin was of great importance in Babylonia, the prophet targets these gods and these arrogant enemy nations. Such portents of darkness, as in the Deir 'Alla inscription of Balaam, generally forecast a time of great disaster.

3:18. hills flowing with milk. This parallel of wine with milk is unique. The well-known combination of milk and honey is one way to speak of the potential of the region to support

a herding economy (see comment on Ex 3:7-10). The word used for wine here refers to freshly squeezed and newly fermented fruit juice. Amos 9:13 also pictures it flowing from the hills, which is logical since vineyards were often planted on the slopes of hills.

3:18. fountain flowing from temple. The association between ancient Near Eastern temples and spring waters is well attested. In fact, some temples in Mesopotamia, Egypt, and the Ugaritic myth of Baal were considered to have been founded upon springs (likened to the primeval waters), which sometimes flowed from the building itself. Thus the symbolic cosmic mountain (temple) stood upon the symbolic primeval waters (spring).

3:18. valley of acacias. Acacias typically grow in dry, wilderness conditions. The wadi that goes from the Valley of Kidron on the east side of Jerusalem to the Dead Sea is still characterized by its acacias, making that the logical choice.

3:19. Egypt and Edom as oppressors. Both of these nations were prominent enemies of Israel in both ancient times and in the events surrounding the exile. Edom had become an Assyrian vassal state in the reign of Tiglath-Pileser III and continued under their rule until the death of Ashurbanipal a century later. It is likely that they submitted themselves to Nebuchadnezzar's rule in 605. Although some Judean refugees may have found shelter in Edom, they apparently remained passive as Jerusalem was destroyed (see Ps 137:7 and Obad 11). Both countries are objects of judgment oracles in Jeremiah and Ezekiel.

AMOS

1:1—2:5
Judgment on the Nations

1:1. Tekoa. The farming village of Tekoa has been identified with Khirbet Tequ'a, about seven miles south of Jerusalem and five miles south of Bethlehem. Because of its location on the edge of arable land, its inhabitants presumably had to work very hard to maintain their existence as farmers and shepherds (see 2 Chron 20:20). For additional information on this small village in the Judean hill country see the comment on 2 Samuel 14:2.

1:1. earthquakes. Seismic activity in Syro-Palestine is a common occurrence. The region lies over the Jordan Rift, which stretches from Damascus to the Gulf of Aqabah, and is therefore subject to periodic shifts of the earth. There is evidence of a sizeable earthquake in the stratum 6 excavations at Hazor, dating to approximately 760 B.C. It is possible that this is the one referred to here, but additional corroborating evidence needs to be sought at other sites, especially Bethel and Samaria. The fact that this earthquake is used to date both Amos's prophetic activity and the reign of King Uzziah (see Zech 14:4-5) suggests that it must have been massive and therefore an event that would have stuck in the minds of the people. If Amos actually predicted the earthquake (as is suggested by Amos 9:1), then it would have authenticated his role as a true prophet of Yahweh.

1:1. chronology. The kings named in Amos's date formula provide a range of time for his prophetic mission. Uzziah of Judah and Jeroboam II of Israel ruled for most of the first half of the eighth century B.C. The earthquake cited here may be the same as that attested by excavations at Hazor (stratum 6) dating to approximately 760. Since Amos claims not to be a professional prophet, many interpreters believe that the oracles of this book would have covered a short span of time rather than stretching over several decades.

1:2. top of Carmel. Mount Carmel overlooked the Mediterranean from the northern coast of Israel. The sea breeze and an annual rainfall of twenty-eight inches made it one of the most flourishing sections of the country. In antiquity its lush slopes were covered with olive trees, vineyards and rich pastureland (see Jer 46:18). Amos and other prophets create a contrasting image with this area's normal fertility and the drought brought on by God's wrath. The prophet also provides a sense of the geographic extent of the disaster, spreading from Jerusalem in the south to Carmel in the north.

1:3. oracles against foreign nations. For this common theme in the prophets see the comment on Jeremiah 46:1.

1:3. Damascus in early eighth century. The eighth century began disastrously for the kingdom of Aram and its capital city of Da-

mascus. The Assyrian king Adad-Nirari III successfully besieged Damascus in 796. Accord-ing to the Assyrian Annals the Syrian king Bir-Hadad (Mar'i in Assyrian) was forced into vassalage. He was also required to make a huge tribute payment, including twenty-three hundred talents of silver and five thousand talents of iron, to save the city. There is even some suggestion that the weakened Syrian monarchy and its territory were subject to the Israelite king Jeroboam II during the mid-eighth century (see 2 Kings 14:28).

1:3. threshing Gilead. The Assyrian Annals of Tiglath-Pileser III give a thorough description of how another nation was defeated and left as though it had been run over by a "threshing sledge." The event mentioned here by Amos may relate to the mid-ninth century invasion of Gilead and the Galilee region by the Syrian king Hazael (see 2 Kings 8:12 and the recently discovered Hazael inscription from Tel Dan). For other examples of the use of a threshing sledge, see the comments on Deuteronomy 25:4; 2 Samuel 24:22; and Isaiah 28:28.

1:4. house of Hazael. Because of his achievements in the ninth century (see 2 Kings 10:32-33), the royal dynasty of Aram/Syria became known as the "house of Hazael." This phrase appears in the annals of Tiglath-Pileser III (744-727 B.C.), who reigned a century later than Hazael. Thus Amos is not referring to a specific king but rather to the dynasty and by extension to the country of Aram itself.

1:4. fortresses of Ben-Hadad. See the comment on Jeremiah 49:27.

1:5. Valley of Aven. Because *aven* means "wickedness" or "idolatry" in Hebrew, it is quite likely that this is not a city site but rather a region where Baal was worshiped (compare Beth-Aven = Bethel in Hos 10:8). It is possible that the fertile Beqa' Valley is the target of the prophet's barb.

1:5. Beth Eden. Ninth-century Assyrian annals from the time of Ashurnasirpal II and Shalmaneser III both mention Beth Eden (Bit Adini) as a rebellious Aramean kingdom located about two hundred miles northeast of Palestine, between the Euphrates and the Balikh rivers. Since it was subjugated and renamed in the reign of Shalmaneser III, the appearance of Beth Eden in the eighth-century prophecies of Amos raises the question of whether this is the same place. However, Tiglath-Pileser III's annals continue to use Beth Eden for an area containing Syrian cities, and Amos may just be using that tradition geographic designation. The ruler at the time of Amos was Shamshi-Ilu.

1:5. Kir. See the comments on Isaiah 22:6 and Amos 9:7 for this site designated as the homeland of the Arameans. It is also mentioned in 2 Kings 16:9.

1:6. Gaza in early eighth century. Since Amos uses Gaza as the synonym for all of the Philistine city-states, it was presumably the most prominent at that time. Because of its alliances with the Arab tribes that controlled the trade routes south to Arabia, Gaza was a major commercial competitor of Judah during the reign of King Jehoram (see 2 Chron 21:16-17). After the Assyrians began to expand their influence into Syro-Palestine, however, the political situation became more complicated. Amaziah and Uzziah were able to defeat the Edomites and regain control over the major port on the Gulf of Aqabah (Elath) in the beginning decades of the century (see 2 Kings 14:7, 22). Uzziah also gained victories over the Philistine cities and the Arabs during this time (2 Chron 26:6-7). It is possible that Amos is reflecting on the enmity between Gaza and Judah in this oracle. In any case, the Assyrian Annals of Tiglath-Pileser III (734 campaign against the Philistines) show that as the century wore on the city of Gaza was forced to pay heavy tribute and serve as an Assyrian vassal state.

1:6. selling captives. One of the most lucrative aspects of warfare and border raiding was the slave trade. Captives were easily sold to dealers, who would transport them far from their homeland (see Ezek 27:13; Joel 3:6-7). Note that Mesopotamian administrative texts as far back as pre-Sargonic times (early third millennium) contain ration lists describing persons "belonging to" or "attached to" households or establishments (weaving shops). The actual number of such persons, who are perhaps better described as serfs or service laborers, is not large. Certainly it does not compare to the huge numbers of slaves found in Greek and Roman cities.

1:8. Ashdod in early eighth century. The size of the lower city and its fortifications, built during the tenth century in the Solomonic style found at Gezer and Hazor, suggests prosperity for this Philistine city-state during the ninth and eighth centuries. Excavations in stratum 9 demonstrate that the huge city gate of Ashdod was partially destroyed around 760. This may be attributed to the campaign of Judah's king Uzziah against the Philistines (2 Chron 26:6-7). Prior to Assyrian control over Syro-Palestine, the smaller states of Philistia, Judah, Israel and Transjordan vied for control of trade routes and periodically staged military campaigns as a means of gaining political

hegemony in the region. After 750, however, Assyria and Egypt will use these smaller states as part of their own political maneuvering.

1:8. Ashkelon in early eighth century. Like Ashdod, Ashkelon was one of the five major Philistine city-states (see the comments on Judg 1:18 and 14:19). Most of what we know of the site during the eighth century comes from Assyrian Annals and tribute lists. However, there is not much mention of Ashkelon until the time of Tiglath-Pileser III's 734 campaign. The exotic nature of some of the tribute paid by Ashkelon to the Assyrian ruler (including roles of papyrus and elephantine hides) suggests it had commercial links with Arabia and Egypt.

1:8. Ekron in early eighth century. The site of Ekron shrank in size during the first two centuries of the first millennium. This may be due to Israel's domination of Philistia starting in the reign of Solomon. Some new construction does take place in the eighth century, including a fortress tower, suggesting a resurgence during the period when Judah's king Hezekiah controlled the region (2 Kings 18:8). Excavations have not demonstrated any remarkable wealth or prosperity during the early eighth century, and it may be that its name in this oracle is simply part of the usual listing of Philistine cities (see Jer 25:20).

1:9. Tyre in early eighth century. During the first quarter of the eighth century, King Pygmalion ruled Tyre. This was a time of great prosperity for the Phoenicians, who controlled most of the commercial activity in the Mediterranean. They had just expanded their colonial presence by founding Carthage in North Africa in 815. Interestingly, the Assyrian tribute list of Adad-Nirari III from this period includes the king of Sidon, but not that of Tyre. Apparently Tyre, like a prosperous Israel (see Amos 3:15; 6:4), was able to avoid Assyrian entanglements for the time being.

1:11. Edom in early eighth century. After being added to David's kingdom (2 Sam 8:11-13), Edom eventually rebelled and gained its independence from Judah during the reign of Jehoram (2 Kings 8:20-22). Amaziah was able to recapture at least a portion of Edom's territory (2 Kings 14:7) at the battle of Sela (= es-Sela on Edom's northern border), and by the reign of the Israelite king Jeroboam II (789-749) border clashes and tension continued to exist between Edom and its neighbors.

1:12. Teman, Bozrah. See the comments on Jeremiah 49:7 and 49:13 respectively for these Edomite sites.

1:13. Ammon in early eighth century. Like Edom, the Transjordanian nation of Ammon periodically rebelled against Israelite rule (2 Chron 20:1) and during the eighth century was forced to pay tribute to Judah (in Uzziah's reign, see 2 Chron 26:8). The shift in political fortunes is evidenced in one Assyrian source that refers to Ammonite ambassadors coming to Calah (Nimrud) in the eighth century to present tribute. However, the first king of Ammon to be listed in the Assyrian texts is Shobi, son of Hahash (Tiglath-Pileser III's 733 list).

1:13. treatment of pregnant women. The practice of ripping open pregnant women is mentioned very rarely. It is attributed to Assyrian king Tiglath-Pileser I (about 1100) in a hymn praising his conquests. It is also referred to in passing in a Neo-Babylonian lament.

1:14. Rabbah. See the comment on Jeremiah 49:2 for this city, which served as Ammon's capital.

2:1. Moab in early eighth century. The mid-ninth-century Moabite inscription of Mesha is the only extrabiblical documentary evidence (compare 2 Kings 3:4-27) currently available about this Transjordanian nation prior to Tiglath-Pileser's campaign into the area in 734. The hostilities that may have existed between Moab and the nations of Judah and Israel can be speculated on, but there is no concrete evidence. The crime of desecrating the bones of the king of Edom may be an indicator of Edom's alliance with Judah. However, without a historical context within which to place the event, it remains a mystery.

2:1. burning bones. The outrageous nature of this act centers not only on defiling the graves of the kings of Edom, but also on the further step of burning their bones to make lime (see Is 33:12). In this way all honor and respect is removed from the bodies, and the Moabites could actually point to walls or houses that had been painted with the resulting lime mixture. On the exhumation of human remains see the comment on 2 Kings 23:16.

2:2. Kerioth. Also mentioned in the Mesha inscription as a city where the Moabite god Chemosh had a shrine, this Moabite city has been identified with el-Qereiyat and Khirbet Aleiyan (see Jer 48:41).

2:6-16

Sins of Israel

2:8. nature of irony. The great irony in Amos's charges against the rich is that they display their excesses before sacred altars in a shrine dedicated to God. It is possible that

they were within their legal rights to seize a garment in default of debt or to purchase wine with funds that had been generated by fining the poor for some offense. However, Yahweh had said (Ex 22:25-26) that the outraged cries of the poor would be heard, "for I am compassionate." As in the case of the worker in the Yavneh Yam inscription, the creditor is to not only obey the law but also take into consideration what seizure of property will do to prevent the debtor from earning a living (see Hammurabi's Code, which forbids seizure of a debtor's ox).

2:9. destroyed Amorite. Israel is reminded of the deeds of the Divine Warrior. Prior to the beginning of the conquest, Yahweh had given the Israelites a victory over the Amorite kings Sihon and Og (see the comments on Num 21:21; 21:24-30). Subsequently, the name Amorites becomes synonymous with the inhabitants of Canaan (see Judg 1:34-36 and 7:14).

2:9. fruit above, roots below. Amos uses a literary device known as a merism—paired polar opposites—to depict the total destruction of the Amorites. This is a common practice in prophetic speech (see Is 37:31; Hos 9:6). It is also found in a Phoenician curse formula (fifth-century *Eshmun 'asor* inscription): "May they have no trunk below nor boughs above."

2:11. Nazirites. See the comments on Numbers 6:1-21 for this special class of Israelites who impose on themselves an oath of purification.

3:1-15

Legal Case Against Israel

3:2. choosing family. The verb used in the Hebrew text is "know." The same idiom of a god knowing a family is used in Akkadian texts to describe the care that family gods provide for their worshipers.

3:4. lion behavior. During the hunt a lion will roar to freeze its prey with fear as the lion makes its rush. Following a successful hunt a lion may drag a portion of the kill back to its den to be eaten later. It may growl while lying there as a sign of pleasure at its success or as a warning to other predators to stay away. See similar examples of lion behavior in Isaiah 5:29 and Ezekiel 22:25.

3:5. bird hunting. See the comment on Hosea 7:12 for the details of ancient bird hunting with traps and snares. It has been persuasively set forth by S. Paul that the word NIV translates "snare" should be rendered "bait," thus establishing what everyone knows, that the bird must be lured into the trap.

3:9. mountains of Samaria. Although the city of Samaria was located on a single hill, it was surrounded by a group of hills that were actually higher than the capital city (see the comment on 1 Kings 16:24). If the prophet is talking about affording a vantage point from which to see the ultimate destruction of Samaria, then these hills would be appropriate.

ECONOMIC CHANGES AND SOCIAL CLASSES IN EIGHTH-CENTURY ISRAEL

In the light of the political changes that took place at the beginning of the eighth century (Assyrian expansion and the capture of Damascus), Israel was able to widen its economic interests and restore its hegemony over a greater area of the Transjordan. In addition, both Israel and Judah were ruled during the first half of the century by strong kings (Jeroboam II and Uzziah respectively) with long reigns. This made it easier to establish a comprehensive economic policy that concentrated on the mass production of export items such as grain, olive oil and wine. Large areas of the Shephelah and the lowland valleys had already been given over to wheat production (2 Chron 26:10). Now, in the eighth century, the elite were able to impose this economic policy on the small hill country farms and villages. As a result, previous agricultural strategies that attempted to distribute potential risks between herding and farming were overturned, and the land was given over to specific cash crops. The smaller holdings of the peasant farmers, overburdened with debts, were enclosed into large estates. This very efficient use of the land, however, eliminated the mixed crops that had formerly been grown in the village culture and more quickly exhausted the soil. Leaving fields fallow and grazing animals on harvested fields would have been eliminated or rigidly controlled. Under this new policy, an attempt was made to increase exports to the extent that there was a real hunger problem for the peasant class, while the nobility and merchant-class were able to indulge in the luxury goods supplied by their Phoenician trading partners. Thus in addition to facing rising prices at home on basic goods, such as wheat and barley, the impoverished peasant farmers now found themselves forced into debt servitude or day labor. Seeing them ground under the heel of exploiting employers and cheated by greedy merchants who sold them adulterated or inferior grain for their meals, it is no wonder that Amos harangued the rich for their lack of concern for the poor. In such an atmosphere of social injustice, agricultural specialization and economic speculation, the prophet reminds the Israelites of their covenant obligations. Like the "eloquent peasant" of twentieth-century B.C. Egypt, Amos warns them that corrupt judges and dishonest businessmen can expect no mercy from an angry God.

3:11. time between prophecy and fulfillment. Amos, speaking in the 760s, may have assumed that the Assyrians would ultimately serve as God's instrument to punish Israel, but he does not state this explicitly. In any case, Samaria and the nation of Israel will fall to the Assyrian armies of Sargon II in 722, and much of the population will be deported to other portions of the Assyrian empire.

3:12. shepherd's responsibility. The legal codes of ancient Mesopotamia (including the Sumerian Law Code, Hammurabi's Code and the Hittite Laws) each contained a clause designed to aid shepherds who have lost an animal to a lion or other predator. The shepherd gave his testimony and took an oath before the gods. Presumably, if there was any physical evidence to display, such as "a piece of an ear," then this would also have been brought forward. In that way the shepherd would be above suspicion of theft. The pieces he brought did not suggest survival but were proof of destruction.

3:12. beds/couches. In the midst of the coming destruction the homes of the rich merchants and nobles of Samaria will be looted. The fleeing refugees will only be able to carry away with them fragments of their wealth. Amos satirizes their plight as they scavenge portions (the headboard and footpiece) of their beds. The irony of this is found in Amos 6:4, where the prophet condemns the rich for luxuriating on the ivory inlaid beds and couches.

3:14. altars of Bethel. See the comments on 1 Kings 12:29-30 for the establishment of Jeroboam's royal sanctuaries at Dan and Bethel at the time of the division of the kingdom. Despite Bethel's association with the altars of the patriarchs Abraham and Jacob (Gen 12:8; 35:7), it served as a rival to Jerusalem in Amos's time, and thus its altars are now to be condemned as part of Israel's apostasy.

3:14. cutting off horns of altars. The horns on the altar represented the place of sanctuary (Ex 21:13-14) and they were also associated with absolution and atonement (Lev 16:18). Cutting off these horns removed the altar's special qualities, desecrated it and transformed it into nothing more than a damaged stone. Israel is thus deprived of any hope for asylum or expiation for their sins in the face of the coming destruction.

3:15. winter and summer houses. One of the signs of luxury displayed by the rich of Samaria was two residences. A summer residence in Samaria took advantage of the cooler climate of the central hill country of Israel, and a winter home, possibly in the warm Valley of Jezreel, allowed residents to escape the extremes of weather and temperature. There are a number of examples of kings being able to indulge in climatic migration from one official residence to another, including the eighth-century Aramean king of Sam'al, Barrakub, and Cyrus, the king of Persia.

3:15. ivory adornment. Excavations at the site of ancient Samaria have revealed fairly large quantities of ivory that had been used to decorate furniture and the walls of the Omride palace (see the comment on 1 Kings 22:39). There are both Egyptian and Phoenician/Syrian decorative styles employed, including representations of the god Horus, lotus blossoms and the "lady in the window" motif. The Iron Age ivories differ from those of the Late Bronze (best represented by those found at Megiddo) with the addition of glass paste and inlaid semiprecious stones. It is possible that some of these ivories were carved and decorated by native Israelite craftsmen, but more likely they are expensive imports.

4:1-13

Judgments with No Effect

4:1. cows of Bashan. Once again demonstrating his background as a herdsman, Amos uses the finely bred cattle of Bashan as a metaphor. These prize animals grazed on the lush grass available in this region in Transjordan on either side of the Yarmuk River (see Deut 32:14). Amos compares these fine cows to the self-indulgent wives of the nobility and wealthy merchants of Samaria. Neither these cows nor these women are capable of seeing beyond their own personal needs and desires (compare Is 3:16). The women, like totally self-absorbed grazing cows, cannot even imagine that people may be starving while they call for another cup of wine or another extravagant meal. It is difficult to say for sure whether the reference is to domesticated pampered cattle or to undomesticated ferocious cattle. Both could be found in Bashan and either picture can make sense of the analogy.

4:1. upper-class women. The prosperity that had come to Israel's merchant class and nobility during the first half of the eighth century B.C. is the direct result of the spreading Assyrian hegemony. In 802 the Assyrian king Adad-Nirari III captured the city of Damascus and effectively removed Syria from its position as chief political and economic rival of Israel. For a brief time, therefore, the city of Samaria and the rest of Israel enjoyed a period of peace and prosperity that brought wealth and allowed for amazing self-indulgence in luxury goods and new construction projects.

Amos targets the wives of these prosperous individuals, singling them out as a base cause for the oppression of the poor. The covenant had placed obligations on the Israelites to care for the less privileged, but what Amos sees are persons who do not count the human cost that pays for their high living.

4:2. hooks, fishhooks. The Hebrew here is very uncertain. An attractive suggestion has been made that the verse describes not what fish are caught with but what they are transported in (baskets and pots). This metaphor is known from the prophetic literature of Mari, where the king's enemies are portrayed as wriggling like fish in a basket. Fishing in Mesopotamian streams and rivers was done with woven baskets (sometimes made from thorn bushes). In fact there is no evidence of the use of fishhooks in Mesopotamia after 3000. Amos's metaphor of the capture of the Israelites after the siege of Samaria may be better translated as "fish baskets." If hooks are in view, however, it is possible that he is referring to the grappling hooks that were used during the siege and that might have been used to impale and drag prisoners.

4:3. Harmon. Since this word occurs only here, there have been a number of suggestions on its meaning. Some scholars consider it a place name and thus the place where the captives are exiles. Among the suggestions here are Mount Minni in Assyria (see Jer 51:27) or Hermal near Kadesh on the Orontes River. For those who emend the text, the translation of "dung heap" for *hadmon* (exchanging a single letter for one that looks similar) is the most likely since it is a suitable place for the disposal of the bodies of prisoners.

4:4. cult sites at Bethel and Gilgal. Bethel has a long history of cultic activity, ranging back to the construction of an altar there by Abraham (Gen 12:8) and Jacob's dream there (Gen 28:10-22). It took on an ominous quality for Amos when it was designated as one of the two major cultic centers by Jeroboam (1 Kings 12:29-30). Cultic activity at Gilgal appears in the conquest narrative when the Israelites cross the Jordan and Joshua raises a memorial to commemorate the event (Josh 4:19-20). It is possible that after the division of the kingdoms, Gilgal was seen as a northern worship site because of its association with Saul (see 1 Sam 11:15 and 15:21). Hosea also condemns this place as corrupt (Hos 4:15 and 9:15).

4:4. three-year tithes. The better reading of the Hebrew here would be "on the third day" or "every three days" (instead of every three years, see NIV note). It is possible that Amos is satirizing an aspect of the northern kingdom's cultic practice. There is a possibility that free-will offerings and noncompulsory tithes (compare Gen 14:20) were given at the sanctuary shortly after arrival or were tied to some coming event or vow. To Amos, however, such frequency of offerings cannot replace true piety or obedience to the covenant.

4:9. blight and mildew. Farmers are only too aware of what the forces of nature can do to their crops. Here God attempts to get Israel's attention by destroying the harvest. First, the sirocco winds strip all of the moisture out of the air and the plant life. Then, too much rain falls and the crops turn yellowish-brown and wither in the fields. See the comment on curses in Deuteronomy 28:22.

4:9. locusts. Insects can also play havoc with growing crops as well as the leaves on olive and fig trees. For another example of locust swarms and their relation to God's anger see Joel 1:4-7. Akkadian Mari texts report that locusts descended on a town and another explains that the harvest could not be completed because of the swarm of insects. For information concerning the devastation caused by locusts see the comment on Exodus 10:1-20.

4:13. connection between wind and thoughts. In Hebrew the word translated "wind" is the word that is also often translated "spirit." It is not so much that the word had two different meanings but rather that in the ancient world they did not find it so easy to differentiate between wind and spirit. In Mesopotamian thought the gods gave revelation of their thoughts through dreams. The messenger who brought these dreams was named Zaqiqu. The common word *zaqiqu* refers to a ghost or a phantom. It derives from the verb *zaqu*, which refers to the blowing of the wind, or to the breath of a god.

5:1-27

Seeking the Lord

5:5. Bethel, Gilgal. See comment on 4:4.

5:5. shrine at Beersheba. The discovery of a large horned altar in the excavations of Tell es-Saba' dating to the Iron II period provides corroboration of cultic activity at this southern site. It is mentioned in the ancestral narratives (Gen 21:33) and is the site where Samuel's sons operated as judges (1 Sam 8:1-2). The destruction of shrines outside Jerusalem by King Hezekiah (Arad, Beersheba; 2 Kings 18:4) may be a reflection of Amos's condemnation of these sites.

5:8. Pleiades and Orion, constellations in ancient world. Textual evidence from Babylonia, including the "Venus tablet" of Ammisaduqa (c. 1650), indicates that astronomical studies

were conducted with skill and precision. Although astrology was also prevalent in late Egyptian periods and in Persian period Mesopotamia, it seems that this divinatory activity, interpreting omens (see Is 47:13) is only an extension of the work of a true science. There are records of the movement of the planets, placement of the major fixed stars and constellations, as well as descriptions of the phases of the moon and solar and lunar eclipses. Given the widespread knowledge of the stars and the planets in both Mesopotamian and Egyptian cultures, it was important for the biblical writers and prophets to attribute these celestial bodies to Yahweh's creation (see Job 9:9). Mesopotamian constellations included animal figures such as a goat (Lyra) and snake (Hydra); objects such as an arrow (Sirius) and a wagon (Big Dipper); and characters such as Anu (Orion). The most popular of the constellations was Pleiades, often portrayed on seals even in Palestine and Syria. Neo-Assyrian texts preserve sketches of stars in constellations. A prayer to the gods of the night from about 1700 B.C. invokes the constellations by name, calling on them to give answers to the diviner seeking an omen.

5:11. stone mansions. This refers to houses using hewn stone (called "ashlar"), for many of the houses in Israel used rough fieldstones in construction. Often the foundation was stone while the superstructure was of sun-dried mud brick. Only the very wealthiest of the upper class would have been able to afford this carefully dressed masonry. The limestone used for this construction was quarried near Samaria. The curse used here is called a "futility curse" because it calls for their efforts and labor to become futile, and it can be compared to an inscription on a Babylonian boundary stone calling on the gods to see that anyone who builds a house on stolen land should have the house taken from them.

5:12. judicial bribes and oppression. One of Amos's principal themes is criticism of social injustice (see Ex 23:6-8; Deut 16:19; and Hammurabi's Code for laws against bribery). There is a long history of peasant or wisdom literature pleading for justice under the law and from kings and officials. For example, in a collection of Babylonian Wisdom sayings the "unscrupulous judge" is one who accepts a present "and yet lets justice miscarry." Similarly, the twenty-first century "eloquent peasant" in Egyptian literature charges that "lawmakers approve of robbery" and "the inspector condones corruption." The tenth-century Babylonian "Theodicy" decries people who "fill the storehouse of the oppressor with gold" while they "empty the larder of the beggar of its provisions."

5:20. day of the Lord. See sidebar at Joel 2.

5:21. religious feasts and assemblies. Amos's attack is addressed at the empty, mechanically celebrated *ḥagîm,* the technical term for the three major pilgrimage festivals (Feast of Unleavened Bread, Feast of Harvest and Feast of Ingathering—see the comments on Ex 23:15-16). Religious festivals offered frequent opportunity for celebrations, communal meals and social gatherings. What had been designed as a means to praise and honor God, however, was not bringing any pleasure to him.

5:23. music in worship. Mesopotamia and Egypt have long histories of both popular and religious music that also must have been known to the Israelites. Professional musicians, like the *kalu* harp-player so well attested in ancient texts from Old Babylonian Mari and Sumerian Uruk, may well have been the model for the Levitical musicians in the Jerusalem temple as well as the musicians in the northern shrines of Dan and Bethel. The types of instruments, liturgical chants, penitential prayers and laments, and hymns of praise created by these ancient civilizations set a standard of style and composition for the Near East. Ancient Egyptian tomb paintings demonstrate the postures of dancers as well as a wide variety of musical instruments. One example of the technical expertise employed in sacred music is found in the Psalms associated with the recitation of the creation story—Psalms 8, 19, 104 and 139. They contain both the literary as well as the musical elements (based on the superscription rubrics, choral markers and assonances in the text) needed for a proper performance of music during worship and the enactment of sacred drama.

5:26. shrine of the king. Because of a mistaken belief that the god Sikkuth was not introduced until after the Assyrian conquest (see 2 Kings 17:30), there has been an attempt to emend the Hebrew so that the text is read "shrine" or "abode" of the king. In fact, Amos's statement probably reflects the degree of cultural influence exercised by Aramean merchants and other travelers on the Israelites. Sikkuth or ^{d}SAG.KUD is associated with Ninurta in Ugaritic sources and specifically with the planet Saturn.

5:26. pedestal of idols. This translation is also an attempt to remove the name of an astral deity from the text with an emendation of the word *kiyyun.* The Mesopotamian star god, Saturn, occurs as *kajamanu* in Akkadian texts and has the meaning "the steady one," an apt title

for the slow-moving orbit of the planet Saturn. The images of these astral deities were carried in procession on their festival days.

5:26. star of your god. Since both of the gods mentioned in this verse are associated with the planet Saturn, the phrase "star of your god" is actually a reference to the people's worship of astral deities. Sacred processions paraded the images and symbols of these gods through the city streets to their shrines, where sacrifices, sacred dancing and other cultic activities would take place. Amos, however, is satirizing these practices. Instead of simply describing what has been occurring, he now predicts a "final" procession, but this time the people carry these idols with them into exile (compare the carrying of burdensome idols in Is 46:1).

5:27. exile beyond Damascus. Since the Assyrians are never directly mentioned in Amos, it is unclear that this is what he meant when he spoke of the coming exile of the people of Israel. Using such an imprecise phrase as "beyond Damascus" is reminiscent of Jeremiah's threat "from the north" (Jer 1:14), and both simply indicate the direction of Mesopotamia as the source of the coming destruction.

6:1-14

Woe and Indictment Oracles

6:1. Mount Samaria. For Amos's parallelism to work most effectively, Mount Samaria would have to also contain a worship center just as Mount Zion does in Jerusalem. It is likely a reference to the acropolis section of the city where the temple and palace would be located. Considering Micah's condemnation of Samaria and its idols (Mic 1:6-7) and Isaiah's reference to "Samaria and her images" (Is 10:11), it seems likely that Israel's capital had a major shrine during the reign of Jeroboam II.

6:2. Calneh and Hamath. Although its exact location is still uncertain, Calneh, the capital of the ancient state of Unqi, was most likely situated in the Antioch plain, near Aleppo. Hamath (modern Hama, almost 100 miles south of Aleppo and about 130 miles north of Damascus) is located on the Orontes River. (for more information see the comments on Is 10:9). Though both suffered destruction at the hands of the Assyrians in 738, Israel was also paying tribute at that time too, so Amos cannot be that late. We know too little of the history of northern Syria in the decades preceding Amos to identify what else he may be referring to.

6:2. Gath. Gath has been tentatively identified as Tell es-Safi, five miles south of Tell Miqne/Ekron. Of the five major cities of the Philistines, it was the closest to Judah. There has been little excavation at the site, though it has been confirmed that there are Iron Age remains. The city was located by the Elah Valley, one of the principal passes from the coastal plain into the hill country surrounding Jerusalem. It was the target of an attack by Uzziah of Judah (referred to in 2 Chron 26:6) in the time of Amos.

6:4. beds inlaid with ivory. The idea of a bed made from some exotic or luxurious material is reminiscent of King Og's iron bed in Deuteronomy 3:11 (see also Solomon's ivory throne in 2 Chron 9:17-19). Sennacherib's Assyrian Annals mention that Judah's king Hezekiah included a couch inlaid with ivory among his tribute items. Ivory decor was very popular at this time for inlays in furniture and for wall panels. One of the principal sources of ivory was elephant tusks, which were imported from Aram (where Syrian elephants were not yet extinct at this time). Elephant hides and tusks, as well as live elephants, were at times included in tribute payments. Excavations at Ashurnasirpal's palace at Kalah produced some very fine ivory carvings decorating the walls. Over five hundred ivory fragments have also been found in the excavations at Samaria dating to the ninth and eighth centuries B.C. Many feature Egyptian and Phoenician artistic motifs.

6:4. choice lambs, fattened calves. For those who could afford it, the best quality meats came from specially bred sheep and cattle that were kept in stalls (see Mal 4:2) and fattened with barley prior to slaughter. Presumably, these ancient feed lots could command a higher price and were well known (see Jeremiah's metaphor for overfed mercenaries in Jer 46:21). Evidence of this breed of sheep (Akk. *kirru)* is found in Ur III economic texts dating to the twentieth-century B.C.

6:6. wine by the bowl. The term used for bowl here is one that is usually associated with cultic activity (see Ex 24:6-8; Num 7:13). That suggests that Amos is accusing them not only of drinking to excess in large bowls but perhaps also of profaning sacred objects. Note that archaeologists have found a number of golden drinking bowls in tombs at Nimrud dating to the late Assyrian period, some of which have the names of Assyrian queens engraved on their sides.

6:6. fine lotions. Banqueters in the ancient world were often treated by a generous host to fine oils that would be used to anoint their foreheads. This provided a glistening sheen to

their countenance and also would have added a fragrance to their persons and the room. For example, an Assyrian text from Esarhaddon's reign describes how he "drenched the foreheads" of his guests at a royal banquet with "choicest oils." Since Amos may be condemning the people for misusing cultic vessels in this verse, he may also be taking them to task for using the oils that would otherwise have been used as part of cultic practice (see Ex 30:31-32).

6:7. feasting. The word translated "feasting" here is a technical term for a funeral meal (more like a festal memorial meal; thus the use of vessels and oils usually connected with cultic rites). The term occurs only here and Jeremiah 16:5, although it is well known in many other Semitic traditions. Extrabiblical references to the funeral meal have been found in Ugaritic texts, in Aramaic texts from Elephantine (Egypt) and in inscriptions in Punic, Nabatean and Palmyrene. All of the elements listed in these verses are connected with these feasts: meat and wine, music, anointing and lounging.

6:10. burning the bodies. The burning of bodies was not a common practice (but see comments on 1 Sam 31:12 and 2 Chron 16:14), and the spelling of the verb is unusual. This has led a number of interpreters to an alternative reading such that the text does not suggest burning the body but embalming it with spices for burial.

6:10. not mentioning the Lord's name. God's wrath is such that the population of the city of Samaria is to be reduced to a tenth, and the survivors will be so frightened by what Yahweh has done that they will be afraid to mention God's name lest the angry deity take any further notice of them. In that sense then, the command "Hush!" is a sort of warding spell (like "God forbid" in English) to prevent the incautious from invoking God (compare Ex 23:13 and Josh 23:7). Assyrian royal documents from the reign of Enlil-Nirari (1326-1317) provide some light here. In one text the king calls out, "May the god by no means speak!" when the death of a member of the royal family is announced at court. His intent may be to ask that the god not act (speak) against anyone else.

6:13. Lo Debar. This site, one of those captured by Jeroboam II during his Transjordanian campaign (2 Kings 14:25), is most often identified with Tell 'el-Hammeh, just north of the Jabbok River, in what would have been Ammonite territory. Amos parodies this victory by revocalizing the city name to *Lo-dabar,* which means "nothing." He mocks their false pride in these flimsy accomplishments that are as nothing to God's victories.

6:13. Karnaim. This important site is located in Bashan at Tell es-Sa'ad, on a northern tributary of the Yarmuk River (see Gen 14:5 and 1 Macc 5:26). Tiglath-Pileser III made it the capital of the Assyrian province of Qarnina when he conquered the region in his 738-737 campaign.

6:14. Lebo Hamath to the Wadi Arabah. See the comment on 2 Kings 14:25 for King Jeroboam II's attempt to restore Israel's borders.

7:1–9

Punishment Alternatives

7:1. locusts. See comment on 4:9.

7:1. king's share. Although it is not mentioned elsewhere in the biblical text, this reference indicates that the king was entitled, as a form of tax, to a portion of the mown grass. This may have been a measure instituted to insure the king's chariot horses and cavalry had sufficient fodder. A reverse example of this is found in a land grant made by the Assyrian king Ashurbanipal to one of his officials. This decree exempted the official's new lands from being levied for straw, grain or a portion of his flocks.

7:7. plumb line. This traditional translation is no longer acceptable, based on the recognition that the Hebrew *'anak* is a cognate of the Akkadian *annaku,* meaning "tin." A plumb line would have a lead or iron weight attached in order to determine that a wall is perpendicular during construction. S. Paul suggests this stands for a tin wall, a symbol of how weak or fragile Israel's defenses are (compare the iron walls in Jer 1:18; Ezek 4:3). For now the exact meaning of this phrase remains uncertain.

7:10-17

Amaziah Confronts Amos

7:10. prophetic message as treason. Throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. In Assyrian king Esarhaddon's instructions to his vassals, he requires that they report any improper or negative statements made by anyone, specifically naming prophets, ecstatics and dream interpreters. It is no wonder, then, that a prophet negatively disposed toward a king had to be controlled lest he bring about all sorts of havoc. One can perhaps understand why a king would be inclined to imprison a prophet whose very words

might incite insurrection or impose doom.

7:13. king's sanctuary. Bethel was one of the two royal sanctuaries established by King Jeroboam to serve as alternative worship centers for the people of the northern kingdom (1 Kings 12:26-30). Amaziah's post was a political appointment since the priesthood at Bethel was established by the crown rather than being attached to tribal lineage as the Levites were (1 Kings 12:32). Naturally his loyalties were to the king, and he was very offended by any criticism of either the king or the shrine at Bethel. The state temple was one in which the king himself participated in the ritual activities.

7:14. shepherd. No village in Judah's central hill country could afford to engage in a single economic activity. Every household would have had their small fields of wheat and barley, as well as a small vineyard, a few fig trees and olive trees on their land. In this way they could hope that at least some of their agricultural endeavors paid off. In like manner, a few sheep, goats and cattle would have served as an economic hedge. It would have been easy enough to allow them to graze on the hillsides, accompanied by a boy (see David's occupation in 1 Sam 16:11). A Mesopotamian parallel to this practice is found in the Akkadian word *naqidu*, a term used for a breeder of cattle, sheep and goats.

7:14. caring for sycamore figs. The sycamore figs *(Ficus sycomorus L.)* originated in east central Africa and spread to Egypt and the Near East by the Iron Age. The trees are capable of as many as six crops per year. Since the fruit is inferior to that of the common fig *(Ficus carica L.)*, the poor principally consume it. Date gardens take up to twenty years to reach their full productive potential. They require much attention because they have to be pollinated by hand. The care of the sycamore fig requires that the fruit be gashed or pierced to encourage an increase in ethylene gas that speeds the ripening process. The knife used to gash the fruit is depicted in Egyptian tomb paintings in Thebes.

8:1-14

Ripe for Judgment

8:5. clash between economic and religious concerns. As Nehemiah discovered several centuries later in Persian-period Jerusalem, the desire of merchants to conduct business sometimes makes their compliance with religious law and Sabbath regulations a matter for complaint or even circumvention (see comment on Neh 10:31). There were religious festivals in surrounding cultures (see comment on Ex 20:8-11), but only Israel was commanded to obey the sabbath law and cease all work (see comment on Ex 31:12-17). This restriction on trade caused friction and apparently contributed to corrupt business practices as a way of "making up" the losses.

8:5. cheating in the market. Certainly, Amos's complaints against Israelite merchants are not unique. For instance, the charge made against merchants that they use false balances is found in the Egyptian *Instruction of Amenemope* and in a clause in the Babylonian wisdom literature. Similarly, Hammurabi's Code contains a statement about bankers who "use a light scale to measure the grain or the silver that they lend and a heavy scale to measure the grain or the silver that they collect."

8:6. sweepings with the wheat. In their efforts to squeeze as much profit as possible from their holdings, grain merchants were cheating the poor by selling the "husks" of the wheat. A similar charge is made in the Egyptian *Tale of the Eloquent Peasant* against those who "substitute lesser for better goods." The word translated as "sweepings" occurs only here, but it is related to the word "to fall" and reflects the poorest quality or that which is left over.

8:8. rising like the Nile. There is a three-month inundation cycle in the flow of the Nile River (from August to October). The increase in volume is the result of monsoon rains in Ethiopia that swell the Nile and its tributaries. Although the height of the inundation is irregular, the Egyptians early in their history learned to make efficient use, through irrigation canals and other means, of whatever the rise of the Nile brought to them.

8:9. sun go down at noon. Since a lunar or solar eclipse was considered a portent of evil or the anger of the gods in the ancient Near East, there are many citations in the literature. Among them is the prediction by the prophet Balaam in the Deir 'Alla inscription that the divine assembly has decided to "bring darkness instead of light." Priests of the moon god Sin in Babylonian would wear torn garments and sing dirges during an eclipse, and there are numerous letters and omen texts in Babylonian and Assyrian records referring to eclipses. Many are written to kings either warning them of a coming eclipse or assuring the monarch that they will be kept informed of the likelihood of coming occurrences. For biblical examples see Joel 3:15 and Zechariah 14:6.

8:10. mourning practices. See comments on Genesis 37:34-35; Leviticus 19:28; and Deuteronomy 14:1-2.

8:12. sea to sea. In their staggering search for

water during the drought, the people will search from one end of the kingdom to the other. From "sea to sea" is used fairly often to distinguish east and west (from the Mediterranean in the west to the Dead Sea or Jordan River) by the biblical writers (see Ps 72:8; Zech 9:10). A similar expression occurs in the Karatepe inscription of the Aramean king Azitawada: "from sunrise to sunset" (see Is 45:6) for east to west or a sense of universality. Since it is combined here with "north to east," it is possible that it defines the southern latitudinal border of the northern kingdom.

8:12. north to east. The southern boundary has been defined in the previous line, and the western boundary is obvious. From Bethel one could still search to the Galilee region to the north, heading for places like Samaria or Dan, and to the east, whether Beth Shan or the Transjordan territory of Gilead.

8:14. shame/Ashima. While the uncertainty with this word has led to its being translated "shame," it seems most likely that it is a reference to the Syrian god Ashima (NIV note). This deity's title comes from the Aramaic for "the name" and thus is a shorthand for any number of the northwest Semitic gods and goddesses (Baal, Anat, Astarte). Although official introduction of the worship of Ashima does not occur until after 722, this does not preclude this god's being worshiped in Samaria before this time. Later evidence for worship of Ashima comes from the Elephantine letters.

8:14. god of Dan. Since Jeroboam I had instituted the worship of Yahweh at Dan by creating a royal sanctuary there (1 Kings 12:28-30), it is appropriate for Amos to refer to the god of Dan. He is probably also referring to the golden calf placed there by Jeroboam as a symbol of Yahweh and as a substitute for the ark of the covenant. Dan continued to have cultic significance for many centuries. Evidence of this is found in a late-third-century bilingual (Greek and Aramaic) inscription that contained the phrase "to the god who is in Dan."

8:14. god of Beersheba. Amos now completes his condemnation of false worship practices among the Israelites by a reference to the "way" of the "god" of Beersheba. "From Dan to Beersheba" is a common phrase for the full extent of the land (Judg 20:1; 1 Sam 3:20), and Amos uses it to demonstrate the universality of Israelite apostasy (see Amos 5:5).

9:1-15
Coming Destruction and Restoration

9:1. tops of the pillars. In order to describe how complete the coming destruction will be, Amos again employs a merism. This time his range is from the top to the bottom of the shrine at Bethel, from the capital that decorates the top of the pillars to the doorjamb (see Zeph 2:14). It is possible to compare these earth tremors to Isaiah's call narrative (Is 6:4), but there it is just a reflection of God's magisterial presence. Ancient Near Eastern examples of similar destruction mention walls, gates, doors or doorjambs being smashed or demolished (including the Gilgamesh Epic and the inscription of Tukulti-Ninurta I).

9:2. grave/heaven contrast. Amos employs a merism contrasting the cosmic distances between heaven and the depths of Sheol (see Ps 139:8). The boasting of Mot in the Ugaritic *Hymn to Baal and Anat* also provides this contrast to the powers of the underworld or death to that of heaven and life. In the ancient world, heaven and the netherworld were not considered to be "spiritual" places outside of the cosmos. Rather, they represented the extreme ends of the cosmos.

9:3. top of Carmel. As part of this series of phrases warning the Israelites that they cannot hide from God's wrath, Amos uses the image of the highest point within their nation. Mount Carmel stands eighteen hundred feet above sea level and is a commanding presence, with dense forests and many caves that some might presume to be excellent hideouts (see the comment on Amos 1:2).

9:3. serpent in the bottom of the sea. From the mountaintop to the bottom of the ocean, there is no place to hide. Even at these depths, God can command the sea serpent to do his biding (compare Jon 1:17). The Israelites knew well the tradition of Yahweh subduing the great sea creatures (see comment on Ps 74:14 and 104:26). Similar contests of strength are found in the Babylonian creation epic, *Enuma Elish,* and the Egyptian hymn to the sun god, Ra, who must repulse the dragon Apophis repeatedly in order to complete his circuit across the skies. For more information see comments on Genesis 1:20; Exodus 7:1; and Isaiah 27:1.

9:6. cosmic temple. Amos's attempt to express God's complete control over all creation begins with a multistoried or many-chambered sanctuary or palace in the heavens (compare Ps 78:69; Is 66:1). These "upper chambers" bind together the vaults of heaven while at the same time rest upon the waters (see Ps 104:3). A precedent for these lofty chambers is found in the *Enuma Elish.* It contains a description of the building of the Esagila temple to Marduk in Babylon in which the gods "built a

stage-tower as high as Apsu (waters above the heavens)." In the biblical and ancient Near Eastern view the cosmos was a temple and the temple was a microcosmos.

9:7. Cushites. See the comment on Numbers 12:1 for a description of these people from ancient Nubia in the Sudan south of Egypt.

9:7. Philistines from Caphtor. For a Philistine connection with Caphtor (Crete), see the comment on Jeremiah 47:4. Ezekiel 25:16 connects them with another of the Sea People groups, the Kerethites. See the comment on Deuteronomy 2:23 for their connection with the Avvites. The prophet uses the universalism theme to show God's concerns for all nations. The Philistines and Arameans, like the Israelites, had been brought to Palestine, but Israel's covenant relationship with Yahweh now required them to be singled out for punishment.

9:7. Arameans from Kir. Amos refers to Kir as the homeland of the Aramean tribes here, but 2 Kings 16:9 speaks of Kir as the place where the conquering Assyrians exiled the Arameans after King Rezin was executed. Isaiah 22:6 seems to support this latter reference since it speaks of Kir in relation to Elam, south and east of the Tigris River. Assyrian records from the reign of Tiglath-Pileser I (1115-1107) speak of the migration of these tribes into Assyria during the twelfth century. What Amos may be doing here and in 1:5 is to point out that just as the Arameans had been sent back to their place of origin, God just as easily could dispatch the Israelites from the land of Canaan.

9:9. grain in a sieve. The work of processing harvested grain included crushing the stalks on the threshing floor with a sled, winnowing (see Jer 4:11) and finally using a sieve to separate the kernels of grain from small stones and other debris. The sieve mentioned here *(kebarah)* has large holes and works best when shaken sideways and in a circular motion. This ordinarily forces the debris to the sides and allows the kernels to fall to the ground where they can be collected (see Ecclus 27:4). The initial NIV translation of *ṣeror* was later corrected from "kernel" to "pebble" to reflect the true action of the sieve.

9:12. remnant of Edom. Amos employs the phrase "the remnant of" two other times (1:8 for the Philistines and 5:15 for Joseph). In this case he may be referring to a portion of the territory of Edom rather than to all of it. King Uzziah had captured the Edomite port at Elath (2 Kings 14:22), and it has subsequently been lost again in the reign of Ahaz (2 Kings 16:6) to the Syrians and Edomites. In this eventual restoration of the Davidic kingdom, Amos may have this valuable port city in mind.

OBADIAH

1. Edom. The principal theme of the book of Obadiah is an indictment of Edom for its crimes against Judah. This nation, located south and east of the Dead Sea, has a mixed tradition among the Israelites. Much as Jacob and Esau, the traditional founders of the two nations, had an ambivalent relationship, so Edom is at times seen as a friend and ally (Deut 2:2-6; 2 Kings 3:9) and on other occasions as a deadly enemy (Num 20:14-21; Amos 1:11-15). During the period of the Neo-Assyrian empire and the Neo-Babylonian empire (734-586) Edom had been a vassal state. Most likely Obadiah's complaint against Edom relates to its participation in the final destruction of Jerusalem and the exile of its people by Nebuchadnezzar of Babylon in 587-586 B.C., but records are unclear concerning the precise role that Edom played.

1. envoy building coalition. When nations went to war in the ancient Near East, it was necessary to call on all covenant partners and vassal states to send troops and supplies for a combined effort. Messengers would be sent to call on them to honor their treaty commitments and conscript the specified number of soldiers (seen in 1 Sam 11:3-4 and the reciprocal defense pact found in the treaty between Pharaoh Rameses II and the Hittite king Hattusilis III). The Mari texts even describe the practice of sending envoys to the temple of a god to inform the deity of the military situation and call on his aid in the coming conflict.

3. topography of Edom. The region of Edom is a mountainous land, dominated by ridges that extend from the Zered River south to the Aqaba. The area is filled with mountain peaks rising as much as fifty-seven hundred feet

above sea level, sharp crags, caves and clefts in which armies could hide. A number of Edomite cities were also located in these nearly inaccessible sites, such as Bosrah and the rocky peak known as Umm el-Biyara in Petra, which some identify with Sela.

5. significance of grapes. Edom was known for its fine mountain-side vineyards. The destruction of the country is likened to the double despoilings of thieves and gleaners. What the thieves or harvesters leave, the gleaners will take. All that will remain is the rotten and crushed fruit left on the ground.

6. Esau/Edom connection. The use of Esau interchangeably with Edom is based on the understanding of Esau as the ancestor of that nation in Genesis 36:31-39 (see Mal 1:2-3). There one finds a list of eight kings who reigned in Edom prior to the establishment of the Israelite monarchy.

6. hidden treasures. This phrase occurs only here in the Old Testament and cannot be adequately translated because of its unusual formation and the lack of additional use elsewhere to help supply a context. Similar words in Isaiah 45:3 and Jeremiah 49:10 provide the basis for the current translation. What is indicated by the text is the thoroughness of the plundering of Edom. Secret treasuries were known in the ancient world, but this was especially appropriate to Edom, where, because of the terrain, whole cities could be kept secret.

7. breaches of international etiquette. Treaties between nations, such as that between Egypt and the Hittite empire (Rameses II and Hattusilis III) or the Vassal Treaties of the seventh-century B.C. Assyrian king Esarhaddon, functioned as mutual defense pacts and required the signatories to provide arms, information and legal reciprocity. Edom is accused here of a total breach in these agreements: refugees have been forced back to their own borders without any relief; nonaggression clauses by covenant partners have been violated; and hospitality customs, in which eating a meal together is the basis of peace agreements (seen in Ps 41:9 and phrases in Mari and El Amarna texts referring to covenant meals), have been completely ignored. The breaking of treaty agreements when convenient or beneficial is well attested in the ancient world. Examples include Egypt's failure to supply needed troops to the Canaanite kings during the Amarna period and the Babylonian king, Nabonidus, breaking his treaty with the Medes in order to make one with the Persians, whom he considered a greater threat.

8. reputation of wisdom of Edom. The tradition of Edomite wisdom can be somewhat substantiated by the nation's association with Job (from Uz, which is considered by some to be in Edom) and with Job's friend Eliphaz the Temanite. Living on the fringe of the northern Arabian desert and benefitting from the caravan trade and accessible copper deposits, it may be that Edom was known for its business acumen or diplomatic shrewdness (see the parallel statement in Jer 49:7).

9. Teman. There is some difficulty in pinpointing the exact location of the tribal territory of Teman. Some scholars tie it to Bozrah, identified as its capital city after the eighth century B.C., and place Teman in the northern region of Edom. However, a number of others, using the references from the fourth-century A.D. historian Eusebius, locate Teman in the southern part of Edom and tie it to the ancient king Husham (Gen 36:34). The Kuntillet 'Ajrud inscriptions also mention "Yahweh of Teman" and suggest a southern location for this region. In this passage it is synonymous with the nation of Edom.

10. violence against Jacob. The fraternal relationship between Edom/Esau and Jacob/Judah is common in Obadiah (see comment on v. 6) and thus does not have to denote a treaty arrangement. This adds to the shock and shame of violence done against a neighbor with traditional kin ties. The word used here for violence has a range of meaning, from murder and rape to wickedness and bloodshed. In this instance it serves as a "shock term" to emphasize the degree of damage inflicted and the justification for Edom's punishment. The Neo-Assyrian annals make similar statements expressing anger and amazement when a treaty partner revolts and military reprisal becomes necessary.

11. casting lots for Jerusalem. The practice of casting lots as part of the divination process in Babylonia and Assyria is described in the comment on Urim and Thummim in Exodus 28:30. The greed with which the invaders look upon Jerusalem suggests visions of looting and great wealth that will result from the city's destruction (see Is 17:14). Armies regularly established criteria for the division of spoils (seen in the penalties imposed on officers in the Mari texts who fail to share this wealth with their soldiers). Casting lots may have been one method for distribution of goods and slaves, since it implied divine intervention.

16. drinking on the holy hill. Edom initially drank in celebration of Jerusalem's fall along with her allies. Ultimately, however, it will be Edom, along with the nations who have par-

ticipated in Jerusalem's destruction, who will be forced to drink perpetually from Yahweh's "cup of wrath" (see Ps 75:8; Is 51:17; Jer 25:15-16).

19. territorial changes. What is envisioned here is both retribution against Israel's enemies and the reclamation of all of Israel's traditional territories. Thus the Negev, synonymous with the area around Beersheba and the lower portion of the Dead Sea, would take over the territory of Edom. The Shephelah, a narrow ridge of land between the coastal plain and the hill country, would expand into the Philistine city-states. Ephraim and Samaria, the region conquered by the Assyrians in 721, would be reclaimed by the people of Judah. And, finally, Gilead in Transjordan (stretching from the lower Galilee to the Arnon River) would once again be ruled by Benjamin (the tribal territory between Bethel and Jerusalem).

20. Zarephath. Located on the coastal highway between Tyre and Sidon in Phoenicia, Zarephath is depicted as the restored Israel's northern border. A commercial center specializing in the processing of purple dye and manufacture of ceramics, this town is mentioned in Egyptian records from the thirteenth century and is included in the list of cities that surrendered to the Assyrian king Sennacherib in 701 (see 1 Kings 17:9).

20. Sepharad. Possible locations for this site range from Spain to the Hesperides to western Media. These identifications are based on place names and some textual evidence from the Neo-Assyrian period. However, the most likely site for Sepharad is Sardis in western Asia Minor. This was the Lydian capital during the Persian period, and a bilingual inscription found there names the city in Aramaic with the same consonants as the Hebrew name in Obadiah. This would be a very far distance for exiles from Jerusalem to travel, but the implication in the text is that even the most distant would return to reclaim a portion of the land.

JONAH

1:1-17
Jonah's Flight

1:1. chronology. Jonah is known from 1 Kings 14:25 as a prophet in the time of Jeroboam II who reigned in the first half of the eighth century B.C. (see comments on 2 Kings 14).

1:2. Nineveh. Nineveh is modern Tell Kuyunjik located on the Tigris River some six hundred miles upriver from the Persian Gulf in north Iraq. In the eighth century Nineveh had not yet entered its period of glory. At the beginning of the seventh century Sennacherib made this ancient cult center for the goddess Ishtar the capital city and beautified and enlarged it to nearly two thousand acres. Archaeologists have successfully excavated Sennacherib's famous "palace without rival," which features wall reliefs depicting Sennacherib's siege of Lachish in Judah. The temple of Ishtar that had been maintained by kings as early as 2400 B.C. has also been identified. At the time of Jonah it was one of the major metropolitan areas in Assyria with a circumference of a bit less than three miles.

1:2. Assyria and Israel in the first half of the eighth century. Assyria had posed a significant threat to Israel in the ninth century. Israel had been part of the western coalition that opposed Shalmaneser III's attempts to expand into the Mediterranean region (see comment on 1 Kings 22:1). In 841 the Israelite king Jehu accepted Assyrian control and paid tribute (see comment on 2 Kings 10:34). In the intervening decades, however, Assyria had weakened considerably, and by the time of Jeroboam II many decades had passed with no antagonism from Assyria.

1:3. Tarshish. Tarshish was the farthest known geographical point. While its exact location is unknown, most believe it was in southern Spain, though some have favored Carthage in north Africa. We can be certain that it was a port in the western Mediterranean known for its trade in exports.

1:3. Joppa. Joppa is located just south of modern Tel Aviv on the Mediterranean. This harbor town is mentioned in Egyptian and Phoenician texts as well as texts from Canaan (the Amarna tablets). During the monarchy period it was often under the control of the Philistine city Ashkelon.

1:3. ship. Merchant ships were of various sizes and averaged a speed of two to four knots. In Solomon's day the ships going to Tarshish

would not return for three years. A ship of this size would have had a crew of less than a dozen. Cargo typically consisted of grain, wine and olive oil.

1:3. fare. From the language used many have concluded that the fare Jonah paid hired the whole ship for his use. Whether or not this is the case, the fare would have been substantial.

1:5. each cried to his own god. Patron deities were rarely cosmic deities, so the sailors would not have thought that their personal or family gods had sent the storm. In the polytheistic context of the ancient world, one could generally identify divine activity with confidence, but it was another matter altogether to discover which god was acting and why. The sailors call out to their gods in the hope that one of their patron deities might be able to exert some influence on whichever god has become disturbed enough to send the storm. They are calling out for assistance, not in repentance. The more contacts made the better, so the captain awakes Jonah so that he could also call upon his patron deity.

1:7-10. lots. Although the casting of lots was sometimes used to allow the deity to communicate, in many instances they were considered more like flipping a coin or drawing straws. As a result the lots were not cast here to determine who was guilty, but to decide who would be first to volunteer information about themselves that might expose an offense against the gods. It is understandable that no one would be eager to go first. For the casting of lots, each individual brought an identifiable marker. The markers were placed in a container, which was shaken until one of the markers came out.

1:9. cosmic deity. Jonah's reply to their questions identifies only his ethnic association (Hebrew) and the God he serves. Most significant is his description of the Lord as a cosmic, creator deity—just the type of God who would be capable of sending such a storm.

1:10. he had already told them. He had told them earlier that he was fleeing from his God, but that had not concerned them—that was his problem and probably not all that uncommon. Their terror now increases as they realize that Jonah's flight from a cosmic deity has put them all in jeopardy of suffering the wrath of Jonah's god.

1:11-16. what shall we do? The sailors' next question concerns appeasement. In the religious thinking of the ancient world the people rarely thought in terms of repentance, because the motivations of the gods could not easily be discerned. Since the gods were neither moral nor consistent, their anger might be entirely whimsical and their acts of punishment arbitrary or childish. Therefore worshipers sought to appease the gods' anger. Different gods might be appeased in different ways, so Jonah is consulted.

1:12. throw me into the sea. The men are reluctant to follow Jonah's advice because they believed that deities were protective of the lives of their worshipers. Putting Jonah to death by throwing him in might expose them to the retributive vengeance of Jonah's God.

1:16. offered sacrifice. When the sea grows calm, the men respond with worship. The sacrifice was most likely a grain offering, probably not burnt on a wooden ship but perhaps thrown into the sea. Alternatively (since all the cargo had been jettisoned) the text may refer to a sacrifice that was made on their return to dry land (there would be no point in continuing on to Tarshish).

1:16. made vows. Vows in the Old Testament and in the ancient world typically concerned sacrifice. For instance, the sailors may have vowed to offer a memorial sacrifice of some sort to Yahweh each year on the anniversary of this event. The vows acknowledged that the sailors had experienced an act of divine power. The text in no way suggests that they had abandoned their gods and accepted the monotheistic faith in Yahweh. Acknowledging the power of one god did not preclude the worship of others.

1:17. great fish. Jonah was swallowed by what the text designates a "large fish"—probably the most general description that could be offered. There is nothing to settle the question of whether it was technically fish or mammal, because Hebrew would use this term for any sea creature. Species identification is therefore impossible. Although studies could be done on gullet sizes of various species that regularly inhabit the Mediterranean, the text's insistence on the Lord's direct involvement suggests that we should not expect that there was anything regular or ordinary about the fish. In the beliefs of the ancient world, large sea creatures represented the forces of chaos that were overcome by the creator deity in the act of creation. Here, as always, Yahweh is portrayed as in complete control of the sea creatures—this one is simply doing his bidding.

2:1-10

Jonah's Prayer of Thanksgiving

2:1-6. Jonah's prayer. This prayer may have been a well-known hymn or a piece adapted from known material. The fish is not men-

tioned and the threat of the waters is a common metaphor in hymnic material. The sea was considered a threatening realm of chaos, and only death could be expected there. However intimidating the fish may have been, Jonah understood it as the Lord's deliverance.

2:7-10. Jonah's relationship to the Lord. God's presence was in the temple, so Jonah's prayer reaches him there. Though Jonah is aware of his disobedience, he still considers himself loyal to the Lord. He has not taken up idol worship.

2:9. Jonah's vow. The prayer does not specify what it is that Jonah has vowed, but most vows in the ancient world concerned rituals to be performed. Leviticus speaks of vow offerings in its description of the various sacrifices (see comments on Lev 3:1-5 and 27:2-13). With no further specification of the nature of the vow, it is likely that Jonah would fulfill his vow with a sacrifice of thanksgiving. There is no indication that he vowed to obey by going willingly to Nineveh. In a hymn to Shamash the sun god is identified as the one who saves those who are surrounded by mighty waves and accepts libations in return.

3:1-10

Jonah and the Ninevites

3:1-4. went to Nineveh. The journey to Nineveh from Joppa (where we assume the fish left Jonah) was about 550 miles. Caravans usually traveled twenty to twenty-five miles a day to make the trip in about a month.

3:3. large city. The size of Nineveh is expressed in terms of the time that it would take Jonah to carry out his assignment. He is not circling the circumference of the walls but going to all the public places in the city to make his proclamation. His itinerary would have included many of the dozen gate areas as well as several of the temple areas. There would have been certain times during the day when significant announcements could be made.

3:4. Jonah's message. Jonah's message is one of impending judgment, as is common for a prophet. We should not confuse a prophetic role with a missionary role. The prophet in the ancient world had the task of conveying whatever message God gave him for a particular audience. The missionary has the task of conveying God's message of salvation given to everyone. The prophet's message was rarely as pleasant as the missionary's. In Jonah's message there is no hint of a call to repentance or a call to put away their false gods. There is no instruction concerning what God wants of them nor indictment of their evil deeds. There are no conditional offers made. The prophet in the ancient world did not come to deliver a comprehensive theology or to convert to a particular religious worldview. He came to deliver a message from God.

3:4. prophets in ancient Near East. Prophecy was well known in the ancient world, so this kind of situation would not be foreign to the Assyrians. There are a number of references to Assyrian prophets and their messages in documents from the time of Ashurbanipal about a century after Jonah. Prophets served as official or unofficial advisors to the king. In the prophecies preserved in the time of Ashurbanipal, the messages are consistently positive, affirming the king's actions, decisions and policies. Earlier examples from Mari in the eighteenth century B.C. were more often negative but still show the prophets as offering messages to the king.

3:5-10. believing prophecy. The Ninevites believed that Jonah's message was a message from a god who was likely to do as he threatened. That conclusion would have been reached by comparing Jonah's message to the message of the omens. Omens were observations made in the natural world that were believed to be related to what the gods were doing in the historical realm. One of the most common opportunities to observe omens was by examining the entrails of animals that were sacrificed daily. The configurations of organs such as the kidney or liver were believed to give favorable or unfavorable omens. Other omens were recorded from the behavior of animals, the flight of birds, the movements of the heavenly bodies and many other phenomena. If omens had been unfavorable for a few days or weeks prior to Jonah's proclamation, the people would have readily accepted the truth of his message. If sacrifices were offered and the entrails verified an impending doom, Jonah's word would be taken very seriously.

3:5. reception of foreigner's prophecy. It would not have mattered that Jonah was an outsider representing another country or another deity. The polytheistic beliefs of the ancient world allowed for hundreds of gods, any of whom might be capable of impacting their lives for good or ill. Foreign delegations would at times have included prophetic personnel so that the favor or disfavor of the major deities involved could be expressed concerning any negotiations. If the Ninevites' own divinations had supported Jonah's message, they would have had no reason to suspect treachery or hoax. The fact that he was a foreigner would have served as evidence of the truth of his message, for why would some-

one have traveled all this distance unless impelled by deity? Remember that Jonah did not ask them to change religions, nor did he seek to dethrone their national god.

3:5-10. response. The response of the Ninevites is both typical and atypical. It is atypical in that there is little evidence for fasting as a religious response in the practice of Assyrians or Babylonians. There are examples of the king donning sackcloth "as befitting a penitent sinner" (*Esarhaddon, Ashurbanipal*). The usual approach would be to try to appease deity by the performance of certain rituals (sacrifices, libations, etc.) or by incantations to prevent the deity from acting. It is therefore likely that the Ninevites were trying an Israelite approach to responding to divine anger. What is typical is that they were trying to appease the angered deity. They had no idea what had angered Yahweh, but any inquiry into Israelite religion would have revealed that their God was interested in justice and that repentance of injustice featured fasting and sackcloth, which did regularly accompany mourning. Their rituals (sackcloth and fasting) and their ethical reforms show that they took Jonah seriously but do not offer evidence of conversion. The polytheism of Assyria would have had no conception of monotheism, covenant or law. The only conversion known in this system was the shuffling of the gods in the pantheon. The Ninevites did not get rid of their idols, nor did they show any inclination to replace their gods with Yahweh of Israel. To recognize a god's power was not the same as to accept him as your one and only god.

3:6. arose from his throne. In Assyria when an omen or prophecy suggested the king was in danger, it was common for a substitute king to be appointed. This individual would sit on the royal throne and wear the royal robes. Meanwhile, the king would engage in acts of purification. Often, after an appropriate time, the substitute king would be killed. It was hoped that this would divert the danger from the king. In this text there is no mention of a substitute, but the king's actions might reflect that this procedure was being used.

3:8. beasts covered with sackcloth. The dressing of the animals in sackcloth (a coarse material made of goat's hair) further expresses the Ninevites' lack of understanding of Israel's God. Even animals might offend deity, so they must be included in the appeasement ritual.

4:1-11

The Object Lesson

4:1-4. Jonah's anger. Jonah is angry that the Lord has so easily capitulated to the pagan tactics of appeasement. He is embarrassed and theologically scandalized that Yahweh should offer compassion so readily, for this suggests that Yahweh can be bought. The Ninevites would view him no differently from their own gods.

4:5-9. vine and worm. The plant that brings Jonah shade is described by a general term usually associated with the gourd family. As with the fish, the terminology does not allow a more specific identification. The insect that destroys the gourd plant is most likely of the aphid variety.

4:8. scorching east wind. The east wind here would not be a *ḥamsin* (or sirocco) because then the sun would not be a factor. The east wind was a problem in Palestine because of the desert to the east, but for Nineveh an east wind would often result in rain. Here it is a particular type of east wind (NIV: "scorching"), but this word is used only here so it is difficult to understand precisely.

4:11. population of Nineveh. Assyrian scholars have estimated the population of Nineveh (city and surrounding countryside) when it was the capital city at about three hundred thousand, so the hundred and twenty thousand here for an earlier period is not implausible.

MICAH

1:1-16

Judgment Coming to Samaria and Jerusalem

1:1. Moresheth. Located approximately six miles northeast of Lachish in the Shephelah, Moresheth (Tell el-Judeideh, about twenty miles southwest of Jerusalem) would have been one of the suburbs of the Philistine city of Gath (Tell es-Safi). After the establishment

of David's kingdom, it served, along with Lachish, Adullam and Mareshah, as a fortified center (2 Chron 11:8). All of these sites, along with "countless" villages, were destroyed by Sennacherib's Assyrian army in 701 B.C.

1:1. chronology. Since the editor gives us the names of the kings of Judah who reigned during Micah's ministry as a prophet, we can date this material to the last half of the eighth century. Micah's first oracle (Mic 1:2-7), which deals with Israel's northern capital of Samaria, would date to just prior to that city's destruction by the Assyrians in 722 B.C.

1:3. treading the high places of the earth. The sense of majesty inherent to a theophany is magnified here by the impression of Yahweh "coming" from his "dwelling place." The power implicit in "treading on" is used very often of vanquishing enemies (Deut 33:29; Ps 108:13). However, in this case the image is of God displaying control over creation, using the earth's mountains as stepping stones (Amos 4:13). A similar image is created of the swift, mountain-hopping movements of the divine messengers in the Ugaritic *Epic of Baal and Anath*. Cities were typically built on hills because of their natural defensibility, and armies chose hills as strategic points of control. The metaphor of treading on the heights therefore also speaks of victory and security.

1:5. Samaria. It was Omri who built Samaria and established it as the capital of the northern kingdom, Israel, early in the ninth century. About twelve miles west of the previous capital, Tirzah, the city is located at an important crossroads with easy access to the Jezreel Valley to the north, Shechem to the southeast and the coast to the west. It is near both major north-south routes that run west of the Jordan. The excavations at the site have uncovered what is believed to be Omri's palace on the acropolis as well as parts of the wall separating the acropolis from the lower city. The wall was about five feet thick and built using the finest masonry of the day (ashlar stones set in a trench using headers and stretchers). Ahab improved the fortifications by adding a casemate wall over thirty feet thick.

1:6. the fall of Samaria. The Assyrian sources describe the "ravaging" of Samaria (c. 724-721 B.C.), which may have denoted the entire land. Some archaeological evidence for the destruction has been found at the Israelite city of Shechem. This accords with the typical Assyrian strategy of wasting the territory of a particular state and then surrounding the main city, which had now been cut off from its resources. Both Sennacherib and Nebuchadnezzar II used this policy against Jerusalem. The three-year siege of Samaria shows that it was heavily fortified, for the Assyrians were unmatched in siege warfare. The city fell in 722/721. Although Shalmaneser III is given credit for the conquest of Samaria in the Bible, his successor Sargon II claimed the very same in the Assyrian annals. Sargon also claims to have rebuilt the city.

1:6. pouring stones into the valley. The forcefulness of Yahweh's wrath against Samaria is compared to the destructiveness of earthquakes. Since cities were typically built on hills, the destruction of a city wall was accomplished by pulling down the stone walls into the valley around.

1:7. temple gifts. Many temple gifts would have been given in exchange for the services of the sacred prostitutes (see comments on Deut 23:17-18). These gifts could have been silver or gold (which could, in turn, be used in the manufacture of idols) or grain or animal gifts. Alternatively, however, Micah, like Hosea (Hos 4:10-15), may simply be equating idolatry with harlotry. Supporting the false worship at the idolatrous temples would be an act of unfaithfulness to Yahweh. The idols which have been worshiped in this shrine are to be destroyed along with their worshipers, and the looting of the temple will provide its conquerors with the wealth to continue their devastating path.

1:8. barefoot and naked. There are a number of mourning rituals employed in the ancient Near East. Some require sacrifices, like those attested in the Ebla tablets, and are part of the royal cult of the dead. In other cases, constant weeping and lamenting mark the acts of mourners (as evidenced in the Ugaritic Epic of Keret). When mourners tear (Lam 2:10) or strip away their clothing and footwear (compare Isaiah's enacted prophecy in Is 20:2), they are putting aside their former status, signifying defeat (compare the restriction against mourning in Ezek 24:17). In this way they acknowledge, as Job does, that they came into this world naked (Job 1:21).

1:8. jackal and owl. The choice of animal voices here are those often heard in the wilderness and wastelands (Is 34:13; Jer 50:39; "prophecy of Balaam" from Deir 'Alla). Both make a piercing sound that would chill the soul and hint of death (note the use of the jackal as an image for the Egyptian god Anubis, whose responsibilities were for the dead and for tombs).

1:10-15. itinerary. All of the sites listed in these verses are in western Judah, in the hill region known as the Shephelah. Sennacherib's report of his campaign offers detailed information

about the Philistine battles, but little about the Shephelah. In the Philistine account, Eltekeh, Timnah and Ekron are named. This would mean the army was poised just a few miles north of Gath as it prepared to go into Judah. If Micah 1 represents a line of march, it would suggest that the Assyrians came south through Gath and took the road that passes a couple of miles west of Lachish (the most prominent fortress of the region), then circled around to the south in order to come at Lachish from the southeast. After Lachish, the route heads northeast toward Jerusalem, with only Mareshah out of order. What is suggested is widespread devastation throughout the Shephelah region. Archaeological surveys have identified a reduction in the number of occupied sites in the region from nearly three hundred in the early eighth century to less than fifty in the seventh century. The population was likewise reduced to less than fifteen percent of what it had been. Gath is probably located at Tell es-Safi. Many of the city names are used for word play unique to this text: Beth Ophrah (meaning "dust"), Shaphir ("horn"; site unknown, though speculated to be Tell 'Eitun), Beth Ezel ("standing place"; location unknown), Zaanan ("she comes out"; possibly the Zenan of the Lachish area in Josh 15:37) and Maroth ("bitter"; site unknown). Lachish is the most important of the cities in this itinerary and will be discussed separately. Moresheth Gath is Micah's home village and is probably to be identified with Tell el-Judeideh (see comment on 1:1). It is in the center of a ten-mile radius in which all of these sites appear to be located. The pun on its name suggests the flight of its citizens. Aczib (possibly Tel el-Beida, northeast of Lachish) is compared to a "failed stream," which here equates with a fortress that failed to serve the king's defensive line. Mareshah, northeast of Lachish, is punned with the word meaning "heir," suggesting a country without a future. Adullam (Tell esh-Sheik Madhkur) similarly lacks a future in the face of the enemy assault.

1:13. Lachish. Dominating the Shephelah and western Judah, Lachish served as the center point of the defensive line of the kings of Judah. Located midway between Jerusalem and the Philistine city states, Lachish guarded the major roads from the coast inland. Its site, Tell ed-Duweir, shows evidence of occupation from the Chalcolithic Period, with massive construction of city defenses and an impressive city gate in the Middle Bronze II (as a major Canaanite city) and Iron II (as the western bastion established after the division of the kingdoms; 2 Chron 11:5-10). Despite its commanding position (a tell 150 feet high), the city fell after a siege by the Assyrian king Sennacherib in 701 (Annals of Sennacherib; for more information see 2 Chron 32:9). Graphic evidence of the ferocity of this siege are found in Assyrian reliefs from the royal palace at Nineveh depicting the events and the remains of a massive siege ramp on the southwest corner of the tell. A mass burial, with approximately fifteen hundred bodies, may also be a result of the fall of the city. Written records of a later siege by the Babylonian king Nebuchadnezzar in 586 also exist in the form of twenty-one ostraca letters that were discovered in a guardroom in the city gate. They describe the desperate situation of the defenders as they take note of the extinguishing of the signal fires from neighboring towns.

1:16. shaved heads. There are several rituals associated with mourning, including tearing one's clothing, cutting oneself (see the comment on Lev 19:28), fasting (see the comment on 2 Sam 12:16) and casting dirt or ashes in one's hair (see the comment on 2 Sam 13:19). Shaving the hair also functions as a sign of mourning (Jer 41:5) as well as a part of purification rituals (Lev 14:8-9; Num 6:9). For instance, Assyrian priests were shaved at the time of their installation. Similarly a man portraying himself as a doctor in *The Poor Man of Nippur* (Sultantepe Tablets) shaves his head. This may be associated with purifying himself or because of the physician's repeated contact with the diseased and dying.

2:1-13

Injustice and False Prophecy

2:2. seized property. The acquisition of property by oppressing the poor and weak violates both the law against coveting as well as the injunction not to violate the covenantal division of the land to each Israelite household after the conquest. Despite these laws, the mounting debt of small landowners and the political power exercised by large landowners led to abuses (see comment on Is 5:8), which are mentioned in Egyptian wisdom literature *(Instruction of Amenemope).*

2:5. assembly of the Lord. See the comment on Deuteronomy 23:1-8 for this technical term for the group of men enfranchised to make decisions within the Israelite community and to serve in the military.

2:5. dividing the land by lot. When the father of a family died, the landholdings were divided among the sons by lot. The Eshnunna Laws, the Hammurabi Code and the Middle Assyrian Laws all make reference to this situa-

tion. Texts from Tell Sifr specifically mention dividing the estate by lot. Here Micah suggests that the one who has oppressively accumulated landholdings will have no one to pass them on to.

2:11. acceptance of optimistic prophets. In Assyria, prophets were expected to be supportive of the king and his policies. Israelite prophets tended to be more counterculture and more often than not were critical of the reigning kings. As Jeremiah 28:8-9 notes, the people are to be wary of "the prophet who prophesies peace." The role of prophets in ancient Israel is to provide reproof and warning to the people when they violate their covenant obligations. This differs from ancient Near Eastern prophets, such as those mentioned in the Mari texts, who generally concern themselves with cultic violations (failure to make a sacrifice or build a promised temple) or with matters of warfare.

3:1-12

Corrupt Leaders

3:2-3. cannibal analogy. The rapacious nature of the leaders and judges of Judah is compared to a cannibalistic feast in which the people fall victim to the economic knives and voracious appetite of these corrupt officials. The realistic aspects of preparing the flesh and cracking the bones for their marrow may well be based on the necessities of survival during famines or military sieges (see comment on 2 Kings 6:29).

3:5-7. unsuccessful prophets. A failed or unsuccessful prophet is one who no longer receives any communication from God (see the "famine" of God's words in Amos 8:11-12). This has been brought about by the greed of the prophets who sell their deceptive prophecies rather than speaking them freely in response to God's prompting. The commercialization of prophetic speech assures "peace" or prosperity for the merchants and the nobility who give the prophets "bread" and brings down threats of ruin, allegorized here as "war," on those who fail to bribe them. Micah, who was not a member of the prophetic guild, but, like Amos, simply a man chosen by God to speak (Amos 7:1-15), replaces their failed rituals and divinatory practices with the true word of God. Prophets of this period in Assyria were often in the employ of the royal court and were expected to support the legitimacy of the regime. We would use the expression that it was important for them to recognize which side their bread was buttered on.

3:12. plowed like a field. An area had to be totally cleared of debris in order to be plowed and planted. This metaphor demonstrates how completely the city and its foundations would be destroyed. The armies of Assyria will plow the city, returning it to its original state as cultivated land (compare Is 5:6). While this did not occur in his lifetime, Jeremiah takes up the oracle, and it is quoted by the elders at his trial (Jer 26:18), demonstrating that the predictions of the prophets were compiled and studied.

4:1—5:15

Days Near and Far

4:3. swords into plowshares. Rather than "plowshares" that turn over the dirt as they plow, this may refer to the metal tip of the plow that breaks up the earth and scratches out a furrow. This tip is about seven inches long. However, this same Hebrew word is used in 2 Kings 6:5, where it appears to refer to some sort of axe. Since the sword is "broken up," it is possible that the resulting product is metal shards that could be put to various uses.

4:4. own vine and fig. Vineyards and fig trees were the basic elements of the diet and economy of the village culture of ancient Israel, and their loss would devastate the people (Joel 1:6-7). The idyllic image of peace and prosperity in the ancient Near East is to be able to sit under one's own vine and fig tree. Egyptian tomb paintings, Assyrian reliefs and the biblical writers commonly use the phrase to refer to a people who control their own lives, without foreign interference, and are able to cultivate the land which the gods/God has given to them (1 Kings 4:25; Is 36:16). The vine and fig provided some shade as well as fruit, and enjoying them indicated some long-term prospects as each took several years to become productive.

4:8. watchtower/stronghold. Although Migdal Eder (NIV: "watchtower of the flock") is a place name elsewhere (Gen 35:21), it is paralleled in this context with Ophel, a section of the old city of David on the eastern hill of the city of Jerusalem. As such, both images are of a citadel or watchtower protecting the "flock" and serving as a rallying point from which God's eventual restoration of the nation and the people will occur (compare the opposite image in Is 32:14). If the term refers to an actual citadel tower, it could be the central tower of the Ophel (the citadel or the hill it was on) in Jerusalem (daughter of Zion).

4:10. Babylon. It would have been more logical in Micah's day if he had assigned Ashur or

Nineveh as the place of exile. But prophecy is not always logical. In Micah's time, the Neo-Assyrian empire, under the Sargonid rulers, Sargon II and Sennacherib, was the most powerful political network the world had ever seen. It stretched across the Near East and would eventually even include Egypt for a short time. The ravaging army of Sennacherib was responsible for destroying many towns and villages in Judah during his two invasions, and the Assyrian reliefs even depict captives being taken away from Lachish. During this period, Babylonia and its Chaldean rulers were subjected, just like all other nation states, by the Assyrians. However, they, like the Medes in western Iran, periodically tested the Assyrian hegemony with revolts or by attempting to subvert Assyria's allies and vassal states. Particularly troublesome was Merodach-Baladan, who ousted Assyrian rulers of Babylon on at least two occasions. Finally in 689 B.C. Sennacherib sacked the city and assumed the title of king of Babylon. Shortly after 660, as the Assyrian empire began to crumble, Babylonia and Media combined to put even greater pressure on the last of the great Assyrian kings, Ashurbanipal. His death in 627 marked the end of Assyrian world power and the emergence of Nebuchadnezzar and the Neo-Babylonian empire.

4:12. sheaves to the threshing floor. One of the principal agricultural installations in the village culture throughout the ancient Near East was the threshing floor. Sheaves of grain were brought to this central location, where they would be threshed and winnowed. Because of the importance of agriculture and fertility, the threshing floor was often a place of ritual importance. Threshing floors were large, flat, open areas and certainly could have been useful for other purposes besides threshing. It is no surprise, therefore, that it should double as an open-air facility when space constraints or the desire for public visibility rendered the palace facilities inadequate. Consequently it became a place of assembly where legal as well as business transactions could be finalized. In the Ugaritic Epic of Aqhat, the king, Danil, publicly judges cases at the threshing floor outside the gate of his city. It was a place where the good was separated from the bad.

4:13. horns of iron, hooves of bronze. Although there are no direct references to animals pulling a threshing sled in the biblical text (see, however, comment on 2 Sam 24:22), Micah is clearly describing standard operations at a threshing floor. Egyptian tomb paintings depict oxen and donkeys pulling a sled weighted with pieces of flint and metal over the grain, and this custom is still followed by farmers in the Middle East. There is also some evidence for metal shoes being attached to the feet of these animals to more efficiently cut the stalks of grain.

5:1. strike on the cheek with a rod. To be struck on the cheek is generally considered a gesture of contempt (see 1 Kings 22:24; Job 16:10). Hammurabi's Code provides for a variety of punishments for the person who strike others on the cheek—from flogging and mutilation to stiff fines. Striking Judah's "judge" implies both the contempt of the nations as well as the impotence of Judah's ruler to respond. In the New Year festival *(akitu)* that was practiced in both Assyria and Babylon, the priest slapped the king on the cheek in a ritual that led to the king claiming he was innocent of injustice.

5:2. Bethlehem. The double place name Bethlehem Ephrathah reflects a tribal distinction within the Bethlehem community and also reinforces the tie to David's family (see comments on Ruth 1:1; 1 Sam 16:4; 17:12). Linking the future messianic king to the origins of David's household rather than to Jerusalem recalls how David was chosen directly by Yahweh as king and breaks with the hereditary succession pattern. This suggests the expectation of a new David.

5:2. ruler with origins from ancient times. Most of the Neo-Assyrian kings claimed that their kingship had been ordered by the gods from days of yore. Ashurbanipal claimed to have been created by Ashur and Ninlil and proclaimed king since the days of yore by Ashur and Sin, created for kingship in the womb of his mother.

5:5. Assyrian invasion. The Assyrians invaded Judah in 713 (though the major objective of the campaign was Philistia) and in 701 under Sennacherib. This text more likely discusses the latter invasion. For detailed information see the sidebar in 2 Chronicles 32. Shepherds usually refer to kings, so the seven/eight may refer to the coalition that is expected to be organized against the invasion. Sennacherib's inscriptions mention Sidon, Ashkelon and Ekron (with help from Egypt and Nubia) as being fought and conquered. Other city-states and territories submitted and paid tribute (Arvad and Byblos in the north, and Ashdod, Ammon, Moab and Edom in the south). It is unclear how many of these may have actually been part of the anti-Assyrian coalition.

5:6. land of Nimrod. Nimrod, the "mighty hunter before the LORD," only appears in Genesis 10:8-11 (see comment there), in the period

before the flood. There he is identified as the founder of many Mesopotamian cities, including Babylon and Nineveh, so he appropriately represents any Mesopotamian empire.

5:12. witchcraft. Literally thousands of texts have been uncovered that deal with magic, including incantations that help alleviate the pain of a toothache, help a baby that is stuck in the womb and help a mother who was barren. It appears that the common person hired an incantation priest for even the most mundane problem. The priest then came and recited a spell to either exorcise a problematic demon or other divine irritant. Certainly then they would resort to incantation priests to try to avoid disasters that were either portended or threatened. Incantations were intended to magically bind the supernatural powers that posed a threat. Magical and divinatory practices were common in Mesopotamia and Egypt, where exorcists, diviners and magicians were fixtures at court, interpreting omens and performing rituals. In addition to these professional practitioners, there were sorcerers who performed malevolent forms of magic. The biblical text outlaws both, since their work invoked deities other than Yahweh and attempted to manipulate the divine.

5:13. sacred stones. Standing stones or *maṣṣebot* were apparently a common feature of Canaanite religion and also appear as memorials in a number Israelite covenantal contexts (see Ex 24:3-8; Josh 24:25-27). Their association with Asherah, Baal and other Canaanite deities are the basis for their being condemned as a rival and threat to Yahweh worship. Archaeologists have discovered sacred stones at Gezer, Shechem, Dan, Hazor and Arad. In the latter three cases they are clearly within a sacred precinct and part of the cultic practices at these sites. The Hazor stones include incised representations of upraised arms and a sun disk.

5:14. Asherah poles. Asherah can be either the name of a fertility goddess or the name of a cult object (as here). The goddess was popular in the religious deviations in Israel and was sometimes considered a consort of Yahweh. An indication of this belief is found in the inscriptions from Kuntillet Ajrud and Khirbet el-Qom. In Canaanite mythology she was the consort of the chief god, El. She appears in Mesopotamian literature as early as the eighteenth century, where she is consort of the Amorite god Amurru. The cult symbol may or may not have born a representation of the deity on it. The pole may represent an artificial tree, since Asherah is often associated with sacred groves. Sometimes the cult object can be made or built, while on other occasions it is planted. We have little information of the function of these poles in ritual practice. The writer of Kings points to the veneration of Asherah poles as one of several reasons for Assyria's conquest of Israel (see comment on 2 Kings 17:10). The reforms of Hezekiah and Josiah both attempted to outlaw these images sacred to the Canaanite goddess Asherah.

6:1-16

God's Lawsuit

6:1-2. court case of covenant violation. Using treaty formulas and terminology from ancient Near Eastern treaties, such as that negotiated between Rameses II and Hattusilis III, the *rib*-pattern or covenant lawsuit is found in most of the Hebrew prophets (see Is 1:2-4; Jer 2:4-9). As in this case, all of creation is called to witness Israel's violation of the covenant with Yahweh (see comment on Is 1:2), and a judgment is declared justifying the punishment of God's covenant partner.

6:5. Balak/Balaam. The prophet calls to mind for his audience the famous incident when a foreign nation and a renowned seer are thwarted. Instead of the requested curse, a blessing is pronounced over Israel. In Numbers 22:6 Balaam is said to be a man whose blessings and curses are effective. He was from the region of upper Mesopotamia, near Carchemish, and had an international reputation as a true prophet. Balak was the king of Moab at the time of the Exodus. His interest in Balaam seems to be based on his ability to invoke blessings or curses—no matter which god he called upon. In 1967, a Dutch archaeological expedition, led by H. J. Franken, discovered some inscribed pieces of plaster at a site in Jordan known as Deir 'Allah. Apparently written in Aramaic, the fragments date to about 850 B.C., and they mention Balaam son of Beor, the same figure described as a "seer" in Numbers 22—24. Although the text is very fragmentary, with many breaks and uncertain words, it can be established that (1) Balaam was a seer, (2) he received a divine message during the night, and (3) his message was not what his neighbors expected to hear. Whether this text refers to the events described in the Bible is problematic, but it does establish a nonbiblical tradition, current just a century before Micah, of a prophet named Balaam.

6:5. Shittim to Gilgal. See the comments on Joshua 2:1 and 4:19. Shittim was Joshua's camp east of the Jordan River, and Gilgal was the place where the Israelites miraculously

crossed the Jordan and established a base camp from which to begin the conquest. An abbreviated itinerary such as this is typical of Mesopotamian royal annals that include the list of cities along the victorious trek of the king.

6:6. year-old calves. Yearling animals would have been more valuable than newborn ones. Thus to offer a year-old calf as a burnt offering would be real financial sacrifice and would represent a major ritual of purification or initiation. At the heart of this practice, however, is a polemic against the formulaic religious rituals of Mesopotamia and Egypt in which the process transcends the meaning. The prophet tries to establish exactly what Yahweh requires and like Samuel (see comment on 1 Sam 15:22) determines it is obedience and love, not simply going through the motions of making sacrifices.

6:7. hyperbole. There is a steady escalation of the size and precious nature of the offerings listed by Micah. Only Solomon could offer thousands of sacrificial animals (1 Kings 8:63). Oil was used for libations (see comment on Lev 14:15). Human sacrifice was abhorred by the Israelites, seeing it as a statute of Canaanite and Phoenician religious practice (see comment on Gen 22:1-2). In fact, while Yahweh had a claim on the first-born son of every family, the Law required them to redeem the sons and substitute animal sacrifice (see comment on Num 3:12-13). God was not asking to be appeased through extravagant gifts. The most extravagant offering they could give him would be their obedience.

6:10. ill-gotten treasures. Micah condemns corrupt merchants who cheat their customers to enrich themselves. While these practices were to be condemned whenever they occurred, it would be particularly harmful during times of war when profiteers would take advantage of shortages to raise prices (2 Kings 6:25). This is also a theme developed by Amos (8:5-6) and Hosea (12:7-8). There are also a series of fair business practice laws in the Code of Hammurabi and the Laws of Eshnunna which set prices and establish standards of behavior.

6:10. short ephah. Just as Amos criticizes dishonest merchants who make the ephah "small" and the shekel "great" (Amos 8:5), Micah also cautions them against cheating their customers with a false measure of grain. The ephah and the hin were used as the primary dry and liquid measures and were equal to half a bushel or one gallon (Lev 19:36). One of the offenses listed in the *Shurpu* incantations was buying by a large measure and selling by a small one.

6:11. dishonest scales/false weights. A just society was one in which the government standardized and guaranteed honest weights and measures. The prologue to the law code of the Ur III king Ur-Nammu (c. 2100) includes a list of the measures he had taken to insure justice and truth throughout his realm. This included the standardization of all the copper and stone weights used in commerce. The Egyptian *Instruction of Amenemope* warns against tampering with scales or the weights used for buying and selling. In a Babylonian Hymn to Shamash, Shamash as the god of justice will punish the merchant who uses deceptive practices with regard to the scales or the weights. The fact that Micah complains of false weights indicates a lawless period without strong government or a concern for covenant obligation (see Prov 11:1; 20:23).

6:14-15. punishment. These curses of infertility and loss are similar in form to those found in the Egyptian execration texts and in coffin texts found in tombs. They represent Yahweh's justice against the covenant violations of Israel (see the set of curses in Deut 28:15-44). Several other prophets also use this form of "futility" curse (threatening lack of success in a course of action: Hos 4:10; Zeph 1:13).

6:16. statutes of Omri. Like the "sins of Jeroboam" that are so often invoked as the height of evil by a king (2 Kings 13:2, 11), the names of Omri and Ahab also serve as labels for monarchs guilty of idolatry (for the crimes of Ahab see comment on 1 Kings 18:4). The dynasty of Omri had come to an end with the death of Zechariah in 753 just a generation earlier than Micah.

7:1-20

From Ruin to Restoration

7:1. agriculture reference. According to the Gezer Almanac, an inscription dated to around 925 B.C., the gathering of summer fruit was the last harvest of the year, taking place in late August and September. This would be the second crop of figs (the first ripening in June), and this fruit would be dried for consumption through the winter months (see Is 16:9; Jer 48:32). Once it had been harvested and the gleaners had taken all that remained, no further fruit could be expected for many months.

7:2. hunting with a net. Fowling and fishing were the common man's form of hunting since they required only nets and traps. Egyptian tomb paintings depict hunting birds with a net (see Prov 1:17) and the an-

tiquity of the net is to be found in the Sumerian word for hunting that is an ideogram in the shape of a net. Isaiah 51:20 describes using a net, possibly a corral of nets, to hunt antelopes that may have been driven into the trap by a line of beaters. It is truly a lawless time when every man is both hunter and hunted (see Ps 10:9).

7:14. geography. Bashan and Gilead are fertile regions lying east of the Jordan River. They had originally been part of the division of the land (see the comment on Josh 13:24-29 and 13:30-31 for Gad's and Manasseh's assignment) but were lost to Assyria during the eighth century. The expectation here is that in the day of Yahweh's triumph all the lost territories would be restored to Israel (see Jer 50:19).

7:17. snake licking dust. Just as the serpent was cursed in the garden of Eden to eat dust (see comment on Gen 3:14), the enemy nations will also be humbled (see Ps 72:9). Since foreign nations are often depicted as serpents (Is 14:29; Jer 8:17), this may be a further condemnation of the use of snakes as fertility symbols and deities in Mesopotamian and Egyptian religious art. In the Amarna texts, eating dirt or dust is a metaphor for suffering defeat.

7:19. treading sins underfoot. Yahweh's forgiveness of Israel allows a conquest of sin in much the same way that a monarch triumphs over his enemy, treading him underfoot or placing his foot on his neck (see comments on Jos 10:24; Ps 60:12). Similar images of the activities of "Divine Warrior" gods are found in Anat slaughtering her enemies in Ugaritic epic and the military exploits of the Babylonian god Marduk and the Hittite god Teshub.

NAHUM

1:1. Nineveh. This oracle against the Assyrian capital city of Nineveh most likely dates to the period between 663 B.C. (the date that the Egyptian city of Thebes is captured by the Assyrians—Nahum 3:8) and the fall of the city to a combined army of Babylonians and Medes in 612 B.C. Nineveh, on the east bank of the Tigris River (ancient Kuyunjik and modern Mosul), was about six hundred miles upriver from the Persian Gulf and just over 250 miles from Babylon. It functioned as one of the major cities of Assyria for much of its history—serving the Old Akkadian, Amorite and Mitanni dynasties prior to the establishment of the Middle Assyrian kingdom in the mid-fourteenth century B.C. At the height of this expanding empire's power, in the reign of Sennacherib (705-681 B.C.), it became Assyria's capital. Excavation of its palaces has revealed stone reliefs of the invasion and ransacking of Judah in 701. The library of its last great king, Ashurbanipal (668-627 B.C.) has provided scholars with copies of much of ancient Mesopotamia's literature and scientific works.

1:1. Assyrian history of this period. The last great Assyrian king, Ashurbanipal, ruled from 668 to at least 635, when it is believed that he abdicated. It appears that he does not die until 627. After his reign, Assyrian history becomes confused, and it is sometimes difficult to determine who is in charge, though the two main rulers were Ashur-Etil-Ilani and Sin-Sharra-Ishkun. During Ashurbanipal's reign, most of Syria-Palestine passively accepted Assyrian rule (though Tyre presented continual difficulties). Manasseh of Judah was, for the most part, a cooperative vassal. However, from 652 to 648 a rebellion was led by Ashurbanipal's brother, Shamash-Shum-Ukkin (appointed king of Babylon), who appears to have won the support of Manasseh (see comment on 2 Chron 33:11). Babylon's last revolt came in 626, when the Chaldean Nabopolassar declared himself king and established a dynastic line that became the Neo-Babylonian empire. These Babylonians, allied with the Medes, brought the fall of the Assyrian empire, starting with the overthrow of Ashur in 614, then Nineveh in 612, Haran in 610 and, finally, Carchemish in 605.

1:1. Elkoshite. The place or clan name Elkosh only appears in the book of Nahum. No exact location for Nahum's village has been established. Jerome places it in the Galilee (possibly el-Kauzeh or Capernaum) and somewhat later traditions locate it either near Nineveh or in Syria. None of these suggestions currently have sufficient evidence to make a positive identification.

1:2. jealous deity. The theme of Yahweh as a jealous god appears first in the Ten Commandments (Ex 20:5), is repeated in Joshua's

covenant renewal oration following the conquest (Josh 24:19) and is reflected again in Ezekiel's vision of the "image of jealousy" (Ezek 8:5), which blocks his entrance into Jerusalem's temple. The word represents a determination to defend zealously and aggressively that which rightfully belongs to him from those who would lay claim to it. This attribute of God is designed to prevent either comparison with other gods or any subordination of Yahweh in worship or ritual to any other deities. Failure to acknowledge Yahweh's sole position is justification for vengeance.

1:3. whirlwind and storm. As in Habakkuk 3:10, Yahweh is portrayed as master of the storm and controller of the winds that can bring both life and destruction. This type of figurative language, demonstrating God's majesty, is also found in the theophany in Job 38:1 (also see comment on 1 Kings 19:11-13) and is a common feature in ancient Near Eastern epic poetry. For example, in the Ugaritic *Epic of Baal and Anath* the god Baal is described as the "Rider of the Clouds," and his "voice" is the sound and fury of thunder and lightening. Similarly, in the Babylonian story of creation, *Enuma Elish,* the storm god Marduk defeats the primordial goddess of watery chaos, Tiamat, through his control of the winds and his use of the lightning.

1:4. drying bodies of water. The image of God controlling the power of the rivers and seas is a common one in the ancient world (compare Jesus' stilling the waters of the Sea of Galilee in Mk 4:39). The most potent Old Testament example is the parting of the Red Sea. The Ugaritic cycle of Baal stories portrays the storm god in a monumental contest for supremacy with the god Yamm, the sea—an image whose origin may have sprung from observation of the stormy seas off the Mediterranean coast near Ugarit. Yahweh's "rebuking" the waters is also mentioned in Isaiah 50:2 and Psalm 104:7. In each passage the majesty of God over the forces of nature is made clear, as is the ability to impose drought on generally fertile areas.

1:4. Bashan and Carmel. Among the most lush and fertile areas within the region of Syria-Palestine was Bashan and the Carmel range of hills. This comprised the northern portion of the Transjordanian plateau, east of the Sea of Galilee, and the hill country extending northwest toward the Bay of Acco on the Mediterranean coast, just south of Lebanon. Both Carmel and Bashan were known for their pastures and cattle grazing. To see them transformed into blighted and drought-stricken lands would have been a reversal of their traditional role as places blessed with richness and plenty. This type of prophetic speech is part of the "world turned upside down" theme found outside the Bible in the prophecies of Balaam (Deir 'Alla inscriptions) and the visions of Neferti (Old Kingdom Egypt).

1:5. effects of theophany. The thunderous effects of Yahweh's voice and presence resemble the earth-shattering shocks of an earthquake. However, the references to the hill country and the control over the forces of the storm suggest that this theophany is modeled after the frighteningly close thunder, lightning and strong winds characteristic of a mountain storm. A similar example of this imagery is found in Psalm 29:3-9, where "voice of the Lord" shatters the mighty cedars of Lebanon and makes "Lebanon skip like a calf." Ugaritic (Baal cycle) and Hittite myth *(Song of Ullikummis)* both describe the use of winds and lightning by the storm god in much the same frightening manner.

1:13. yoke and shackles. Prophetic speech often refers to the burden of political domination as a yoke or shackles. In the Amarna letters the rulers of the Canaanite city-states speak to Pharaoh of how they willingly placed themselves in the yoke to serve Egypt faithfully. Akkadian wisdom literature indicates that bearing a god's yoke is desirable because of the fringe benefits. In the *Atrahasis Epic* the gods find the yoke of Enlil unbearable and so rebel. Assyrian inscriptions describe their conquest of other lands as imposing the yoke of the god Ashur on the people, and rebellion was portrayed as throwing off the yoke. The prophet is thus using an image familiar throughout the ancient Near East.

1:14-15. history of Nineveh after its fall. According to the Babylonian Chronicle, Nineveh was destroyed by the combined Medean and Chaldean (Babylonian) army led by Nabopolassar (625-605 B.C.) in the spring of 612 B.C. after a three-month siege. Ritual and actual desecration of the site occurred with the carrying of its ashes back to Babylon. The reported inundation of the city (based on classical sources, Diodorus Siculus and Xenophon) would have probably involved the damming of the Khosr River which flowed between the two citadels of Nineveh on the east bank of the Tigris River (Kuyunjik and Nebi Yunus). The city never reached its former heights again, although it was rebuilt and there are Hellenistic, Parthian and Roman remains at the site.

1:14. Assyrian temples and gods. From the time of Shamshi-Adad I (c. 1813-1781 B.C.) the

principal gods of Assyria's pantheon were the king of the gods, Ashur, and Ishtar, the goddess of love and war. Other gods included Ninurta (warfare and hunting), Adad (storm god), Sin (moon god) and Shamash (sun god), as well as many lesser deities, and each had a cult center and attendant priestly community. These temples were heavily subsidized by the grants made to them by the monarchy, based on the looting of neighboring countries during nearly continuous periods of warfare. Much of their rituals and religious festivals were borrowed from older Sumerian and Babylonian forms. Nearly every Assyrian royal annal describing military campaigns includes the statement "by the command of Ashur" as the justification for war. The "Banquet Stele" of Ashurnasirpal II's palace at Nimrud, which chronicles his military victories, makes it clear that the gods of Assyria were residents of his palace. Similarly, the text bands that decorated the walls of the palace of Sargon II at Khorsabad include the invitation for "Ashur, father of the gods, the great lord, and Ishtar, who dwell in Assyria" to take up residence there. Sennacherib moved the Assyrian capital to Nineveh and rebuilt the huge temple complex to the goddess Ishtar as part of his building campaign to create restored cult centers for the gods and a "palace without rival." It was normal procedure in the ancient world to destroy the images of the gods and desecrate the temples of defeated cities. The images would be toppled over and disfigured, with heads and limbs cut off.

1:15. Judah's history under Assyrian power. From around 734 B.C. until the fall of Nineveh in 612, Judah was a vassal state within the Assyrian empire. King Ahaz paid tribute to Tiglath-Pileser III and stayed out of the plots to gain independence that led to the destruction of the northern kingdom of Israel and the devastation of many of the other neighboring states. Hezekiah did attempt to assert some measure of independence (cleansing the temple, closing the local high places), but that led to an invasion of Judah by Sennacherib (see comments on 2 Kings 18), the destruction of many towns like Lachish, the deportation of some of the population and a siege of Jerusalem that impoverished the nation. The long reign of Manasseh (see comments on 2 Chron 33) was marked by a complete submission to Assyrian control. In addition to a wide range of stipulations designed to promote and demonstrate political loyalty, Esarhaddon's vassal treaties required respect for the god Ashur as king of the gods and as their own god. Manasseh's cooperation allowed for a period of peace and rebuilding, but represented a political and theological compromise that marked him, in the eyes of the biblical writers, as the worst of kings. It is only the political chaos following the death of Assyria's last great king, Ashurbanipal (see comment on 1:1), that allows Judah to temporarily assert its freedom under King Josiah.

2:3. soldiers wearing red. Not yet bloodied in battle, the red uniforms of the soldiers may indicate they are a professionally equipped and well-trained fighting unit (see the blue-clad soldiers in Ezek 23:6). In Greece the Spartans were known for wearing red tunics under their armor as an indicator of membership in their ranks and as a further effort to intimidate their opponents. In Assyria it was common rhetoric to speak of cities and countrysides dyed red with the blood of enemies, and the army marching through the blood of their enemies. Additionally, Isaiah 9:5 refers to a practice of warriors rolling their garments in blood. It would be logical, therefore, that armies would choose to wear red tunics to suggest that they were covered with the blood of their enemies. Paintings at Til-Barsip show red uniforms, and classical sources describe soldiers of this period as wearing red or purple tunics.

2:3. metal on chariots. Metal ornamentation of chariot bodies to strengthen them for plowing through ranks of infantry is attested in the Judges period, and examples of decorated chariots have been found in Assyrian reliefs and Egyptian tomb paintings.

2:5. protective shield. This word occurs only here in the Bible and is possibly a term borrowed from the Akkadian language used by the Assyrians and their besiegers. In Akkadian the term refers to a plug or something used to stop something up. Since the next verse speaks of manipulating the sluice gates in an attempt to bring about the collapse of the palace, a plug may have been used to block where the water would usually have flowed through the city walls after the river had been dammed up at the reservoir created by Sennacherib about two miles up the Khosr River.

2:6. river gates at Nineveh. Sennacherib had created an elaborate network of canals and sluice gates to control the waters of the Khosr River and to provide irrigation channels to the city of Nineveh and its surrounding farm land. Though the language of this section is difficult, one scenario would involve damming the river, then scrambling to the walls while the dam held in order to position some sort of plug where the water entered the city. When the gates were opened, the wall of wa-

ter would rush at the walls and effect their collapse. The Babylonian Chronicle does not mention the use of flood waters as one of the methods of conquering the city, though classical sources do. Archaeological evidence at Nineveh suggests a great conflagration but gives no indication of flood damage.

2:6. palace of Nineveh. The "palace without rival," or the "Southwest Palace" as it is known today, was built by Sennacherib between 703 and 691 and consists of a huge complex of interconnected rooms and courts (estimated at 1635 by 786 feet, an area large enough to fit twenty-five football fields). Those areas closest to the throne room were decorated with carved limestone facades, massive statuary (winged bulls and fish-scaled giants), and intricate reliefs of military campaigns, while the outer courts, with their more utilitarian functions, were devoid of elaborate design or statues. The palace has been excavated over a period of 120 years, starting in the 1850s by A. H. Layard, and is still not completely uncovered. Its layout was dictated by the preexisting Ishtar temple and ziggurat on the highest point of Kuyunjik and by the Khosr and Tigris Rivers to the southeast and west.

2:11-12. lion metaphor. The iconography of the Assyrian gods depicts Ishtar, the patron goddess of Nineveh, as accompanied by a lion, and the sun god Shamash is often portrayed as a winged lion. Assyrian kings, like Esarhaddon (680-669), described themselves like lions in their rage and fierceness in battle. Here, however, the lions who had so proudly taken whatever they wanted for themselves and their cubs are cowering and no longer in command. In this way the prophet throws one of Assyria's favorite metaphors back in its face as a taunt.

3:4. offenses of Nineveh. The actual events behind the crimes of Nineveh mentioned here are unknown. However, this harlotry and sorcery are both well-known metaphors used to depict a city or nation that victimizes others, for both witch and prostitute exert their power over the weak, vulnerable or unwary. Other instances of this seductive harlot image include Babylon in Revelation 18:3 and Jerusalem in Ezekiel 16:15-22 and 23:2-8. There may also be a reference here to Ishtar, the patron goddess of Nineveh, whose rituals and sacred stories often contained explicit sexual activity. It may actually be referring to the web of political intrigue created by the Assyrians as they expanded their control over much of the ancient Near East. The taunting of Hezekiah by Sennacherib's representative, the Rabshekah (Is 36), includes reference to the maneuvering for power by Egypt and Assyria (Is 36:4-6), while the smaller states were drawn into treaties and vassalage that impoverished and destroyed them. Certainly the economic exploitation of the natural resources of Syro-Palestine by the Assyrians would also fit Nahum's list of charges against Nineveh (see Rev 18:14-17).

3:7. no one to comfort. One scholar (Becking), noticing the similarity between a number of the judgment pronouncements in Nahum and the curses in vassal treaties, recognized in this line the Assyrian curse that the dead would have no one to care for their spirit by pouring out libations.

3:8. Thebes. As he taunts Nineveh, Nahum reminds them that another heavily fortified city, Thebes (known as "No Amon" to the Greeks and thus named in the Hebrew), had not been able to withstand the Assyrian armies of Ashurbanipal in 663. The Kushite ruler, Tantamani, had taken control of Thebes and Memphis in 664, drawing a response from the Assyrians, who supported the current northern regime of Necho (whom Tantamani executed). Under the Assyrian onslaught, Tantamani briefly made a stand at Thebes before abandoning it to the invaders and fleeing to Napata. Thebes, located about 325 miles south of Memphis (which is about 15 miles south of Cairo) on the east bank of the Nile River, had, like Nineveh, an elaborate system of moats and other defenses that gave the illusion of invulnerability. Also like Nineveh, it was a sacred city, dedicated to the god Amon and containing the magnificent temples of the Karnak complex.

3:9. Cush, Egypt, Put, Libya as allies. At the time that Thebes was conquered by the Assyrians, it and Egypt was being ruled by a Cushite (Nubian) dynasty (Twenty-Fifth Dynasty). The capital of Nubia was Napata (between the third and fourth cataract of the Nile, eight hundred miles south of Thebes, in modern Sudan). Ancient Libya was mostly along the coast west of Alexandria but included the long expanse of desert west of the Nile Valley. Put is more difficult. The most likely conclusion is that Put is an alternate name for Libya and that together they refer to the area to the west of ancient Egypt represented by the modern state of Libya.

3:10. lots cast for nobles. As the leaders of Egypt were forced to surrender, they were distributed as slaves among the Assyrian commanders along with the rest of the loot. Provision for the division of spoils, including the casting of lots, is also found in Homer's *Il-*

iad, the Mari texts and Joel 3:3.

3:14. preparation for siege. Fortifications for cities in the ancient Near East consisted of earthen ramparts, a sloping glacis, towered gates and walls (sometimes twenty-five to thirty feet thick) constructed on a stone foundation and made of sun-baked mud bricks. However, wind and rain eroded these walls, and they had to be constantly repaired. Thousands of bricks were needed and countless hours were spent making them. Many royal annals and inscriptions mention the repair or construction of city walls as a major accomplishment, and this would have been even more important in anticipation of a siege. Nineveh's city walls, constructed by Sennacherib, ranged approximately seven and a half miles in circumference. It was also necessary to insure an adequate water supply during a siege. Nineveh's water came mainly from the river and the system of aqueducts connected to it, but that supply could be compromised by the enemy outside the walls. The drawing of water here would refer to the activity of filling huge cisterns within the city.

3:15-17. locust metaphor. Swarms of locust have periodically plagued the Near East throughout its history. They originate in desert and steppe regions as unwinged grasshoppers, and as their population grows they transform themselves into winged locusts whose numbers can literally blot out the sun as they eat, mate and infest the area with huge quantities of their young (see comment on Ex 10:1-20).

3:17. guards and officials. Nahum is using well-known Assyrian titles here referring to courtiers and scribes (probably a more general title for administrative officials). Records of the period show that some of the administration led by Ashur-Uballit II managed to flee west to Haran when the fall of Nineveh was imminent.

3:18. identity of king of Assyria. Since the date of the book of Nahum is uncertain, it is not possible to determine which king of Assyria is referred to in this final oracle. Most scholars would say that the earliest date would be shortly after the capture of Thebes in 663 and the terminus date would be the actual fall of Nineveh in 612. It may be Nahum was written as encouragement to the people of Judah to revolt as the Assyrian empire began to break apart after Ashurbanipal's death in 627. The reference may alternatively be to Sin-Shar-Ishkun, who was the Assyrian king when Nineveh fell.

HABAKKUK

1:1-11
First Complaint and Response

1:2-4. complaints about social injustice. Although Habakkuk is speaking to the people of Judah in the late seventh century B.C., his statements regarding social injustice are quite similar to those made by Amos to the northern kingdom of Israel in the eighth century. Both prophets condemn the self-indulgent and corrupt leaders of their time (see the sidebar on Amos 2:6-8 dealing with economic and social conditions in the eighth century and the comment on Amos 5:12 on the corrupt justice system). Accusations of social injustice are standard fare in Egyptian wisdom literature. The writers attempt to hold the leadership of the nation to a very high standard, and they feel it is essential for the survival of their culture that corruption be exposed and dealt with by the highest powers. Thus in the period of the Middle Kingdom (2050-1800) a *Dispute over Suicide* was composed to expose those social ills that had nearly destroyed Egyptian society during the just completed First Intermediate Period (2258-2050). The man who asks for the release of death through suicide complains that "everyone is a thief," "hearts are covetous," and "crimes outrage no one." Also during this time of instability, the *Tale of the Eloquent Peasant* speaks of the need for Egypt's administrators to check the actions of lawmakers who "approve of robbery" and inspectors who "condone corruption." He calls on judges not to accept bribes or to countenance perjury. In the ancient Near East justice was the most basic and necessary characteristic of society. It was the job of the king to maintain justice. To an even greater extent, the covenant required of Israel that justice be strictly maintained on both a personal and societal level.

1:6. chronology. If Habakkuk's prophecy is

to be understood as utterly amazing and unbelievable (1:5), it must have been given before Babylon was sweeping across the earth. It therefore seems necessary to conclude that the book should be dated prior to the Battle of Carchemish in 605. Otherwise, Habakkuk's prediction of Yahweh's "raising up the Babylonians" would have been anticlimatic. The Babylonians only became a significant threat to Judah after 605, and by 597 they had already captured Jerusalem and taken King Jehoiachin as a hostage (see the comments on 2 Kings 24:10-14). Babylon became an independent state in 625 and began its expansionist activities by 620. It is impossible to offer more precision for dating the oracles of Habakkuk.

1:6. Babylonians (Chaldeans). The Chaldeans are first mentioned in Mesopotamian sources in the ninth century B.C. Although related ethnically to the other Aramean tribes of southern Babylonia, they had a distinct tribal structure. As the Assyrian empire began to weaken, Chaldean leaders, including Nabopolassar and Nebuchadnezzar, eventually gained their independence and established the Neo-Babylonian dynasty after 625. Nebuchadnezzar inherited this powerful state in 605, becoming its most famous king. He literally rebuilt the city of Babylon, solidified Babylonian control throughout the Near East and even attacked Egypt (although unsuccessfully). His long reign lasted until 562. He was briefly succeeded by three descendents who reigned a total of six years. The last king of the dynasty of Nabonidus, who had apparently been a high official during Nebuchadnezzar's reign. He reigned until 539, when Babylon was captured by the Medo-Persians under Cyrus the Great.

1:8. Babylonian cavalry. Given the description here of swiftly moving cavalry, it seems most likely that these are spear-carrying horsemen rather than mounted archers. Assyrian reliefs from the palace of Sennacherib at Nineveh show how effectively these mounted soldiers could traverse hills and woodlands. Their sudden appearance would have terrified local villagers. In open country the chariot corps functioned as mounted infantry and archery platforms, serving as a frontal assault force, while the infantry followed them. Mounted bowmen and spear carriers, fighting in pairs for protection, stood on the flanks to protect the army from being taken in the rear and also to bar the escape of enemy soldiers.

1:10. earthen ramps. See comments on Isaiah 29:2 and Jeremiah 32:24; 33:4 for discussion of the use of earthen ramps in siege warfare.

1:12—2:20
Second Complaint and Response

1:12. rock. The metaphor comparing deity to a rock focuses primarily on the issues of protection and shelter. A large rock could provide shade, and caves were sometimes found in rocky areas. This is not a metaphor common in the river cultures of Egypt or Mesopotamia, with their abundance of alluvial plains (see the sidebar on metaphors at the beginning of Psalms). It is possible that the term is more than a metaphor because it appears in personal names in the same place as a divine name would normally appear (for example, Elijah means "Yahweh is my God," so by comparison Elizur [Num 1:5] would mean "Zur [Rock] is my God"). It also occurs in the Amorite and Aramaic personal names from Syria in the position of a divine name.

1:15-16. fishing equipment. At least in royal inscriptions and art, fishing was done with woven baskets rather than individual hooks (see the comments on Ezek 12:13 and Amos 4:2). Naturally, in these instances the point is political, depicting the strength of a ruler who can trap his enemies like fish or birds (see the comment on Hos 5:1) in a net.

2:2. herald running with tablets. The idea of running with a message suggests its urgency or importance. What is unclear is whether the "one who reads the message" is a herald (with NIV) whose task is to run from location to location reading aloud his proclamation, or whether it refers to anyone who reads the message. In the former case the inscribed tablets would be entrusted to a professional. In the latter the inscription would be set up in a public place, and as individuals read it, they would run off to spread the news. Preference lies with the former, since the text here speaks of tablets. Publicly posted inscriptions would usually be on stelae. Professional messengers were a common fixture in royal courts such as those at ancient Mari and Babylon. They were needed as "runners" to carry their lord's commands (see also Jer 36:4 and Baruch's mission as Jeremiah's scribe and messenger).

2:17. Lebanon. According to his royal annals, Nebuchadnezzar ordered his army to construct a road "for the transport of the cedars" of Lebanon. He describes how they "cut through steep mountains, split rocks, [and] opened passages" to build this commercial logging road. This was done in the name of freeing the land of its foreign enemies. However, these trees actually were used to build

his palace and to enhance the temple of Marduk in Babylon. It may be assumed that the workers also hunted the mountainous areas of Lebanon for the food they needed to supplement their own stores.

2:18. image teaching lies. The uselessness of worshiping or consulting idols is once again declared here (see Is 46:7 and Hos 4:12 for other examples). Isaiah applied the phrase used here to a false prophet (Is 9:15), but Habakkuk is referring to the priests who manipulate people by "making the idol speak" or pronounce an oracle. The Babylonian *baru* priests functioned as diviners, interpreting omens, signs and performing rituals that were designed to solicit an answer from the gods.

2:19. bringing wood, stone to life. See the comment on Isaiah 44:17-18. The ritual of "opening the mouth" was employed in Babylon to transform a wooden image, decorated with gold and precious jewels, into the physical embodiment of the god. The incantations of the priests proclaimed to the god, "From this time forth you shall go before your father Ea." Ceremonial processions then take place, the mouth of the image is washed repeatedly (fourteen times in all), and food and drink are presented. After a evening of sacrifices the priest opens the eyes of the image with a wand of tamarisk, and then the "god" is enthroned within the temple and dressed with the insignia of office.

3:1-19

Habakkuk's Prayer

3:1. *shigionoth.* This verse serves as a superscription to the third chapter and functions in the much the same way that superscriptions or rubrics do in the Psalms. *Shigionoth* appears in the singular form in Psalm 7:1. Presumably it refers to a particular kind of song. If a linguistic connection can be made with Akkadian *shigu,* it possibly refers to a lament. However, its exact meaning is still unknown. For this and other musical terms, see the sidebar on musical terms in Psalms.

3:2-19. Habakkuk's psalm and mythology. As can be seen frequently in Isaiah and Ezekiel, the prophets often make use of familiar mythological imagery in order to convey their message. Two of the ways that this can take place are (1) history can be told using mythological motifs; and (2) mythological tales can utilized with historical elements substituted in. The first is illustrated when the exodus and, especially, the crossing of the Red Sea are told using the mythological motif of divine combat with the sea (see comment on Ex 15:3). The second can be seen in Isaiah 27 or Ezekiel 32, where familiar myths are turned into oracles against real nations in real historical contexts. Habakkuk uses both of these techniques as he interweaves elements from Babylonian and Canaanite mythology into this hymn. The general flow of this chapter shows some similarity to the Babylonian *Enuma Elish.* Marduk's praise is sung, he acquires weapons (similar list), he rides on the storm with assistants by his side, and the enemy is split open and crushed. This sequence is not unique to *Enuma Elish* but shows the intention of Habakkuk to adopt these well-known motifs and transform them to new use.

3:3. Teman. See the comments on Obadiah 9 and Jeremiah 49:7 for this site that is mentioned in the Kuntillet 'Ajrud inscription and either may be a city or a portion of the country of Edom.

3:3. Mount Paran. The area or "wilderness" of Paran is generally considered to be a region south of Palestine, but there is a difference of opinion on whether it lies westward into the Sinai peninsula or to the east of the Arabah in the vicinity of Teman (see the comments Num 10:12 and Deut 33:2).

3:3. sun metaphor. Hymns to the Babylonian sun god, Shamash, use similar terminology. One incantation refers to Shamash shining forth and filling the lands with his heavenly splendor. Yahweh is occasionally praised in terms that are also used in sun worship and in some periods was probably misconstrued as a sun god (see comment on 2 Kings 23:11). Official evidence of sun worship in ancient Israel seems to be tied primarily to the reign of Manasseh. The horses and chariots of the sun that he set up are destroyed by Josiah as he attempts to cleanse the temple complex of foreign religious influence (see comment on 2 Kings 23:11). Place names such as Beth Shemesh, Ein Shemesh, and Mount Heres (Josh 15:7; Judg 1:35) also attest to the popularity of sun worship.

3:4. rays in his hand. A typical pose of divine warrior storm gods in the ancient Near East is with bolts of lightning in an upraised hand.

3:5. plague, pestilence. The terms are personified here as associates of Yahweh in battle. The Hebrew word translated "pestilence," *resheph,* is the name of the Canaanite god of the plague. He is well known from Ugaritic, Phoenician (identified with Apollo) and Aramaic inscriptions. He is also associated with the Babylonian Nergal, who was connected with plague. In ancient Near Eastern mythology the gods going into battle are often accompanied by two associates.

3:7. tents of Cushan. This ethnic term, probably of a nomadic tribal group, appears nowhere else in the Bible. Since it appears in parallelism with Midian, it may be presumed that their territory was also in the southern steppe. They may in fact have been a subgroup of the Midianites.
3:7. dwellings of Midian. For Midian and the Midianites, see the comments on Exodus 2:15 and Numbers 22:4-7. Habakkuk here predicts the route of the divine warrior from his holy mountain to attack the Babylonians. Apparently this will startle but not harm the inhabitants of the southern regions.
3:8. conflict with rivers/sea. In Canaanite literature from Ugarit there is a lengthy myth devoted to the war between Baal and Yamm (Sea) and his associate Nahar (River), who represent the forces of chaos and destruction. Habakkuk indicates that Yahweh's anger was not directed against these mythological foes, but against the enemies of his people (v. 13).
3:9-11. cosmic effects of divine warrior. The idea of a divine warrior who leads his people into battle is well developed in the Israelite conquest narrative (see the comments on Josh 2:11 and 3:17). It also appears in the Moabite inscription of King Mesha and in the prophets (see the comment on Jer 32:21). A particularly spectacular example is found in the "Song of the War of Yahweh" in Isaiah 34 (see the comments on Is 34:4). It may be compared as well with a portion of the Ugaritic Baal epic in which that deity's approach is marked by the "withering of the heavens" and whose voice is described in the Aqhat legend as "double deep," a thundering exclamation that presages the rains. F. M. Cross cites an El Amarna text in which a subject prince, Abimilki of Tyre, refers to Pharaoh Akhenaten as the one "who utters his (battle) cry in the heavens, like Haddu so that the whole land shakes at his cry." A Mesopotamian lamentation of the first millennium uses terminology for divine judgment similar to Habakkuk when it speaks of the heavens rumbling, the earth shaking, the sun lying at the horizon, the moon stopping in the sky and evil storms sweeping through the land. For more specific information concerning the movements of the heavenly bodies connected to warfare see comments on Joshua 10:12-13.

ZEPHANIAH

1:1-13
Judgment Against Judah

1:1. chronology and pedigree. This superscription dates the book to the reign of Josiah (640-609 B.C.). Since Josiah came to the throne as a small boy, a regency made up of priests and court officials ruled Judah until 622 (see 2 Kings 22:1). Because there were several persons with the name Zephaniah in the period just prior to and during the exile, adding a short genealogy helped indicate which person was responsible for the oracles (compare a similar practice of attaching the prophet's name to a list of prophecies in the Mari texts and the Assyrian Annals of Esarhaddon).
1:4. Josiah's reform. The cultic abuses and idolatry described in this verse anticipate the actions taken by Josiah after 622 B.C. (see the comments on 2 Chron 34). When Josiah was able to effect his cleansing of the temple and elimination of foreign gods, idols and priests, he did it in the name of a restoration of the covenant's provisions (see 2 Kings 23:24-25). A similar reform had been carried out by Hezekiah about eighty years earlier (2 Kings 18:4). In both instances the apparent weakness of the Assyrian monarchy contributed to attempts by small kingdoms like Judah to assert their political and religious independence.
1:5. worshiping starry host. Worship of the starry hosts refers to the celestial gods (sun god, moon god and Venus particularly; in Babylonia, Shamash, Sin and Ishtar respectively), who were primary in most ancient religions. Controlling calendar and time, seasons and weather, they were viewed as the most powerful of gods. They provided signs by which omens were read, and they looked down on all. By the end of the second millennium a major compilation of celestial omens, the seventy tablets of the work known as *Enuma Anu Enlil,* had been compiled and was consulted for nearly a thousand years. Stamp seals from Israel in this period show that astral deities were very popular. There were many constellations recognized by the Mesopotamian astrologers (many, though not all, the same we recognize today, transmitted through the Greeks), but the zodiac was not

yet known. For more information see comment on 2 Chronicles 33:5.

1:5. Molech. See the comments on Leviticus 18:21 and Deuteronomy 18:10. Many consider Molech to have been a netherworld deity featuring rituals with Canaanite origins focusing on dead ancestors. An eighth-century B.C. Phoenician inscription speaks of sacrifices made to Molech before battle by the Cilicians and their enemies.

1:8. foreign clothes. Since Judah had been under foreign (Assyrian, Egyptian and Babylonian) domination for over a hundred years, it is not surprising that government officials and those who wished to curry favor with their overlords would adopt their clothing styles as well as other cultural traits. Neither Judean nor Babylonian dress of this period is well attested in the inscriptional materials, so detailed comparison is not possible. Differences could have included the articles of clothing that were worn or the style, material, weave or dyes that were used. A later example of the adoption of foreign styles is found in the Hellenistic period, when Jason, the high priest, forced the nobility of Jerusalem to wear a broad-brimmed hat associated with the Greek god Hermes (2 Macc 3:12).

1:9. stepping on threshold. The threshold was typically made of a single stone that spanned the doorway, raised slightly from the level of the floor. Sockets were cut into the outer edges of the threshold on which the gates or door swung. The height of the threshold would prevent the doors from swinging out. Entryways were often considered both sacred and vulnerable. Superstitious belief presumably held that stepping on the threshold would allow the demons that haunted the entryway to gain admission. Similar superstitions have continued in the Near East and the Far East from Syria to Iraq to China, but ancient information concerning this superstition is lacking.

1:10. Fish Gate. Jerusalem had many gates to serve its various quarters. The Fish Gate provided an entrance through the northern wall just to the west of the Tower of Hananel (Neh 12:38-39). Archaeological excavations confirm that it opened upon a ridge leading from the temple enclosure to the Benjamite plateau. Its name probably derives from the presence of a fish market established there by Tyrian merchants (see Neh 3:3).

1:10. New Quarter. This section of Jerusalem was created when Hezekiah built the first defensive wall around the western hills of the city (2 Chron 32:5). Manasseh apparently repaired these walls during his reign (2 Chron 33:14). Avigad's excavations have disclosed a seventh-century wall over 225 feet long and 24 feet thick. It may have surrounded the entire western hill, providing additional protection to the northern section of the city.

1:11. market district. As each district of Jerusalem is called upon in turn to lament, the Mortar or market district in the western section of the city takes up the wail. Based on the Hebrew word *maktesh* (bowl or mortar; see Prov 27:22), it was probably located in one of the folds or depressions within the Tyropoeon Valley and was enclosed within the city walls in the seventh century.

1:14—2:15
Day of the Lord Oracles Against Nations

1:14. Day of the Lord. See sidebar at Joel 2.

2:4. Philistine cities in late seventh century. After Sargon II's and Sennacherib's campaigns of the late eighth century and the capture and destruction of many of the Philistine cities, these sites were then rebuilt by the Assyrians, and several of them (particularly Timnah and Ekron) prospered as centers for olive oil production. Archaeological evidence has identified industrial districts where olive oil was processed and cloth was woven (based on large numbers of loom weights in these levels). There are indications of Egyptian presence in Philistia after the Assyrian empire collapsed (see comment on Ezek 25:15). These cities were then destroyed in 600 B.C. in the campaigns of the Babylonian ruler Nebuchadnezzar.

2:8-9. Moab and Ammon in late seventh century. Like all the small kingdoms in Syro-Palestine, Moab and Ammon were vassals of the Assyrians during the eighth and seventh centuries. Evidence of this is found in the mention of four Moabite kings in the Assyrian Annals (ranging from the time of Tiglath-Pileser III to Ashurbanipal). It can be expected that they gained some measure of independence toward the end of the seventh century as chaos reigned in Assyria (see the comment on Ezek 25:8). However, Josephus records that they were subjugated by the Babylonians shortly after the fall of Jerusalem (see the comment on Ezek 25:2).

2:12. Cushites in late seventh century. It is unclear what prompted this oracle against Ethiopia. The Cushites had not ruled Egypt since the supplanting of their dynasty in 664 by the Saite dynast Psammeticus I. While this native Egyptian pharaoh did ally himself with the Assyrians after 616, no specific event or campaign in Palestine is referenced in his or

his successors' inscriptions prior to the 609 campaign of Necho II. There has been some suggestion that this reference to Cush should be understood in relation to Mesopotamia (as is possible in Gen 10:8), since it precedes the oracle on Assyria.

2:13. Assyria in late seventh century. After the death of Ashurbanipal in 627, the disputes among his heirs and potential successors so weakened the Assyrian empire that it swiftly fell apart. This collapse was hastened by two factors. First were the harsh administrative policies. The hatred generated against the Assyrians was further compounded by their use of extreme terror tactics in warfare (see the sidebar on the siege of Lachish in 2 Chron 32:9). The emergence of a Babylonian-Median coalition provided a match for Assyria's army, and by 612 the Assyrian capital at Nineveh had been captured and destroyed (see the comment on Is 13:1). The final step in completely eliminating all vestiges of Assyrian power came at the Battle of Carchemish in 605. Its empire fell to the Egyptians and Neo-Babylonians to divide (see the comment on Is 31:8).

3:1-20
Hope for Jerusalem

3:3. officials as lions. The prophet's analogy between Judah's officials and ravenous lions may be compared to the lament in Psalm 22:12-21, where the sufferer is threatened by roaring lions and calls out for rescue from their open mouths (see also Jer 2:30). In seventh-century Assyrian literature the lions' pit occurs as a metaphor for vicious and antagonistic courtiers of the king.

3:9. purifying lips. Mesopotamian rituals often featured the purification of lips as symbolic of the purification of the person. It was viewed as a prerequisite, especially for diviner priests, before they could appear before the divine council and report what they had witnessed.

3:10. rivers of Cush. As alluded to in 2:12 above, Cush can refer to several different places in the Old Testament, though it most frequently is the designation for the area translations usually render "Ethiopia." This is misleading, for the area Cush refers to is not modern Ethiopia (Abyssinia) but the area along the Nile just south of Egypt, ancient Nubia (in modern Sudan). The boundary between Egypt and Nubia in ancient times was usually either at the first or second cataract of the Nile. It is unlikely that Nubia ever extended much beyond the sixth cataract at Khartoum. This verse would then refer to the region of the Blue and White Niles in Upper Egypt. Alternatively, since no Israelites were known to have been scattered to the region of Nubia, this verse may refer to the rivers of Mesopotamia (see Gen 2:13).

HAGGAI

1:1-15
Call to Build the Temple

1:1. chronology. The use of a precise date to introduce a particular prophetic narrative is common in the postexilic writings. The monarch mentioned here is Darius I, who seized the throne of Persia on September 29, 522 B.C. This followed what had been almost seven months of trouble in the empire, beginning with the revolt by Gaumata on March 11 and his subsequent usurpation of the throne on July 1 of the same year, upon the death of Cambyses. Even after Darius secured the throne, revolts continued, as recorded on the famous Behistun Inscription. The date given in Haggai is August 29, 520.

1:1. Zerubbabel. Zerubbabel was the heir to the Davidic throne (grandson of Jehoiachin; see comment on 2 Kings 24) and served as governor of Judah under the Persian king Darius I. There was a significant amount of expectation surrounding him that had a messianic flavor to it. Undoubtedly some expected him to set up the promised kingdom and bring freedom from their slavery (to the Persians). While his duties were primarily secular, he is described in Ezra, along with the priest Joshua, as the force behind the rebuilding of the temple in Jerusalem. Governing under the auspices of the Persian king, he was responsible for maintaining law and order, and for the collection of taxes. Though Zerubbabel is the last Davidic heir to serve in the role of governor, archaeologists have found a seal of Shelomith (listed as a daughter of

Zerubbabel in 1 Chron 3:19), where she is designated as either a wife or an official of Elnathan, the governor who is thought to have succeeded Zerubbabel.

1:1. Joshua. Joshua was the high priest in the early postexilic period. His grandfather, Seraiah, had been executed by Nebuchadnezzar when Jerusalem fell to the Babylonians (2 Kings 25:18-21; note that Ezra is also from the line of Seraiah, see 7:1). Judah's heir to the throne, Zerubbabel, served as governor, but since Judah was still under Persian control, there were restrictions on the extent of his control (so as not to compete with the Persian king). Consequently, rule in the community was now divided between the governor and the high priest, giving the priest a more prominent role. Little is known about him except that he was one of the leaders who helped get the temple rebuilt. There are no contemporary extrabiblical references to him.

1:4. paneled houses. The term "paneled" can mean "covered," "roofed," or "paneled," but the point in any case is that it represents the finishing touches. Their homes were not "in process" but were fully appointed, while the temple remained a ruin. The term does not imply luxury or great expense, though paneling can be of that nature. Wood paneling was unusual in private residences, although Solomon's throne was "paneled" (1 Kings 7:7).

1:7. prophetic role in temple rebuilding. In the seventh century, Assyrian prophets offered encouragement to kings Esarhaddon and Ashurbanipal to rebuild the temples of particular deities. This message from the gods was considered essential for the kings to feel free to proceed with the building preparations. The deity who was to dwell in the temple was the only one who could authorize the undertaking.

1:15. chronology. The date here is about September 21, 520 B.C., three and one-half weeks after the first prophecy.

2:1-9

Temple Grandeur

2:1. chronology. This would have taken place on October 17, 520, about seven weeks after the first prophecy.

2:3-4. temple glory and God's presence. The main reason for all of the splendor built into a temple was to make it worthy of the deity's presence. Honor was bestowed by the wealth and luxury of the building and its furniture. Some would have even felt that this was necessary to induce the deity to make the temple his dwelling. Here Haggai deflates their fears by assuring them that the Lord intends to inhabit the "less-than-glorious" house and will subsequently bring splendor to it.

2:10-23

Defilement and Blessing

2:10. chronology. The equivalent date is December 18, 520, over three and one-half months since the first prophecy.

2:12. transmission of purity. The "holy meat" consecrates anything it touches (e.g., the fold of a garment), but nothing that touches the fold of the garment would in turn be consecrated. The situation pictured here may have been quite common at this time. The altar had been rebuilt within a few years of the return (535), but the temple had not yet been built. This means that meat from the sacrifices could not be eaten in the regular temple precincts, as was the norm. Instead, the food would have to be transported to the eating place. The regulations governing the transfer of purity are not found in Scripture and so must have been part of Israelite oral tradition. The law in Leviticus 6:27 states that whoever touches the flesh of a sin offering will be consecrated, and when any of the blood splashes on a garment, that garment had to be washed.

2:13. transmission of impurity. Ritual defilement, however, was passed on by contact in a manner like a contagious disease (see comments on Lev 11:8; 22:3-9). In fact, contact with a corpse caused the highest degree of defilement. Those who were ceremonially unclean because of a corpse were not allowed to participate in organized worship (e.g., Num 9:6; see further the comment on Num 19:11) and often were sent away from the camp (Num 5:2). Thus, food touched by one who was defiled was contaminated.

2:17. blight, mildew and hail as divine punishment. The three punishments described here, blight, mildew and hail were all typical forms of divine correction in ancient Israel (see comment on Amos 4:9). Blight is derived from a Hebrew term signifying a scorching wind. The term usually refers to the hot east wind that blows across the land from the desert. The term "blight" refers to the debilitating effects of the wind, causing the withering and destruction of plants and grain. Mildew is a term that refers to a disease of grain caused by a fungus. It has been thought that it is often caused by drought and excessive rains. A third adverse weather condition is hail, which, if followed by a strong wind, will damage crops. Like the other terms, hail is often seen as divine judgment (see comment on Josh 10:11).

2:18. chronology. December 18, 520 (the same date mentioned in 2:10), is described here as the

date of the founding of the Lord's temple. Thus the date of was great importance to Haggai.

2:23. signet ring. The term "signet" probably refers to a seal, which could have been either a cylinder seal worn with a cord around the neck or a stamp seal embedded in a ring, which is referred to here. The former was very common in Mesopotamia, while the latter was used in Israel. Thousands of cylinder seals and stamp seals have been found in Mesopotamia and Syro-Palestine respectively. They were a sign of authority, identification and ownership.

ZECHARIAH

1:1-6
Call to Repentance

1:1. chronology. Zechariah dates his oracles very precisely, as did his contemporary Haggai. His ministry began in November-December of the year 520 B.C., overlapping Haggai by one month.

1:1. Iddo. If several ancestors are mentioned in a genealogical note, the last one is usually someone of importance. In Nehemiah 12:4 an Iddo is mentioned among the priests who returned from exile with Zerubbabel in the first wave in 538. If this is the same Iddo, it indicates that Zechariah is of a prominent family with a priestly heritage.

1:7-17
First Vision: Myrtle Valley

1:7. chronology. This vision occurs several months after the initial oracle. It is dated to February 15, 519 B.C. Since the next chronological notation does not occur until after this sequence of visions, it should be considered as offering the framework for the visions, which give central attention to the rebuilding of the temple. It is likely not coincidence, then, that the vision occurs just one week prior to New Year's day, when temple building and restoration projects usually commenced in the ancient world. In addition, some scholars believe that Darius marched to Egypt in 519 to secure its renewed loyalty and that the preparations of the army for this march were a source of concern for the people of Judah. They could have felt very uncertain about what demands might be made on them and how they would be treated.

1:9. angel directing vision. Angels not only delivered messages from deity but explained those messages and answered questions concerning them. Thus Gabriel is seen in Daniel 8:16 as one who can interpret the vision. In the polytheistic context of the ancient world the messengers of the gods were generally gods themselves (of lower rank). In Mesopotamia

APOCALYPTIC LITERATURE

"Apocalyptic" is the name that has traditionally been given to a particular category (genre) of literature. Apocalyptic is defined by its characteristics. It has some traceable roots outside the Bible (see the sidebar on Akkadian apocalypses in Dan 11) but finds its earliest true members in Old Testament books such as Daniel and Zechariah. In the Bible it is intricately intertwined with prophetic literature. There are over a dozen Jewish apocalyptic works during the intertestamental period, the most prominent being *4 Ezra* and the books of *Enoch*. The book of Revelation is the New Testament's contribution to the genre. Other Christian apocalypses began to appear on the heels of the New Testament, including works like the *Shepherd of Hermas*, the *Apocalypse of Peter* and the *Ascension of Isaiah*. The genre was a favorite of the Gnostics, whose literature contains numerous examples. Apocalypses feature a narrative framework and often portray an angelic interpreter or guide alongside the prophet. The angel may take the prophet on a tour of heavenly realms to convey certain realities and activities. Alternatively, he may unveil a future time of trouble and deliverance. This literature operates by means of a broad spectrum of symbols using significant numbers and mythological images. It draws heavily on both biblical and extrabiblical literature. It tends to schematize. When reading apocalyptic, there are a couple of important guidelines to keep in mind. First, each detail does not necessarily carry symbolic significance. Even the details that do carry symbolic significance may not be transparent to us and speculating accomplishes little. Second, it is important to remember that the apocalyptic vision is not the message itself but rather is the vehicle or occasion for the message. So, for instance, the message of the first vision of Zechariah (1:7-17) is *not* that there are going to be four horses of different colors in a myrtle grove. The message is laid out very clearly in verses 14-17. Apocalyptic is simply a medium.

we find individuals such as Nuska and Kakka, while the well-known Hermes serves the function in Greek mythology. In a dream of Nabonidus a young man appears to offer an interpretation of a celestial omen that has been observed.

1:10. sent throughout the earth. The Persians were well known for their mounted couriers, who traveled daily through the empire maintaining the most efficient communication system known in the ancient world. The myrtle trees evoke the image of palace gardens. Persian kings enjoyed the parks of trees that stood beside the audience halls and received visitors and reports there.

1:11. Persian peace. Just as royal couriers would be reporting to their superior that all was peace, so these angelic couriers bring their report to the angel of the Lord. The fact that Darius was now securely seated on the throne and smoldering revolts had been quenched would have been good news for the empire but bad news for the Jews. Their hopes for the restoration and reestablishment of a Davidic monarchy that had been excited at the prospect of the collapse of the Persian empire were now dashed. Additionally, if Darius's army is on the way to Egypt through Judah (see comment on 1:7), the horseman's report could offer assurance that there will be no trouble from the Persians as they pass through.

1:16. status of rebuilding. Ezra 3 reports work that had been done on the temple site prior to 520. Certainly the altar had been set up on its foundation and was operational, but the chronological note introducing the building of a foundation in Ezra 3:10 is not as clear as it could be (see comment on Ezra 3:8). It is not impossible that a foundation was laid a second time.

1:18-21
Second Vision: Horns and Craftsmen

1:18. four horns. It was common in Mesopotamia for kings and gods to wear crowns featuring either protruding or embossed horns. Sometimes the sets of horns were stacked one upon another in tiers. The winged lion from Ashurnasirpal's palace has a conical crown on its human head with three pairs of tiered horns embossed on it. It is difficult to determine what the significance of the four might be. Suggestions include the presentation of a four-empire scheme (see comment on Dan 7:17) or perhaps a reference to the four corners of the earth from where these enemies have come (see comment on Ezek 7:2). Given the context of temple building, a persuasive suggestion is that the symbolism of the horns was evoked from the four horns of the altar. An altar had been set up on the temple site soon after the arrival of the returnees (see comment on 1:16) but probably would have had to be removed for the reconstruction work to take place.

1:20-21. craftsmen. Among the many categories of Babylonian temple personnel at the end of the sixth century was one designated "craftsmen" *(ummanu).* A number of different guilds were included in this group (those who worked with materials such as wood, metal, leather, gold, cloth, stone and gems, as well as those who carried out tasks such as laundering). This same term was extended to serve as a title of royal advisors believed to be supernaturally endowed. Individuals of this title are also identified as the sages who composed famous pieces of literature. In short, this term referred to various experts in the employ of the palace and temple. The Erra Epic makes it clear that it was the *ummanu* who were responsible for crafting divine images. The Hebrew term used here can also refer to a wide range of guild workers, including those who craft images and serve the temples, but is never clearly extended to sages or royal administrative advisors. In the Canaanite pantheon the important deity Kothar-wa-Hasis is the craftsman of the gods. He makes the weapons of the gods and is responsible for building Baal's house. In the Egyptian pantheon, Ptah of Memphis is the craftsman deity, who was thereby considered a creator as well as the patron of artisans. If it is correct that these are the craftsmen who are dismantling the altar (see previous comment), then they are artisans in the employ of the temple carrying out a sacred and ceremonial task.

2:1-13
Third Vision: Measuring Line

2:2. measuring Jerusalem. The placement and orientation of a temple was considered extremely important (see the comment on Ex 26:1-36). This is also evidenced in temple building texts both mythological and historical in Mesopotamia. In *Enuma Elish* when Marduk is preparing to build his cosmic temple, he measures the Apsu (the area where the foundation of the temple will be laid). From Sumerian times through Assyrian and Babylonian periods the possession of the measuring equipment is a sign of the divine commission for the rebuilding project. It is through this

equipment that the leader is given divine direction. Additionally this equipment was used to determine the exact location of previous temple foundations.

2:5. glory within. As early as Sumerian literature it can be observed that the presence of deity in a city represents the city's protection. For example, in the *Curse of Agade* the gods take their leave of the city and thereby make it vulnerable to its enemies.

2:6. land of the north. Especially in Jeremiah, the north was direction that the enemy was going to come from (see comment on Jer 1:14-15). Eventually it became clear that Babylon was that enemy from the north. Even though Babylon was located east of Jerusalem, all traffic flowed in an arc around the Syrian desert. Thus Babylonians would come into Judah from the north, and Israelites would go to Babylon from the north. Now Zechariah is urging them to flee from the lands of their captors.

2:6. four winds. In Mesopotamian thinking there were occasionally seven winds, but four was the more usual. The four were connected with compass points in accordance with the direction they blew from, just as they are today.

3:1-10 Joshua's Investiture

3:1. Satan. Here and in the book of Job the word *saṭan* appears with a definite article ("the"), which makes it clear that it is not being treated as a personal name. The Hebrew word *saṭan* is used to describe an adversary and can be used of human beings or supernatural beings. Even the angel of the Lord can exercise this function (Num 22:22). The term does not clearly take on the role of a personal name until the intertestamental period (specifically the second century B.C.). Though the individual functioning as an adversary to Joshua here may well be the one who later bears the name Satan, that cannot be concluded with certainty. Those who serve as adversaries are generally in the role of calling God's policies and decisions into accountability.

3:3. Joshua. Joshua is the high priest in the early postexilic period. His grandfather, Seraiah, had been executed by Nebuchadnezzar when Jerusalem fell to the Babylonians (2 Kings 25:18-21; note in 7:1 that Ezra is also identified as being from the line of Seraiah). Judah's heir to the throne, Zerubbabel, served as governor, but since Judah was still under Persian control, there were restrictions on the extent of his control (so as not to compete with the Persian king). Consequently, rule in the community was now divided between the governor and the high priest, giving the priest a more prominent role. Little is known about Joshua except that he was one of the leaders who helped get the temple rebuilt. There are no contemporary extrabiblical references to him.

3:4. those standing before him. The scene that includes an accuser and one standing in the dock evokes the imagery of a heavenly court. Such a concept had a long-standing tradition in both Israel and the ancient Near East. In the ancient Near East the major decisions were all made in the divine council. There the gods would consult with one another and share their information and opinions. The familiar picture of a heavenly throne surrounded by the heavenly council is well known from the Ugaritic texts (most notably the Epic of Keret), though this Canaanite council is made up of the gods of the pantheon. Examples occur also in the tenth-century building inscription of Yehimilk from Byblos and the Karatepe stele of Azitawadda. In the Akkadian *Enuma Elish* it is the assembly of the gods that appoints Marduk as their head. Fifty gods made up this assembly, with seven in the inner council. In Israelite belief the gods were replaced by angels or spirits—the sons of God or the heavenly host.

3:5. investiture. There is no mention in this section of the most notable items of the priest's regalia—no ephod, no breastplate, not even any linen—just the turban. This suggests that Joshua's priestly status is not the issue. In a relief of Ashurbanipal (seventh century) the king wears a special turban as he carries the foundation brick in a basket on his head. Alternatively, then, we could view Joshua being prepared for his role in the temple reconstruction.

3:8. branch. Most consider the word "branch" a technical term referring to a rightful heir of an established dynastic line—in Israel, a future Davidic king who would restore the monarchy. A similar usage has been found in a Phoenician votive inscription from Cyprus honoring Melqart that dates to the early third century B.C. There it refers to a legitimate "branch" of the Ptolemaic dynasty of Egypt. The Dead Sea Scrolls from Qumran do not use the term in a messianic sense, but the kingship sense does occur in Ugaritic and Assyrian texts. For instance, Tiglath-Pileser III is described as the shoot or scion of the city of Baltil (Ashur) who brings justice to his people.

3:9. seven eyes on the stone. It has generally been held that the seven "eyes" are seven facets. The problem is that gemstones were

shaped but not faceted in the ancient world. Given the context, it is preferable to associate this stone with a new foundation stone for the temple (see the comment on 4:7). In Mesopotamia there are beads of precious stones given as gifts to the temple that are cut in the shape of eyes and engraved with the names of the donors. Assyrian and Babylonian kings included gemstones in the foundation deposits of temples. Nabopolassar reports spreading gold, silver and imported stones on foundations. Foundation stones were sometimes overlaid with precious metals and could therefore be encrusted with gems. If Zechariah reflects this practice, the seven "eyes" are being inlaid on the stone rather than engraved on it.

4:1-14

Lampstand and Olive Trees

4:1. angel directing the vision. See comment on 1:9.

4:2. description of lamp. This solid gold lamp consists of a pedestal on which a large bowl rests. Arranged around the rim of the large bowl are seven lamps. These lamps are small shallow bowls that hold the oil. Such bowl lamps are common throughout the biblical period, though they take varying shapes in different periods. Typically they feature a pinched area on the rim where a wick can be squeezed in with the bottom of it submerged in the oil. The wick will then draw oil up to burn. Each of the seven lamps here has seven pinched spouts around its rim, as attested in some excavated lamps. In this way the large lamp has forty-nine lights. The large bowl presumably contained oil that was somehow channeled to the seven smaller lamps. There are no excavated artifacts that bear a resemblance to the complex lamp described here. An alternative design that has a little more support from archaeology is that of the kernos. This type of vessel features a pottery ring (instead of a bowl) on which the seven lamps are mounted. Kernoi that were used as lamps have been found in Persian-period Palestine.

4:3. setting of the lamp. O. Keel has demonstrated that in the iconography represented on seals of the eighth and seventh centuries, the deity is often represented stylistically. Astral images usually represent the deity, most commonly the crescent moon with its horns facing upward. Both the shape and the fact that light is involved can easily parallel the lamp of this vision. Additionally, this symbol is flanked by worshipers, sometimes represented stylistically as trees, though often of the cypress variety. It is not impossible that, as B. Halpern has suggested, the vision of the lampstand provides a description of that which will be inscribed on the foundation stone. The main advantage to this is that it draws together the seven eyes of the stone in 3:9 with the seven eyes representing the lamps in 4:10, since the lampstand and the stone would be one and the same.

4:6. Zerubbabel. Zerubbabel was the heir to the Davidic throne (grandson of Jehoiachin, see comments on 2 Kings 24) and served as governor of Judah under the Persian king Darius I. There was a significant amount of expectation surrounding him that had a messianic flavor to it. Undoubtedly some expected him to set up the promised kingdom and bring freedom from their slavery (to the Persians). While his duties were primarily secular, he is described in Ezra, along with the priest Joshua, as the force behind the rebuilding of the temple in Jerusalem. Governing under the auspices of the Persian king, he was responsible for maintaining law and order, and for the collection of taxes. Though Zerubbabel was the last Davidic heir to serve in the role of governor, archaeologists have found a seal of Shelomith (listed as a daughter of Zerubbabel in 1 Chron 3:19), on which she is designated as either a wife or an official of Elnathan, the governor who is thought to have succeeded Zerubbabel.

4:7. capstone. Rather than a capstone, this is more likely to be the foundation brick that is always significant in temple building and restoration. One of the most detailed temple-building accounts in ancient Near Eastern literature describes Gudea's construction of a temple for Ningirsu around 2000 B.C. The ceremony concerning the premier brick shows its centrality to the building procedure. In Neo-Assyrian texts, Esarhaddon personally brings out the old premier brick from the site of the temple so that restoration can begin. The reference to level ground here suggests that Zerubbabel is ceremoniously removing the premier brick from the prior temple to indicate that the restoration can begin.

4:9. Zerubbabel to complete the temple. In the *Autobiography of Adad-Guppi,* Adad-Guppi, the mother of King Nabonidus (just a few decades prior to Zechariah) is told in a dream that her son will construct the temple of the god Sin in Harran. He will complete the work and bring renewed glory to Harran and its patron deity.

4:10. plumb line. The Hebrew speaks only of a tin stone. Some temple restoration projects in the ancient world featured a tin bracelet

used by the one who removed the premier stone (see the comment on 4:7 above). Tin was also occasionally used as a tablet for the foundation inscription.

4:10. seven eyes of the Lord. The seven "eyes" of the Lord are represented by the lamps. If the connections suggested between 3:9 and 4:3 above are correct, these seven "eyes" are also the same ones mentioned in 3:9 and are embedded in the foundation stone as part of the picture of the lampstand.

4:12. golden pipes. In the seals described in the comment on 4:3, there are also portrayed what Keel identifies as "tassels" extending from the crescent moon. In this vision they take the form of pipes conducting oil from the trees to the lamp.

4:14. significance of oil. The word used for oil in verses 12 and 14 refers to the raw material, unprocessed oil. This would not be used for anointing (NIV's "anointed" in the Hebrew is "sons of oil"). As a raw material it is often connected with prosperity, but it is difficult to know what connection that would have here. Given the context of laying the foundation of the temple, it may be important that the ceremonial laying of the foundation often featured mortar mixed with oil rather than water. If this connection is valid, it would again identify Joshua and Zerubbabel as the ones carrying out the building project. Sennacherib claims that he sprinkled a foundation with oil as if it were river water.

5:1-4
Flying Scroll

5:1. flying scroll. The description of the scroll as flying suggests that it is at least partially unrolled. Though in English we can speak of a flag flying as well as a creature flying, Hebrew usage is only in the latter category (though sparks and clouds are also said to "fly"). This is confirmed in verse 4, where the scroll is sent out and enters houses. There is no parallel to flying scrolls in extrabiblical literature.

5:2. dimensions compared. The dimensions of the scroll are the same as the portico area of Solomon's temple, but it is difficult to identify any significance to such a correlation. The thirty-foot-long scroll is not unusual for ancient scrolls, but the fifteen-foot width is extraordinary and out of proportion. Concern for proportionality has led some to consider the thirty-foot length as a reference to only the few columns that were visible in a partial unrolling of the scroll. It would be highly unusual to unroll the entire scroll. Conventional practice would be to unroll both sides of the scroll simultaneously to move through the scroll, maintaining the visibility of just a few columns of text at a time. Having the open section thirty feet long would be more consistent with the giant size suggested by the fifteen-foot width. Since a column of writing on a scroll was typically about half as wide as the height of the scroll, probably two columns would be visible, with the still rolled portions on either side making up the remainder of the width.

5:3. curse on the scroll. The word used here for curse refers to the dire consequences called down on one who violates an oath, or to a public summons intended to collect information concerning a crime that has been committed (see Lev 5:1). Failure to reveal information that one has would implicate a person as an accomplice, subject to the same punishment as the perpetrator.

5:3. written on both sides. Though scrolls usually had writing on only one side, it is not without precedent for the writing to carry over onto the other side (see Ezek 2:10). Having said that, however, it is not at all clear that the text is referring to a scroll written on two sides. In almost every use of this idiom, the two sides are left and right, not front and back. If front and back were intended, the same idiom that is used in Ezekiel 2:10 would have been the logical choice. It is therefore more likely that two columns are exposed on the scroll (see comment on 5:2), with one addressing the punishment for theft and the other the punishment for swearing falsely.

5:3. thieves and oath breakers. The text suggests a connection between theft and oath breaking. What oath could be made that, if broken, would constitute theft? One possibility is that individuals had made pledges of funds to accomplish the building of the temple and were now reneging on their oaths. In that case they would be guilty of stealing (it had been pledged and, therefore, no longer belonged to them) and of oath breaking. The sanctions (represented in the scroll) are now going forth to ferret them out and bring the consequences down on them. The problem of investing in their own houses instead of the temple is referred to in Haggai 1:4; the accusation of theft for holding back that which has been pledged is seen to be a postexilic problem in Malachi 3:8-10.

5:4. curse entering a house and remaining in it. If, as suggested in the above comments, the offenders have reneged on their promised contributions to the temple, it is appropriate that their obstruction of the building of the Lord's house should result in the destruction of their own houses. It is another way of say-

ing that their unfaithfulness will come back to haunt them in such a way that the punishment is suited to the offense.

5:5-11

Woman in the Basket

5:6. measuring basket. Special ceremonial containers were used to transport the premier stone as well as to house the foundation deposits. This container is described only by its size, an ephah, which is generally considered about two-thirds of a bushel. There is no indication as to what material it is made out of. The container used for foundation deposits in Mesopotamia is called a *quppu* and could be either a wicker basket or a wooden chest. Judging from what was placed in them, they could be of varying sizes.

5:7. lead. Though the NIV interprets this as a cover, the text refers to it in verse 7 as a "talent" of lead (a particular weight, usually the shape of a convex disk) and as a stone of lead in verse 8. Temple foundation deposits often included metal pieces (gold, silver, iron, bronze, lead), sometimes small scraps, other times large blocks and at times square convex tablets or bricks.

5:7. woman inside. The small size of the container has led to the conclusion that the woman sitting inside refers to a figurine. The connection of this to temple building could be that figurines were often buried next to the foundation deposit or beneath the door-pivot stone. Such figurines could either indicate dedication to a particular deity, or represent an apotropaic (protective) deity. It is very tempting to see this vision as entailing a foundation deposit box taken from the ruins of the temple that contained a figurine and a piece of lead.

5:9. women with wings. In the Old Testament angels are not female and are not portrayed with wings (though in Dan 9:21 Gabriel perhaps comes in swift flight; but see comment there). In Ugaritic literature Baal's sister, Anat, is portrayed with wings. In Mesopotamian art winged creatures are generally either protective genies or demons. The goddess Ishtar is also occasionally portrayed with wings. Two winged female genies are portrayed flanking a stylized tree in a relief from the ninth century.

5:11. building a house for it. The pronoun "it" is feminine, as are the woman and the ephah. Since the second part of this verse makes reference to the container rather than to the woman, the house is seen as being built for it rather than for her. This would further confirm that the container should be identified as a foundation deposit that will be set in place in a temple there. The word "house" is often used for a temple.

6:1-8

Four Chariots

6:1-5. charioteer messengers of deity. These are called the four spirits, the same terms as the four winds in 2:6. Psalm 104:4 refers to the winds as the messengers of Yahweh, and that

SUMMARY OF THE TEMPLE-BUILDING CONNECTIONS TO ZECHARIAH'S VISIONS

The series of visions starts off with the affirmation that Yahweh still cares about his people despite the secure standing of the Persian empire. The first vision indicates that his plan for the future is going to be accomplished through the rebuilt temple. The second vision begins the process of preparing the site for the rebuilding. The dismantling of the altar is envisioned as representing the terrifying of the nations. The third vision continues the preparation by measuring the city (1:16 shows that measuring the city is part of the preparation for building the temple). Measurements of the city served the purpose of determining the placement of the temple. Such a process would not be productive in this case, however, because the city is not going to have walls to calculate from. It would be highly unusual for a temple not to be protected by a wall because of all the valuables stored there and the need to preserve the sanctity of the area. In a preamble to the fourth vision, Joshua is prepared to play his role; he is purified for the rituals surrounding the premier stone and given the ceremonial cap on which the stone is carried. This foundation stone is ornamented with seven semiprecious stones that serve as seven lamps in the inscribed decoration. The inscription on the stone is a typical scene of a lampstand (representing the temple and indirectly Yahweh, who dwells there) flanked by stylized trees. Here they are olive trees that supply the oil to keep the lampstand/temple going. Oil is also used to pour over the foundation and mix with the mortar for the placement of the ceremonial premier stone. In this vision, Zerubbabel is the one responsible for ceremonially removing the previous premier stone so that the leveling of the site can take place. The fifth vision represents an attempt to call in the pledges that have been made for the funding of the building project. The deadbeats are guilty of breaking their oaths and, in effect, of stealing because they have kept that which had been pledged to the temple rebuilding fund. The sixth removes an idolatrous figurine that would have been deposited in the foundations in a previous renovation. It is sent back to Babylon where it belongs, and there a temple can be built for this foundation deposit. The sequence ends with the temple serving its function as a base of operations from where Yahweh can carry out his military and political plans.

is the function they are serving here. The horsemen in chapter 1 were comparable to the Persian courier service, but chariots were not used that way. It is unusual that a chariot should be used by a messenger, because it would only slow him down and tire his horses unnecessarily. In the ancient Near East a supernatural being in a chariot was usually transporting the deity rather than serving as a messenger (see comment on 2 Kings 2:11).

6:9-15
Joshua's Crown

6:11. high priest's crown. The crown referred to here is a circlet, and, though it is occasionally worn by royalty, it more often adorns a person who is being honored or celebrated. It can be made of precious metals, as it is here, but can also be made of flowers or greenery.

7:1-14
Fasting Question

7:1. chronology. The date equivalent is December 7, 518 B.C. This is nearly two years after the last date given in chapter 1 and the last date given in the book. There is no evident correspondence to any particular event in either the Jewish calendar or the activities of Darius that would give this date significance.

7:2. people of Bethel. The town of Bethel was about twelve miles north of Jerusalem and was on the northern fringe of the Persian province known as Yehud (Judah).

7:3. fast of the fifth month. Nebuchadnezzar's destruction of the temple had taken place in the fifth month (see 2 Kings 25:8). It is logical that a fast day had been established on that date. The delegation would undoubtedly wonder whether they should continue to observe a fast for the destruction of the temple now that it was being rebuilt. Zechariah responds by questioning whether the fast focused on a petition to rebuild the temple or on a petition that concerned repentance for the sins that had brought about the destruction.

7:5. fast of the seventh month. The only known event from the seventh month that could reasonably the occasion for a fast is the assassination of Gedaliah (Jer 41). He had been appointed governor of Jerusalem by Nebuchadnezzar after the fall of Jerusalem.

7:5. purpose of fasting. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling before God (Ps 69:10; 102:4). It is not an end in itself, but rather it is the disciplined training in preparation for an important event.

8:1-23
Oracles of Restoration

8:19. various fasts. The fasts of the fifth and seventh months have been identified in the comments on chapter 7. The other two also appear to be connected with the events surrounding the siege of Jerusalem. The fourth month represented the end of Davidic kings occupying the throne. It was in the fourth month that the last king of Judah, Zedekiah, secretly fled the city after a year and a half of siege. The tenth month had marked the beginning of the siege of Jerusalem by the Babylonian armies.

8:22. powerful nations seeking the Lord. This was already a theme in preexilic prophecy. See comment on Isaiah 2:2.

8:23. grasping the hem. Grasping the hem of the garment was a common phrase found in Ugaritic, Aramaic and Akkadian (languages related to biblical Hebrew). In Akkadian the phrase was "to seize the hem." In both Israel and Mesopotamia, grasping the hem of someone's garment was a gesture of supplication and submission. Saul's grasping of Samuel's skirt was a final plea for mercy. This is also the case in the Ugaritic Baal cycle, where Anat seizes the hem of Mot's garment to plead for her brother Baal.

9:1-17
Coming Judgment

9:1. Hadrach/Damascus. Hadrach is not known from any other biblical references but is familiar from Neo-Assyrian sources beginning in the mid-eighth century as the district of Hatarikka. It is located along the upper Orontes River between Aleppo and Hamath. It is the northernmost area of the Persian satrapy known as Abarnahara (land across the river) that dominated the region between the Orontes and the Euphrates. Damascus dominated the northeastern region of the satrapy between the Orontes and the Syrian desert. During this period it was a province, as was Hadrach.

9:2. Hamath in early fifth century. Hamath is

likewise a term that could refer to a region as well as a city. It was located about 130 miles north of Damascus along the Orontes. If it was a province during this time, as some suggest, its territory would most likely have been the area between the Orontes and the Mediterranean. Neither archaeological or literary sources provide much information for the sixth and fifth centuries.

9:2. Tyre and Sidon in the early fifth century. These cities represent the province(s) of Phoenicia between the Litani River and the Mediterranean. Though as port cities these two were important to the Persian military efforts in the west, there is little information about them during this period.

9:5-6. Philistine cities in early fifth century. The area of ancient Philistia was now identified as the province of Ashdod. Gaza served as the base for Persian military operations against Egypt, and Ashkelon was a prosperous port city. Excavations at Ashdod suggest a thriving town during the Persian period but historical documents give little information.

9:7. blood, forbidden food. This speaks of a change in Philistine diet such that they will conform to Jewish law. The Israelites were forbidden to eat meat without draining the blood (see comments on Lev 17:11-12, and there were regulations concerning animals that could or could not be eaten (see comments on Lev 11).

9:7. Ekron like Jebusites. The Jebusites were native to the region of Jerusalem at the time of the conquest of the land under Joshua. They continued to control Jerusalem for the centuries of the Judges period up to the conquest of Jerusalem by David. There are a few textual indications that they were absorbed into Israel rather than wiped out (see comment on 2 Sam 24:18). Ekron has been identified as Tell Miqne in the Sorek Valley, about twenty miles southwest of Jerusalem and fifteen miles from the Mediterranean. It features a forty-acre lower city, a ten-acre upper tell and a two-and-a-half-acre acropolis. Excavations since the early 1980s have given a good picture of this town. It was known for its production of olive oil and had over one hundred processing plants. An inscription found on the site in 1996 that dated to the seventh century B.C. provided the first example of the Philistine dialect of West Semitic using the Phoenician script. After Ekron's destruction by Nebuchadnezzar in 603, there was very little occupation of the site.

9:9. king riding donkey. It was common in the ancient Near East for a king to ride a mule (see comment on 1 Kings 1:33), but here the reference is to a common donkey. Although Akkadian texts do evidence a king riding a donkey, it is by no means a royal mount. The word translated "colt" in the NIV refers to the same animal that is the mount for the sons of judges in Judges 10:3. Using a donkey for a mount is more likely to be connected to humility than to royalty.

9:10. battle bow. In Assyrian texts from the seventh century (Esarhaddon), a deity breaking the bow of the enemy is a way of describing conquest. In this passage the action appears to prevent future battle. In other biblical texts the same concept is expressed by the idea of beating swords into plowshares (see comment on Is 2:4).

9:10. sea to sea. Rather than referring to particular seas such as the Mediterranean and the Dead Sea, the universal tone of the passage suggests that reference is being made to cosmic seas that encompass all the inhabited lands.

9:10. River to ends of the earth. When "river" is used with a definite article, it is usually a name for the Euphrates. Here there is no definite article, suggesting a more abstract cosmic reference. In Akkadian literature the great cosmic river is known as *apsu* and would serve as a suitable contrast to the ends of the earth. "The ends of the earth" is used to refer to the most distant known places.

9:13. Greece in the early fifth century. The Hebrew term used here, "Javan," was probably the Greek name Ionia, the Greek region of the western coast of Turkey and the Aegean islands. Ionian Greeks settled this area just before the first millennium B.C. There is evidence of contact between them and the Assyrians by the eighth century B.C. By the time of Zechariah the Greeks have been involved in warfare with the Persians (see comment on Esther 2:1).

9:14. divine warrior. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. In this worldview human warfare is viewed simply as a representation of warfare among the gods. The stronger god would be victorious regardless of the strengths or weaknesses in the human combatants. Thunder and lightning were considered to regularly accompany the presence of a deity, especially in a battle setting. From the Sumerian *Exaltation of Inanna,* to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thunder-

ing terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion.

9:15. bowl from sprinkling corners of altar. The horns of the altar were sprinkled with the blood of the sacrifices, so it was blood that filled these bowls. The comparison to the bowl therefore suggests massive bloodshed.

10:1—11:3
Deliverance of Judah from Oppressive Shepherds

10:1. Yahweh as fertility deity. There is a long history in the ancient Near East of particular worship being offered to the storm god who brought rain and fertility to the fields. Baal was that god in the Canaanite system. Israelites in the preexilic period had been inclined to attribute the fertility of the fields to Baal even while they gladly acknowledged Yahweh as their national God (see comment on Hos 2:1).

10:2. idols and diviners. The word translated "idols" is *teraphim,* which are not representations of the gods, but, most likely, of the ancestors (see comment on Gen 31:19). These images would most likely "speak" through omens or through the necromancers who professed skill in communicating with the spirits of the dead. Experts in divination not only interpreted dreams (see comments on Dan 1:17; 2:4), but also specialized in inducing revelatory dreams (see comment on 1 Sam 3:3).

10:3. leaders as shepherds. The ideology of the king as a shepherd to his people is applied to Lugalzagessi of Sumer as early as around 2450 B.C. The contemporary king Urukagina of Lagash claimed that the god Ningirsu owned his state and that the king had been chosen as a "shepherd" to administer the city on behalf of the gods and the people. Gods responsible for maintaining justice (Shamash in Mesopotamia, Amon in Egypt) are likewise represented in this way. This ideology continued in the ancient Near East into the monarchy period, occurring in reference to Ashurbanipal of Assyria (seventh century) and Nebuchadnezzar (sixth century).

10:4. cornerstone. Israelite Iron Age architectural design made increasing use of cut stone masonry over the rough boulders and rubble construction of earlier periods. In order to provide stability and to bind two adjoining walls together, a finely shaped block of stone was inserted that became the cornerstone. It would have been a larger stone than those normally used, and its insertion often required special effort or rituals. Its large, smooth surface was a natural place for inscribing religious slogans, the name of the architect or king responsible and the date of construction. It is possible that the cornerstone could also serve as the foundation stone.

10:4. tent peg. It could be said that the tent peg is to the tent what the cornerstone is to a building. Alternatively, there is an Old Assyrian inscription of Irishum that suggests that a peg is driven into the wall of a temple as a symbol of its completion. In such a case the foundation stone marks the beginning of the project, while the peg marks the end of it. The terms both came to be used metaphorically as that which is foundational (as in Is 22:23; Ezra 9:8). Such pegs were sometimes included in Mesopotamian foundation deposits.

10:10. places of exile. Although Assyria is the well-known site of exile for both the northern kingdom and groups from the southern kingdom (see comment on Is 22:2-3), it is evident that there were also colonies of Israelites that had either fled to Egypt or been taken to Egypt, perhaps as early as the eighth century but certainly by the seventh century (see comment on Jer 43:7).

10:10. Gilead and Lebanon. Referring to Gilead (tableland east of the Jordan) and Lebanon (Beqa Valley along the Litani River between the Lebanon and Anti-Lebanon mountain chains) for Israel would be like referring to Montana and Wyoming in the United States. Images would be evoked of wide open, sparsely inhabited spaces.

11:1-3. destruction of forests and pastures. Forestation and pasturage are valuable resources in this land that offers so little of them. Vast stretches of potentially productive land become trackless waste land when the greenery is destroyed. The modern state of Israel is reclaiming the land's productivity by reintroducing forestation into desolate areas. Ancient invaders strategically destroyed farmland, pasturage and forestation when seeking to cripple a nation long-term (see comment on 2 Kings 3:25).

11:4-17
Drama of Two Shepherds

11:4. flock marked for slaughter. The temple kept extensive herds that had been given as firstfruit offerings (and for other reasons) and were marked for slaughter in that they had been promised to the Lord. There would therefore be many shepherds in the employ of

the temple to watch over these herds.

11:6. handing people over to neighbors. The Hebrew word for neighbor is very close to the Hebrew word for shepherd. The parallel with the word "king" in this verse has led some to conclude that the word "shepherd" was the original reading. Alternatively, there may just be a play on words here.

11:12. thirty pieces of silver. By verse 12 it is difficult to know whether Zechariah is still in his role as shepherd and is collecting shepherd wages, or whether he is collecting wages for his prophetic role (last line of v. 11). Information from the law codes in the second millennium B.C. indicates that a shepherd would normally make ten shekels in a year. On the other hand a prophet might expect to be paid well for his skills. The fact that a slave was worth thirty shekels is not helpful here, since Zechariah is not being bought as a slave. In Sumerian usage "thirty shekels worth" has an idiomatic meaning along the lines of "two bits" or "a plug nickel," meaning that something was virtually worthless. While this would fit the context here, the jump from Sumerian to postexilic Hebrew is a large one and cannot be relied upon.

11:13. thrown to the potter. Three possible explanations have been given here, and it is difficult to decide between them. First, it is likely that there was a pottery shop in the vicinity of the temple that served the temple's needs. But why would this money be thrown there? Second, the word for potter simply means "fashioner," so some have suggested that here it refers to a metalworker who is perhaps going to make a figurine out of the silver. This may offer an explanation of why the silver is thrown here, but it requires an unusual meaning to be applied to a fairly common noun. Third, it has been observed that the word rendered "potter" can, with very little change, be understood as "treasury." Some of the early translations take this route, and it can find some support in the New Testament as well (Mt 27:5-6, though Matthew also refers to the potter). Each interpretation has its difficulties, and no information from the ancient Near East can shed light on the actions of the prophet.

11:16. tearing off hoofs. Herds of sheep were rarely used for meat. The wool was far more valuable. A shepherd's main responsibility was to preserve the life and health of the sheep so as to vouchsafe their continued productivity. Eating the meat spoke of the shortsighted self-indulgence of undisciplined appetites rather than wise management of long-term resources. The tearing off of the hoofs may represent an attempt to persuade the owner that the sheep had been devoured by a wild animal so that the shepherd would not be held accountable. Alternatively, the shepherd may be seeking to sell the hoofs so as to get a small return.

12:1-14

Deliverance of Jerusalem

12:2. cup (bowl) of reeling. The expression "cup of reeling" is used elsewhere in Isaiah 51:17, 22, but here the text actually speaks of a bowl *(saph)* rather than a cup. It is possible that the author chose the word "bowl" in order to execute a wordplay. The Hebrew word *saph* also means "threshold." Just as the drink from a vessel could cause drunkenness and stumbling, a threshold could easily cause stumbling, because part of the threshold was raised above ground level. The threshold consisted of a large stone slab that featured sockets on each end into which the door pivots were fitted (though large gates would have separate sockets sunk in the ground). The door would close against the protruding threshold. This threshold slab could also be the immovable rock that is referred to in the next verse.

12:3. immovable rock. If the word translated "bowl" in the last verse is doing double duty as a reference to the threshold, then this would likely refer to the threshold slab. As an integral part of the gate structure, the threshold stone would probably be dislodged when the gates were destroyed. This would be a prime objective of a besieging army. Tearing down gates is mentioned in Neo-Babylonian texts, but the taking up of the threshold is not specifically referred to. A Sumerian lament over Eridu reports that the doorframe was ripped out. Akkadian texts describe the high grade of stone that is used and the function these slabs serve as a foundation for both gates and walls. When Sennacherib destroyed Babylon, he tore out the foundations of temples and walls and threw them into the canal. Temple thresholds were often inscribed with prayers for protection.

12:11. weeping of Hadad Rimmon. This name occurs nowhere else in the Old Testament, though each of the parts are known. Hadad was the name of the Canaanite storm god, the head of the Aramean pantheon, who was generally referred to by the title "Baal." A temple of Rimmon is referred to by Naaman in 2 Kings 5:18. Rimmon (or Ramman, "thunderer") is believed to be a title of this storm god Hadad. Though this association is confidently

made, there has been no occurrence of this title outside the Bible. Though some interpreters have thought of mourning that took place at a location known as Hadad Rimmon, it is more likely that a reference is being made to a mourning festival or ritual connected to the deity Hadad Rimmon. When the expected rains did not come at their proper time, mourning for the storm god was one step taken to bring the rains needed for planting season.

12:11. plain of Megiddo. The plain of Megiddo is the Jezreel Valley. If mourning rites for a storm god are indicated here, the Jezreel Valley, the most fertile land in Israel, would be the likely site for the ritual. If Hadad Rimmon is a place in the Jezreel Valley, it may indicate the location of a devastating event. It was in the plain of Megiddo, for instance, that the promising and godly king Josiah lost his life attempting to stop the Egyptians from helping the floundering Assyrian empire in 609 B.C. (see comments on 2 Chron 35:20, 22). This loss was felt so deeply that a customary day of mourning was instituted (2 Chron 35:24-25).

12:12-13. historical significance of named clans. David and Levi are recognizable as the royal and priestly lines. Nathan and Shimei are more difficult in that there are numerous individuals in the Bible with those names. Since Nathan was one of the sons of David (2 Sam 5:14), and Shimei was one of the grandsons of Levi (Num 3:21), many see in these verses a reference to clans and subclans. Also of interest is the possibility that all of these clans had a relationship to Zerubbabel. He descended from David through Nathan and through Levi (Lk 3:29, 31), and Zerubbabel's brother is named Shimei (1 Chron 3:19).

13:1-9

Cleansing and Refining

13:4. prophet's garment of hair. The distinctive prophet's cloak was most likely made of animal skin and was hairy in appearance, though not all cloaks were so made. Very little is said about prophetic garb in the ancient Near East, so comparison is difficult. It may be of interest that Assyrian inscriptions beginning at this period portray a few individuals wearing lion-headed cloaks. These individuals seem to be involved in ritual activities (dance) and accompany deity. It is guessed that they may be exorcists.

13:6. wounds on prophet's body. Self-laceration is evident in 1 Kings 18:28 as part of a mourning ritual performed by the prophets of Baal. In the Ugaritic literature the gods are portrayed as lacerating themselves when they hear of the death of Baal. Additionally an Akkadian wisdom text from Ugarit compares the blood-letting of mourning rites to that practiced by ecstatic prophets. Marks of self-flagellation would be indicative of practicing prophets.

14:1-21

The Lord Reigns

14:3. divine warrior. See comment on 9:14. The imagery of the deity standing on a mountain is well known in the ancient Near East (see comment on Mic 1:3), especially on cylinder seals. In these pictures the mountain is believed to represent the center of the earth.

14:4. Mount of Olives. The Mount of Olives is so named only here in the Old Testament. It is a ridge two and a half miles long running north and south just east across the Kidron Valley from Jerusalem.

14:4. splitting of Mount of Olives. In Akkadian literature leveling mountains is an act of destruction, but there is no reference to splitting mountains to provide for escape. The ascent up the Mount of Olives from the Kidron Valley is quite steep, so an east-west valley would certainly facilitate the refugees' flight.

14:5. Azel. There is no clear consensus regarding the location of Azel. In other verses it is only the name of a person in the genealogy of Saul. If the territory name is connected to the person, it would be located northwest of Jerusalem in the territory of Benjamin, but it is difficult to understand what is intended by having the valley extend there.

14:5. earthquake in Uzziah's days. Seismic activity in Syro-Palestine is a common occurrence. The region lies over the Jordan Rift, which stretches from Damascus to the Gulf of Aqabah, and is therefore subject to periodic shifts of the earth. There is evidence of a sizeable earthquake in the stratum 6 excavations at Hazor, dating to approximately 760. It is possible that this is the one referred to here, but additional corroborating evidence needs to be sought at other sites, especially Bethel and Samaria. The fact that this earthquake is used to date both Amos's prophetic activity and the reign of King Uzziah suggests that it must have been massive and therefore an event that would have stuck in the minds of the people.

14:7. cosmic effects. The cessation of markers of time signifies the most dramatic world-upside-down effect imaginable (see comment on Jer 4:23-26). It is accompanied by extensive topographical changes (vv. 8, 10) and by sweep-

ing political developments (vv. 12-13), as well as by a redistribution of wealth (v. 14) and a reorientation of worship (v. 16).

14:8. Jerusalem as watershed with stream. "Living water" refers to flowing spring water (in contrast to collected runoff or rain water). In Jerusalem the source of water is the Gihon Spring on the southeastern flank of the city by the Kidron Valley. Although there are higher elevations south of Jerusalem (Bethlehem to Hebron), the land slopes away both in the west (through the Shephelah down to the Mediterranean coast) and in the east (down to Jericho, the Jordan Rift Valley and the Dead Sea). Many wadis in Israel contain water only during the rainy season (winter), but this verse speaks of a continuous flow. The Gihon Spring gushes daily throughout the year (see comment on 2 Sam 5:8).

14:10. Geba to Rimmon. Geba is located about five miles north of Jerusalem. It guards the Wadi Swenit near what was the northern border of the Persian province of Yehud. Rimmon is a little more difficult. There is a site known elsewhere as En-Rimmon on the southern end of the Shephelah (about ten miles north of Beersheba), but this would not have been in the territory of Yehud and appears too far south to be matched with Geba.

14:10. land like the Arabah. The term "Arabah" is capable of having both specific and general meanings. As a specific geographical designation it refers to the arid region around the Dead Sea and south to the Gulf of Aqaba. As a general topographical designation it refers to flat steppe land. The context of this verse demands the latter meaning.

14:10. Jerusalem topography. The Benjamin Gate (other times called the Sheep Gate), north of the Temple Mount, exits from the area of the Bethesda Pool (known in this period as the Sheep Pool) into the Kidron Valley. It is toward the northern side of the east wall (near the present day Lion's Gate) and would have led to the Jericho road. If First Gate is the name of a gate, it should probably be associated with the Old Gate (see comment on Neh 3:6). The Corner Gate is located on the northwest corner of the city's western expansion. It is in the vicinity of today's Jaffa Gate. The gates mentioned therefore span the city from east to west along the northern walls. The Tower of Hananel was positioned on the northwest side of the city near the Temple Mount. This is about the same location as the Antonio Fortress in Herod's Jerusalem. Finally, the king's winepresses were probably in the area of the king's garden (see comment on Neh 3:15) at the southern end of the city. The winepresses combined with the Tower of Hananel span the city from north to south.

14:12. plague description. Among the most common treatments of prominent enemies in the ancient Near East were flaying the skin, putting out the eyes and cutting out the tongue. Here those are accomplished through "plague." These symptoms are unattested as connected to any particular plague in the ancient Near East.

14:16. feast of tabernacles as enthronement feast. Although an enthronement festival per se is unattested in Israelite practice, it is often assumed to have existed, and, if it did exist, it would most logically have been connected to the Feast of Tabernacles (see comments on 1 Kings 12:32-33 and Ezra 3:4). That would especially be significant in this context as the nations are expected to attend in order to acknowledge the kingship of Yahweh.

14:18. rain in Egypt. Egypt receives very little rain, and what it receives is not essential to its productivity. Agriculture in Egypt is dependent almost entirely on the annual flooding of the Nile.

14:20. bells of horses. When something is designated "Holy to the Lord" it is given sacred status as part of that which is purified for service within the sacred space of the temple precinct where Yahweh's presence dwelt. In Exodus 28:38 it was engraved on the golden plate worn by the high priest. Although priests wore bells on their garments (Ex 28:33), this is a different Hebrew word. The word used here may simply refer to metal disks that tinkled together.

14:20. cooking pots and sacred bowls. Sacred bowls would have been used for the most significant ritual activities such as transporting the blood of the sacrificed animals. Cooking pots, in contrast, were the most common of the temple vessels. Both could come in a variety of shapes and sizes.

MALACHI

1:3. Esau's mountains. "Esau's mountains" was most likely a designation for the hill country of Seir (Gen 36:8-9, 21), which was in the eastern Negev. The mountains of Seir are mentioned in Scripture (e.g., Gen 14:6, Deut 2:1). It was most likely a designation for the southern portion of the Edomite state, between the Wadi al-Ghuwayr and Ras en-Naqb.

1:4-5. Edom in the fifth century. Although Edom did not appear to join the rebellion against Babylonian rule in the sixth century B.C., the region appears to have been attacked by the last Babylonian monarch, Nabonidus. References in Obadiah, Jeremiah 49 and Ezekiel 25 refer to its destruction, but here in Malachi it implies that the territory was not as of yet abandoned by the Edomites. In the fifth century B.C., however, little is known of the fate of Edom. There appears to be some economic activity from Edom with the Levant and eastern Mediterranean, as well as evidence of new population groups in the area. The Qedarites appear to have belonged to the Syrian desert southeast of Damascus, raiding and migrating as far south of Moab and Edom. It is also possible that the Nabataeans, who conquered the area of Edom in the late third century B.C., may have begun to migrate north to this area from the Arabian desert.

1:8. offering defective animals. With the termination of funding from the Persian government (see comment on 3:10), various attempts were being made cut costs. Apparently one of them came in the form of relaxing the regulations concerning the animals that could be offered for sacrifices.

1:12. Lord's table. The phrase "the Lord's table" is found only here in the Old Testament. The term translated "table" is a common one used literally and figuratively to denote a table (e.g., Is 65:11). Tables were used in Ezekiel 40:39-43 at the gates of the inner court to slaughter sacrifices or for utensils. In the context of Malachi 1:12, the Lord's table appears to be synonymous with the altar, which has been defiled by the Israelites. It is figuratively described as a table because of the imagery of sacrifices being "food" for God. For discussion of this imagery see the comment on Leviticus 1:2.

2:5-7. role of postexilic priesthood. Over four thousand members of priestly and Levitical families returned to Palestine after the exile under the supervision of Zerubbabel and Joshua. Both groups engaged in a variety of activities, including the rebuilding of the walls of Jerusalem, instructing in the law and leading in the religious duties of the nation. However, the priestly cult must have deteriorated during this time (especially during Nehemiah's absence), since a foreigner (Tobiah the Ammonite) was allowed a room in the temple. In fact, the Levites had forsaken the temple for a time (Neh 13:10-11). Malachi 2 fits in this context, as the contemporary priesthood had abrogated its priestly responsibilities. The high priesthood continued to exist as an office, continuing in Zadok's line. The book of Zechariah indicates that many civil responsibilities exercised by the king or governor had been assigned to or simply absorbed by the priesthood so as to prevent the governor from competing with the authority of the Persian king.

2:11. marrying the daughter of a foreign god. Although the meaning is not entirely certain, the phrase "marrying the daughters of a foreign god" probably refers to mixed Jewish and non-Jewish marriages. The women who were married to Jewish men remained devoted to the service of their idols, and thus the Jews were brought into the family of foreign gods, making them liable to commit idolatry. These marriages were condemned by both Ezra and Nehemiah. For further information on the practice of endogamy (marrying within the group) see comment on Ezra 9:10-12.

2:14-16. marriage and divorce in fifth century. What is known of marriage and divorce in the Persian period comes from the Jewish documents from Elephantine. Marriage contracts often included stipulations concerning the disposition of the dowry, bride price, property and children in the event of a divorce. Divorce appears to have been common and uncomplicated with economic implications being of greatest concern. At Elephantine no reason for the divorce had to be offered.

3:1. preparatory role of the messenger. The idea of the preparation for the way of the Lord is also found in Isaiah 40:3. This concept probably comes from an ancient Near Eastern custom of sending messengers ahead of a visiting king to inform local inhabitants of his coming in order for them to pave the way (remove all obstacles) for the monarch.

3:2. launderer's soap. Launderer's soap was used to remove impurities and unclean elements from clothing and other items. The soap described here is the alkali that comes from the iceplant, which was found in Babylo-

nia but not in Syro-Palestine. The term occurs elsewhere only in Jeremiah 2:22.

3:3. refiner and purifier of silver. In the ancient world silver was extracted and assayed through a process called cupellation. In the initial smelting process silver was extracted from lead ores (galena) containing less than 1 percent silver in a given sample. The lead was melted in shallow vessels made of porous substances such as bone ash or clay. A bellows was then used to blow air across the molten lead, producing lead oxide (litharge). Some of the lead oxide was absorbed by the bone ash, while some could be skimmed off the surface. Ideally, the silver would remain. Malachi might alternatively refer to the assaying process. This involved heating a sample of silver together with large amounts of lead in order to draw off the impurities.

3:5. sorcerers. The technical term here refers to those who were specialists in spells and incantations. These experts would have had familiarity with the literature for omens and dreams. They would have practiced sympathetic magic (based on the idea that there is an association between an object and that which it symbolizes; for example, that what is done to a person's picture will happen to the person) and would have used their arts to command the gods and spirits. Magic was the thread that held creation together. and it was used both defensively and offensively by its practitioners, human or divine.

3:8-10. tithes providing food. There is little difference in the ancient Near East between tithes and taxes. Both were exacted from villages as payment to the government and usually stored in temple complexes, from which the grain, oil and wine were then redistributed to maintain royal and religious officials. In collecting and redistributing the tithe, the distinction between sacred and secular is blurred. The tithe (literally, the "tenth part") mentioned here was a compulsory contribution for the maintenance of both the cult and the government of ancient Israel. It was also used among various other peoples in the ancient Near East, including the Phoenicians and Canaanites. Israel was commanded to tithe to God and to "eat before the Lord," probably a communal meal. It is unlikely that the one who is tithing is expected to eat the entire tithe. That would frustrate its purpose of providing for the priestly community and serving as a reserve for the destitute. The injunction probably has more to do with bringing the tithe (or its value in silver) to God's sanctuary in Jerusalem and thereby demonstrating devotion. See comment on Numbers 18:21-32 for further information.

3:10. shortfall in temple funds. The problem of appropriating for private use that which rightfully belonged to the temple was recognized early on in the ancient Near East. In a Sumerian prayer to Enki a worshiper denies that he has plundered the offerings of the deity. During the reign of Xerxes the funding of the temple by the Persian empire came to an end. This meant that there was a greater burden placed on the people to provide the support for all of the priests, the worship activities and the temple upkeep. This additional financial responsibility created what the people considered a hardship and led to rationalizations for cutting back temple spending.

3:16. scroll of remembrance. The expression "book of remembrance" is found only here in Scripture, although the idea of God having a book in which he recorded entries is found elsewhere (e.g., Ex 32:32; Ps 139:16; Is 4:3; 65:6; Ezek 13:9). Ancient Near Eastern kings often had a record written of the most important events in their reign (see comment on Esther 2:23). It was believed both in Israel and in the ancient Near East that deity kept books as well. In Exodus 32:32-34 Moses is willing to be blotted out of the book of life, an action that would result in his death. Yahweh replies that the one who sins is wiped out from the book. The metaphor is of a ledger that contains a list of the living. This is comparable to the book that contains the names of those destined for death that Enkidu sees in his dream of the netherworld. Mesopotamian literature contains references both to tablets recording evil deeds (in the *Shurpu* texts) and to tablets recording good deeds. See comment on Psalm 56:8.

4:2. sun of righteousness with healing in its wings. The sun of righteousness here is bringing justice. Throughout the ancient Near East solar deities are connected to justice. It is not unusual in the Old Testament for Yahweh's work to be depicted using this metaphor of solar terminology. "Healing in its wings" is a symbolic use of the wings of a bird with the rays of the sun. The wings denote protective care (hence the healing). An ancient Near Eastern motif in astral religions has the sun depicted as a winged disk. This is especially pervasive in the Persian period.

4:4. Horeb. Horeb was another name for Mount Sinai, the place where God revealed himself to Moses and gave him the Ten Commandments. Its precise location is uncertain, and there are at least four possible locations in the southern Sinai argued by scholars to be Mount Sinai: Jebel Musa, Ras es-safsafeh, Jebel Serbal and a mountain near al-Hrob. For discussion of the location see comment on Exodus 19:1-2.

GLOSSARY

Many terms that arise frequently in our discussions are explained in this glossary. To aid readers we have placed asterisks (*) throughout the text before terms that are found here. Not all terms will be found in exactly the same form here as in the text.

Adapa: a priest of the god Ea in the Sumerian city of Eridu. The story about him tells how he was tricked out of the opportunity to obtain immortality when he was advised not to eat divine food.

Ahiqar: an advisor to the Assyrian king Sennacherib (704-681 B.C.), who was exiled and wrote a set of teachings on "wise" and "foolish" men that parallels some of the saying in Proverbs.

Akkadian: term applied to Mesopotamian culture and language from about 2500 to 500 B.C.

Alalakh: a northern Syrian city in the southern part of the plain of Antioch that flourished in the early second millennium B.C. It produced numerous records that describe the politics and economy of the area, and it is mentioned in texts from Mari, Nuzi and the Hittite kingdom.

Amarna: see El-Amarna.

amulet: a carved ornament worn around the neck designed to ward off evil, cure disease or bring good luck to the owner.

Amorite/Amurru: a group of Semitic peoples who lived in an area west of Mesopotamia and including the Mediterranean seacoast during the second millennium B.C.

anachronism: a detail or word in a story that does not fit the time period of the story. Often anachronisms can be understood as clarifications or adjustments made to the text at a later time.

Anat: goddess of fertility and warfare, and principal consort of the god Baal in Canaanite and Ugaritic religion.

Anatolia: roughly equivalent to the area known in the New Testament as Asia Minor and today as Turkey. It was the home of the Hittites in the mid-second millennium.

annunciation: a birth announcement.

Apocrypha: books written in the Hellenistic period between the Testaments. These fourteen books were not part of the Jewish canon and are not included in the Protestant canon but are retained in the Catholic tradition.

apodictic law: a type of legal statement in the form of a command, without explanation.

apostasy: any action which allows or condones false worship.

apotropaic: an action taken or a symbol used to drive away evil.

Aqhat: the son of Danil. He is the hero of a Ugaritic epic in which he is portrayed as a mighty hunter and is murdered by the goddess Anat when he refuses to give her his bow. The story has parallels with the ancestral narratives and the book of Judges.

Aram: the northwestern half of Mesopotamia and the Mediterranean coast was the home of the Arameans in the late second and early first millennia B.C.

Asherah: Canaanite fertility goddess, consort of Baal, often associated with sacred groves or represented by sacred poles in the Bible.

Assyria: northern Mesopotamian area centered on the Tigris River. It has several periods of prominence, the most important being from 1000 to 612 B.C., when it conquered all of the Near East and produced a law code (Middle Assyrian Code) that parallels biblical law.

Astarte: a Canaanite and Phoenician goddess, consort of the god Baal, associated with fertility and known as the goddess of war.

Baal: Canaanite and Ugaritic god of storms and fertility.

Babylon: major Mesopotamian city located

at the closest conjunction of the Tigris and Euphrates Rivers, which dominated the history of that area during several periods.

Bronze Age: the era (divided into Early, Middle and Late periods) from approximately 3000 to 1200 B.C., characterized by bronze technology.

bulla: a clay stamp used to seal a papyrus document. The seal impression prevented tampering and also provided the name or the rank of the official who wrote the document.

casuistic law: a form of legal statement based on an "if-then" structure.

Chalcolithic Age: the era from 4300 to 3000 B.C., characterized by use of copper technology.

Chaldean: period of Mesopotamian history from approximately 700 to 540 B.C. and associated with the Neo-Babylonians and King Nebuchadnezzar.

Chemosh: Moabite national god, often associated with war.

circumcision: the religious ritual of removing the foreskin from the penis. It was employed by the Israelites to mark them as members of the covenant community.

cognate: languages that are part of the Semitic family and share vocabulary and numerous grammatical features with Hebrew. The principal cognate languages are Akkadian, Aramaic and Ugaritic. Among several other less significant cognates are Arabic, Moabite, Ammonite, Amorite, Ethiopic and Syriac. The literature written in these languages is referred to as cognate literature.

colophon: a statement or phrase placed at the end of a document, or a literary segment that may serve as a summary or simply as an end marker.

concubine: a secondary wife, who may have come to the marriage without a dowry and whose children may not inherit from their father unless he publicly declares them as his heirs.

corporate identity: a group is treated as a single unit. Reflected in a legal principle that rewards or punishes an entire household for the righteousness or the sins of the head of the household.

covenant: a contractual agreement associated in the Bible with the agreement between Yahweh and the Israelites that promises land and children in exchange for exclusive worship and obedience.

cult: the organization and activities of a religious group, including sacrifice and other rituals.

cuneiform: the wedge-shaped syllabic script invented by the Sumerians and used by every subsequent civilization in Mesopotamia until the coming of the Greeks.

demotic: a shorthand version, dating back to 700 B.C., of the Egyptian language known as hieratic, a more practical cursive script than its precursor, pictographic hieroglyphics.

Dilmun: an Edenlike land in Mesopotamian mythology. Utnapishtim, the hero of the *Gilgamesh Epic,* was taken here to live eternally after the flood.

divination: a process of determining the will of the god(s) through the examination of natural phenomena (cloud formations, the entrails of sheep) or by casting lots.

Dumuzi/Tammuz: a Mesopotamian god, consort of the goddess Ishtar, whose death and incarceration in the underworld represented the changes of the seasons.

Ea: Mesopotamian god of rivers and streams who figures in the flood story of the Gilgamesh Epic and in the Babylonian creation story, *Enuma Elish.*

Early Bronze Age: the era from approximately 3300 to 2300 B.C., characterized by the emergence of cities, the high civilization of Early Dynastic Egypt and Sumer, as well as bronze technology.

El: the high god in the Ugaritic pantheon and also a generic term for a god. It would be added to a place name (i.e., Bethel or El Elohe-Israel) to distinguish it as a place where a god has made his power manifest.

El Amarna: the capital of Pharaoh Akhenaten (fourteenth century B.C.) in which archaeologists have discovered hundreds of royal dispatches describing rather chaotic events in Canaan during this period.

Elam: country to the east of the Tigris River in modern Iran.

Elohim: one of the names for the Israelite god, generally translated as "God" in English but occasionally used for other gods or supernatural beings.

Emar: a Bronze Age city (Tell Meskene/Balis) located on the northern reaches of the Euphrates River in Syria. Texts found here from the Late Bronze period provide insights into daily life during the fourteenth through the twelfth centuries B.C.

Enki and Ninhursag: a Sumerian myth

providing an explanation for the life-giving properties of river water (Enki) and the types of vegetation engendered as the water passed through and nourished the land (Ninhursag and her children).

Enlil: Mesopotamian storm god, the head of the divine assembly and instigator of the flood in the Gilgamesh Epic.

Enuma Elish: the Babylonian creation story.

Eshnunna: Mesopotamian city in the Diyala region east of modern Baghdad that produced a short-lived kingdom between 2100 and 2000 B.C. and a law code that contains some parallels to Hammurabi's Code and biblical law.

Etana: ancient Mesopotamian king, the subject of a legend in which he obtains a plant from heaven that provides fertility and thus is able to father a son to continue his rule. His flight to heaven is on the back of an eagle and thus he is depicted on ancient seals.

etiology: story that attempts to explain the origin of a name, a custom or a current reality, such as death or painful childbirth.

execration: a method of cursing an enemy by fashioning a doll or an incantation bowl containing the name of the accursed party.

exorcism: a ritual, including spells and incantations, designed to cast out or remove demons from persons or places.

fertility worship: a dominant religious practice in much of the ancient world. The principal gods were paired as male and female, and their rites were designed to insure plentiful rain, plant growth and bountiful harvests and herds. This worship could include sacrifices as well as sacred prostitution. In a society dominated by farming and herding, fertility is of utmost importance.

funerary: rituals and objects involved with the internment of the dead. Funerary rites were also part of a larger system of ancestor worship.

Gilgamesh: Sumerian king of Uruk who is the prototypical hero of Mesopotamian literature. His epic contains a quest for the secret of immortality and a flood story.

glyptic: a type of engraved art featured especially on seals where the design is engraved in reverse so that its impression on clay or wax will be embossed and upright.

Habiru: a term used in Mesopotamian texts for stateless persons.

Hammurabi: Babylonian king (1792-1750 B.C.) who compiled a law code containing a number of parallels with biblical law.

henotheism: a religion that acknowledges the existence of other gods but often insists on the supremacy of one's own god.

herem: "holy war" or the "ban" which requires the complete destruction of all persons, animals and property as a dedicatory sacrifice to Yahweh.

Herodotus: a Greek historian who lived in the fifth century B.C. He is best known for his *Histories* (ca. 445 B.C.), which document the history of the Persian Wars against the Greeks, such as the battles at Marathon, Thermopylae and Salamis.

Hesiod: a Greek philosopher from the eight century B.C. His major work was the *Theogony,* the earliest known Greek account of creation and the origins of the gods.

hieroglyphic: the pictographic, syllabic script developed by the ancient Egyptians.

Hittites: an Indo-European people who migrated into Anatolia after 2000 B.C. and created an empire that challenged Egypt for control of Syro-Palestine during the mid-second millennium. They also produced a law code with parallels to biblical law.

Hurrian: a non-Semitic people who created a kingdom in Mitanni, central Mesopotamia, during the mid-second millennium.

Hyksos: an alliance of Semitic peoples, perhaps from the resurgent cities of Middle Bronze Canaan, who settled in Egypt and gained control of major portions of the country c. 1750 B.C. They eventually came to rule most of Lower Egypt, with their capital at Avaris, until c. 1570 B.C.

iconography: pictoral, rather than verbal, messages inscribed on ancient artifacts. These images include three-dimensional objects, reliefs, paintings, seals and even graffiti. As visuals, they are an important source of information that complement the textual data.

impurity: a state of being in which an individual, a group or an object has been polluted through an unlawful act or through contact with an impure person or thing. The result is ritual impurity, which prohibits a person or group from participating in religious activities and may (in the case of leprosy) require expulsion. Rituals of purification are required to remove this stigma and restore the person or group to full participation.

in situ: a term applied to the resting place or "find spot" of an artifact that has been uncovered and recorded by archaeologists.

Iron Age: the era in ancient Near Eastern history from 1200 to 300 B.C. characterized by the use of iron technology.

Ishtar: Mesopotamian goddess of love, the consort of Dumuzi, who appears in Gilgamesh's flood story.

Josephus: Jewish historian from the first century A.D. His two great works, *Antiquities of the Jews* and *Jewish Wars,* offer a detailed look at Jewish perspectives on their times and their history.

Kassites: a people originally from the mountainous region in northern Mesopotamia who conquered the Old Babylonian kingdom about 1595 B.C. and ruled in Babylon until 1157 B.C.

Keret: the king hero of a Ugaritic tale in which he receives instructions from the gods concerning how to acquire a wife and an heir to his throne. This family crisis is only one of a series that includes illness and rebellion by one of his sons.

Lagash: third-millennium Sumerian city-state (el-Hiba) containing several urban centers, which contested for control of the region with Ur, Uruk and Kish.

Larsa: early second-millennium Sumerian city, ten miles east of Uruk and twenty miles north of Ur.

Late Bronze Age: the chronological era from 1550 to 1200 B.C., which is marked by the Amarna age and New Kingdom in Egypt, the Hittite empire in Anatolia and the invasion of the Sea Peoples.

Levant: the area of the eastern Mediterranean. Also referred to as Syro-Palestine.

Leviathan: a sea serpent associated with the chaotic powers of the sea. The name is found in Ugaritic mythological texts as well as Job, Psalms and Isaiah.

Lipit-Ishtar: king of the Ur III dynasty in Mesopotamia who produced a law code that parallels some aspects of biblical law.

Marduk: principal god of Babylon who defeats Tiamat in the creation story *Enuma Elish* and becomes the head of the divine assembly.

Mari: Mesopotamian city on the northern reaches of the Euphrates River that thrived from 2500 to 1700 B.C. and produced thousands of cuneiform documents describing political events, prophetic activity and the pastoral nomadic peoples of northern Syria.

Middle Bronze Age: the chronological era from 2300 to 1550 B.C., which includes the period of Israel's ancestors, the Old Babylonian period and Egyptian control of Syro-Palestine.

Mitanni: the kingdom of the Hurrians in central Mesopotamia during the mid-second millennium B.C.

monolatry: a situation where a person or group has determined to worship only one God regardless of whether other gods exist or not.

Nazirite: an Israelite (either male or female) who takes an oath to refrain from consuming any product of the grape, from coming in contact with the dead and from cutting his or her hair.

Nineveh: the capital of the Assyrian empire on the upper reaches of the Tigris River.

Nuzi: a Hurrian city of the sixteenth and fifteenth centuries B.C. that has provided family and business documents documenting marriage and inheritance customs similar to those in the ancestral stories.

Old Babylonian: a period of Mesopotamian history from 2025 to 1595 B.C. highlighted by the reign of Hammurabi (1792-1750 B.C.), who produced a law code and united all of the city-states under his rule.

oracle: a prophetic speech or a reading of divine will through the use of divination.

Osiris: the Egyptian god of the underworld.

pollution (uncleanness): ritual impurity is caused by contact with or consumption of polluted items, such as blood, and can only be removed through ritual acts designed to take away the person's impurity and transform him or her from an unclean to a clean state.

pseudepigraphic: literature produced under the persona of a respected and well-known individual. Old Testament pseudepigraphal works are attributed to people such as Enoch and Ezra, and date to the intertestamental period or later.

purity: to be in compliance with the law and free to participate in religious and social activities. This state may be achieved through proper action, ritual purification or sacrifices.

ritual acts: a prescribed set of actions taken for religious purposes, such as a sacrifice.

ritual prostitution: the practice of sexual

acts as part of a religious ceremony, to promote fertility or to enrich a sanctuary.

Sea Peoples: a mixed group of peoples from throughout the Mediterranean area who served as mercenaries in the Egyptian and Hittite armies until about 1200 B.C. when they made a collective attack on the major civilizations of the Near East and disrupted them enough to allow for the emergence of new peoples in Canaan.

Sinuhe: an official of Pharaoh Amenemhat I (1991-1962 B.C.) who was exiled in Canaan for many years before being pardoned and allowed to return to Egypt. His story contains some parallels to that of the ancestors in Genesis as well as the story of Moses.

Sumer: the southernmost area of ancient Mesopotamia. It produced the first true civilization in that region about 3500 B.C., invented cuneiform script and created many of the myths that sustained religion for the next several millennia.

sympathetic magic: the ritualistic representation of reality in an object. A person's name, hair or blood may be used, or images may be made of the person or thing to be affected. The idea is for the person's essence to be linked or transferred to the representative object.

syncretism: the borrowing of cultural ideas, practices, and beliefs and combining them with one's own.

tell: an artificial hill that has been created by the successive layers of settlements on that site.

theophany: the appearance of God to a human being, as in the "burning bush."

theophoric: personal names that contain a reference to a named deity. Theophoric names such as Isaiah, Ezekiel, Jerubbaal and Nebuchadnezzar often make statements about the deity.

Thoth: the Egyptian moon god.

Tiamat: primordial Mesopotamian goddess of salt water, the consort of Apsu, god of fresh water. She is Marduk's opponent in the creation story *Enuma Elish.*

Ugarit: northern Syrian seaport city that controlled the Mediterranean carrying trade from approximately 1600 to 1200 B.C., when it was destroyed by the Sea Peoples. Several Ugaritic epic stories have been discovered that help illumine biblical stories from the ancestral and settlement periods. Ugaritic culture is thought to have approximated Canaanite culture.

Ur III: the period of Mesopotamian history from 2120 to 1800 B.C. founded by Ur-Nammu, centered in the city of Ur and characterized by a brief revival of Sumerian culture.

Ur-Nammu: Ur III king, father of Shulgi, who produced a law code that has some parallels with biblical law.

Uruk: third- and early second-millennium Sumerian city ruled by Gilgamesh.

Utnapishtim: hero of the flood story in the Gilgamesh Epic.

Wenamon: a priest of the Egyptian god Amon (c. 1100 B.C.), sent as an envoy to obtain logs for the royal barge from the rulers of Syria and the Phoenician coast. His mission was delayed by the weak stature of Egypt at that time and the chaotic political conditions following the invasion of the Sea Peoples.

Xenophon: Greek historian writing early in the fourth century B.C. His most famous historical work, *Anabasis,* focuses on the battle between Cyrus the Younger and Artaxerxes II.

Yahweh: one of the names for the Israelite God, sometimes anglicized as Jehovah and translated in English as "LORD."

Major Tablets of Old Testament Significance

NAME	NUMBER OF TABLETS	LANGUAGE	DISCOVERER	LOCATION FOUND	DATE FOUND	SUBJECT	DATE OF ORIGIN	BIBLICAL SIGNIFICANCE
Ebla	17,000	Eblaite	Matthiae	Tell-Mardikh	1976	Royal archives containing many types of texts	24th c.	Provide historical background of Syria in late 3rd millennium
Atrahasis	3	Akkadian	Many found different parts	different parts in different sites	1889 to 1967	Account of creation, population growth and flood	1635 copy	Parallels to Genesis accounts
Mari	20,000	Akkadian (Old Babylonian)	Parrot	Tell-Hariri	1933	Royal archives of Zimri-Lim containing many types of texts	18th c.	Provide historical background of the period and largest collection of prophetic texts
Enuma Elish	7	Akkadian (Neo-Assyrian)	Layard	Nineveh (library of Ashurbanipal)	1848-1876	Account of Marduk's ascension to the head of the pantheon	7th c. copy	Parallels to Genesis creation accounts
Gilgamesh	12	Akkadian (Neo-Assyrian)	Rassam	Nineveh (library of Ashurbanipal)	1853	The exploits of Gilgamesh and Enkidu and the search for immortality	7th c. copy	Parallels to Genesis flood accounts
Boghaz-Köy	10,000	Hittite	Winckler	Boghaz-Köy	1906	Royal archives of Neo-Hittite Empire	16th c.	Hittite history and illustrations of international treaties
Nuzi	4000	Hurrian dialect of Akkadian	Chiera and Speiser	Yorghun Tepe	1925 to 1941	Archive containing family records	15th c.	Source for contemporary customs in mid-2nd millennium
Ugarit	1400	Ugaritic	Schaeffer	Ras Shamra	1929 to 1937	Royal archives of Ugarit	13th c.	Canaanite religion and literature
Amarna	380	Akkadian (W. Semitic dialect)	Egyptian peasant	Tell el-Amarna	1887	Correspondence between Egypt and her vassals in Canaan	1370 to 1340	Reflects conditions in Palestine in the mid-2nd millennium
Babylonian Chronicles	4	Akkadian (Neo-Babylonian)	Wiseman	Babylon	1956	Court records of Neo-Babylonian Empire	626 to 594	Record of capture of Jerusalem in 597 and history of the period
Emar	800	Akkadian	Margueron	Tell-Meskene	1975	Royal Temple, and family archives	13th c.	family customs; religious rituals
Alalakh	500	Akkadian	Woolley	Tell-Atchana	1939	Royal Temple archive; Statute of Idrimi	18th-17th c.	Treaties and contracts offer cultural background

Major Inscriptions of Old Testament Significance

NAME	LANGUAGE	DISCOVERER	LOCATION FOUND	DATE FOUND	SUBJECT	DATE OF ORIGIN (B.C.)	BIBLICAL SIGNIFICANCE
Beni Hasan Tomb Painting	Hieroglyphic Egyptian	Newberry	Beni Hasan	1900	Tomb painting of Khnumhotep II	1920	Pictures Semites in Egypt
Laws of Hammurabi	Akkadian (Old Babylonian)	deMorgan	Susa	1901	Collection of Babylonian laws	1725	Illustrates ancient Near Eastern law
Merenptah Stela	Hieroglyphic Egyptian	Petrie	Thebes	1896	Military accomplishments of Merenptah	1207	First mention of the name "Israel"
Sheshonq Inscription	Hieroglyphic Egyptian		Karnak Temple	1825	Military accomplishments of Sheshonq	920	Confirmation of raid against Rehoboam
"House of David" Inscription	Aramaic	Biran	Dan	1993	Syrian conquest of region	9th c.	Earliest mention of David in contemporary records
Mesha Inscription	Moabite	Klein	Dibon	1868	Military accomplishments of Mesha of Moab	850	Moabite-Israelite relations in 9th century
Black Stela	Akkadian (Neo-Assyrian)	Layard	Nineveh	1845	Military accomplishments of Shalmaneser III	840	Picture Israelites paying tribute

1. . . . in the Ancient Near East

afterlife beliefs, Is 14
arbitrator, Job 9:33
astral worship, Deut 4:19
blessings, Num 6:24-26
boundary lists, Josh 13:1
conquest narratives, Josh 10:16-43
consulting the dead, 1 Sam 28:8-11
cosmic control, Job 9:5-9
council of the gods, Is 40:13-14
creation of people, Gen 1:26-31
death, preference for, Job 7:15-16
dietary restrictions, Lev 11:2
divorce, Deut 22:29
drunkenness, Is 28:7
eclipses, Joel 2:31
election before birth, Jer 1:5
endowed with divine spirit, Is 11:2
festivals and holy days, Num 28:1-30
financial systems, Deut 15:1-11
firstfruit offering, Deut 26:1-15
foretelling by dreams, Deut 13:1-5
idols, Jer 10:5
incubation dreams, 1 Sam 3:3
individual responsibility, Ezek 18:20
judges bribed, Is 5:23
judicial structures, Deut 1:16
king chosen by deity, Deut 17:14-20
kingship, 1 Sam 8:6
laments, Lamentations sidebar; Ezek 19:1
life expectancy, Deut 31:2; Ps 90:10; Is 40:6-7
mining, Job 28:11
monotheism, Deut 6:4
omnipresence, divine, Ps 139:8-12
omniscience, divine, Ps 139:2-4
oppressive laws, Is 10:1
parables and allegories, Is 5:1-2
pathology, Deut 28:22
persuasive oration, 1 Sam 25:23-31
physicians' methods, Job 13:4
prophecy, Deut 18:14-22; Jonah 3:4
punishment, divine, Deut 32:23-25
refuge, cities of, Deut 19:2-3
refugees, Jer 40:11-12
resurrection, Is 26:19; Dan 12:2
road building, Is 40:3-4
sabbath, Is 58:13
sages, Prov 1:1
shepherd king, Ezek 34:7-16
slave laws, Ex 21:2-6
slave trade, Deut 24:7
spies, Josh 2:2
substitutionary rites, Is 53:4-10
temple ideology, 2 Chron 7:16
temple restoration, 2 Chron 24:4
tithing, Num 18:21-32
traditional instruction, Job 8:8-10
treaty curses and blessings, Deut 28:2-11
trial by ordeal, Num 5:23-24
usury, Ezek 18:8
verdict by omen, Deut 17:8-13
winged guardians, Ezek 1:5
wisdom, source of, Job 28:20-27

2. Material Culture

amulets, Deut 6:8
chariots, 2 Sam 8:4
fortifications, Is 2:15
gates and bars, Deut 3:5; Judg 16:3
grinding mill, Judg 16:21
house architecture, Josh 2:6; 6:1
iron, 1 Sam 13:19-20
loom weaving, Judg 16:13-14
metallurgy, Is 1:22
musical instruments, Gen 4:21; 1 Sam 10:5; 2 Sam 6:5; 2 Chron 20:28; Ps 150; Dan 3:5
seals, Neh 9:38; Jer 32
shofar, Ex 19:13
siege ramps, Jer 6:6; 32:24
temple architecture, Judg 16:29
trumpets for signaling, Num 31:6; Josh 6:4-5
writing, Ex 24:4

3. People Groups

Amalekites, Gen 36:12; Num 24:20
Ammonites, Deut 2:19
Amorites, Num 21:21; Deut 1:19
Arabians, Is 21:13
Aramaeans, Gen 28:5; 2 Sam 8:5
Assyrians, Is 7:17
Cushites, Is 18:1
Edomites, Is 21:11
Egyptians, Is 19:1
Hittites, Gen 23:2-20
Hivites, Gen 34:2; Josh 9:7
Jebusites, Judg 1:21
Kenites, Judg 1:16
Midianites, Judg 6:1
Moabites, Is 15:1
Philistines, Judg 13:1; Is 14:29
Rephaim, Deut 2:11; Josh 12:4

4. Places

Ai, Josh 7:2
Arad, Num 21:1-3; Josh 12:14; Judg 1:16
Arpad, Is 10:9
Ashdod, 1 Sam 5:1
Ashkelon, Judg 1:18; 14:19
Beersheba, Gen 22:19
Beth Shemesh, Josh 21:16; 1 Sam 6:9
Bethel, Josh 8:9; Judg 1:22-23
Bethshean, Josh 17:16; Judg 1:27; 1 Sam 31:10-12
Calno, Is 10:9
Carchemish, Is 10:9
Damascus, 2 Sam 8:5; Is 17:1
Dan, Judg 18:29
Ekron, Judg 1:18; 1 Sam 5:10
Gath, 1 Sam 5:8
Gaza, Judg 1:18
Gezer, Josh 10:33; 21:21
Gibeon, Josh 9:3
Hamath, Is 10:9
Hazor, Josh 11:1; Judg 4:2
Hebron, Gen 13:18; Num 13; Josh 10:3
Heshbon, Deut 2:26
Jericho, Josh 2:1
Jerusalem, Josh 10:1; 2 Sam 5:6
Kiriath-jearim, 1 Sam 6:21
Lachish, Josh 10:3; 2 Chron 32; Mic 1:13
Libnah, 2 Chron 21:10
Mahanaim, 2 Sam 2:8
Megiddo, Josh 12:21
Michmash, 1 Sam 13:2
Nineveh, Jon 1
Ramah, 2 Chron 16:1
Ramoth Gilead, 2 Chron 18:2
Samaria, 1 Kings 16:24
Shechem, Gen 12:6; 33:18-19; Josh 24:1; Judg 9:1
Shiloh, 1 Sam 1:3
Susa, Esther 1:2
Tirzah, 1 Kings 16:6
Tyre, 2 Sam 5:11; Is 23:1, 3
Ziklag, 1 Sam 27:6

5. Religion

afterlife, Psalms: Common Concepts sidebar; Is 14:9
ancestor cult, Num 3:1; Deut 18:11; 1 Sam 28:8-11
angry deities, Deut 9:28
ark, Ex 25:10-22
Asherah poles, Ex 34:13; Deut 7:5; 12:3; Judg 6:25
Ashtoreths, Judg 2:13
astral worship, Deut 4:19; 17:3; 2 Kings 23:4; 2 Chron 33:5
Baal, Judg 2:11-13
burnt offering, Lev 1:3-4
Chemosh, Judg 11:24
cherubim, Ex 25:18-20
consulting the dead, 1 Sam 28:8-11
corpse contamination, Num 19:11
cultic prostitution, Deut 23:17-18
Dagon, Judg 16:23
divination, Lev 19:26; Deut 18:10-13; Gen 30:27
divine assembly, Is 40:13-14
divine destruction, Is 10:22-23
divine kingship, Ex 15:3; 1 Sam 8:7
divine punishment, Deut 32:23-25
divine warrior, 1 Sam 4:3-7; Psalms: Common Concepts sidebar
dreams, Gen 37:5-11; 40:5-18; Deut 13:1-5; 1 Sam 3:3; Dan 2:4
earthquake, 1 Sam 14:15
El Shaddai, Gen 17:1-2
fasting, 1 Sam 7:6
fat/suet, Lev 3:1-5
high places, 1 Sam 9:12
idols, Lev 26:1; Deut 4:15-18; Is 2:8; 40:19; 44:17-18

incense, Ex 30:7-8; Jer 44:18
magicians/wise men, Gen 41:8-16
Marduk (Bel), Is 46:1
mediums/spiritists, Lev 19:31; Deut 18:11
Milcom, 1 Kings 11:5, 7
Molech, Lev 18:21; Deut 18:10
monotheism, Deut 6:4
Nebo, Is 46:1
New Moon Festival, 1 Sam 20:5
omens, Deut 18:10
outdoor shrines, Deut 12:2
prayer, 1 Sam 1:13
priests, Ex 28:1; Num 3:7-10; 18:1-7
prophet, Deut 18:14-22
sacred compass, Lev 10:10; 16:2; Num 18:1-7
sacred pillars, Gen 28:18-19
sorcery, Deut 18:10
teraphim, Gen 31:19
theophanies, 1 Kings 19:11-13
thunder, 1 Sam 7:10
uncleanness, Lev 12:1
visions, Gen 15:1
whirlwind, Nahum 1:3
worship, Psalms: Common Concepts sidebar

6. Society and Institutions
bowing to honor, Gen 43:26
census, Ex 30:11-16
city gate, Gen 34:20
debt slavery, Ex 21:2-6
eunuchs, Is 56:4-5; Esther 1:10
exogamy, Ezra 9:10-12
interest and moneylending, Ex 22:25; Lev 25:38; Deut 15
judiciary system, Ex 18:13-27; Deut 1:9-18; 16:18-20; 17
kingship, 1 Sam 8:6
mercenaries, 2 Chron 25:6
political marriages, Deut 17:17; Judg 12:8; 1 Sam 25:39-44; 1 Kings 11:1
primogeniture, 1 Kings 1:5-6
queen mother, 1 Kings 2:19
scribes, 1 Chron 24:6; Neh 8:1
scrolls, Jer 30:2
siege warfare, 2 Chron 32:9; Jer 32:24
slavery, Lev 25:39-55; Deut 23:15-16; Eccles 2:7
taxation, 2 Chron 24:5
trial by ordeal, Num 5:23-24
vulnerable classes, Ex 22:22-24
warfare, Deut 20:10-15

7. Stages of Life
barrenness, Gen 11:30
bride price/dowry, Gen 29:18-20
burial practices, Gen 23:4-5
concubines, Gen 16:2; 25:1-4
corpse exposure, Josh 8:29; 1 Kings 16:4; 21:19; 2 Kings 9:36; Is 14:19
disease, Gen 12:17
divorce, Deut 22:29
firstborn right, Deut 21:15-17
genealogies, Gen 5:1-32
life expectancy, Deut 31:1
marriage customs, Gen 29:21-24; Deut 22:23, 25; Judg 14:10; 15:1
marriages, arranged, Judg 14:2
mourning practices, Gen 37:34-35; Lev 10:6-7; 19:28; Deut 14:1-2; Esther 4:1
pathology, Deut 28:15-68
polygamy, Gen 4:19; 1 Sam 1:2
Sheol, Is 14:9
widows, Gen 38:11; Ex 22:22-24
women, role of, Num 30:3-15

8. Miscellaneous
angel of the Lord, Num 22:22-35; Judg 6:11
anointing/oil, Lev 8:1-9; 1 Sam 16:1

The IVP Bible Background COMMENTARY

New Testament

An indispensable resource, now revised and expanded,
accessibly providing the cultural background
of every verse in the New Testament

SECOND EDITION

CRAIG S. KEENER

Based on the fruits of thirty years of in-depth study, this accessible and best-selling commentary offers historical, social and religious background in a convenient verse-by-verse format covering the entire New Testament. Included are a glossary of cultural terms and important historical figures, maps and charts, up-to-date bibliographies, and introductory essays about cultural background information for each book of the New Testament.

This must-have resource is just what's needed for

- pastors in sermon preparation
- Sunday-school and other church teachers as they build lessons
- missionaries concerned not to import their own cultural biases into the Bible
- college and seminary students in classroom assignments
- everyday Bible readers seeking to deepen and enhance their study of Scripture

"The discerning reader will detect how well Keener has drawn on the results of much recent research and presented it in a way that pastors and laypeople will be able to grasp."

CLINTON E. ARNOLD
Talbot School of Theology

"Like an intriguing archaeological dig, Keener's work surfaces the cultural and world-view assumptions of the New Testament."

DARRELL BOCK
Dallas Theological Seminary

"Keener has taken careful aim at an aptly defined target, and his equally careful methodology has enabled him to hit it dead-center."

Biblical Archaeologist

This book is dedicated to our brothers and sisters
on the frontline of evangelism in Africa, Asia, Latin America,
the inner cities of North America and the many other places
where followers of Jesus are paying a high price
to proclaim his gospel in truth. Many of them have not had
the time or opportunity to pursue the original cultural context
of the New Testament, but I pray with all my heart
that this book will be useful to them in their service
to our Lord Jesus Christ.

Preface and Acknowledgments

When I began studying the Bible, I just wanted to learn the Bible itself in its original languages so I could spend the rest of my life living and preaching it. The more I studied it, however, the more I realized that I needed the *background*. Once I realized, more than three decades ago, that background helps us understand the Bible better, I desperately began looking for a book that would provide the necessary background for each passage, so I could use that in my sermon preparation. Unable to find such a book, I began scouring many books, and soon began working through countless volumes of ancient sources. Eventually I resolved to provide such a book, if no one else offered the service first, to save ordinary readers the years of study it had taken me. At the time of this foreword, the commentary has received almost unanimously positive reviews and, including translations and electronic editions, has sold more than six hundred thousand copies. Others have also developed different kinds of background commentaries for other purposes since that time.

I wrote the *Background Commentary* to serve readers like the young preacher I was when I began my study: many pastors and other readers who lack access to more detailed tools for reasons of time, training or economics. In addition to busy pastors, I envisioned students and others doing inductive Bible study, and readers in some parts of the world where few resources for research on the ancient world were available.

I did not write the book (in contrast to many of my other books) for scholars, who have access to many primary sources, or even for those pastors who had many commentaries providing more background detail. Many of my fellow biblical scholars have, however, expressed regret that this work does not provide scholarly documentation they could follow up. This lack is unfortunate, but given the book's size and its primary audience, the editorial decision was made not to bog it down with documentation, which would have been extensive. I have added some more references for this edition, but only very sparingly.

Scholars will know where to find some of the information, but I am also writing more academic commentaries that provide much of the documentation as well as the detail for what is only summarized here. Those looking for my information on the Gospels will find most of it in my academic commentaries on Matthew and John (in addition to my *Historical Jesus of the Gospels*); my multivolume commentary on Acts; and my shorter commentaries on Romans, 1–2 Corinthians and Revelation, which also supply the most relevant of my sources for these works. I could not include such documentation here without expanding this volume and its printing cost, but I am making it available in the appropriate venues, where those who desire it can access it. I trust that no one who has perused my scholarly work will doubt the level of research in ancient sources that stands behind my work. Nevertheless, a good scholar keeps learning, and after two decades in print, the time has come to provide a slightly revised version of the commentary.

I am deeply indebted to the many professors with whom I studied over the years. I am also deeply indebted to the students I served through campus ministry or teaching, and to the congregations I served, for the opportunity to test out the ideas in this commentary. They are the ones who helped me sift through which elements of potential background were more relevant for communicating the message of the biblical text and which elements were more peripheral.

I should especially acknowledge InterVarsity Press and my editors there (at the time Rodney Clapp, Ruth Goring and Dan Reid) for taking seriously the mission of this book. Just as we need to make the text of the Bible available to ordinary readers in all cultures, we need to make the background available that helps readers hear biblical passages the way their first audiences would have heard them. About two years after I decided that InterVarsity would be an ideal publisher for a commentary like this if I ever got the time to write it, Rodney asked if I would be interested in writing for InterVarsity, and I proposed this commentary. Before I received word back I began calculating the amount of income I would need to buy groceries and pay rent (in an apartment large enough for my research files) if I spent a year writing the commentary full time. At the time, the figure seemed overwhelming, given the only kind of employment I thought available to me that year, and I could only pray. Less than twenty-four hours later, Rodney called, surprising me with the unexpected offer of an advance. He could not have known that the offer came to the exact dollar amount that I had prayed for the night before. I am most grateful to the Lord for providing the opportunity to pursue and publish this research, and I pray that this book will serve the needs of his church.

How to Use This Commentary

In its most basic form, "background" is what the biblical writers did not have to say because they could take for granted their original audiences knew it. Modern audiences, however, often do not know it, and some texts become even obscure to us without it. Cultural and historical background can shed light on virtually every text in the New Testament, yet much of this material is difficult for nontechnical readers to find. Although many helpful commentaries exist, no single one-volume commentary has focused solely on the background material. Yet it is precisely this element—the background that indicates how the New Testament's writers and first readers would have understood its message—that the nontechnical reader needs as a resource for Bible study (most other elements, such as context, can be observed on the basis of the text itself).

Some surveys of the cultural background of the New Testament exist, but none of these is arranged in a manner that allows the reader to answer all the pertinent questions on a given passage. This deficiency convinced me nearly three decades ago to undertake this project, unless someone else provided the service first. This book is written in the hope that more readers will now be able to hear the New Testament much closer to the way its first audience would have heard it.

A Cultural Commentary

Cultural context makes a difference in how we read the New Testament. For instance, since there were plenty of exorcists in the ancient world, ancient readers would not have been surprised that Jesus cast out demons, but since most exorcists employed *magic spells or stinky roots to seek to expel demons, Jesus' driving them out "by his word" was impressive. Viewing the conflict concerning head coverings in 1 Corinthians 11 in the broader context of tensions over head coverings between well-to-do and less well-to-do women in first-century Corinth clarifies Paul's teaching in that passage. Understanding ancient views on slavery demonstrates that

Paul's teaching, far from supporting that institution, undermines it. Recognizing what Jewish people meant by "resurrection" answers the objections of many skeptics today concerning the character of Jesus' resurrection. Understanding Roman law helps us understand why Felix was playing unjust politics by not simply releasing Paul after his defense speech. And so forth.

The sole purpose of this commentary (unlike most commentaries) is to make available the most relevant cultural, social and historical background for reading the New Testament the way its first readers would have read it. Although some notes about context or theology have been necessary, such notes have been kept to a minimum to leave most of the work of interpretation with the reader.

Knowing ancient culture is critical to understanding the Bible, especially the passages most foreign to us. Our need to recognize the setting of the biblical writers does not deny that biblical passages are valid for all *time;* the point is that they are not valid for all *circumstances.* Different texts in the Bible address different situations. (For instance, some texts address how to be saved, some address Christ's call to missions, some address his concern for the poor, and so on.) Before we can determine the sorts of circumstances to which those passages most directly apply, we need to understand what circumstances they originally addressed.

This observation is not to play down the importance of other factors in interpreting the Bible. The most important issue, next to the Spirit's application to our hearts and lives, is always literary context: reading each book of the Bible the way it was put together under the inspiration of the Holy Spirit. This commentary itself is meant only as a tool to provide readers ready access to New Testament background—it is not meant to be the whole story. In my own preaching and teaching, I am more concerned with literary context than with culture. But readers can ascertain the context on their own by studying the Bible itself. For most of us, application of the Bible is also crucial, but specific applications will differ from culture to culture and from person to person, and these, again, are readily available to readers of the Bible without outside helps.

For the majority of the users of this commentary, who have not studied Greek and Hebrew, a good, readable translation is crucial for understanding the Bible. (For instance, both the NASB, which is more word for word, and the NIV, which is more readable, are very helpful. One might read regularly from the NIV and study more detailed passages from or compare with the NASB.) In contrast to the half-dozen mainly medieval manuscripts on which the King James Version was based, we now have over five thousand New Testament manuscripts, including some from extremely close to the time the New Testament books were written (by the standards used for ancient texts). These manuscripts make the New Testament by far the best-documented work of the ancient world and also explain why more accurate translations are available today than in times past. But the biggest reason for using

an up-to-date translation is that it is written in the form of language that we speak today and thus is easier to understand. Understanding the Bible so one can obey its teaching is, after all, the main purpose for reading it.

Other methods of getting into the text itself, like outlining and taking notes, are also useful to many readers. For more complete guides on how to study the Bible, the reader may consult (among less technical sources) works like Gordon Fee and Douglas Stuart, *How to Read the Bible for All Its Worth* (Grand Rapids: Zondervan, 1981), or J. Scott Duvall and J. Daniel Hays, *Grasping God's Word: A Hands-On Approach to Reading, Interpreting, and Applying the Bible* (Grand Rapids: Zondervan, 2001).

But the one factor in applying the Bible that is not available to most Bible readers is the cultural background. This commentary is meant to fill that need and should be used in conjunction with other important elements of Bible study: an accurate and readable translation, context, prayer and personal application.

Again, this commentary will not be helpful for those who neglect context, a rule of interpretation more basic than culture. It is best to read through each book of the Bible as a whole, rather than skipping from one part of the Bible to another, so one can get the whole message of a particular biblical book and see each passage in its larger context. For the most part, these books were written one at a time to different groups of readers, who read them one book at a time and applied them to their specific situations. One must keep this point in mind when reading, teaching or preaching from the Bible. (Many alleged contradictions in the Bible arise from ignoring context and the way books were written in the ancient world. Ancient writers, like modern preachers, often applied and updated the language, while being faithful to the meaning, by arranging their materials; so the context is usually inspired guidance on how to apply a teaching in the Bible.) It is always important to check the context of a passage in the biblical book in which it occurs before using this commentary.

But once one has examined a passage in context, this commentary will be an invaluable tool. One may use it while reading through the Bible for daily devotions; one may use it for Bible studies or for sermon preparation. The one book orthodox Christians accept as God's Word is the most important book for us to study, and it is hoped that this commentary will aid all believers in their study of God's Word.

Although the format of this book has been tested in the classroom, in Bible studies, from the pulpit and in personal devotions, it may fail to answer some social-cultural questions related to passages of the New Testament. Despite efforts to answer the right questions, it is impossible to anticipate every question; for this reason, some helpful books on ancient culture are listed in the brief bibliography at the end of this introduction.

The reader may also find background relevant to a particular passage under other passages where I had felt it was most important to include it. Because the New

Testament itself is composed of books aimed at different audiences (Mark was meant to be read quickly, whereas Matthew was meant to be studied and memorized), my treatment of some books is more detailed than that of others. As the book most foreign to modern readers, Revelation receives the most detailed treatment.

How to Use This Book

This commentary may be used either for reference or in conjunction with one's regular Bible reading. In reading the Bible devotionally or in preparing sermons or Bible studies, one has two of the most crucial tools for interpretation in the Bible itself: the text and its context. The third most crucial tool, which was already known and assumed by the ancient readers but is unavailable to most modern readers, is the background of the text. This commentary is written to supply that need to the fullest extent possible in a one-volume work.

The most important ancient background for the New Testament's ideas is the Old Testament, especially in its Greek translation. Most New Testament authors wrote to biblically informed audiences and could take for granted this shared theological background. This commentary includes Old Testament background, but because that background is available to all readers of the Bible, this commentary especially emphasizes other Jewish and Greco-Roman culture of the first century. Early Christian writers naturally also drew on other early Christian traditions, many of which are available to us in the New Testament. These traditions are often more relevant, especially for later works in the New Testament, than some other background I have offered, but because that material is directly available to the reader, it has been omitted for the most part here. Similarly omitted are notes on background that is transcultural, because readers in all cultures assume this information.

Those who use this commentary in conjunction with personal Bible study should read the biblical passage first and examine its context. Then they may most profitably examine the notes in this commentary; the notes on related passages may also be helpful. Having established what the text was saying to the ancient readers, one has a better feel for the issues being addressed and is ready to move to the stage of application.

The situation behind Paul's letter to the Romans provides one example of how one could apply what one learns in this commentary. In that letter, Paul argues (among other matters) that Jews and Gentiles are saved on the same terms and urges reconciliation between them within the body of Christ. If Paul's gospel message challenged ethnic divisions that God himself had in some way established, how much more would it challenge the ethnic, tribal and racial divisions in the body of Christ today, both locally and globally? Once we grasp the point of the text in its original historical setting, we are in a position to apply that text to both our personal lives and our culture today.

Because the Bible's original message, once understood, speaks to human issues today in a variety of situations and cultures, the way we apply it will vary from person to person and culture to culture. (For instance, if Paul urges the Corinthians to deal seriously with sin, the principle is clear; but different people will have to deal with different sins.) For that reason, most application is left to the reader's common sense and sensitivity to the Holy Spirit.

This point usually applies even where I strongly felt that guidance should be given concerning application. For instance, in my treatment of Matthew 24:15-22 I emphasize those details that were fulfilled in A.D. 66–70. Some people think that certain prophecies in that passage will be fulfilled again; but because that is a theological rather than a cultural-historical issue, I leave that matter to the reader's discretion. In the same way, I am convinced that the background provided for passages on women's ministry should lead modern readers to recognize that Paul does indeed accept the teaching ministry of women. But due to the nature of this work, someone who does not share that conviction can nevertheless profitably use the commentary on those passages without feeling constrained to accept my view. (Most of those who disagree will find at least some use for the background here; few today take the injunction of silence so literally, for example, as to preclude even singing.) At least on most issues, sincere believers, grappling with the same context and the same background, often come to similar conclusions in the end.

Most readers will be familiar with words like *priest* and *Palestine,* but terms whose cultural significance may be unfamiliar to the reader are found in the glossary at the end of this book and are marked at least once in a given context with an asterisk (*). Some recurrent theological terms (like *Spirit, apocalyptic, Diaspora, Pharisee* and *kingdom*) had a range of specific connotations in the ancient world that cannot be mentioned in each text; the regular reader of this commentary should thus become familiar with these terms in the glossary. I should pause to note that I have often followed common nomenclature even when it is imprecise or sometimes controversial where alternative terms were difficult to supply. Thus I use "Christian" and "Jewish" even though these categories strongly overlapped. Similarly, I am following usual scholarly convention concerning Roman antiquity, not making a political statement (as one critic complained), when mentioning "Palestine"; I am open to an alternative, but Judea-and-Samaria-and-Galilee is too cumbersome to be useful. I retain scholarly convention in mentioning "patrons" rather than the stricter Roman political usage; and so forth.

How Not to Use This Book

Not all background in this commentary is equally helpful for understanding the Bible. Some background is almost self-evident, especially where ancient culture and modern readers' culture overlap. Likewise, not all sources are of equal merit for our

purposes. Some sources, particularly rabbinic sources, are later than the New Testament; some of the information from these sources is more helpful whereas other material is less helpful, and I weighed these factors as carefully as possible in writing this commentary. Usually only Old Testament and Apocrypha citations and occasionally citations from the Jewish Pseudepigrapha are explicitly given in this commentary; citing all the rabbinic, Greek and Roman sources would weigh it down too heavily for the general reader. Many observations and analogies offered in my scholarly work are missing here, because it is difficult to determine the likelihood of their relevance (e.g., if a custom is attested only later and rarely).

Some background is included because it appears in standard scholarly commentaries, and readers must judge for themselves how relevant it is for their interpretation. This is a *background* commentary; it does not dictate how readers must understand or apply the text, and readers who disagree with some interpretations I suggest will nevertheless find the commentary useful.

More importantly, the general reader should be aware that parallels between an idea in the New Testament and an idea in the ancient world need not mean that one copied the other—both may have drawn on a familiar saying or concept in the culture. Thus I cite the parallels simply to illustrate how many people in that culture would have heard what the New Testament was saying. For instance, Paul's use of the kinds of arguments used by rhetoricians (professional public speakers) indicates that he was relating to his culture, not that he wrote without the inspiration of the Holy Spirit. Further, people and sources from wholly unrelated cultures (e.g., Stoics and the Old Testament) may share some concepts simply because those concepts make sense in those cultures (or even most cultures), even if they do not make sense in ours; our own culture often unconsciously limits our understanding of Paul and his contemporaries. Because ancient peoples did not think as we do does not mean that they were wrong; we can still learn much from their insights in areas like rhetoric and human relationships.

Similarly, when I comment that Paul used the language of Stoic philosophers, I do not mean that Paul had adopted Stoicism; public philosophical discourse had been commonly affected by Stoic ideas and terminology. In other cases, the adoption of philosophical language is intentional; outsiders sometimes viewed Christianity as a philosophical school, and Christians were able to use this outside perception as a means to communicate the gospel. Like other writers, Paul could appeal to his culture in the popular language of his day but give that language a new twist.

When I cite a later Jewish tradition that amplifies the Old Testament, I do not mean to imply that the tradition is necessarily true. These citations are to help us feel how the first hearers of the New Testament felt about the Old Testament characters; sometimes New Testament writers also allude to these extrabiblical traditions (Jude 14-15). (One need not assume that New Testament writers always simply

recycled earlier Jewish imagery to relate to their culture, however; often a variety of Jewish views existed, and a New Testament writer often picked a particular one. Although the New Testament writers had to accommodate the language of their day to communicate their point, neither they nor we need see all that language as inaccurate. Some modern readers assume glibly that ancient worldviews are wrong, but experiences and interpretations sometimes attributed to "primitive" worldviews, such as possession by harmful spirits, appear in a wide range of cultures; they need not be explained away by modern Western reductionism.)

Finally, we should always be cautious in application; it is important that we apply biblical texts only to genuinely analogous situations. For an obvious example, it is not accurate to read Jesus' attacks on the religious leaders of his day as attacks against all Jewish people, as some anti-Semites have. Jesus and his disciples were themselves Jewish, and such an abuse of the text makes no more sense than using the book of Exodus against Egyptians today (later Old Testament prophets did not, e.g., Is 19:23-25). Jesus' challenges against the piety of religious authorities in his day have nothing to do with their ethnicity; these challenges are meant to confront us as religious people today and warn us not to act as those religious leaders did. The issue was a religious one, not an ethnic one. In other words, we must apply the *principles* of the text in the light of the real issues the biblical authors were addressing and not ignore the passages' historical context.

A Popular, Not a Scholarly, Commentary

Scholars may be disappointed that the text of this work is not documented or nuanced the way a scholarly work would be, but should keep in mind that this book is not written primarily for scholars, who already have access to much of this information elsewhere. For much of the New Testament, I have already provided the most relevant of my sources in more detailed commentaries. But a concise and handy reference work in one volume can place much relevant information at the fingertips of busy pastors and other Bible readers who have fewer resources and less time available.

Scholars like to document and investigate all angles of a question, nuancing their language carefully and guarding against attacks by those holding other interpretations of the same texts. I follow this procedure in some of my other works, but this approach is not possible in a work of this length. Scholars also like to include all available data, which the same limitation also prohibits here. To be useful for most pastors' preaching and most other Christians' Bible study, this work's language needs to be plain and concise.

I have generally ignored scholarly questions that do not deal directly with the issue central to this book, the ancient context of the New Testament. It is important for the purpose of this book to ask what the text as it stands means; it is not im-

portant to ask about the sources behind the text and their editing, and I have dealt with those issues only where absolutely necessary.

The purpose of this book is likewise limited not only to cultural-historical context in general, but also to that which actually sheds light on the New Testament. For instance, to claim that some emphasis of early Christianity is distinctive to Christianity is not to claim that other groups did not have their own distinctive characteristics; but this is a commentary on the New Testament, not a commentary on those other groups.

I have, however, tried to be as fair as possible to the major different views of the background of the New Testament. My own research divides fairly evenly between the Jewish and Greco-Roman contexts of the New Testament, with an emphasis on ancient Judaism as part of the larger Mediterranean culture. I have often labored over a variety of interpretations of the evidence before selecting which interpretation or interpretations I felt were most accurate or most relevant to the text. Not every scholar will agree on every point, but I have endeavored to make the book as accurate and helpful as possible. I hope that this book will both stimulate other students to pursue more detailed scholarship and provide easy access to the world of the New Testament for those whose call in life does not permit them the opportunity to pursue it in more detail.

My comments are based on what were originally one hundred thousand index cards, especially from the primary literature of the ancient world but also recent scholarly research in ancient Judaism and Greco-Roman antiquity, as well as observations in earlier commentaries.

To keep the commentary to manageable length, I have made painful decisions about what material to omit. I have not adduced the many parallels available to turns of phrases or mentioned remote parallels that would not illumine a passage for the Bible teacher or general reader. I have often chosen to delete material of uncertain value, even if it is used by many other scholars. (For instance, given the uncertainty of the date of the document called the *Similitudes of Enoch,* I have not cited it as background for Jesus' title "Son of Man," although it could be relevant.) I have also tried to avoid duplicating the kinds of information available in other commonly used reference works. Because word studies are elsewhere available (and the New Testament contains many Greek words), I have generally omitted discussions of Greek words except where the meaning of the text depends on the broader cultural context of these words.

Readers may detect some points where my own theology has influenced my reading of a text in a manner that disagrees with their own. I genuinely try to derive my theology and applications only from my study of the biblical text, but if the reverse has occasionally happened, I ask the reader's pardon. This book is meant to be useful, not controversial, and if readers disagree on some points, I hope they will find most of the rest of the commentary helpful nonetheless.

Other Sources for the Cultural Context of the New Testament

The following sources are useful to readers of the New Testament.

General. See especially John E. Stambaugh and David L. Balch, *The New Testament in Its Social Environment,* LEC 2 (Philadelphia: Westminster, 1986); David E. Aune, *The New Testament in Its Literary Environment,* LEC 8 (Philadelphia: Westminster, 1987); Everett Ferguson, *Backgrounds of Early Christianity* (Grand Rapids: Eerdmans, 1987). A helpful anthology of texts is C. K. Barrett, *The New Testament Background: Selected Documents,* rev. ed. (San Francisco: Harper & Row, 1989); some one-volume Bible dictionaries (for example, those by Eerdmans and InterVarsity Press) are helpful; see more fully larger reference works, such as Geoffrey W. Bromiley, ed., *The International Standard Bible Encyclopedia,* 4 vols., rev. ed. (Grand Rapids: Eerdmans, 1979–88); David Noel Freedman, ed., *Anchor Bible Dictionary*, 6 vols. (New York: Doubleday, 1992); and (esp. on background) Craig A. Evans and Stanley E. Porter, eds., *Dictionary of New Testament Background* (Downers Grove, IL: InterVarsity Press, 2000). Extremely helpful for understanding the New Testament are reference works on antiquity such as *The Oxford Classical Dictionary,* 3rd ed. (New York: Oxford University Press, 2003) and *Brill's New Pauly* (15 vols.), although, as with all such reference works, one must either read the entire way through or know where to look for information. Several years after my present one-volume background commentary was released (1993), some useful multivolume background commentaries (those edited by Clinton Arnold and Craig Evans) were also published; a different sort of useful background resource, including block quotations from ancient sources, is M. Eugene Boring, Klaus Berger and Carsten Colpe, eds., *Hellenistic Commentary to the New Testament* (Nashville: Abingdon, 1995). The most thorough work providing New Testament background today is a long-term project that will no doubt prove invaluable to scholars: Ugo Schnelle et al., eds., *Neuer Wettstein: Texte zum Neuen Testament aus Griechentum und Hellenismus* (New York: De Gruyter, 1996–).

How to Understand the Bible in Its Context. On a basic level, see works such as Gordon D. Fee and Douglas Stuart, *How to Read the Bible for All Its Worth: A Guide to Understanding the Bible* (Grand Rapids: Zondervan, 1981); J. Scott Duvall and J. Daniel Hays, *Grasping God's Word: A Hands-On Approach to Reading, Interpreting, and Applying the Bible* (Grand Rapids: Zondervan, 2001). Two of the recent New Testament introductions that emphasize cultural context are David A. deSilva, *An Introduction to the New Testament: Contexts, Methods & Ministry Formation* (Downers Grove, IL: IVP Academic, 2004); Gary M. Burge, Lynn H. Cohick and Gene L. Green, *The New Testament in Antiquity: A Survey of the New Testament Within Its Cultural Context* (Grand Rapids: Zondervan, 2009).

For more advanced discussions of interpretive approaches, see, for example,

Jeannine K. Brown, *Scripture as Communication: Introducing Biblical Hermeneutics* (Grand Rapids: Baker Academic, 2007); Grant R. Osborne, *The Hermeneutical Spiral: A Comprehensive Introduction to Biblical Interpretation,* rev. ed. (Downers Grove, IL: IVP Academic, 2006); and Kevin J. Vanhoozer, *Is There Meaning in This Text? The Bible, The Reader, and the Morality of Literary Knowledge* (Grand Rapids: Zondervan, 1998); with a special focus on cultural issues in interpretation, see William J. Webb, *Slaves, Women & Homosexuals: Exploring the Hermeneutics of Cultural Analysis* (Downers Grove, IL: IVP Academic, 2001), with a foreword by Darrell L. Bock.

Judaism: General. E. P. Sanders, *Judaism: Practice and Belief, 63 BCE–66 CE* (Philadelphia: Trinity, 1992).

Judaism: Rabbinic Judaism. Our most voluminous corpus of ancient Jewish sources comes from the rabbis; one popular survey of rabbinic literature is Ephraim E. Urbach, *The Sages: Their Concepts and Beliefs,* 2 vols., 2nd ed. (Jerusalem: Magnes, Hebrew University Press, 1979). Unfortunately, it does little with the comparative dates of the rabbinic traditions; New Testament students must depend on the earliest and most widely attested (preferably in other kinds of sources) traditions. Some detailed work on dating rabbinic traditions appears in the multivolume work of David Instone-Brewer, *Traditions of the Rabbis from the Era of the New Testament* (Grand Rapids: Eerdmans, 2004–).

Judaism: Surveys of the Documents. One useful work is Samuel Sandmel, *Judaism and Christian Beginnings* (New York: Oxford University Press, 1978); see most extensively Craig A. Evans, *Ancient Texts for New Testament Studies: A Guide to the Background Literature* (Grand Rapids: Baker Academic, 2005). Some recent and progressive approaches may be sampled in volumes such as Robert A. Kraft and George W. E. Nickelsburg, eds., *Early Judaism and Its Modern Interpreters,* SBLBMI 2 (Atlanta: Scholars Press, 1986). Most issues are treated in detail in more specialized works; for instance, see E. P. Sanders, *Paul and Palestinian Judaism* (Philadelphia: Fortress, 1977), for Jewish views on salvation (qualified in some respects by more recent studies); on the roles of women see Leonard Swidler, *Women in Judaism: The Status of Women in Formative Judaism* (Metuchen, NJ: Scarecrow, 1976); Judith Romney Wegner, *Chattel or Person? The Status of Women in the Mishnah* (New York: Oxford University Press, 1988).

Judaism: Primary Sources. One should especially read the Old Testament and the Apocrypha (in the latter, especially Wisdom of Solomon and Sirach); then translations of the Dead Sea Scrolls (perhaps especially the Manual of Discipline [1QS], the Damascus Document [CD] and the War Scroll [1QM]); and the documents of most relevant date in *The Old Testament Pseudepigrapha,* ed. James H. Charlesworth, 2 vols. (Garden City, NY: Doubleday, 1983–1985), especially *1 Enoch, Jubilees,* the *Sibylline Oracles* (not all from the same period), the *Letter of Aristeas*

and other works like *4 Ezra* and *2 Baruch.* Josephus is in many respects one of our most valuable sources next to the Old Testament, though due to the sheer volume of his works, one may wish to focus on *Against Apion,* the *Life* and then the lengthier *Jewish War*. Readers may wish to peruse Philo to acquaint themselves with a major Jewish philosopher in the Diaspora; the works of Philo are now available in a one-volume edition (trans. C. D. Yonge; Peabody, MA: Hendrickson, 1993). Those who wish to examine rabbinic literature firsthand might start with *Avot* in the Mishnah; many early traditions are also preserved in the Tosefta, *Avot de Rabbi Nathan* and the tannaitic commentaries on parts of the Pentateuch (Mekilta on Exodus, Sifra on Leviticus, Sifre on Numbers, and Sifre on Deuteronomy). Archaeological data are regularly published in journals and books; collections of inscriptions and papyri, such as *Select Papyri,* a three-volume work translated by A. S. Hunt, C. C. Edgar and D. L. Page (LCL; Cambridge, MA: Harvard University Press, 1932–1941) and discussions, such as Naphtali Lewis, *Life in Egypt Under Roman Rule* (Oxford: Clarendon, 1983), are also helpful.

Greco-Roman World: General. See Stambaugh and Balch, *New Testament in Its Social Environment;* James S. Jeffers, *The Greco-Roman World of the New Testament Era: Exploring the Background of Early Christianity* (Downers Grove, IL: IVP Academic, 1999); David A. deSilva, *Honor, Patronage, Kinship & Purity: Unlocking New Testament Culture* (Downers Grove, IL: IVP Academic, 2000); M. Cary and T. J. Haarhoff, *Life and Thought in the Greek and Roman World,* 4th ed. (London: Methuen, 1946).

Greco-Roman World: Secondary Sources. On the way texts were written and understood in the Greco-Roman world, see Aune, *New Testament in Its Literary Environment;* see also Stanley K. Stowers, *Letter Writing in Greco-Roman Antiquity,* LEC 5 (Philadelphia: Westminster, 1986). On moralists and moral issues, see primary sources and comment in Abraham J. Malherbe, *Moral Exhortation: A Greco-Roman Sourcebook,* LEC 4 (Philadelphia: Westminster, 1986). On Greek religion, see Walter Burkert, *Greek Religion* (Cambridge: Harvard University Press, 1985).

On history, Tacitus, Suetonius and Josephus are quite readable and may be pursued before the secondary sources; many Greek and Roman sources are available in paperback (e.g., through Penguin Books), although those wishing to do more advanced work should locate the Loeb Classical Library editions. Helpful secondary sources include F. F. Bruce, *New Testament History* (Garden City, NY: Doubleday, 1972); and Bo Reicke, *The New Testament Era: The World of the Bible from 500 B.C. to A.D. 100* (Philadelphia: Fortress, 1974). Specialized works, such as those on women in antiquity (e.g., Mary R. Lefkowitz and Maureen B. Fant, *Women's Life in Greece and Rome* [Baltimore: Johns Hopkins University Press, 1982], one collection of texts), are indispensable for more detailed study. On ancient rhetoric and argumentation, see, e.g., R. Dean Anderson Jr., *Glossary of Greek Rhetorical Terms Connected*

to Methods of Argumentation, Figures and Tropes from Anaximenes to Quintilian (Leuven: Peeters, 2000); Stanley E. Porter, ed., *Handbook of Classical Rhetoric in the Hellenistic Period 330 B.C.–A.D. 400* (Leiden: Brill, 1997). Too many valuable sources exist to name them all; one sample could include Edwin A. Judge, *The First Christians in the Roman World: Augustan and New Testament Essays,* ed. James R. Harrison, WUNT 229 (Tübingen: Mohr Siebeck, 2008).

Greco-Roman World: Primary Sources. A broad sampling of documents is available in Robert K. Sherk, ed., *The Roman Empire: Augustus to Hadrian,* TDGR 6 (New York: Cambridge University Press, 1988). For first-century Roman history, one should read especially Tacitus and Suetonius; for Judea, especially relevant material in Josephus. For first- and second-century moral thought, one should at least sample Epictetus, Seneca, Plutarch and perhaps a satirist like Juvenal; see also Abraham J. Malherbe, *The Cynic Epistles: A Study Edition,* SBLSBS 12 (Missoula, MT: Scholars Press, 1977). For ancient and argumentation, helpful works include Quintilian's *Institutes of Oratory,* the rhetorical essays of Dionysius of Halicarnassus and Cicero, and the like.

The Need for a Cultural-Historical Commentary

Many readers will recognize the value of a cultural commentary. But others may, even after reading "How to Use This Commentary," still remain unclear. The following essay elaborates the importance of cultural background in biblical interpretation for those who have not been exposed to this issue previously. Because those already trained in biblical studies will agree with the need for cultural context, this essay is directed solely toward nontechnical readers.

How the Bible Invites Us to Interpret It

Sometimes reading passages in light of their ancient context simply makes them more concrete for us, for example, knowing something about the character of Pilate or Herod Agrippa I. Sometimes, however, it prevents us from reading texts in impossible or absurd ways. For example, you probably do not set aside money for the Jerusalem church every Sunday, even though that is a direct command of Scripture (1 Cor 16:1-3). Perhaps you have also never traveled to Troas to try to find Paul's cloak to bring it to him (2 Tim 4:13), even though this passage is also phrased as a command.

There are other passages that may not seem absurd to us but which also would sound different to us if we understood their original setting. The danger of "absurd" applications, however, points us to the importance of reading Scripture in its setting, where possible. It suggests a way of reading that, if followed consistently, can help us grasp all of the Bible more concretely.

Readers of the Bible have long realized the value of cultural and historical background for understanding the Bible. The biblical writers themselves assume its importance. For instance, when Mark writes about an issue debated by Jesus and his opponents, he explains the custom involved in it to his Gentile readers, who would

not have otherwise known the custom (Mk 7:3-4). Similarly, when Jesus' opponents take an apparent concession in the law at face value, Jesus says that the *intent* of the law is what is crucial, and to grasp it one must understand the situation and the state of its original audience (Mk 10:4-5).

Biblical writers can often simply assume the importance of the readers' knowing the situation. It was understood in the ancient world that the better one knew the situation with which a work dealt, the better one could understand a work (see the first-century A.D. Roman rhetorician Quintilian, *Institutes of Oratory*, 10.1.22 on speeches; one should also keep rereading the speech to catch all the subtle nuances and foreshadowings in it; see Quintilian 10.1.20-21). For instance, when Paul writes a letter to the Corinthians, he can assume that the Corinthians know what situations he is addressing. Reading 1 Corinthians may be like listening to one side of a telephone conversation, and we can fortunately reconstruct most of the conversation by reading 1 Corinthians. But part of the meaning of the conversation is determined by the situation itself, not just by the words in front of us. What Paul *assumes* his readers will grasp in his writing is as much a part of his meaning as what he *says,* because this is a *part of the meaning he did not need to specify explicitly.* (This approach recognizes insights in what scholars call "relevance theory.") As Jesus pointed out in his conflicts with some Bible interpreters of his day, the original meaning and intention matters, not just the wording (e.g., Mk 10:5-6).

If we cannot relate to the situation the biblical writers and their readers are assuming, we will have more difficulty understanding the points they are making. A few examples will illustrate this point.

Paul addresses the issue of celibacy in 1 Corinthians 7. There he definitely sounds as if he favors celibacy, and even though he allows marriage as a valid lifestyle, some commentators think he suggests that it is a second-class lifestyle for those who do not have the gift of being able to "control themselves." He certainly makes some valid points about the benefits of singleness, but is he really against marriage in general? First Corinthians 7:1 tells us plainly that Paul is responding to a letter from some of the Christians in Corinth. Because some of these Christians followed a certain view in their culture that opposed marriage, one could just as easily read the chapter as follows: Paul is saying, "You have a good point, and I agree with you that singleness is a good gift from God. But you are taking matters too far if you impose it on married people or on people who should get married."

A clearer example would be how we read Paul's warnings about meat offered to idols. It would be all too easy for readers in some cultures today to say, "Well, there aren't any idols to sacrifice meat to today, so let's just skip this chapter of 1 Corinthians." But this sidesteps the transcultural issue *behind* the cultural issue. Once we see how concrete the issue was in Corinth—that well-to-do Christians who did not eat this food could offend friends and business associates, and all to keep the less-

educated Christians from being hurt in their faith—we can compare it with similar issues today. Some Christians today want a prestigious lifestyle because it attracts others to a religion that demands little in the way of sacrifice—even if such a religion alienates the homeless and hungry in poorer nations and in our own cities. Considering how to balance the interests of different factions in a church is similarly relevant in many congregations today.

Understanding that the Bible does address issues and motives like those we face today is important. Far from making the Bible less relevant, understanding the situation helps us make it more relevant (sometimes even uncomfortably relevant). It forces us to see that the people with whom Paul dealt were not simply morally unstable troublemakers; they were real people with real agendas like ourselves. This recognition invites us to deal with how Paul's words would challenge us as well.

Relevance to All Cultures

Most of the book God gave us was not directly dictated in the first person (i.e., the Bible does not read as if God were explicitly saying: "I'm God, and I am speaking directly to everybody in all times"). Some Bible readers have always wanted the Bible to read that way and like to pretend that this is the proper way to interpret it. But God chose to inspire the Bible in a different form: he inspired his prophets and witnesses to address real situations in their own day as an example for generations that would follow (1 Cor 10:11). If Paul was inspired to write a letter to the Corinthians, whether people today like it or not, that letter is a letter to the *Corinthians,* just as it claims to be. We should listen in and learn from the wisdom God inspired Paul to give believers in Corinth; to do so we should do our best to hear it the way the Corinthians would have.

God gave us eternal principles, but he gave them to us in specific concrete forms, addressing real situations. He gave us those principles in the form of illustrations, to show us how those principles work out in real-life situations, because he wanted to make sure that we would apply them to our own real-life situations. Thus, for example, Deuteronomy 22:8 ("build a parapet around your roof, lest you incur bloodguilt if someone falls off") still teaches us concern for our neighbor's safety, even though most of us no longer have flat roofs on which we entertain our neighbors. The moral today might be, "Make your colleague fasten her seatbelt when she rides with you to work." The example might be different today, but the point is the same; yet until we understand the original example, we cannot recognize the real point we must reapply in our own culture.

We may not like the fact that God gave us his Word in concrete form, because in much of Western culture we are used to thinking abstractly. But in many cultures people think concretely and can read a story or a conversation and learn more lessons than Western readers learn from reading a series of abstractions. Those

cultures are more attuned to the Bible that God chose to give the world than we in the West are. Much of the Bible is historical narrative (i.e., true stories), and much of it is letter or prophecy directed to specific situations. Thus its format is more like a conversation than an abstract philosophical treatise. Even abstract principles like those in Proverbs are expressed in specific cultural forms; for instance, some Egyptian wisdom sayings use almost the same wording as their Hebrew counterparts, because that was how people in that part of the ancient Near East expressed their wisdom at that time.

If God had not chosen to give us the Bible in concrete, cultural forms, what forms would he have used? Is there a neutral language, a universal one not bound by any culture? As one scholar put it, if God had just spoken to us in a cosmic wind, how many of us would have understood him? Or as one cartoon put it, if God had revealed the details of quantum physics and the theory of relativity to Moses, instead of "In the beginning God created," would Moses or the Hebrew language have been able to communicate that data to his contemporaries? God is too practical and too concerned about us understanding him to try to communicate with us like that. He worked through all the different cultures—from early in the Old Testament to totally different cultural situations in the New Testament—to communicate his Word.

Beyond Our Own Cultural Starting Points

Indeed, God is so involved in the multicultural matrix of history that he did not disdain to step into it himself. The ultimate enculturation of his Word occurred when the Word became flesh, as the prologue of John (1:1-18) declares. Jesus did not come as a cultureless, amorphous, genderless human. He came as a first-century Jewish man, with unique chromosomes and physical features, just as each of the rest of us is unique. His cultural specificity does not mean that he was not *for* all of us; it means instead that he could better identify with all of us as a *particular* person—by being like we are—than by being a general, faceless person who compromised any real humanity for an indistinctive "neutrality." Many Gnostics, who reinterpreted Christianity in later centuries, tried to deny that Jesus really came "in the flesh," but the apostle John is clear that this point is the dividing line between genuine and phony Christians: genuine Christians believe that our Lord Jesus came in the flesh, as a particular historical person (1 Jn 4:1-6). Those who insist on understanding Jesus—or the other people in the Bible—apart from that historical particularity are treading on the outer fringes of Christian faith.

One of the main emphases in the book of Acts is that the gospel is for all peoples and all cultures. The first Christians were surprised to learn that the gospel was for Gentiles as well as Jews, but throughout the book of Acts the Spirit of God was revealing this multicultural mission to the church. That was God's program from the beginning: missions from Jerusalem to the ends of the earth. Those like Stephen

and Paul, who already knew more than one culture, were the most ready to participate in God's plan. People who assume that God reveals himself only in one culture (their own) are a couple of millennia behind on their Bible reading! In Acts we find God purposely revealing himself to people of all cultures in terms they understood; thus Paul preaches one way in a synagogue in Acts 13, another way to rural farmers in chapter 14 and still another way to Greek philosophers in chapter 17. The same Paul related to specific issues of ancient culture in his letters, and we cannot ignore those issues if we wish to know what Paul's point was.

When Paul fought for Gentiles to have the right to come to Christ as Gentiles, he was fighting culturally prejudiced persons who (in that case) said that one had to be Jewish to be a first-rate Christian. They read the Bible in the light of their own culture and tradition and thought that everybody else should read it the same way they did. They had quite a lot of good company, unfortunately, because their problem was not their Jewishness—Paul was just as Jewish as they were. The problem was that they read the Bible in light of their own cultural assumptions, which is the same problem we all have unless we train ourselves to see beyond those assumptions. Our own backgrounds and the information we start with affect the categories and associations we bring to a text—consciously or unconsciously. By contrast, getting more of the ancient readers' backgrounds helps us to read texts more as they would have read them.

Missionaries today face problems similar to Paul's. If we read the gospel in the light of our own culture, we are in danger of mixing our culture in with the Bible and then imposing our new concoction on someone else as a condition of being right with God. Some Western missionaries forced converts to adopt Western lifetsyle, dress and even names to become Christians, rather than allowing that God works within a variety of cultural settings. Of course, some other missionaries, such as many early Jesuits or Hudson Taylor's China Inland Mission, showed greater respect and cultural identification.

Most missionaries today recognize that Christians in different cultures can learn from one another. Sometimes even different parts of the Bible appeal to different groups. One part of the Bible unclear to us may be clear to some Shona Christians in Zimbabwe. Or a reading that one group thinks is clear may be a misinterpretation of the text. Hindus who read Jesus' teaching about being "born again" as a reference to reincarnation have missed Jesus' meaning because they have read it from the standpoint of Hindu assumptions. But if we start merely from our own culture's assumptions, we stand as much chance of misreading the Bible as reincarnationist Hindus do. (Some less informed non-Christian readers in North America might even popularly associate the phrase with a modern political agenda.)

Some devoutly evangelical Christians in certain Asian and African cultures still venerate their ancestors, and North American Christians generally consider such

veneration as pagan. But we North Americans sometimes explain away texts like "You can't serve both God and mammon," and "covetousness is idolatry," so we can live the way we want. Christians in other cultures generally consider our culture's materialism as pagan too. Our cultural blinders let us see other people's sins more easily than our own, and only reading the Scriptures the way the writers were inspired to intend them—rather than the way the Scriptures fit what we already believe—will challenge our own cultural misconceptions.

What common ground can we, as Christian interpreters from a variety of cultures, have? If we want an objective way to interpret the Bible, and if we believe that the writers were inspired to address specific issues of their day, then we need to try to find out what issues they were addressing. To some extent we can figure that out from the texts themselves. We do not have to know what women's head coverings looked like in Corinth to figure out from 1 Corinthians 11 that the question of whether women should wear head coverings was an issue there. Further, some texts can give us background for other texts; for instance, 2 Kings tells us what was going on when Isaiah was prophesying to the people of Israel, and so helps us understand the book of Isaiah.
